Ivandick, Matthew G., assignor to Free Sewing Machine Co., Rockford, Ill. Sewing machine. 2,460,828, Feb. 8.

Ivanovic, Nicholas, Philadelphia, Pa. Vibration insulating device. 2,460,829, Feb. 8.

Iversen, Norman H., Birmingham, Mich., assignor to Production Broaching Corporation. Chuck. 2,461,059, Feb. 8.

Jack & Heintz Precision Industries, Inc., assignee: *See*—Heintz, Ralph M.

Jackman, Walter P., Boonton, N. J., assignor to American Telephone and Telegraph Company. Portable coin collector for telephone systems. 2,460,936, Feb. 8.

Jackson, Albert S., Wood River, and C. A. Heyne, Alton, Ill., assignors to Owens-Illinois Glass Company. Machine for applying surface decorations to bottles and jars. 2,461,281, Feb. 8.

Jackson, James W., Toronto, Ontario, Canada. Tool for reconditioning valves. 2,460,985, Feb. 8.

Jacobson, Carl H., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Lateral film edge pressure spring. 2,461,471, Feb. 8.

Jacobus, Winifred, New York, N. Y. Vanity case and the like. 2,461,421, Feb. 8.

Jansa, Oscar V. E.: *See*—
Hjort, Carl I. F.

Janser, Lorin H.: *See*—
Urschel, Bertis H., and Janser.

Jeffrey, Florence H. C., executrix: *See*—
Jeffrey, Robert K.

Jeffrey Manufacturing Company, The, assignee: *See*—
Jeffrey, Robert K.
Todd, Francis C.

Jeffrey, Robert K., deceased, by F. H. C. Jeffrey, executrix, Bexley, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company. Hydraulic system for controlling the operation of rotary hydraulic motors. 2,461,116, Feb. 8.

Jenny, Robert W., East Paterson, N. J., assignor to Curtiss-Wright Corporation. Helicopter engine suspension. 2,461,422, Feb. 8.

Jerome, Arthur L.: *See*—
Johnston, Allan T., and Jerome.

Jobst, Conrad, assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio. Injector mechanism for molding machines. 2,461,282, Feb. 8.

Johns-Manville Corporation, assignee: *See*—
Koehne, Frank J.
Modigliani, Piero, and Holcomb.
Ximenez, Manuel R., Ferguson, and Bunce.

Johnson, George, assignee: *See*—
Spicer, Manford, Jr.

Johnson, Reynold B., Binghamton, assignor to International Business Machines Corporation, New York, N. Y. Projection apparatus for training mechanisms. 2,461,423, Feb. 8.

Johnston, Allan T., Mount Lebanon, and A. L. Jerome, Edgewood, assignors to The Union Switch & Signal Company, Swissvale, Pa. Polarized control apparatus. 2,461,060, Feb. 8.

Jones, Basil E., Flossmoor, and J. E. Stanley, assignors to The Pullman Company, Chicago, Ill. Vehicle heating arrangement. 2,461,424, Feb. 8.

Jones, Theodore C., Louisville, Ky. Electrolytic water purifier. 2,461,325, Feb. 8.

Jordan, John P., Scotia, N. Y., assignor to General Electric Company. High-frequency heating regulator. 2,461,283, Feb. 8.

Josh, George, Crown Point, Ind., and L. A. Harriman, Chicago, and E. W. Hopkins, Hinsdale, assignors to Armour and Company, Chicago, Ill. Drying eggs. 2,460,986, Feb. 8.

Joyce, Maurice, Port Washington, N. Y. Toilet seat cover. 2,461,160, Feb. 8.

Judge, Samuel J., Rochester, N. Y. Wire clip combining scarf and coat. 2,461,216, Feb. 8.

Kallmann, Heinz E., New York, N. Y., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy. Equalized delay line. 2,461,061, Feb. 8.

Kane, Catherine B., Greenwich, Conn. Sanitary mattress. 2,461,062, Feb. 8.

Kanhofer, Elmer R., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Mixing and separating apparatus. 2,460,987, Feb. 8.

Kantor, James, and E. Marovits, assignors to The Liquid Carbonic Corporation, Chicago, Ill. Filler valve for container filling machines. 2,461,326, Feb. 8.

Karson, Samuel, Cleveland, Ohio. Guard rail for perambulators. 2,461,063, Feb. 8.

Kaszuba, Frank J., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Gelatin subbing compositions containing a mixture of formamide and glycerol-α-chlorohydrin. 2,461,472, Feb. 8.

Kaszuba, Frank J., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Gelatin subbing compositions having antistatic properties. 2,461,473, Feb. 8.

Kaszuba, Frank J., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Gelatin subbing compositions having antistatic properties. 2,461,474, Feb. 8.

Kaszuba, Frank J., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Gelatin subbing compositions containing ascorbic acid (vitamin C). 2,461,475, Feb. 8.

Kaszuba, Frank J., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Gelatin subbing compositions containing lactones or hydroxy lactones. 2,461,476, Feb. 8.

Kaszuba, Frank J., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Gelatin subbing compositions containing an unsaturated lactone. 2,461,477, Feb. 8.

Kaszuba, Frank J., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Gelatin subbing compositions having antistatic properties. 2,461,478, Feb. 8.

Kauffman, Marie E.: *See*—
Damschroeder, Rudolph E., and Kauffman.

Kaufman, Ralph G., New York, N. Y. Pipe smoker's dibbler. 2,460,937, Feb. 8.

Kaufmann, John J., Elkins Park, assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa. Loom harness. 2,461,496, Feb. 8.

Kaufmann, John J., Elkins Park, assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa. Loom harness. 2,461,497, Feb. 8.

Keevil, Henry W.: *See*—
Barnes, Walter C., and Keevil.

Kellogg, M. W., Company, The, assignee: *See*—
Trumpler, Paul R.

Kelly, Edwin R. L., Neuse, N. C. Tractor-mounted timber sawing apparatus. 2,461,384, Feb. 8.

Kelly, Frederick G., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Electrical measuring system. 2,461,425, Feb. 8.

Kemler, Emory N.: *See*—
Smith, Marvin M., and Kemler.

Kemmet, Reinhold, Everett, Wash. Lock bolt. 2,461,284, Feb. 8.

Kemp, Lebbeus C., Jr., Scarsdale, assignor to The Texas Company, New York, N. Y. Manufacturing motor fuel. 2,461,064, Feb. 8.

Kemp, Lebbeus C., Jr., Scarsdale, assignor to The Texas Company, New York, N. Y. Manufacturing motor fuel. 2,461,065, Feb. 8.

Kent, Henry J., Toronto, Ontario, Canada. Shock absorber. 2,461,066, Feb. 8.

Kiefer, William R., assignee: *See*—
Duerr, Carl F., Jr.
Knam, Francis E.

Kilinski, Stanley, Brooklyn, N. Y., assignor to Baltimore Paper Company, Kansas City, Mo. String closure affixing machine. 2,461,327, Feb. 8.

King, James T., Burbank, Calif. Razor blade sharpener. 2,461,161, Feb. 8.

King, Vernon M., Bakersfield, Calif. Safety strike plate and release bar. 2,461,426, Feb. 8.

Kleber, Samuel L., assignor to Kleber Trunk & Bag Company, Pittsburgh, Pa. Wardrobe case for men's suits and women's dresses on hangers. 2,461,216, Feb. 8.

Kleber Trunk & Bag Company, assignee: *See*—
Kleber, Samuel L.

Kleen Refrigerator, Inc., assignee: *See*—
Af Kleen, Nils E.

Kleintop, Harold E., Parkesburg, Pa. Motion-picture titler. 2,461,285, Feb. 8.

Kline, Halsey W., Schenectady, N. Y., assignor to General Electric Company. Radio-frequency bridge. 2,461,286, Feb. 8.

Knam, Francis E., assignor, by mesne assignments, of thirty one-hundredths to E. E. Roemer, thirty-five one-hundredths to L. E. Roemer, twenty-five one-hundredths to W. R. Kiefer, and ten one-hundredths to J. E. Tompkins, Cleveland, Ohio. Multiconductor electric harness. 2,460,830, Feb. 8.

Kneebone, Lincoln, Dundee, Ill. Tension absorber. 2,461,427, Feb. 8.

Knight, Claude L.: *See*—
Wormell, Robert L., Millidge, and Knight.

Kobe, Inc., assignee: *See*—
Coberly, Clarence J., Jr.

Koebner, Adolf: *See*—
Oxley, Peter, Robson, Koebner, and Short.

Koehne, Frank J., Martinsville, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Method and apparatus for cleaning asbestos. 2,460,938, Feb. 8.

Koinzan, Walter J., Elgin, Nebr. Oil filter. 2,460,888, Feb. 8.

Koopman, Kenneth H., Kenmore, N. Y., assignor to Union Carbide & Carbon Corporation. Welding flux. 2,460,988, Feb. 8.

Kosak, Alvin I.: *See*—
Hartough, Howard D., and Kosak.

Kovacs, George J., Walled Lake, Mich. Method and apparatus for molding. 2,460,831, Feb. 8.

Kralinator Prducts Limitied, assignee: *See*—
Fouse, Charles N., and Krieg.

Kramers, William J.: *See*—
Bennett, John G., Foster, Greaves, Philipotts, Pirani, and Kramers.

Kraner, Warren A., assignor to General Paint Corporation, San Francisco, Calif. Pipe-cleaning machine. 2,460,989, Feb. 8.

Krats, John A., Yonkers, N. Y., and H. G. Thoma, Rutherford, N. J., assignors to The Linde Air Products Company. Automatic electric fusion welding apparatus and process. 2,460,990, Feb. 8.

Krieg, Walter H. A.: *See*—
Fouse, Charles N., and Krieg.

Kris, Joseph J., Jr., assignor of one-half to P. H. Bombach, Chicago, Ill. Egg breaker. 2,460,887, Feb. 8.

Krieger, John, assignor to The Edwal Laboratories, Inc., Chicago, Ill. Preparation of symmetrical triaminobensene compounds. 2,461,498, Feb. 8.

Kuhl, Frederick A.: *See*—
Boucher, Charles P., and Kuhl.

Ladish Co., assignee: *See*—
Hille, Guenther H.

La Follette, John W., Denver, Colo. Apparatus for resoling rubber boots and the like. 2,460,832, Feb. 8.

Lagreid, Magnus, and J. H. McGuire, Minneapolis, Minn. Packing retainer for journal boxes. 2,461,287, Feb. 8.

Laifer, Fred, assignee: *See*—
Givens, Melvin.

Laird, Elmer R., assignor to Armour and Company, Chicago, Ill. Can washing machine. 2,461,162, Feb. 8.

La Lande, William A., Jr., Upper Darby, assignor to Attapulgus Clay Company, Philadelphia, Pa. Production of invert sugar. 2,461,163, Feb. 8.

Lamb, Lucy A., Cleveland Heights, Ohio. Hose coupling. 2,460,833, Feb. 8.

Lamm, Uno, Ludvika, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Ignition device for ionic valves. 2,461,428, Feb. 8.

Lancaster Processes, Inc., assignee: *See*—
Banbury, Fernley H., Comes, and Schnuck.

Landis & Gyr, A. G., assignee: *See*—
Pudelko, Richard, and Moos.

Landon, Walter S., assignor to Detroit Lubricator Company, Detroit, Mich. Controlling means and system. 2,461,328, Feb. 8.

Landwehr, Richard F., Laurelton, Long Island, assignor to American Safety Razor Corporation, Brooklyn, N. Y. Lighter. 2,461,329, Feb. 8.

Landwehr, Richard F., Laurelton, Long Island, assignor to American Safety Razor Corporation, Brooklyn, N. Y. Lighter. 2,461,330, Feb. 8.

Lapsley, Robert, Berrien Springs, assignor to Clark Equipment Company, Buchanan, Mich. Transmission control system. 2,461,218, Feb. 8.

Lapsley, Robert, Berrien Springs, and B. L. Mills, assignors to Clark Equipment Company, Buchanan, Mich. One-way brake for torque converters. 2,461,217, Feb. 8.

Larsen, Earl I., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Ejector type welding electrode holder. 2,460,889, Feb. 8.

Larson, Karl O., Minneapolis, Minn. Continuously extensible, retractable, and collapsible structure. 2,461,429, Feb. 8.

Lasky, Carl O., Plainville, Conn. Work-holding means. 2,460,890, Feb. 8.

Lear, John S., assignee: *See*—
Guthrie, James M.

Le Brasse, Gordon J., Ann Arbor, and H. E. Francis, assignors to Federal-Mogul Corporation, Detroit, Mich. Atomized metal. 2,460,991, Feb. 8.

Le Brasse, Gordon J., Ann Arbor, and H. E. Francis, assignors to Federal-Mogul Corporation, Detroit, Mich. Atomising metal. 2,460,992, Feb. 8.

Le Brasse, Gordon J., Ann Arbor, and H. E. Francis, assignors to Federal-Mogul Corporation, Detroit, Mich. Apparatus for atomising metal. 2,460,993, Feb. 8.

Leesemann, Charles J. G., Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Dehydrogenation of hydrocarbons in the presence of a gaseous diluent. 2,461,331, Feb. 8.

Leonard, John T., Evanston, Ill. Lubricant compressor. 2,461,332, Feb. 8.

Leviton, Abraham, Washington, D. C., assignor to the United States of America as represented by the Secretary of Agriculture. Separation of proteins from milk products. 2,460,891, Feb. 8.

Lew, Harold, Brooklyn, N. Y. Knockdown sheet metal cabinet. 2,461,219, Feb. 8.

Lewis, Farral F. Houma, La. Wear indicating attachment for drilling-bits. 2,461,164, Feb. 8.

Lewis, Richard O., Los Angeles, Calif. Liquid fertilizer apparatus. 2,461,067, Feb. 8.

Libby, McNeill & Libby, assignee: *See*—
Stanton, Earl G.

Lindow, Rudolph F.: *See*—
Miller, Arthur E., Vivall, and Lindow.

Lindstrom, Charles M., East Greenwich, R. I., assignor, by mesne assignments, to Bostitch, Inc. Magazine for fastener applying. 2,461,165, Feb. 8.

Linde Air Products Company, The, assignee: *See*—
Krats, John A., and Thoma.

Lindgren, Hans O., Appelviken, assignor to Aktiebolaget Separator, Stockholm, Sweden. Producing butter by cooling cream of high concentration. 2,461,117, Feb. 8.

Line Material Company, assignee: *See*—
Amundson, Roald H.

Lippincott, Joshua G., Scarsdale, N. Y., assignor to Guth, Stern & Co., Inc. Flashlight torch. 2,461,118, Feb. 8.

Liquid Carbonic Corporation, The, assignee: *See*—
Kantor, James, and Marovitz.

Lisle, Wade H., Kansas City, assignor to Crook Paper Box Company, North Kansas City, Mo. Box shaping machine. 2,460,892, Feb. 8.

Litchfield Manufacturing Company, assignee: *See*—
Packer, Gordon W.

Little, Alfred E., assignor to Busch Precision Camera Corporation, Chicago, Ill. Photographic film pack adapter. 2,460,994, Feb. 8.

Livermon, Carl R., Roxobel, N. C. Aircraft landing gear. 2,461,288, Feb. 8.

Lockwood, Lee, Des Moines, Iowa. Downdraft stove. 2,461,068, Feb. 8.

Logston, Robert, assignee: *See*—
Mozingo, Guy K.

Logue, Leland H., Denver, Colo., assignor, by mesne assignments, to Mining Process and Patent Company. Settling method and apparatus. 2,460,834, Feb. 8.

Logue, Regina K., Philadelphia, Pa. Article of furniture. 2,461,385, Feb. 8.

Lorand, Eugene J., assignor to Hercules Powder Company, Wilmington, Del. Separation of polyhydric alcohols. 2,461,220, Feb. 8.

Lott, William A., Maplewood, J. Bernstein, and B. Sterns, New Brunswick, N. J., assignors to E. R. Squibb & Sons, New York, N. Y. Bis-glycolic acid amides of 2,6-diamino-pyridines, and preparing them. 2,461,119, Feb. 8.

Loughlin, Bernard D., Bayside, N. Y., assignor, by mesne assignments, to Haseltine Research, Inc., Chicago, Ill. Signal generator. 2,461,120, Feb. 8.

Lovins, Gerald H., Silver Spring, Md., assignor, by mesne assignments, to American Instrument Co., Inc. Level device employing a light reflecting liquid surface as a horisontal reference surface. 2,460,836, Feb. 8.

Luboshez, Benjamin E., assignor to Eastman Kodak Company, Rochester, N. Y. Instrument for testing the accuracy of the angle between two prism faces. 2,461,166, Feb. 8.

Ludwig, Walter, assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich. Making yokes for garment hangers. 2,460,939, Feb. 8.

Luts, Samuel G., Washington, D. C. Electrical insulation testing apparatus. 2,460,835, Feb. 8.

Maccaferri, Mario, Rye, N. Y. Clothespin. 2,461,333, Feb. 8.

MacCutcheon, Edward M., Jr., Arlington, Va., D. F. Windenburg, Chevy Chase, Md., and S. K. Smith, Seattle, Wash. Arresting the cracking of the plates of welded ships. 2,460,893, Feb. 8.

Machine Tool Works Oerlikon Administration Company, assignee: *See*—
Weiss, Albert.

Mack, Theresa G., Pennsauken, N. J. Combination greeting card and bib. 2,461,430, Feb. 8.

Maeser, Mieth, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Method of and apparatus for treating shoes with steam and hot air. 2,460,940, Feb. 8.

Magnavox Company, The, assignee: *See*—
Clark, Richard U.

Magnesium Elektron Limited, assignee: *See*—
Murphy, Alfred J., and Payne.

Major, Ralph M., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Liquid treating unit. 2,461,334, Feb. 8.

Malhiot, Clarence J., Oak Park, assignor to F. B. Redington Co, Chicago, Ill. Conveyer and transfer mechanism. 2,461,167, Feb. 8.

Mallory, P. R., & Co., Inc., assignee: *See*—
Larsen, Earl I.
Peck, Gordon V.

Malone, Homer E., assignor to Perfex Corporation, Milwaukee, Wis. Snap switch. 2,460,837, Feb. 8.

Mancuso, Joseph P., Jamesburg, N. J. Developing tank for 35 mm. film. 2,461,289, Feb. 8.

Margolin, Meyer, Elgin, Ill. Shoe outsole. 2,460,838, Feb. 8.

Margulies, Lazar, New York, N. Y. Pencil holder. 2,461,221, Feb. 8.

Marisic, Milton M., Woodbury, and A. C. Schmitt, Wenonah, N. J., and F. C. Frank, Philadelphia, Pa., assignors to Socony-Vacuum Oil Company, Incorporated. Simultaneous catalytic cracking and desulfurization of hydrocarbons. 2,461,069, Feb. 8.

Markem Machine Company, assignee: *See*—
Putnam, David F., and Robbins.

Markham, Thomas A., Dallas, assignor of forty-nine per cent to J. J. Smith, Garland, Tex. Fluid pump. 2,461,121, Feb. 8.

Marovitz, Edward: *See*—
Kantor, James, and Marovitz.

Marriott, Robert H., London, and W. W. Myddleton, New Malden, England. Reaction of stillboestrol with camphor. 2,460,941, Feb. 8.

Marshall, Angela, Adel, Iowa. Collapsible headrest. 2,460,942, Feb. 8.

Marshall Field & Company, assignee: *See*—
Medbery, E. W.

Martinovich, Nicholas, Berlin Center, Ohio. Automatic manure conveyer. 2,460,894, Feb. 8.

Materials Handling Laboratories, assignee: *See*—
Moffat, Alexander W.

Matheny, David, New Brighton, Pa. Golf cup. 2,461,386, Feb. 8.

Maynard, Ernest W., Brooklyn, N. Y., and L. P. Di Giacomo, Jersey City, N. J., assignors to American Home Products Corporation, New York, N. Y. Bottle chute. 2,461,290, Feb. 8.

McCarthy, Thomas O., United States Navy. Radio direction finder. 2,460,798, Feb. 8.

McCathron, Claude B., assignor to Graflex, Inc., Rochester, N. Y. View finder for photographic cameras. 2,461,499, Feb. 8.

McDermott, Carl, Freehold, N. J. Rotor brake and spinner lever. 2,460,839, Feb. 8.

McDonough, Everett G., assignee: *See*—
Winkel, Fred M.

McGuire, John H.: *See*—
Lagreid, Magnus, and McGuire.

McIlvaine, Oran T., St. Charles, Ill. Resonant spark plug. 2,461,168, Feb. 8.

McKee, Harry H., assignor to Swift & Company, Chicago, Ill. Manufacture of dried meat. 2,461,291, Feb. 8.

McKinney, Leonard L., Peoria, Ill., assignor to The United States of America as represented by the Secretary of Agriculture. Process to produce a stabilized protein-formaldehyde dispersion. 2,461,070, Feb. 8.

McQuitty, Roy M., Richmond Heights, Mo. Aim indicator. 2,461,122, Feb. 8.

Mead Specialties Company, Inc., assignee: *See*—
Mead, Theodore E.

Mead, Theodore E., Wilmette, Ill., assignor to Mead Specialties Company, Inc. Work holder. 2,461,292,

Meany, Thomas E., Chicago, Ill. Joint protector. 2,460,895, Feb. 8.

Medbery, Edward W., Arlington Heights, assignor to Marshall Field & Company, Chicago, Ill. Cloth roll attachment for lace looms. 2,461,387, Feb. 8.

Meitzler, Donald E., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Accumulator injection system. 2,461,222, Feb. 8.

Meitzler, Donald E., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Arrangement for fuel injection in a free-piston unit. 2,461,223, Feb. 8.

Meitzler, Donald E., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Overstroke control for free-piston units. 2,461,224, Feb. 8.

Meitzler, Donald E., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Constant stroke mechanism for free-piston compressors. 2,461,225, Feb. 8.

Meltzer, Jack, New York, N. Y. Making slip lasted welt shoes. 2,461,226, Feb. 8.

Metal Hydrides Incorporated, assignee: *See*—
Alexander, Peter R.

Metal and Thermit Corporation, assignee: *See*—
Rollason, Ernest C.

Mettenleiter, Michael W., New York, N. Y. Handbag holder or the like. 2,461,071, Feb. 8.

Mewherter, Frank W., and E. E. Smith, Raeford, N. C. Skipperproof meat case. 2,461,227, Feb. 8.

Meyer, Walter R., Hamden, assignor, by mesne assignments, to Enthone, Inc., New Haven, Conn. Composition for blackening copper and copper alloy surfaces. 2,460,896, Feb. 8.

Meyer, Walter R., Hamden, assignor, by mesne assignments, to Enthone, Inc., New Haven, Conn. Rendering aluminum and aluminum alloy surfaces corrosion resistant. 2,460,897, Feb. 8.

Meyer, Walter R., Hamden, assignor, by mesne assignments, to Enthone, Inc., New Haven, Conn. Process and composition for coloring copper and copper alloy surfaces. 2,460,898, Feb. 8.

Mikeska, Louis A., Westfield, N. J., assignor to Standard Oil Development Company. Organometallic compound. 2,461,335, Feb. 8.

Mikeska, Louis A., Westfield, N. J., assignor to Standard Oil Development Company. Manufacture of glutaric acid. 2,461,336, Feb. 8.

Miles, Donald L., Detroit, Mich., assignor to American Chemical Paint Company, Ambler, Pa. Method of and material for preparing stanciferous surfaces for electroplating. 2,461,228, Feb. 8.

Miller, Arthur E., and G. K. Viall, Milwaukee, and R. F. Lindow, Wauwatosa, assignors to Chain Belt Company, Milwaukee, Wis. Apparatus for constructing vibration-compacted concrete slabs. 2,461,500, Feb. 8.

Miller, Clarence W., Chicago, Ill. Combination safety chair and table. 2,461,123, Feb. 8.

Miller, Donald J., assignor to American Anode Inc., Akron, Ohio. Meteorological balloon or similar article and making the same. 2,461,072, Feb. 8.

Miller, Donald L., Pine City, N. Y., assignor to Bendix Aviation Corporation, Electromagnetic pump. 2,461,501, Feb. 8.

Miller, Edith M.: *See*—
Miller, Swift.

Miller, Edwin A., Fairfield, Conn. Power transmission belt. 2,461,169, Feb. 8.

Miller, Raymond J., Detroit, Mich. Ignition circuit. 2,461,293, Feb. 8.

Miller, Swift, Milwaukee, Wis.; E. M. Miller, executrix of said S. Miller, deceased, assignor, by decree of distribution to E. M. Miller. Fuse-plug type circuit breaker. 2,461,338, Feb. 8.

Millheam, Theodore F., Beloit, Wis. Chamfering tool. 2,461,431, Feb. 8.

Millidge, Alfred F.: *See*—
Wormell, R. L., and Millidge, and Knight.

Mills, Burton L.: *See*—
Lapsley, Robert and Mills.

Mills, Irwin F., assignee: *See*—
Dirand, Louis J.

Minco Products Corp., assignee: *See*—
Minkow, Robert.

Mining Process and Patent Company, assignee: *See*—
Logue, Leland H.

Minkow, Robert, assignor to Minco Products Corp., New York, N. Y. Gluing machine. 2,461,388, Feb. 8.

Minnesota Mining & Manufacturing Company, assignee: *See*—
Davis, Edward P., and Heltzer.
Taylor, Nelson W., and Murray.

Miskimen, Carl W., Seattle, Wash. Pipe joint. 2,461,337, Feb. 8.

Missouri Meerschaum Company, assignee: *See*—
Rettke, Julius L., and Otto.

Mitchell, David T., Decatur, Ill. Laboratory circulating evaporator. 2,461,389, Feb. 8.

Mitchell, John E., Company, assignee: *See*—
Mitchell, Orville.

Mitchell, Orville, assignor to John E. Mitchell Company, Dallas, Tex. Air conditioning device for beds. 2,461,432, Feb. 8.

Mockabee, John W., United States Army, Washington, D. C. Handle lock for hinged handle utensils. 2,460,840, Feb. 8.

Modigliani, Piero, Manhasset, N. Y., and H. E. Holcomb, Stratford, Conn., assignors to Johns-Manville Corporation, New York, N. Y. Mat formation. 2,460,899, Feb. 8.

Moe, Owen A., Minneapolis, Minn., assignor to General Mills, Inc. Cyanoethyl ethers of galactomannan and glucomannan gums. 2,461,502, Feb. 8.

Moffat, Alexander W., assignor to N. L. Cahners, doing business as Materials Handling Laboratories, Boston, Mass. Temporary support for use in loading pallets or the like. 2,461,479, Feb. 8.

Mohler, James B.: *See*—
Schaefer, Ralph A., and Mohler.

Monitor Controller Company, The, assignee: *See*—
Freese, Joseph F.

Montague, Esther P., Arlington, Va. Umbrella pocket and umbrella. 2,461,390, Feb. 8.

Moos, Paul: *See*—
Pudelko, Richard, and Moos.

Morey, Leon P., assignor to Eastman Kodak Company, Rochester, N. Y. Centering support. 2,461,171, Feb. 8.

Morey, William L., Melrose, and R. A. Taylor, Newburyport, Mass. Projection and plotting device. 2,460,841, Feb. 8.

Morretta, Jack J., Scarsdale, N. Y. Tricurler. 2,461,170, Feb. 8.

Morris, Rupert C., Berkeley, J. L. Van Winkle, San Lorenzo, and E. C. Shokal, Oakland, assignors to Shell Development Company, San Francisco, Calif. Unsaturated thioethers of cyclic sulfones. 2,461,339, Feb. 8.

Morris, Rupert C., Berkeley, and J. L. Van Winkle, San Lorenzo, assignors to Shell Development Company, San Francisco, Calif. Polyalkylated cyclic sulfone halohydrins. 2,461,340, Feb. 8.

Morris, Rupert C., Berkeley, and A. V. Snider, Richmond, assignors to Shell Development Company, San Francisco, Calif. Secondary sulfolanyl amines. 2,461,341, Feb. 8.

Mortenson, Carl W., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polyvinyl alcohol plasticized with an amine adduct of butadiene cyclic sulfone. 2,460,995, Feb. 8.

Mostek, Jerome L., Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y. Production of 3-chloro methacrylonitrile. 2,460,996, Feb. 8.

Moulton, Arthur C.: *See*—
Moulton, George B., and A. C.

Moulton, George B., and A. C. Moulton, Newfield, Maine. Telescoping tractor boom. 2,461,433, Feb. 8.

Moulton, Reginald F., Canton, Ohio. Mechanism applicable to rotary pumps, motors, etc. 2,461,073, Feb. 8.

Mount Hope Machinery Company, assignee: *See*—
Robertson, John D.

Moyers, Eunice, Washington, D. C. Folding mechanical pillow. 2,461,434, Feb. 8.

Moyle, Clarence L.: *See*—
Britton, Edgar C., White, and Moyle.

Mosingo, Guy K., assignor of twenty-five per cent to O. T. Olden and twenty-five per cent to R. Logston, Ashtabula, Ohio. Hose coupling. 2,461,074, Feb. 8.

Muncie Gear Works, Inc., assignee: *See*—
Smith, Marvin M., and Kemler.

Murphy, Alfred J., Petts Wood, and R. J. M. Payne, New Malden, assignors to Magnesium Elektron Limited, London, England. Producing magnesium base alloys. 2,461,229, Feb. 8.

Murphy, Edward B., Linden, N. J., and S. Segal, New York, N. Y., assignors to Wilson-Jones Company, Chicago, Ill. Paper trimmer. 2,460,842, Feb. 8.

Murray, Robert C.: *See*—
Taylor, Nelson W., and Murray.

Mussy, Elisabeth D., San Francisco, Calif. Taper holder and snuffer. 2,461,124, Feb. 8.

Myddleton, William W.: *See*—
Marriott, Robert H., and Myddleton.

Myers, Donald C., Dallas, Tex. Clothes hanger assembly. 2,460,997, Feb. 8.

Nathan, Ellis, assignor to Pennsylvania Pump & Compressor Company, Easton, Pa. Seal for gas compressors. 2,461,294, Feb. 8.

National Cabinet Company, assignee: *See*—
Christopherson, Raymond.

National Cylinder Gas Company, assignee: *See*—
Candy, Albert M.

National Inventions Corporation, assignee: *See*—
Boucher, Charles P., and Kuhl.

National Starch Products Inc., assignee: *See*—
Caldwell, Carlyle G.

Navy, United States of America as represented by the Secretary of the, assignee: *See*—
Guillemin, Ernst A.
Kallmann, Heinz E.
Stephenson, Richard G., and Bush.

Naylor, William E., Ridgefield Park, assignor to Bendix Aviation Corporation, Teterboro, N. J. Pressure responsive indicating device. 2,461,075, Feb. 8.

Neeson, Charles R., Oakwood, Ohio, assignor to Chrysler Corporation, Highland Park, Mich. Oil pressure safety control. 2,461,076, Feb. 8.

Nelson, Harley E., Park Ridge, Ill., assignor, by mesne assignments, to Stein, Hall & Co., Inc. Method of coating paper. 2,460,998, Feb. 8.

Nelson, William W., Belmont, Mass. Neck straightening device for musical instruments. 2,460,943, Feb. 8.

Nergaard, Leon S., Princeton, N. J., assignor to Radio Corporation of America. Electron discharge device utilizing cavity resonators. 2,461,125, Feb. 8.

Newbold, William H., Langhorne, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Wide-band superheterodyne receiver. 2,460,900, Feb. 8.

Newman, Joseph M., Toronto, Ontario, Canada. Vegetable and fruit shredding device. 2,460,901, Feb. 8.

Newman, Robert J., Enfield, and D. S. Freund, assignors of one-third to E. A. Baker, London, England. Labelling machine. 2,461,295, Feb. 8.

Newmann, Charles A., and H. H. Baca, Corpus Christi, Tex. Fluid propelled and controlled aircraft. 2,461,435, Feb. 8.

New York Air Brake Company, The, assignee: *See*—
Huber, Matthew W.

Ney, William O., Jr.: *See*—
Barnes, Carl E., and Ney, Jr.

Nicholson, Frank H., Penn Township, Allegheny County, assignor to The Union Switch & Signal Company, Swissvale, Pa. Coded signaling system. 2,461,077, Feb. 8.

Nighthart, George E., Lewistown, Pa. Bicycle holding fixture. 2,460,944, Feb. 8.

Nighthart, George E., Lewistown, Pa. Bicycle servicing fixture. 2,460,945, Feb. 8.

Nilson, James H., Wilmette, and V. C. Westberg, assignors to Sun Electric Corporation, Chicago, Ill. Tachometer generating apparatus. 2,460,999, Feb. 8.

Nixon, Alan C.: *See*—
Shiras, Russell N., Nixon, and Deal, Jr.

Obert, Maximillian J., North Merchantville, N. J., assignor to Radio Corporation of America. Deflecting coil. 2,461,230, Feb. 8.

Obreiter, Joseph W., Jr., Glen Ridge, N. J. Removal of liquid refrigerant from the supply line to a compressor. 2,461,342, Feb. 8.

Odor, Ralph K., Edmond, assignor to The Vornado Trust, Oklahoma City, Okla. Propeller. 2,460,902, Feb. 8.

Offen, Arthur, assignor to Offen & Company Limited, South Nutfield, England. Cutting tool. 2,461,436, Feb. 8.

Offen & Company, Limited, assignee: *See*—
Offen, Arthur.

Ogorzaly, Henry J., Summit, N. J., and A. Voorhies, Jr., Baton Rouge, La., assignors to Standard Oil Development Company. Contacting gaseous fluids and solid particles. 2,461,343, Feb. 8.

Ohio Crankshaft Company, The, assignee: *See*—
Somes, Howard E.

Ohio Ferror-Alloys Corporation, assignee: *See*—
Prits, Lawrence G.

Olcott, Harold S.: *See*—
Fraenkel-Conrat, Heinz L., and Olcott.

Olden, Orville T., assignee: *See*—
Mosingo, Guy K.

Olson, Harry F., Princeton, N. J., assignor to Radio Corporation of America. Signal transmission and receiving apparatus. 2,461,344, Feb. 8.

Oppenheim, Ralph, Brooklyn, N. Y. Winding machine. 2,461,231, Feb. 8.

Ordas, Arthur F., Huntertown, Ind., assignor to General Electric Company. Dynamoelectric machine core member. 2,461,296, Feb. 8.

Osterhaus, Joseph F., Independence, Iowa. Drive transmission for garden tractors. 2,461,391, Feb. 8.

Otto, Edmund H.: *See*—
Rettke, Julius L., and Otto.

Ours, Statoon R., U. S. Navy. Airplane flight safety device. 2,460,843, Feb. 8.

Overturf, William K., San Diego, Calif. Resettable circuit breaker. 2,461,126, Feb. 8.

Owens-Illinois Glass Company, assignee: *See*—
Ball, Charles O., and Scott.
Hohl, John, Belnap, and Barnby.
Jackson, Albert S., and Heyne.
Jobst, Conrad.

Oxley, Peter, T. D. Robson, A. Koebner, and W. F. Short, assignors to Boots Pure Drug Company Limited, Nottingham, England. Manufacture of nitriles. 2,461,437, Feb. 8.

Packer, Gordon W., assignor to Litchfield Manufacturing Company, Litchfield, Mich. Playground slide. 2,461,345, Feb. 8.

Packwood, George H., Jr., St. Louis, Mo. Dispenser support. 2,461,000, Feb. 8.

Paddle Pumps, Inc., assignee: *See*—
Simer, Jerome, and Cook.

Page, Herbert E., Alhambra, Calif. Clothes washing and extracting machine. 2,461,078, Feb. 8.

Page, Ralph E., West Orange, and H. S. Beattie, East Orange, N. J., assignors to International Business Machines Corporation New York, N. Y. Record controlled accounting machine. 2,461,438, Feb. 8.

Palen, Peter H., Paterson, N. J., assignor to Wright Aeronautical Corporation. Torque meter. 2,461,001, Feb. 8.

Pantsios, Anthan A.: *See*—
Truhlar, John, and Pantsios.

Paper Patents Company, assignee: *See*—
Weyenberg, John T.

Parmentier, Charles W.: *See*—
Philp, William J., and Parmentier.

Parr, Josephus O., Jr., assignor to O. S. Petty, San Antonio, Tex. Seismic surveying. 2,461,173, Feb. 8.

Parry, Edward C., Ferndale, Wash. Automatic vent. 2,461,392, Feb. 8.

Patelhold Patenlverwertungs-& Elektro-Holding A.-G., assignee: *See*—
Steinmann, Willy.

Patterson, John A., Beverly, N. J., assignor to Standard Oil Development Company. Separation of hydrocarbons. 2,461,346, Feb. 8.

Paxton, William A., Detroit, Mich. Flush type latching device. 2,461,393, Feb. 8.

Payne, Ronald J. M.: *See*—
Murphy, Alfred J., and Payne.

Pearson, Frank G., Delaware County, Pa., assignor to American Viscose Corporation, Wilmington, Del. Acrylonirtile-vinylidene chlorofluoride copolymers. 2,460,844, Feb. 8.

Pearson, John H.: *See*—
Calfee, John D., and Pearson.

Peck, Gordon V., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Motor starting capacitor assembly. 2,460,903, Feb. 8.

Pelzer, Harry L., Steger, Ill., assignor to Sinclair Refining Company, New York, N. Y. Pyrolytic conversion of hydrocarbons. 2,461,172, Feb. 8.

Pennsylvania Pump & Compressor Company, assignee: *See*—
Nathan, Ellis.

Pentecost, Horace T., Renton, near Seattle, Wash. Helicopter adapted to be attached to a pilot. 2,461,347, Feb. 8.

Pentecost, Horace T., Renton, near Seattle, Wash. Helicopter of the coaxial wing type. 2,461,348, Feb. 8.

People in the Territory of the United States, dedicated to the free use of the, assignee: *See*—
Flynn, Theodore P., and Coldwell.
Holaday, Horace A.

Perfex Corporation, assignee: *See*—
Malone, Homer E.

Perkins, Albert G., Warsaw, N. Y. Alarm device for milking machines. 2,461,439, Feb. 8.

Permanente Metals Corporation, The, assignee: *See*—
Foster, Thomas W. F.

Peterman, Harry A. B., Chicago, Ill. Auto vacuum cleaner. 2,461,174, Feb. 8.

Peterson, Charles W., assignor to Eastman Kodak Company, Rochester, N. Y. Panoraming tripod head. 2,461,175, Feb. 8.

Peterson, Vincent C. J., York, and H. M. Wilson, Bear Creek, Pa., assignors to American Chain & Cable Company, Inc., Bridgeport, Conn. Wire rope splice. 2,461,079, Feb. 8.

Pettibone Mulliken Corporation, assignee: *See*—
Piper, Walter F.

Petty, Olive S., assignee: *See*—
Parr, Josephus O., Jr.

Petty, Wesley, Effingham, Ill. Holding device. 2,461,440, Feb. 8.

Pfeiffer, David C.: *See*—
Clewell, Dayton H., and Pfeiffer.

Philco Corporation, assignee: *See*—
Bradley, William E.
Newbold, William H.

Phillpotts, George C.: *See*—
Bennett, John G., Foster, Greaves, Phillpotts, Pirani, and Kramers.

Philp, William J., Battle Creek, Mich., and C. W. Parmentier, Philadelphia, Pa.; said Philp assignor to Clark Equipment Company, Buchanan, Mich. Pallet. 2,461,297, Feb. 8.

Picker X-Ray Corporation Waite Manufacturing Division, Inc., assignee: *See*—
Goldfield, Edwin R.

Pickley, Leonard B., North Hollywood, Calif. Composite photography. 2,461,127, Feb. 8.

Pilnik, Walter F.: *See*—
Wobbe, Delbert E., and Pilnik.

Piper, Walter F., Chicago, Ill., assignor, by mesne assignments, to Pettibone Mulliken Corporation. Mulling apparatus. 2,461,176, Feb. 8.

Pirani, Marcello: *See*—
Bennett, John G., Foster, Greaves, Phillpotts, Pirani, and Kramers.

Piskur, Michael M., and J. W. Higgins, assignors to Swift & Company, Chicago, Ill. Antioxidant for fats. 2,461,080, Feb. 8.

Piton, Charles, Geneva, Switzerland, assignor to Hermann Thorens S. A. Device for securing an element of an oscillating electric circuit to a support. 2,461,441, Feb. 8.

Plante, Alfred J., assignor of one-half to D. Cloutier, Augusta, Maine. Hoist clamp. 2,461,394, Feb. 8.

Plas-Tk-Bits, Inc., assignee: *See*—
Wagner, Arthur E., and Camp.

Power Jet (Research and Development) Ltd., assignee: *See*—
Whitehead, Leslie T.

Prestien, Clyde G., Berea, Ohio. Manicure case. 2,461,177, Feb. 8.

Prits, Lawrence G., North Canton, assignor to Ohio Ferro-Alloys Corporation, Canton, Ohio. Making ferro-alloys. 2,461,442, Feb. 8.

Procofieff, Michel: *See*—
Bert, Léonce, Procofieff, and Blinoff.

Production Broaching Corporation, assignee: *See*—
Iversen, Norman H.

Psikal, Emil, Dorchester, Nebr. Air cleaner. 2,461,395, Feb. 8.

Pudelko, Richard, and P. Moos, assignors to Landis & Gyr, A. G., Zug, Switzerland. Multiple tariff counter for measuring instruments. 2,461,081, Feb. 8.

Pullman Company, The, assignee: *See*—
Jones, Basil E., and Stanley.

Pulsifer, Henry H., Kitchener, Ontario, Canada. Playing steel. 2,461,232, Feb. 8.

Purnell, Edward A., assignor to The General Fireproofing Company, Youngstown, Ohio. Furniture. 2,461,082, Feb. 8.

Putnam, David F., and C. F. Robbins, assignors to Markem Machine Company, Keene, N. H. Machine for marking cylindrical articles. 2,461,233, Feb. 8.

Quik-Seal, Inc., assignee: *See*—
Sticelber, Merlin A.

Radio Corporation of America, assignee: *See*—
Braden, Rene A.
Hanchett, George D., Jr.
Hershberger, William D.
Nergaard, Leon S.
Obert, Maximillian J.
Olson, Harry F.
Schroeder, Alfred C.
Usselman, George L.
Zappacosta, Amedeo D.

Radtke, Albert A., New York, N. Y. Adjustable clamp. 2,461,234, Feb. 8.

Ralston, Anderson W., and H. M. Corley, assignors to Armour and Company, Chicago, Ill. Compounds modified by abietic nitriles. 2,461,349, Feb. 8.

Raney, Murray, Chattanooga, Tenn. Producing finely divided metals. 2,461,396, Feb. 8.

Rank, Richard L., St. Louis, Mo. Clip. 2,461,083, Feb. 8.

Rapaport, Leonard, assignee: *See*—
Fontaine, Jack.

Rauland Corporation, The, assignee: *See*—
Antalek, John J.

Raymond, Thomas E., assignor to Simplex Engineering Company, Zanesville, Ohio. Fluid pressure energy translating device. 2,461,235, Feb. 8.

Raytheon Manufacturing Company, assignee: *See*—
Faulk, Donald P.

Reckmeyer, Verne H., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Preparing light filter foils. 2,461,480, Feb. 8.

Reconstruction Finance Corporation, assignee: *See*—
Castle, James B.

Redington, F. B., Co, assignee: *See*—
Malhiot, Clarence J.

Reich, George A., Cleveland, Ohio. Roller skate. 2,461,128, Feb. 8.

Reinke, Fred A., Cleveland, Ohio. Hat and tie holder. 2,461,178, Feb. 8.

Rempel, Dietrich G., Akron, assignor to The Sun Rubber Company, Barberton, Ohio. Form for building hollow articles. 2,460,845, Feb. 8.

Rettke, Julius L., and E. H. Otto, assignors to Missouri Meerschaum Company, Washington, Mo. Pipe bowl turning machine. 2,461,443, Feb. 8.

Rey-Bellet, Gerald: *See*—
Spiegelberg, Hans, and Rey-Bellet.

Reyburn, John R., Fairfield, Conn. Fishing reel. 2,460,904, Feb. 8.

Reynolds, John W., Albion, Mich. Hanger. 2,460,946, Feb. 8.

Riggs, Harold C., Langhorne Manor, Pa., assignor to The Electric Storage Battery Company. Quick-change battery support. 2,461,002, Feb. 8.

Robbins, Charles F.: *See*—
Putnam, David F., and Robbins.

Roberts Manufacturing Company, The, assignee: *See*—
Roehr, Zbislaw M.

Robertson, John D., assignor to Mount Hope Machinery Company, Taunton, Mass. Weft-straightening apparatus. 2,461,084, Feb. 8.

Robson, Thomas D.: *See*—
Oxley, Peter, Robson, Koebner, and Short.

Roe, Ernest, assignee: *See*—
Schulze, Kurt E.

Roehr, Zbislaw M., assignor to The Roberts Manufacturing Company, New York, N. Y. Hypodermic syringe. 2,461,481, Feb. 8.

Roemer, Louise E., assignee: *See*—
Duerr, Carl F., Jr.
Knam, Francis E.

Roemer, Ralph R., assignee: *See*—
Duerr, Carl F., Jr.
Knam, Francis E.

Rogalla, Robert G., Racine, Wis. Trouser hanger. 2,461,179, Feb. 8.

Rollason, Ernest C. Waltham Abbey, England, assignor to Metal and Thermit Corporation, New York, N. Y. Coated weld rod. 2,461,180, Feb. 8.

Rosenberg, Paul, Brookline, Mass., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Reflecting device. 2,461,181, Feb. 8.

Rosenqvist, Sven O., Rotebro, Sweden, assignor to Svenska Jästfabriks Aktiebolaget. Production of yeast. 2,460,947, Feb. 8.

Ross, Kenneth B., Chicago, Ill. Permeability tuned transformer. 2,461,397, Feb. 8.

Rostoker, Louis, assignor to D. Esser, Toronto, Ontario, Canada. Switch mechanism for signal lights and the like. 2,461,236, Feb. 8.

Rover, Richard H., Roselle, N. J., assignor to Foster Wheeler Corporation, New York, N. Y. Insulating blanket. 2,460,848, Feb. 8.

Roy, Louis P., Montreal, Quebec, Canada. Replacement door handle. 2,461,085, Feb. 8.

Ruhwandl, Dominicus G. S., Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Rectifier discharge tube and sealing the anode leadin. 2,461,237, Feb. 8.

Safety Car Heating and Lighting Company, Inc., The, assignee: *See*—
Schepmoes, Lindsley.

St. Joseph Lead Company, assignee: *See*—
Isbell, William T.

St. Regis Paper Company, assignee: *See*—
Hoppe, Edgar B.

Sander, Hans C., Denver, Colo., assignor to Continental Oil Company, Ponca City, Okla. Pump piston. 2,460,948, Feb. 8.

Sanders, Sanford E. A., Los Angeles, Calif., assignor to Sta-Neet Corporation, Haircutting comb. 2,461,444, Feb. 8.

Sands, Henry F., Cranston, R. I. Portable door fastener. 2,461,398, Feb. 8.

Saunders, Fred B., Tarpon Springs, Fla. Garment hanger. 2,460,905, Feb. 8.

Schaar, Charles H.: *See*—
Erdle, Reiner W., and Schaar.

Schade, Willy, assignor to Eastman Kodak Company, Rochester, N. Y. Four component photographic objective having the first two cemented surfaces convex to the front. 2,461,182, Feb. 8.

Schaefer, Frederic, Pittsburgh, Pa. Brake beam. 2,461,183, Feb. 8.

Schaevitz, Herman, Collingswood, N. J. Resonant differential transformer. 2,461,238, Feb. 8.

Schaffer, Ralph A., East Cleveland, and J. B. Mohler, Euclid, assignors to The Cleveland Graphite Bronze Company, Cleveland, Ohio. Electrodeposition of lead-antimony-tin alloys. 2,461,350, Feb. 8.

Schaus, Victor P., Jackson Heights, assignor to Howe Folding Furniture, Inc., New York, N. Y. Collapsible wheeled containers. 2,461,482, Feb. 8.

Schepmoes, Lindsley, New Haven, Conn., assignor to The Safety Car Heating and Lighting Company, Inc. Lighting apparatus. 2,461,445, Feb. 8.

Schepmoes, Lindsley, New Haven, Conn., assignor to The Safety Car Heating and Lighting Company, Inc. Lighting fixture for passenger vehicles. 2,461,446, Feb. 8.

Schmied, Joseph M., Chicago, Ill. Pressure pump. 2,460,949, Feb. 8.

Schmiedeberg, Frederick W., Portland, Oreg. Package holder. 2,460,906, Feb. 8.

Schmitt, Arthur C.: *See*—
Marisic, Milton M., Schmitt, and Frank.

Schnerb, Isaac: *See*—
Bloch, Rudolf, Goldschmid, Schnerb, and Goldschmidt.

Schnuck, Carl F.: *See*—
Banbury, Fernley H., Comes, and Schunck.

Schroeder, Alfred C., Feasterville, Pa., assignor to Radio Corporation of America. Cathode-coupled wide-band amplifier. 2,460,907, Feb. 8.

Schubert, Alvin E., and H. P. Hintz, assignors to Eastman Kodak Company, Rochester, N. Y. Record handling and copying apparatus. 2,461,186, Feb. 8.

Schulze, Kurt E., assignor to E. Roe, doing business as Coast Wire Company, San Francisco, Calif. Wire tying machine. 2,460,846, Feb. 8.

Schumacher, Edward G., Buffalo, N. Y. Diving board. 2,461,086, Feb. 8.

Schuster, John, Jr., Narberth, Pa., assignor to United Aircraft Corporation, East Hartford, Conn. Cooling turbine rotors. 2,461,239, Feb. 8.

Schwars, Harold W., Mercedes, Tex. Implement balance control link spring. 2,460,847, Feb. 8.

Schwinn, Frank W., Chicago, Ill. Truss rod bracket. 2,461,003, Feb. 8.

Scott, Franklin D.: *See*—
Ball, Charles O., and Scott.

Scott, William M., Jr., Bryn Mawr, assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa. Valve mechanism. 2,460,908, Feb. 8.

Scovill Manufacturing Company, assignee: *See*—
Huelster, Otto J.

Scruggs, Thomas M., Richmond Heights, assignor to Bemis Bros. Bag Company, St. Louis, Mo. Open-mesh fabric selvage. 2,461,240, Feb. 8.

Searle, G. D., & Co., assignee: *See*—
Cusic, John W.

Segal, Samuel: *See*—
Murphy, Edward B., and Segal.

Segal, Samuel, New York, N. Y., assignor to Wilson-Jones Company, Chicago, Ill. Notebook loose-leaf binder. 2,460,850, Feb. 8.

Selbert, Howard F.: *See*—
Tabor, Joseph M., Selbert, and Frohring.

Seippel, Claude, Ennetbaden, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland. Gas turbine installation. 2,461,186, Feb. 8.

Selas Corporation of America, assignee: *See*—
Hess, Frederic O.

Self, Edward S., Bakersfield, assignor to Shell Development Company, San Francisco, Calif. Oil base drilling fluid. 2,461,483, Feb. 8.

Sell, Richard G., and L. E. Thompson, London, England, assignors, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa. Alternating electric current rectifier of the dry surface contact type. 2,461,087, Feb. 8.

Sena, Jurg A., Milwaukee, Wis., assignor to the United States of America as represented by the Secretary of War. Constant speed rotor for turbines. 2,460,849, Feb. 8.

Servel, Inc., assignee: *See*—
Major, Ralph M.
Wallace, Hugh.

Shaffer, Morton J., New York, N. Y. Bellows type envelope having all edges of mouth reinforced. 2,460,909, Feb. 8.

Shaheen, Elias, assignee: *See*—
Dager, Albert.

Shakespeare Company, assignee: *See*—
Shakespeare, William, Jr.

Shakespeare, William, Jr., assignor to Shakespeare Company, Kalamazoo, Mich. Fishing reel. 2,460,950, Feb. 8.

Shann, Oscar A., Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone alarm system. 2,461,241, Feb. 8.

Sheets, Jack H., and M. E. Cushman, Verona, N. J., assignors to Curtiss-Wright Corporation. Propeller hub and associated blades. 2,460,910, Feb. 8.

Shell Development Company, assignee: *See*—
Davies, Elwyn P., and Eggertsen.
Morris, Rupert C., and Snider.
Morris, Rupert C., and Van Winkle.
Morris, Rupert C., Van Winkle, and Shokal.
Self, Edward S.
Shiras, Russell N., Nixon, and Deal, Jr.

Sheppard, William L., Farmington, Mich., assignor to Eureka Williams Corporation. Bag coupling for suction cleaners. 2,460,851, Feb. 8.

Shiras, Russell N., Oakland, A. C. Nixon, Berkeley, and C. H. Deal, Jr., Alameda, assignors to Shell Development Company, San Francisco, Calif. Isomerization of cycloparaffin of nonhydroaromatic structure. 2,460,852, Feb. 8.

Shokal, Edward C.: *See*—
Morris, Rupert C., Van Winkle, and Shokal.

Short, Wallace F.: *See*—
Oxley, Peter, Robson, Koebner, and Short.

Shortt, Charles R., Stamford Township, Niagara Falls, Ontario, Canada. Magnetic toy train. 2,461,088, Feb. 8.

Shuff, Horace M., Tampa, Fla. Bending machine abutment guide. 2,460,951, Feb. 8.

Shullaw, Sherman E., Peoria, Ill. Clutch lever attachment. 2,460,911, Feb. 8.

Siegel, David T., assignee: *See*—
Chanovitz, Harry.

Siesel, Josephine M., executrix: *See*—
Siesel, William M.

Siesel, William M., Morrisville, Pa.; J. M. Seisel, executrix of said W. M. Siesel, deceased. Yielding drive. 2,461,447, Feb. 8.

Silverman, Leslie, Westwood, Mass. Flowmeter. 2,461,351, Feb. 8.

Simer, Jerome, and E. E. Cook, assignors to Paddle Pumps, Inc., Minneapolis, Minn. Rotary pump with elastic rotor sealing rib. 2,460,952, Feb. 8.

Simplex Engineering Company, assignee: *See*—
Raymond, Thomas E.

Sinclair Refining Company, assignee: *See*—
Cole, Eldon B.
Mostek, Jerome L.
Pelzer, Harry L.

Singer Manufacturing Company, The, assignee: *See*—
Turner, Edgar P.

Siple, Paul A., United States Army, Arlington, Va. Waterproof fastening device. 2,460,853, Feb. 8.

Smidth, Leonard, New York, N. Y. Forming granulated synthetic resin compositions. 2,461,089, Feb. 8.

Smith, Edward E.: *See*—
Mewherter, Frank W., and Smith.

Smith, Everett M., Leamington, Ontario, Canada. Street crossing signal device for blind pedestrians. 2,461,448, Feb. 8.

Smith, Jack J., assignee: *See*—
Markham, Thomas A.

Smith, Marvin M., Muncie, Ind., and E. N. Kemler, Birmingham, Ala., assignors to Muncie Gear Works, Inc., Muncie, Ind. Heat pump using deep well for a heat source. 2,461,449, Feb. 8.

Smith, Robert A., Ridley Park, and J. S. Chaya, Springfield, Pa., assignors to American Viscose Corporation, Wilmington, Del. Method and apparatus for slashing yarns. 2,461,090, Feb. 8.

Smith, S., & Sons (England) Limited, assignee: *See*—
Grose, Frederick J.

Smith, Sidney K.: *See*—
MacCutcheon, Edward M., Jr., Windenburg, and Smith.

Smith, Vaughn R., El Cerrito, and D. E. Stevens, Fairfax, assignors to California Research Corporation, San Francisco, Calif. Water-in-oil emulsion paints containing a leafing pigment. 2,461,352, Feb. 8.

Smith, William L., Bremerton, Wash. Shaft taper gauge. 2,460,854, Feb. 8.

Smullin, Louis D.: *See*—
Hollingsworth, Lowell M., and Smullin.

Snider, Alva V.: *See*—
Morris, Rupert C., and Snider.

Societe Anonyme d'Innovations Chimiques dite: Sinnova ou Sadic, assignee: *See*—
Bilnoff, Vsevolod.

Societe Anonyme dite: Societe d'Innovations Chimiques dite: Sinnova ou Sadic, assignee: *See*—
Bert, Léonce, Procofieff, and Bilnoff.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Hartough, Howard D., and Kosak.
Marisic, Milton M., Schmitt, and Frank.

Soday, Frank J., Baton Rouge, La., assignor to The United Gas Improvement Company. Treatment of hydrocarbon resins and products thereof. 2,461,004, Feb. 8.

Soderberg, Carl R., Weston, Mass., assignor to United Aircraft Corporation, East Hartford, Conn. Rotor construction for turbines. 2,461,242, Feb. 8.

Soderberg, Carl R., Weston, Mass., assignor to United Aircraft Corporation, East Hartford, Conn. Diaphragm seal for turbines. 2,461,243, Feb. 8.

Somes, Howard E., Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio. Electromagnetic induction heat-treating apparatus. 2,460,855, Feb. 8.

Southworth, George C., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Ultrahigh frequency transmission. 2,461,005, Feb. 8.

Sowers, Ivan P., Los Angeles, Calif. Trouser presser. 2,461,006, Feb. 8.

Spicer, Manford, Jr., Kansas City, Mo., assignor of twenty-five per cent to G. Johnson, Kansas City, Kans. Cover holder for pressing machines. 2,460,953, Feb. 8.

Spiegelberg, Hans, and G. Rey-Bellet, Basel, Switzerland, assignors to Hoffmann-La Roche Inc., Nutley, N. J. Manufacture of 2-amino-6-hydroxy-8-(hydroxymethyl) pteridine. 2,461,503, Feb. 8.

Splittgerber, George H., Whiting, Ind., assignor to Sinclair Refining Company, New York, N. Y. Refining turpentine. 2,461,007, Feb. 8.

Squibb & Sons, E. R., assignee: *See*—
Holaday, Horace A.
Lott, William A., Bernstein, and Sterns.

Stahl, William F., assignee: *See*—
Collins, Fred V.

Standard Oil Development Company, assignee: *See*—
Leeseemann, Charles J. G.
Mikeska, Louis A.
Ogorzaly, Henry J., and Voorhies, Jr.
Patterson, John A.
Vanderbilt, Byron M., and Bascom.
Vlies, Prentiss S., and Camp.
Young, David M., and Britton.

Standard Railway Equipment Manufacturing Company, assignee: *See*—
Gilpin, Garth G.
Thompson, Alfred L.

Sta-Neet Corporation, assignee: *See*—
Sanders, Sanford E. A.

Stanke, Frank W., Milwaukee, and L. F. Bender, assignors to The Universal Milking Machine Company, Waukesha, Wis. Suspension hanger. 2,460,856, Feb. 8.

Stanley, Joseph R.: *See*—
Jones, Basil E., and Stanley.

Stanton, Earl G., Glencoe, Ill., assignor to Libby, McNeill & Libby. Advertising device for containers. 2,461,244, Feb. 8.

Stearns Magnetic Mfg. Co., assignee: *See*—
Stearns, Roswell H.

Stearns, Roswell H., Wauwatosa, assignor to Stearns Magnetic Mfg. Co., Milwaukee, Wis. Magnetic separator. 2,461,008, Feb. 8.

Steel Heddle Manufacturing Company, assignee: *See*—
Kaufmann, John J.

Steele, P. I.: *See*—
Birk, Paul M., and Steele.

Stein, Hall & Co., Inc., assignee: *See*—
Nelson, Harley E.

Steiner, Edward C.: *See*—
Francisco, William H., Jr., Steiner, and Hill.

Steinmann, Willy, Zurich-Wipkingen, assignor to Patelhold Patentverwertungs-& Elektro-Holding A.-G., Glarus, Switzerland. Direction finding apparatus. 2,461,187, Feb. 8.

Stelzer, Madelon J.: *See*—
Stelzer, William and M. J.

Stelzer, William and M. J., Summit, N. J. Garden cart. 2,461,353, Feb. 8.

Stephenson, Hugh M., Fort Wayne, Ind., assignor to General Electric Company. Combination coupling and overload cam operated device. 2,461,298, Feb. 8.

Stephenson, Richard G., and W. M. Bush, Poquonock Bridge, Conn., assignors to the United States of America as represented by the Secretary of the Navy. Transformer network. 2,461,091, Feb. 8.

Sterling, George H., Minneapolis, Minn. Oar protector. 2,461,092, Feb. 8.

Sterns, Barbara: *See*—
Lott, William A., Bernstein, and Sterns.

Stevens, Don E.: *See*—
Smith, Vaughn R., and Stevens.

Sticelber, Merlin A., Kansas City, Mo., assignor to Quik-Seal, Inc. Refrigerating means for dough mixers. 2,461,450, Feb. 8.

Stone, Carl R., assignor to Crane Co., Chicago, Ill. Fastening means for direct lift waste fittings or the like. 2,461,354, Feb. 8.

Stoner, Forrest H., Dixon, Mo. Self-propelled tree felling and log cutting saw rig. 2,461,188, Feb. 8.

Stookey, Robert H.: *See*—
Teter, John W., and Stookey.

Strausser, Herbert, New York, N. Y. Confectionery. 2,461,399, Feb. 8.

Streszynski, George J., Chicago, Ill., assignor to The De Laval Separator Company, New York, N. Y. Centrifuge for the separation of serum from cheese constituents. 2,461,129, Feb. 8.

Stromberg-Carlson Company, assignee: *See*—
Vincent, Andrew W.

Stuart, Joseph II, Wilmington, Del., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Cutting machine. 2,460,954, Feb. 8.

Stueland, Harold M., East Moline, assignor to Deere & Company, Moline, Ill. Shovel loader. 2,461,093, Feb. 8.

Sturbelle, Lucien C., New York, N. Y. Preparation of magnesium from its ores. 2,461,009, Feb. 8.

Submarine Signal Company, assignee: *See*—
Batchelder, Laurence.

Sullivan, Clarence E., Atlanta, Ga. Tire deflation switch. 2,461,299, Feb. 8.

Sun Electric Corporation, assignee: *See*—
Nilson, James H., and Westberg.

Sun Oil Company, assignee: *See*—
Bates, John R.

Sun Rubber Company, The, assignee: *See*—
Rempel, Dietrich G.

Supple, Gilbert, Waban, Mass. Transversely rigid, longitudinally flexible, internal sole element for footwear. 2,461,355, Feb. 8.

Sus, Anton, Jr.: *See*—
Sus, Joseph E. and Anton, Jr.

Sus, Joseph E. and Anton, Jr., Racine, Wis. Automatic fish pole holder. 2,461,356, Feb. 8.

Svenska Jästfabriks Aktiebolaget, assignee: *See*—
Rosenqvist, Sven O.

Sweat, Max L., Salt Lake City, Utah. Operating table. 2,460,857, Feb. 8.

Swift & Company, assignee: *See*—
Coad, Frederic J.
McKee, Harry H.
Piskur, Michael M., and Higgins.

Switzer, Joseph L., assignee: *See*—
de Forest, Taber.

Switzer, Robert C., assignee: *See*—
de Forest, Taber.

Szaj, Casimir C., Hales Corners, Wis. Rosary unit. 2,461,130, Feb. 8.

Tabor, Joseph M., East Islip, N. Y., H. F. Selbert, Mason, Mich., and P. R. Frohring, Bainbridge, assignors to General Biochemicals Inc., Chagrin Falls, Ohio. Conditioning a hard soap for solvent extraction. 2,461,300, Feb. 8.

Tawney, Pliny O., Passaic, N. J., assignor to United States Rubber Company, New York, N. Y. Polymerizable chemicals. 2,461,301, Feb. 8.

Taylor, Nelson W., White Bear Lake, and R. C. Murray, Bald Eagle Lake, assignors to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Carbon powder method of making glass beads. 2,461,011, Feb. 8.

Taylor, Robert A.: *See*—
Morey, William L., and Taylor.

Taylor, Robert J., Claymont, assignor to American Viscose Corporation, Wilmington, Del. Making lightweight filamentous structures. 2,461,094, Feb. 8.

Technical Specialties Company, assignee: *See*—
Decker, William E.

Teter, John W., Chicago, Ill., and R. H. Stookey, Whiting, Ind., assignors to Sinclair Refining Company, New York, N. Y. Recovery of ammonia. 2461,010, Feb. 8.

Texaco Development Corporation, assignee: *See*—
Goldsby, Arthur R.

Texas Company, The, assignee: *See*—
Atwell, Harold V.
Fairbairn, George C.
Kemp, Lebbeus C., Jr.
Toettcher, Fred C., and Coley.

Thiel, Leo S., Des Plaines, Ill. Mop cleaner and holder. 2,461,189, Feb. 8.

Tholstrup, Henry L., Rochester, assignor to International Business Machines Corporation, New York, N. Y. Signal-controlled printing apparatus. 2,461,451, Feb. 8.

Thoma, Henry G.: *See*—
Kratz, John A., and Thoma.

Thomas, Theodore R., Wilkes-Barre, Pa. Tackless display holder. 2,461,400, Feb. 8.

Thompson, Alfred L., Munster, Ind., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill. Assembly for supporting refrigerant containers in refrigerator cars. 2,461,012, Feb. 8.

Thompson, Howard A., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Code detecting means. 2,461,452, Feb. 8.

Thompson, Leslie E.: *See*—
Sell, Richard G., and Thompson.

Thompson, Ransom S., East Hampton, assignor to United Aircraft Corporation, East Hartford, Conn. Mounting of collector and free-piston gas generators. 2,461,245, Feb. 8.

Thompson, Thomas R., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Pyrylium dye salts as filter and antihalation dyes in photographic materials. 2,461,484, Feb. 8.
Thompson, Thomas R., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Xanthylium dye salts as filter and antihalation dyes in photographic materials. 2,461,485, Feb. 8.
Thompson, William: *See*—
Bletso, Bruce N., and Thompson.
Thoreau, Hermann S. A., assignee: *See*—
Piton, Charles.
Thropp, Wm. R., & Sons Co., assignee: *See*—
Wilkes, William H.
Thulin, Ivan V., Upper Darby, Pa. Chuck. 2,460,858, Feb. 8.
Times Facsimile Corporation, assignee: *See*—
Chiger, Arthur.
Todd, Francis C., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Electrical circuit. 2,461,131, Feb. 8.
Todd, Paul H., Kalamazoo, Mich. Inhaler. 2,460,955, Feb. 8.
Toettcher, Fred C., Fishkill, assignor to The Texas Company, New York, N. Y. Manufacture of lubricating oil. 2,461,454, Feb. 8.
Toettcher, Fred C., Fishkill, assignor to The Texas Company, New York, N. Y. Manufacture of lubricating oil. 2,461,455, Feb. 8.
Toettcher, Fred C., Fishkill, and J. R. Coley, Beacon, assignors to The Texas Company, New York, N. Y. Manufacture of lubricating oil. 2,461,453, Feb. 8.
Togstad, C. I., Company, assignee: *See*—
Henderson, Scott W.
Tompkins, J. Everette, assignee: *See*—
Duerr, Carl F., Jr.
Knam, Francis E.
Trail, Herbert H., assignor to Fuller Manufacturing Company, Kalamazoo, Mich. Combined friction and jaw clutch. 2,460,956, Feb. 8.
Trebes, Bruno M. A.: *See*—
Adair, Frank M., Brunner and Trebes.
Trimble Nurseryland Furniture, Inc., assignee: *See*—
De Puy, Charles T., and Baxter.
Trombley, Roy, Presque Isle, Maine. Hoisting device. 2,461,401, Feb. 8.
Truhlar, John, Clarendon Hills, and A. A. Pantsios, Chicago, assignors to R. F. Hlavaty, Cicero, Ill. Flameproofing. 2,461,302, Feb. 8.
Trumpler, Paul R., Westfield, assignor, to The M. W. Kellogg Company, Jersey City, N. J. Gas separation including impurity removing steps. 2,460,859, Feb. 8.
Truxell, Andrew J., Washington, D. C. Attaching means for watches. 2,461,095, Feb. 8.
Turner, Edgar P., Fanwood, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Electrical transmitter for driving sewing machines and the like. 2,461,504, Feb. 8.
Union Carbide & Carbon Corporation, assignee: *See*—
Koopman, Kenneth H.
Union Switch & Signal Company, The, assignee: *See*—
Johnston, Allan T., and Jerome.
Nicholson, Frank H.
Sell, Richard G., and Thompson.
Thompson, Howard A.
United Aircraft Corporation, assignee: *See*—
Bodger, Walter K.
Meitzler, Donald E.
Schuster, John, Jr.

Ogorsaly, Henry J., and Voorhies, Jr.
Vornado Trust, The, assignee: *See*—
Odar, Ralph K.
Vroom, Harold B., assignor to Veeder-Root Incorporated, Hartford, Conn. Coin actuated electrical switch. 2,461,486, Feb. 8.
Wagner, Arthur E., and F. E. Camp, assignors to Plas-Tk-Bits, Inc., Meadville, Pa. Bridle bit. 2,460,912, Feb. 8.
Wagner, Hans P., Akron, Ohio. Self-sealing gasoline tank. 2,461,096, Feb. 8.
Wagstaff, George, Long-Eaton, England, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Holder for thermionic valves and like electrical devices and securing it to supports. 2,461,487, Feb. 8.
Wallace, Frank C., assignor to H. H. Heibush, Los Angeles, Calif. Nut anchor. 2,461,097, Feb. 8.
Wallace, Hugh, Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Refrigerator latch. 2,461,361, Feb. 8.
Walsh, Philip J., assignor to Agency Electric Co., San Francisco, Calif. Electric power system. 2,461,133, Feb. 8.
Walters, Harold G., United States Army, Richmond, Ind. Liquid sprayer. 2,460,861, Feb. 8.
War, United States of America as represented by the Secretary of, assignee: *See*—
Cook, John C.
Goff, Milton R.
Holden, Lawrence T.
Hollingsworth, Lowell M., and Smullin.
Rosenberg, Paul.
Senn, Jurg A.
Stuart, Joseph, II.
Wasson, Zack B., Dallas, Tex. Ship fender. 2,460,913, Feb. 8.
Watson, Robert P., Schenectady, N. Y., assignor to General Electric Company. Grid structure for electric discharge devices. 2,461,303, Feb. 8.
Wayne Pump Company, The, assignee: *See*—
Dahlem, J., and Gordon.
Weatherly, Morgan G., Mount Upton, assignor to Bendix Aviation Corporation, New York, N. Y. Ignition apparatus. 2,461,098, Feb. 8.
Weber, Henry, Cleveland, assignor of one-fourth to H. A. Hildebrand, Brunswick, Ohio. Drapery crane. 2,461,457, Feb. 8.
Weiman Company, The, assignee: *See*—
Allington, George H.
Weiss, Albert, Zurich, assignor to Machine Tool Works Oerlikon Administration Company, Zurich-Oerlikon, Switzerland. Ejector for firearms. 2,460,862, Feb. 8.
Weiss, Herbert K., Camp Davis, N. C. Fire control. 2,460,863, Feb. 8.
Weissbrodt, Jean: *See*—
Broido, Jacques J., and Weissbrodt.
Welch, Cline H., assignor to The Alloy Cast Steel Company, Marion, Ohio. Metal-casting mold. 2,461,099, Feb. 8.
Welsh, Matilda D., Ladue, Mo. Canopy frame. 2,461,014, Feb. 8.
Wendt, Robert H., assignee: *See*—
Dally, Roy.
Westberg, Vernon C.: *See*—
Nilson, James H., and Westberg.
Western Electric Company, Incorporated, assignee: *See*—
Adair, Frank M., Brunner, and Trebes.
Bureau, Arthur A.
Clifford, Harry W.
Weyenberg, John T., Kimberly, assignor to Paper Patents Company, Neenah, Wis. Web severing method and apparatus. 2,461,246, Feb. 8.
White, Halbert C.: *See*—
Britton, Edgar C., White, and Moyle.
White, Harold L., San Marino, Calif., assignor to American Pipe and Construction Co. Adapter joint for pipes. 2,461,100, Feb. 8.
White, Harry B., Canton, assignor to The Hoover Company, North Canton, Ohio. Handle control for suction cleaners and the like. 2,461,458, Feb. 8.
Whitehead, Leslie T., Farnborough, assignor to Power Jets (Research and Development) Ltd., London, England. Rotor for multistage axial flow compressors and turbines. 2,461,402, Feb. 8.

Whiteley, Fred H., Kansas City, Kans. Motion-picture projecting system. 2,460,864, Feb. 8.
Whitfield, Joseph E., Hamilton, Ohio. Housing joint. 2,460,957, Feb. 8.
Whiting Corporation, assignee: *See*—
Cress, William C.
Wilcox, John E., Jr., Los Angeles, Calif. Photographic synchronizer tester. 2,461,493, Feb. 8.
Wild, Otto, Jr., West Hartford, assignor to Veeder-Root Incorporated, Hartford, Conn. Price wheel setting mechanism. 2,461,488, Feb. 8.
Wilkes, William H., Florence, assignor to Wm. R. Thropp & Sons Co., Trenton, N. J. Roll grinder and polisher. 2,461,459, Feb. 8.
Williams, Vera P., assignee: *See*—
Henderson, Scott W.
Williams, Walter R., Jonesboro, Ark. Camper's box having removable table-closure and pivoted table-top-extension leaves. 2,460,958, Feb. 8.
Wills, Reuben P., Macon, Ga. Airplane kite. 2,460,959, Feb. 8.
Wilson, Charles E., Jr., Denver, Colo., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Manufacture of trichloromethyl diarylmethanes. 2,460,865, Feb. 8.
Wilson, Donald G., assignor to The Wilson Manufacturing Company, Stratford, Conn. Quick-acting securing means for water-tight doors. 2,460,961, Feb. 8.
Wilson, Harold M.: *See*—
Peterson, Vincent C. J., and Wilson.
Wilson, John H., Bay Shore, N. Y. Control valve. 2,461,304, Feb. 8.
Wilson-Jones Company, assignee: *See*—
Murphy, Edward B., and Segal.
Segal, Samuel.
Wilson Manufacturing Company, The, assignee: *See*—
Wilson, Donald G.
Wilson, Robert, assignor to Holland Furnace Company, Holland, Mich. Draft control damper. 2,460,960, Feb. 8.
Windenburg, Dwight F.: *See*—
MacCutcheon, Edward M., Jr., Windenburg, and Smith.
Winkel, Fred M., Phillipsburg, Pa., assignor to R. L. Evans, New York, and E. G. McDonough, Yonkers, N. Y. Hair-waving unit. 2,461,101, Feb. 8.
Winn, William, Monkseaton, England, assignor to Victor Products (Wallsend), Limited. Rotary bit for drilling coal and rock. 2,461,305, Feb. 8.
Winnek, Philip S., and H. E. Faith, Indianapolis, Ind., assignors to Allied Laboratories, Inc., Kansas City, Mo. N-acylphenothiazines. 2,461,460, Feb. 8.
Withrow, Andrew H., Cincinnati, Ohio. Can opener and reshaper. 2,461,015, Feb. 8.
Wobbe, Delbert E., Maywood, and W. F. Pilinik, Harvey, Ill., assignors to American Can Company, New York, N. Y. Can body solder fluxing mechanism. 2,460,866, Feb. 8.
Wolff, Frederick J., Jr., assignor to Eastman Kodak Company, Rochester, N. Y. Adjustable mount for optical elements. 2,461,100, Feb. 8.
Wolfskill, John M., assignor to Briley Electric Company, Erie, Pa. Crystal drier. 2,461,489, Feb. 8.
Wood, Clifford: *See*—
Haddock, Norman H., and Wood.
Wormell, Robert L., and A. F. Millidge, Coventry, and C. L. Knight, Kenilworth, assignors to Courtaulds Limited, London, England. Extraction of protein from seeds. 2,461,404, Feb. 8.
Wormull, George, Bergenfield, N. J. Utility cover. 2,461,247, Feb. 8.
Wright Aeronautical Corporation, assignee: *See*—
Francisco, William H., Jr., Steiner, and Hill.
Hill, Henry C., and Francisco.
Palen, Peter H.
Wright, Alva T., Fort Worth, Tex. Vehicle chocking device. 2,461,248, Feb. 8.
Wright, Ben W., Boonton, N. J., assignor to Curtiss-Wright Corporation. Welding guide. 2,460,914, Feb. 8.
Ximenes, Manuel R., Fanwood, J. H. Ferguson, Somerville, and S. C. Bunce, Plainfield, N. J., assignors to Johns-Manville Corporation, New York, N. Y. Plastic insulation and manufacture. 2,460,962, Feb. 8.
Young, David W., Roselle, and C. E. Britton, Elizabeth, N. J., assignors to Standard Oil Development Company. Preparation of 2-3 methyl butadiene 1-3. 2,461,362, Feb. 8.
Young, Frank G., Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation. Production of enol acetates. 2,461,016, Feb. 8.
Young, Frank G., Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation. Production of enol acetates. 2,461,017, Feb. 8.
Young, Irvin L., Chicago, Ill. Casing closure. 2,460,963, Feb. 8.
Young, L. A., Spring & Wire Corporation, assignee: *See*—
Ludwig, Walter.
Young Radiator Company, assignee: *See*—
Christensen, Donald W.
Young, Ralph D., Morden, England. Floating body game apparatus. 2,461,461, Feb. 8.
Zahn, Otto E., Penn Township, St. Joseph County, Ind. Leather skiver. 2,461,462, Feb. 8.
Zappacosta, Amedeo D., Havertown, Pa., assignor to Radio Corporation of America. Electronic frequency modulator. 2,461,364, Feb. 8.
Zenith Radio Corporation, assignee: *See*—
Adler, Robert.
Zim Manufacturing Company, assignee: *See*—
Berkman, Herbert A.
Zimmerman, Charles F., Braddock Heights, assignor of one-half to W. J. Davis, Frederick, Md. Valve closure. 2,460,867, Feb. 8.
Zommer, William P., Lake Zurich, Ill. Dispenser with measuring chamber of adjustably variable capacity. 2,461,363, Feb. 8.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 8TH DAY OF FEBRUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Corn harvester. Andrews, Norman F., and R. L. Dort, assignors to Deere & Company. Re. 23,083, Feb. 8.

LIST OF DESIGN INVENTIONS

Ash receiver, Pin-up. H. W. Louis. 152,629, Feb. 8.
Ash tray. A. J. Schwisow. 152,656, Feb. 8.
Ash tray. N. K. Tschirley. 152,664, Feb. 8.
Awning. D. D. Kobbe. 152,622, Feb. 8.
Baby bunting. E. Brande. 152,586, Feb. 8.
Band, Wrist watch. M. Sklar. 152,658, Feb. 8.
Bank, Coin. T. E. Orr. 152,646, Feb. 8.
Base, Lamp. H. Gogolick and E. Meyer. 152,609, Feb. 8.
Base or pedestal for chairs. H. A. Penchoen. 152,648, Feb. 8.
Beverage cooler, Portable. G. M. Acton. 152,580, Feb. 8.
Block, Sanding. L. Gerlinger. 152,607, Feb. 8.
Bottle. J. B. Mayfield. 152,634, Feb. 8.
Bottle, Perfume. D. Gibson. 152,608, Feb. 8.
Bracket, Appliance. H. J. Kline. 152,621, Feb. 8.
Bracket or the like, Wall. P. J. Cronen. 152,598–9, Feb. 8.
Bus cart or similar article. W. E. Williams. 152,666, Feb. 8.
Cabinet or similar article. S. Ben-Ari. 152,585, Feb. 8.
Cap, Container. J. Kronman. 152,625, Feb. 8.
Case, Combination portable electric motion-picture camera and battery. C. P. Lent. 152,627, Feb. 8.
Case, Lady's hat and shoe. N. D. Rinehart. 152,653, Feb. 8.
Case, Measuring instrument. G. Banever. 152,582, Feb. 8.
Casing, Vehicle signal. M. Steigel. 152,663, Feb. 8.
Chain for a bracelet or similar article, Expansible. A. W. Koppell. 152,623, Feb. 8.
Cigarette holder and ash receiver, Combined. H. Krohnengold. 152,624, Feb. 8.
Cleaning machine, Sewer. J. J. Rausch. 152,651, Feb. 8.
Control device, Pedal. E. C. Caudill. 152,594, Feb. 8.
Dispenser, Needle. P. T. Marinack and I. P. Dooley. 152,630, Feb. 8.
Dispenser, Tissue sheet. A. C. H. Weiss. 152,665, Feb. 8.
Dispensing machine. A. D. Brundage. 152,588, Feb. 8.
Display fixture. E. C. Dimling. 152,602, Feb. 8.
Display lamp or the like, Decorative. H. M. Carey. 152,592, Feb. 8.
Earring and perfume container, Combined. P. W. Fanelli. 152,604, Feb. 8.
Face plate for a dispensing machine. A. D. Brundage. 152,587, Feb. 8.
Figurine, Owl. R. C. Smith. 152,662, Feb. 8.
Fish gaff, Safety. H. Cederblad. 152,595, Feb. 8.
Fish lure. S. J. Simon. 152,657, Feb. 8.
Fishing lure. T. W. Messick. 152,636, Feb. 8.
Fire extinguisher. I. Nurkiewicz. 152,645, Feb. 8.
Fire extinguisher. A. B. Phister. 152,650, Feb. 8.
Fire extinguisher, Portable hand. A. B. Guise and T. W. Johnson. 152,612, Feb. 8.
Flashlight. R. F. Becker. 152,584, Feb. 8.
Girdle. P. Amyot. 152,581, Feb. 8.
Handle for a brush or similar article. A. Rodriques. 152,654, Feb. 8.
Handle unit, Cooking range. L. F. Covey. 152,597, Feb. 8.
Hedge clipper, Rotary. R. W. Perdew. 152,649, Feb. 8.
Holder, Florist's wire. H. S. Rossell. 152,655, Feb. 8.
Holder, Soap. E. L. Kibler. 152,613, Feb. 8.
Jacket, Bed. M. E. Smith. 152,661, Feb. 8.
Knife. S. Maugham. 152,633, Feb. 8.
Lamp, Bubbling candle. J. K. Castell. 152,593, Feb. 8.
Leather or similar article of manufacture. F. H. Becker and L. F. Peabody. 152,583, Feb. 8.
Lighting device. J. Nathan and J. C. Haberman. 152,642, Feb. 8.
Mallet. G. Pavlinets. 152,647, Feb. 8.
Meter, Moisture. C. N. Kimball, W. R. Lewis, and H. A. Strecker. 152,619, Feb. 8.
Nozzle and control handle for dry chemical fire extinguisher, Combined. A. B. Guise and T. W. Johnson. 152,611, Feb. 8.
Nozzle attachment for vacuum cleaners. W. F. Burri. 152,589, Feb. 8.
Pad, Knee. B. Mechur and W. Riedler. 152,635, Feb. 8.
Panel for an electronic timer or similar article. J. W. Lauricella. 152,626, Feb. 8.
Panel, Instrument. W. S. Fletcher. 152,605, Feb. 8.
Panties, Baby. E. Foreman. 152,606, Feb. 8.
Plate, Hot-water. E. S. Zelsel. 152,667, Feb. 8.
Plug, Heater. A. H. Massey. 152,631, Feb. 8.
Polishing machine, Floor. W. E. Holt. 152,617, Feb. 8.
Rack, Tie. H. M. Canner. 152,591, Feb. 8.
Range, Cooking. L. F. Covey. 152,596, Feb. 8.
Ring, Finger. F. P. Kinsley. 152,620, Feb. 8.
Saw and cleaver, Combination. P. F. Danielson. 152,600, Feb. 8.
Shaker, Combination salt and pepper. M. S. Dillon. 152,601, Feb. 8.
Shaker, Condiment. H. E. Musselman and W. H. Buck. 152,641, Feb. 8.
Skirt, Plaited. E. Donath. 152,603, Feb. 8.
Stocking, Lady's. W. Nebel. 152,643–4, Feb. 8.
Stroller body. F. T. Regan. 152,652, Feb. 8.
Textile fabric. W. Mitschke. 152,637–40, Feb. 8.
Textile fabric or similar article. E. I. Hanson. 152,613–14, Feb. 8.
Toy. N. K. Masten. 152,632, Feb. 8.
Toy airplane. E. H. Green. 152,610, Feb. 8.
Toy animal figure. M. C. Levich. 152,628, Feb. 8.
Transformer, Electrical heating and welding. H. B. Smith and G. A. Dolan. 152,660, Feb. 8.
Tray or article of analogous nature, Baby's food. A. Sloan. 152,659, Feb. 8.
Waxer, Floor. E. C. Hartley. 152,616, Feb. 8.
Weather vane. O. D. Harbert. 152,615, Feb. 8.
Weight-lifting amusement device or the like, Carnival. P. Campbell and E. G. Fox, Sr. 152,590, Feb. 8.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 8TH DAY OF FEBRUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Absorber, Tension. L. Kneebone. 2,461,427, Feb. 8.
Accounting apparatus. A. H. Dickinson. 2,461,412, Feb. 8.
Accounting machine, Record controlled. R. E. Page and H. S. Beattie. 2,461,438, Feb. 8.
Accumulator injection system. D. E. Meitsler. 2,461,222, Feb. 8.
Acrylonitrile, Production of. E. L. Carpenter and H. S. Davis. 2,461,492, Feb. 8.
Acrylonitrile-vinylidene chlorofluoride copolymers. F. G. Pearson. 2,460,844, Feb. 8.
Acylating furan. H. D. Hartough and A. I. Kosak. 2,460,822, Feb. 8.
Acylating furan. H. D. Hartough and A. I. Kosak. 2,460,825, Feb. 8.
Acylating furans. H. D. Hartough and A. I. Kosak. 2,460,823–4, Feb. 8.
Adapter, Photographic film pack. A. E. Little. 2,460,994, Feb. 8.
Adjustable clamp. A. A. Radtke. 2,461,234, Feb. 8.
Advertising device for containers. E. G. Stanton. 2,461,244, Feb. 8.
Aim indicator. R. M. McQuitty. 2,461,122, Feb. 8.
Air cleaner. E. Palkal. 2,461,395, Feb. 8.
Air conditioning device for beds O. Mitchell. 2,461,432, Feb. 8.
Aircraft, Fluid propelled and controlled. C. A. Neumann and H. H. Baca. 2,461,435, Feb. 8.
Aircraft landing gear. C. R. Livermon. 2,461,288, Feb. 8.
Aircraft structural limit indicator. W. L. Gray. 2,461,210, Feb. 8.
Alarm device for milking machines. A. G. Perkins. Feb. 8.
Alarm system, Telephone. O. A. Shann. 2,461,241, Feb. 8.
Alcohol plasticized with an amine adduct of butadiene cyclic sulfone, Polyvinyl. C. W. Mortenson. 2,460,995, Feb. 8.
Aliphatic sulfonic acids and esters thereof, Obtainable of. L. Bert, M. Procofieff, and V. Blinoff. 2,460,968, Feb. 8.
Alloy suitable for use at high temperatures. S. O. Fisher. 2,460,817, Feb. 8.
Alternating current synchronous transmission. E. Granat. 2,461,053, Feb. 8.
Aluminum and aluminum alloy surfaces corrosion resistant, Rendering. W. R. Meyer. 2,460,897, Feb. 8.
Ammonia, Recovery of. J. W. Teter and R. H. Stookey. 2,461,010, Feb. 8.
Amplifier and revolution accumulator, Torque. B. Cooper and A. F. Hohmann. 2,460,808, Feb. 8.
Amplifier, Cathode-coupled wide-band. A. C. Schroeder. 2,460,907, Feb. 8.
Amplifier system, Magnetic. A. S. FitsGerald. 2,461,046, Feb. 8.
Anchor, Nut. F. C. Wallace. 2,461,097, Feb. 8.
Animal poke. J. H. Beard. 2,461,255, Feb. 8
Antenna R. A. Braden. 2,460,869, Feb. 8.
Antioxidant for fats. M. M. Piskur and J. W. Higgins. 2,461,080, Feb. 8.
Apparatus for atomizing metal. G. J. LeBrasse and H. E. Francis. 2,460,993, Feb. 8.
Apparatus for constructing vibration-compacted concrete slabs. A. E. Miller, G. K. Viall, and R. F. Lindow. 2,461,500, Feb. 8.
Apparatus for developing photographic paper strips. V. J. Forgett. 2,461,419, Feb. 8.
Apparatus for measuring humidity. P. Cilley. 2,461,310, Feb. 8.
Apparatus for molding. F. M. Adair, A. J. Brunner, and B. M. A. Trebes. 2,460,964, Feb. 8.
Apparatus for resoling rubber boots and the like J. W. La Follette. 2,460,832, Feb. 8.
Apparatus for the top separation of nitrotoluene. M. H. Carl. 2,461,141, Feb. 8.
Apparatus for treating material with a gas. A. W. Arnold. 2,461,134, Feb. 8.
Aqueous alcohol extracts of mahogany sulfonates, Distillation of. E. B. Cole. 2,461,371, Feb. 8.
Aqueous azeotropic mixtures, Separating. J. L. M. Frèjacques. 2,461,048, Feb. 8.
Arrangement for fuel injection in a free-piston unit. D. E. Meitsler. 2,461,223, Feb. 8.
Arresting the cracking of the plates of welded ships. E. M. MacCutcheon, Jr., D. F. Windenburg, and S. K. Smith. 2,460,893, Feb. 8.
Article conveying mechanism. J. Hohl, R. K. Belnap, Jr., and H. A. Barnby. 2,461,277, Feb. 8.
Article of furniture. R. E. Logue. 2,461,385, Feb. 8.
Arylmethylmercapto aldehydes. W. H. Vinton. 2,461,013, Feb. 8.
Assembly for supporting refrigerant containers in refrigerator cars. A. L. Thompson. 2,461,012, Feb. 8.
Attaching means for watches. A. J. Truxell. 2,461,095, Feb. 8.
Auto vacuum cleaner. H. A. R. Peterman. 2,461,274, Feb. 8.
Automatic fish pole holder. J. E. Sus and A. Sus, Jr. 2,461,356, Feb. 8.
Bag: *See*—
Multiply pasted end bag.
Bag with sealed inner ply, Multiply pasted end. E. B. Hoppe. 2,460,885, Feb. 8.
Balloon mold. E. E. Habib and D. G. Greenlie. 2,461,270, Feb. 8.
Balloon or similar article and making the same, Meteorological. D. J. Miller. 2,461,072, Feb. 8.
Balloons, Manufacturing. E. E. Habib and D. G. Greenlie. 2,461,271, Feb. 8.
Band, Flexible and/or elastic self-locking. R. P. Ellis. 2,461,201, Feb. 8.
Bandage, Abdominal. L. Goforth. 2,461,208, Feb. 8.
Bath stand and dressing table, Infant's folding. C. T. De Puy and W. C. Baxter. 2,461,260, Feb. 8.
Beam, Brake. F. Schaefer. 2,461,183, Feb. 8.
Beta-trichloroethane, Production of. O. W. Cass. 2,461,142, Feb. 8.
Bin, Sheet receiving and aligning. A. Dager. 2,460,876, Feb. 8.
Binder, Loose-leaf. J. A. Gibson. 2,461,050, Feb. 8.
Binder, Notebook loose-leaf. S. Segal. 2,460,850, Feb. 8.
Binocular shutter mechanism. L. E. Hamilton. 2,461,379, Feb. 8.
Bis-glycolic acid amides of 2,6-diamino-pyridines, and preparing them. W. A. Lott, J. Bernstein, and B. Sterns. 2,461,119, Feb. 8.
Bit: *See*—
Bridle bit.
Bit for drilling coal and rock, Rotary. W. Winn. 2,461,305, Feb. 8.
Blade construction, Sorter pocket and chute. E. A. Ford. 2,461,418, Feb. 8.
Blanket, Insulating. R. H. Rover. 2,460,848, Feb. 8.
Board: *See*—
Diving board.
Boiler: *See*—
Steam and hot water boiler.
Bolster suspension, Railroad car truck. G. T. R. Hunter. 2,461,382, Feb 8.
Bolt, Lock. R. Kemmet. 2,461,284, Feb. 8.
Booth, Safety. J. W. Beretta. 2,460,917, Feb. 8.
Bottle carrier. G. L. Dreher. 2,461,317, Feb. 8.
Box: *See*—
Stereotype plate casting box.
Box. W. K. Bruckhauser. 2,460,870, Feb. 8.
Box having removable table-closure and pivoted table-top-extension leaves, Campers'. W. R. Williams. 2,460,958, Feb. 8.
Brace installation, Sway. P. M. Birk and F. I. Steele. 2,461,406, Feb. 8.
Bracket: *See*—
Truss rod bracket.
Brake and spinner lever, Rotor. C. McDermott. 2,460,839, Feb. 8.
Brake drive, Press. J. B. Castle. 2,461,034, Feb. 8.
Brake for torque converters, One-way. R. Lapsley and B. L. Mills. 2,461,217, Feb. 8.
Braking mechanism for rail vehicles. H. F. Flowers. 2,461,263, Feb. 8.
Bridge, Radio-frequency. H. W. Kline. 2,461,286, Feb. 8.
Bridle bit. A. E. Wagner and F. E. Camp. 2,460,912, Feb. 8.
Broaching apparatus and method. L. B. Green. 2,461,320, Feb. 8.
Burner construction, Gas. M. W. Hoenshell. 2,461,420, Feb. 8.
Butter by cooling cream of high concentration, Producing. H. O. Lindgren. 2,461,117, Feb. 8.
Button, Plastic. O. J. Huelster. 2,461,324, Feb. 8.
Cabinet: *See*—
Knockdown sheet metal cabinet.
Cable contact, Four-way. E. R. Goldfield. 2,461,268, Feb. 8.
Cable stitch knitting. J. Fontaine. 2,461,204, Feb. 8.
Camera objective mounting. J. J. Broido and J. Weissbrodt. 2,461,357, Feb. 8.

Canopy frame. M. D. Welsh. 2,461,014, Feb. 8.
Capacitor assembly, Motor starting. G. V. Peck. 2,460,908, Feb. 8.
Carbon powder method of making glass beads. E. P. Davis and H. Heltzer. 2,460,977, Feb. 8.
Carbon powder method of making glass beads. N. W. Taylor and R. C. Murray. 2,461,011, Feb. 8.
Carburetor. P. M. Cummings, Sr. 2,461,411, Feb. 8.
Carburetor float mechanism. R. M. Heintz. 2,461,274, Feb. 8.
Card and bib, Combination greeting. T. G. Mack. 2,461,430, Feb. 8.
Carrier: *See*—
Bottle carrier.
Cart, Garden. W. and M. J. Steiner. 2,461,353, Feb. 8.
Case: *See*—
Engine shipping case. Shipperproof meat case.
Manicure case.
Case and the like, Vanity. W. Jacobus. 2,461,421, Feb. 8.
Case for men's suits and women's dresses on hangers, Wardrobe. S. L. Kleber. 2,461,216, Feb. 8.
Cast positioner, Mandibular. V. K. Frowine. 2,461,207, Feb. 8.
Casting. J. Gombosh. 2,461,052, Feb. 8.
Catalysis. J. R. Bates. 2,461,104, Feb. 8.
Catalytic cracking and desulfurization of hydrocarbons, Simultaneous. M. M. Marisic, A. C. Schmitt, and F. C. Frank. 2,461,069, Feb. 8.
Cellulose ester filaments, Conditioning. J. B. Eisen. 2,461,043, Feb. 8.
Cellulosic matter, Bleaching of. R. Bloch, K. Goldschmid, I. Schnerb, and P. Goldschmidt. 2,461,105, Feb. 8.
Centering support. L. P. Morey. 2,461,171, Feb. 8.
Centrifuge for the separation of serum from cheese constituents. G. J. Streszynski. 2,461,129, Feb. 8.
Chair, M. Greitzer. 2,461,055, Feb. 8.
Chair and table, Combination safety. C. W. Miller. 2,461,123, Feb. 8.
Chamfering tool. T. F. Millheam. 2,461,431, Feb. 8.
Chemical compositions and the preparation thereof. J. W. Cusic. 2,461,038, Feb. 8.
Chuck. N. H. Iversen. 2,461,059, Feb. 8.
Chuck. I. V. Thulin. 2,460,858, Feb. 8.
Chute, Bottle. E. W. Maynard and L. P. Di Giacomo. 2,461,290, Feb. 8.
Circuit: *See*—
Electrical circuit. Ignition circuit.
Hydraulic circuit.
Circuit breaker, Electronic. A. Volpigno. 2,460,860, Feb. 8.
Circuit breaker, Fuse-plug type. S. Miller. 2,461,338, Feb. 8.
Circuit breaker, Resettable. W. K. Overturf. 2,461,126, Feb. 8.
Circuit for high-voltage tubes, Protected transformer. H. H. Gates. 2,461,265, Feb. 8.
Circuit interrupter, High-voltage. R. H. Amundson. 2,460,967, Feb. 8.
Clamp: *See*—
Adjustable clamp. Rope clamp.
Hoist clamp.
Clamping device for electron tubes and the like. A. Chiger. 2,461,198, Feb. 8.
Clasp, Bracelet. J. Cedar. 2,461,309, Feb. 8.
Cleaner: *See*—
Air cleaner. Auto vacuum cleaner.
Cleaner and holder, Mop. L. S. Thiel. 2,461,189, Feb. 8.
Cleaning asbestos, Method and apparatus for. F. J. Koehne. 2,460,938, Feb. 8.
Clip. E. L. Rank. 2,461,083, Feb. 8.
Clip combining scarf and coat, Wire. S. J. Judge. 2,461,215, Feb. 8.
Closure. A. F. Ciarfello. 2,461,259, Feb. 8.
Closure, Casing. I. L. Young. 2,460,963, Feb. 8.
Closure, Valve. C. F. Zimmerman. 2,460,867, Feb. 8.
Cloth roll attachment for lace looms. E. W. Medbery. 2,461,387, Feb. 8.
Clothespin. M. Maccaferri. 2,461,333, Feb. 8.
Clutch: *See*—
Combined friction and jaw clutch.
Coating composition. C. and B. L. Di Battista. 2,460,878, Feb. 8.
Code detecting means. H. A. Thompson. 2,461,452, Feb. 8.
Coil, Deflecting. M. J. Obert. 2,461,230, Feb. 8.
Coin actuated electrical switch. H. B. Vroom. 2,461,486, Feb. 8.
Coin collector for telephone systems, Portable. W. P. Jackman. 2,460,936, Feb. 8.
Coin slide. V. K. Davis and E. T. Davidson. 2,461,314, Feb. 8.
Collapsible or folding infant's auto seat. T. H. Bonk. 2,461,367, Feb. 8.
Comb, Haircutting. S. E. A. Sanders. 2,461,444, Feb. 8.
Combined friction and jaw clutch. H. H. Trail. 2,460,956, Feb. 8.
Communication system. R. Adler. 2,460,906, Feb. 8.
Compensator and impulse repeater for signaling systems, Automatic line voltage. A. S. Dubuar. 2,461,200, Feb. 8.
Composition for blackening copper and copper alloy surfaces. W. E. Meyer. 2,460,865, Feb. 8.
Compounds modified by abietic nitriles. A. W. Ralston and H. M. Corley. 2,461,349, Feb. 8.
Compressor, Lubricant. J. T. Leonard. 2,461,332, Feb. 8.
Conditioning a hard soap for solvent extraction. J. M. Tabor, H. F. Seibert, and P. E. Frohring. 2,461,300, Feb. 8.
Confectionery. H. Strausser. 2,461,399, Feb. 8.
Conical roller, Self-aligning. T. O. Davidson. 2,460,810, Feb. 8.
Construction for tractors, Drawbar. W. A. Greene. 2,461,269, Feb. 8.
Contacting gaseous fluids and solid particles. H. J. Ogorzaly and A. Voorhies, Jr. 2,461,342, Feb. 8.
Container: *See*—
Dispensing container.
Waterproof shipping container.
Container. C. O. Ball and F. D. Scott. 2,461,251, Feb. 8.
Containers, Collapsible wheeled. V. P. Schaus. 2,461,482, Feb. 1.
Containers, Making. V. Hagopian. 2,460,820, Feb. 8.
Control apparatus. R. C. Dehmel. 2,460,877, Feb. 8.
Control apparatus, Polarized. A. T. Johnston and A. L. Jerome. 2,461,060, Feb. 8.
Control device for multiple linearly movable members. F. J. Grose. 2,461,378, Feb. 8.
Control for free-piston units, Overstroke. D. E. Meitzler. 2,461,224, Feb. 8.
Control surface for high-speed aircraft, Auxiliary. S. B. Brentnall. 2,460,804, Feb. 8.
Control system for hydraulic dredges. P. J. Cushing and P. M. Enright. 2,461,311, Feb. 8.
Control system, Magnetic. A. M. Candy. 2,460,921, Feb. 8.
Control system, Transmission. R. Lapsley. 2,461,218, Feb. 8.
Control unit for airplanes. W. K. Beetle, Jr. 2,461,194, Feb. 8.
Control valve. G. W. Bornquist. 2,461,136, Feb. 8.
Control valves. J. H. Wilson. 2,461,304, Feb. 8.
Controlling means and system. W. S. Landon. 2,461,328, Feb. 8.
Controlling the operation of a plurality of gaseous discharge lamps. W. Foerste. 2,460,979, Feb. 8.
Conversion of hydrocarbons, Pyrolytic. H. L. Pelser. 2,461,172, Feb. 8.
Conveyer and transfer mechanism. C. J. Malhiot. 2,461,167, Feb. 8.
Conveyer, Automatic manure. N. Martinovich. 2,460,894, Feb. 8.
Conveyer, Self-feeding. A. J. Brinker. 2,460,920, Feb. 8.
Copolymers of alpha-acetaminoacrylates. E. Isaacs and H. Gudgeon. 2,461,383, Feb. 8.
Core with variable air gap, Magnetic. A. M. Candy. 2,460,922, Feb. 8.
Counter for measuring instruments, Multiple tariff. E. Pudelko and P. Moos. 2,461,081, Feb. 8.
Coupling: *See*—
Hose coupling.
Coupling and overload cam operated device, Combination. H. M. Stephenson. 2,461,298, Feb. 8.
Coupling device. E. J. Baumgardner. 2,461,024, Feb. 8.
Coupling for suction cleaners, Bag. W. L. Sheppard. 2,460,851, Feb. 8.
Cover: *See*—
Toilet seat cover. Utility cover.
Cover for seat cushions, Slip. I. A. Evans. 2,460,928, Feb. 8.
Crane, Drapery. H. Weber. 2,461,457, Feb. 8.
Crankcase ventilator valve. C. N. Fouse and W. H. A. Krieg. 2,461,206, Feb. 8.
Crankpin replacement bearing construction. J. W. Heaston. 2,461,273, Feb. 8.
Crystal drier. J. M. Wolfskill. 2,461,489, Feb. 8.
Curtain support. D. Fallone. 2,461,417, Feb. 8.
Cushion vehicle wheel. G. M. Brandon. 2,461,257, Feb. 8.
Cutting and the like, Method of and apparatus for. A. G. Bodine, Jr. 2,460,918, Feb. 8.
Cutting device, Hole. H. D. Hooser and W. Vomacka. 2,460,826, Feb. 8.
Cutting machine. J. Stuart, II. 2,460,954, Feb. 8.
Cutting materials, Method of and apparatus for. A. G. Bodine, Jr. 2,460,919, Feb. 8.
Cutting tool. A. Offen. 2,461,431, Feb. 8.
Cyanoethyl ethers of galactomannan and glucomannan gums. O. A. Moe. 2,461,502, Feb. 8.
Cycloparaffin of nonhydroaromatic structure, Isomerization of. R. N. Shiras, A. C. Nixon, and C. H. Deal, Jr. 2,460,852, Feb. 8.
Damper, Draft control. R. Wilson. 2,460,960, Feb. 8.
Dehydrogenation process. E. P. Davies and F. T. Eggertsen. 2,461,147, Feb. 8.
Delay line, Equalized. H. E. Kallmann. 2,461,061, Feb. 8.
Desoxyalditols and their preparation, Disubstituted. W. A. Bonner and C. D. Hurd. 2,460,863, Feb. 8.
Detecting flaws, Method and apparatus for. W. C. Barnes and H. W. Keevil. 2,461,252, Feb. 8.
Device for controlling the swing of trailer vehicles. W. T. Hanna. 2,461,212, Feb. 8.
Device for securing an element of an oscillating electric circuit to a support. C. Piton. 2,461,441, Feb. 8.
Dibbler, Pipe smoker's. R. G. Kaufman. 2,460,937, Feb. 8.
Differentiator. G. I. Bilyeu. 2,461,026, Feb. 8.
Digger, One-man posthole. C. M. Cox. 2,461,373, Feb 8.

Dielefin polymerization in the presence of ammonium soap emulsifier. B. M. Vanderbilt and F. Bascom. 2,461,358, Feb. 8.
Direction finder. H. G. Carter. 2,460,806, Feb. 8.
Direction finder, Radio. T. O. McCarthy. 2,460,798, Feb. 8.
Direction finding apparatus. W. Steinmann. 2,461,187, Feb. 8.
Discharge device and system, Electric. F. M. Bailey. 2,461,250, Feb. 8.
Discharge device, Pool-type electric. C. C. Herskind. 2,461,275, Feb. 8.
Discharge device utilizing cavity resonators, Electron. L. S. Nergaard. 2,461,125, Feb. 8.
Dispenser support. G. H. Packwood, Jr. 2,461,000, Feb. 8.
Dispenser with measuring chamber of adjustably variable capacity. W. P. Zommer. 2,461,363, Feb. 8.
Dispensing container. J. M. Guthrie. 2,461,211, Feb. 8.
Dispensing machine. J. A. Chambers. 2,461,197, Feb 8.
Diving board. E. G. Schumacher. 2,461,066, Feb. 8.
Dolly, Camera. H. W. Houston. 2,461,058, Feb. 8.
Door closer. C. O. Gosserud. 2,460,881, Feb. 8.
Drawing and releasing device, Bow. F. E. Eichoits. 2,461,042, Feb. 8.
Drier: *See*—
Crystal drier. Electric clothes drier.
Drum for nail cleaning apparatus, Rotary screening. B N. Bletso and W. Thompson. 2,461,366, Feb. 8.
Drying and conditioning of yarns. W. H. Furness. 2,460,879, Feb. 8.
Drying eggs. G. Josh, L. A. Harriman, and E. W. Hopkins. 2,460,986, Feb. 8.
Dyeing and creping process for organic derivative of cellulose fabrics, Combined. C. M. Croft and W. H. Hindle. 2,460,875, Feb. 8.
Dyestuffs, Yellow azo. N. H. Haddock and C. Wood. 2,460,932, Feb. 8.
Egg breaker. J. J. Kris, Jr. 2,460,887, Feb. 8.
Elector for firearms. A. Weiss. 2,460,862, Feb. 8.
Elector type welding electrode holder. E. I. Larsen. 2,460,889, Feb. 8.
Electrical circuit. F. C. Todd. 2,461,131, Feb. 8.
Electric clothes drier. A. J. Folli. 2,461,315, Feb. 8.
Electric switch. H. C. Bolley. 2,461,026, Feb. 8.
Electric switch. J. F. Frese. 2,460,818–19, Feb. 8.
Electrode for electrolytic cells, Porous. R. U. Clark. 2,461,410, Feb. 8.
Electrodeposition of lead-antimony-tin alloys. R. A. Schaefer and J. B. Mohler. 2,461,350, Feb. 8.
Electromagnetic pump. D. L. Miller. 2,461,501, Feb. 8.
Emulsions sensitized with N,N-alkylenecyanine dyes, Photographic. L. G. S. Brooker. 2,461,137, Feb. 8.
Engine: *See*—
Rotary internal-combustion engine.
Engine shipping case. G. H. Allington. 2,460,797, Feb. 8.
Engine suspension, Helicopter. R. W. Jenny. 2,461,422, Feb. 8.
Enol acetates, Production of. F. G. Young. 2,461,016–17, Feb. 6.
Envelope having all edges of mouth reinforced, Bellows type. M. J. Shaffer. 2,460,909, Feb. 8.
Esters of amino acids, Cellulose. T. S. Gardner. 2,461,152, Feb. 8.
Evaporator, Laboratory circulating. D. T. Mitchell. 2,461,389, Feb. 8.
Extensible, retractable, and collapsible structure, Continuously. K. O. Larson. 2,461,429, Feb. 8.
Fabric selvage, Open-mesh. T. M. Scruggs. 2,461,240, Feb. 8.
Fastener: *See*—
Portable door fastener.
Fastener attaching machine. S. L. Gookin. 2,460,930, Feb. 8.
Fastening device, Waterproof. P. A. Siple. 2,460,853, Feb. 8.
Fastening means for direct lift waste fittings or the like. C. R. Stone. 2,461,354, Feb. 8.
Fender, Ship. Z. B. Wasson. 2,460,913, Feb. 8.
Ferro-alloys, Making. L. G. Pritz. 2,461,442, Feb. 8.
Fertilizer apparatus, Liquid. R. O. Lewis. 2,461,067, Feb. 8.
Filamentous structures, Making lightweight. R. J. Taylor. 2,461,094, Feb. 8.
Film supporting frame. D. L. Caldarulo. 2,460,871, Feb. 8.
Filter: *See*—
Oil filter. Radiation filter.
Filter foils, Preparing light. V. H. Reckmeyer. 2,461,480, Feb. 8.
Filter for fluorescent screens. B. Aronstein. 2,461,464, Feb. 8.
Fire control. H. K. Weiss. 2,460,863, Feb. 8.
Fishing reel. J. R. Reyburn. 2,460,904, Feb. 8.
Fishing reel. W. Shakespeare, Jr. 2,460,950, Feb. 8.
Fitting for transparent tubes. V. P. Donner. 2,461,414, Feb. 8.
Fitting, Terminal. A. E. Brickman. 2,461,031, Feb. 8.
Fixture accommodating and hanger stud. F. R. Beck. 2,461,025, Feb. 8.
Fixture, Bicycle holding. G. E. Nighthart. 2,460,944, Feb. 8.
Fixture, Bicycle servicing. G. E. Nighthart. 2,460,945, Feb. 8.
Fixture for passenger vehicles, Lighting. L. Scheymoes. 2,461,446, Feb. 8.
Fixture, Window. J. Di Lorenzo. 2,461,316, Feb. 8.
Flameproofing. J. Truhlar and A. A. Pantsios. 2,461,302, Feb. 8.
Flaw detection apparatus. W. C. Barnes and H. W. Keevil. 2,461,253, Feb. 8.
Flaw detection, Method and composition for. T. de Forest. 2,461,404, Feb. 8.
Floating caliper gauge. H. A. Dawley. 2,461,148, Feb. 8.
Flowmeter. L. Silverman. 2,461,351, Feb. 8.
Fluid pressure energy translating device. T. E. Raymond. 2,461,235, Feb. 8.
Fluid pump. T. A. Markham. 2,461,121, Feb. 8.
Fluid treatment equipment. A. H. Friedman. 2,461,113, Feb. 8.
Fluxing mechanism, Can body solder. D. E. Wobbe and W. F. Pillnik. 2,460,866, Feb. 8.
Folding machine. W. Holmes. 2,461,214, Feb. 8.
Footpad. B. D. and S. Freedman. 2,461,047, Feb. 8.
Form for building hollow articles. D. G. Rempel. 2,460,845, Feb. 8.
Four component photographic objective having the first two cemented surfaces convex to the front. W. Schade. 2,461,182, Feb. 8.
Fractional frequency generator. L. Batchelder. 2,460,800, Feb. 8.
Frame: *See*—
Canopy frame. Film supporting frame.
Frame construction for kites and like toys. H. M. and H. F. Chu. 2,461,465, Feb. 8.
Frame member, Extruded. G. G. Gilpin. 2,460,982, Feb. 8.
Furniture. E. A. Purnell. 2,461,082, Feb. 8
Game apparatus, Floating body. R. D. Young. 2,461,461, Feb. 8.
Garment hanger. J. E. Ericson. 2,461,149, Feb. 8.
Garment hanger. F. B. Saunders. 2,460,905, Feb. 8.
Garment hanging screen. H. Derman. 2,460,978, Feb. 8.
Garment, Lady's. D. Gourdon. 2,460,882, Feb. 8.
Gas separation including impurity removing steps. P. E. Trumpler. 2,460,859, Feb. 8.
Gas turbine installation. C. Seippel. 2,461,186, Feb. 8.
Gasoline, Manufacturing high antiknock synthesis. A. R. Goldsby. 2,461,153, Feb. 8.
Gauge: *See*—
Floating caliper gauge. Vacuum gauge.
Shaft taper gauge.
Gauging apparatus for checking the relative alignment of reference planes of spaced articles. H. W. Clifford. 2,461,143, Feb. 8.
Gear: *See*—
Aircraft landing gear.
Gelatin, Preparing. R. E. Damschroder and M. E. Kauffman. 2,460,809, Feb. 8.
Gelatin subbing composition. B. P. Easton. 2,461,467, Feb. 8.
Gelatin subbing compositions containing a mixture of formamide and glycerol-a-chlorohydrin. F. J. Kaszuba. 2,461,472, Feb. 8.
Gelatin subbing compositions containing an unsaturated lactone. F. J. Kaszuba. 2,461,477, Feb. 8.
Gelatin subbing compositions containing ascorbic acid (vitamin C). F. J. Kaszuba. 2,461,475, Feb. 8.
Gelatin subbing compositions containing lactones or hydroxy lactones. F. J. Kaszuba. 2,461,476, Feb. 8.
Gelatin subbing compositions having antistatic properties. F. J. Kaszuba. 2,461,473–4, Feb. 8.
Gelatin subbing compositions having antistatic properties. F. J. Kaszuba. 2,461,478, Feb. 8.
Generating apparatus, Tachometer. J. H. Nilson and V. C. Westberg. 2,460,999, Feb. 8.
Generator: *See*—
Fractional frequency generator. Pulse generator.
Signal generator.
Generator mounting. W. K. Bodger. 2,461,195, Feb. 8.
Gluing machine. R. Minkow. 2,461,388, Feb. 8.
Glutaric acid, Manufacture of. L. A. Mikeska. 2,461,336, Feb. 8.
Golf cup. D. Matheny. 2,461,386, Feb. 8.
Grid structure for electric discharge devices. R. P. Watson. 2,461,303, Feb. 8.
Grinder and polisher, Roll. W. H. Wilkes. 2,461,459, Feb. 8.
Guide, Bending machine abutment. H. M. Shuff. 2,460,951, Feb. 8.
Guide, Welding. B. W. Wright. 2,460,914, Feb. 8.
Hair-waving unit. F. M. Winkel. 2,461,101, Feb. 8.
Handle: *See*—
Replacement door handle.
Handle control for suction cleaners and the like. H. B. White. 2,461,458, Feb. 8.
Handle for containers, Collapsible. J. S. Allen. 2,460,915, Feb. 8.
Handles, Making tool. C. J. Coberly, Jr. 2,460,874, Feb. 8.
Hanger: *See*—
Garment hanger. Trouser hanger.
Lug strap hanger. Wall bracket hanger.
Suspension hanger.
Hanger. J. W. Reynolds. 2,460,946, Feb. 8.
Hanger assembly, Clothes. D. C. Myers. 2,460,997, Feb. 8.
Harness, Loom. J. J. Kaufmann. 2,461,496–7, Feb. 8.

Harness, Multiconductor electric. F. E. Knam. 2,460,830, Feb. 8.
Hat and tie holder. F. A. Reinke. 2,461,172, Feb. 8.
Headrest, Collapsible. A. Marshall. 2,460,942, Feb. 8.
Heat protection for motion-picture projectors, Double shutter. J. G. Capstaff. 2,461,140, Feb. 8.
Heat-treating apparatus, Electromagnetic induction. H. E. Somes. 2,460,855, Feb. 8.
Heater construction, Unit. D. W. Christensen. 2,461,409, Feb. 8.
Heater for use with pipe bending apparatus, Induction. G. H. Hille. 2,461,323, Feb. 8.
Heater with altitude controlled combustion air feed, Airplane. F. O. Hess. 2,460,983, Feb. 8.
Helicopter adapted to be attached to a pilot. H. T. Pentecost. 2,461,347, Feb. 8.
Helicopter of the coaxial wing type. H. T. Pentecost. 2,461,348, Feb. 8.
High-frequency heating regulator. J. P. Jordan. 2,461,283, Feb. 8.
Hindered settling classification. E. C. Bitzer. 2,460,801, Feb. 8.
Hoist clamp. A. J. Plante. 2,461,394, Feb. 8.
Hoisting device. R. Trombley. 2,461,401, Feb. 8.
Holder: *See*—
Automatic fish pole holder.
Ejector type welding electrode holder.
Hat and tie holder.
Label holder.
Packing holder.
Pencil holder.
Photographic film and screen holder.
Tackless display holder.
Tire chain holder.
Work holder.
Holder and snuffer, Taper. E. D. Muzzy. 2,461,124, Feb. 8.
Holder for pressing machines, Cover. M. Spicer, Jr. 2,460,953, Feb. 8.
Holder for thermionic valves and like electrical devices and securing it to supports. G. Wagstaff. 2,461,487, Feb. 8.
Holder or the like, Handbag. M. W. Mettenleiter. 2,461,071, Feb. 8.
Holding device. W. Petty. 2,461,440, Feb. 8.
Hose coupling. L. A. Lamb. 2,460,833, Feb. 8.
Hose coupling. G. K. Mozingo. 2,461,074, Feb. 8.
Hose fitting mechanism. J. G. Dahlem. 2,461,312, Feb. 8.
Housing joint. J. E. Whitfield. 2,460,957, Feb. 8.
Hub and associated blades, Propeller. J. H. Sheets and M. E. Cushman. 2,460,910, Feb. 8.
Hydraulic circuit. M. W. Huber. 2,461,279, Feb. 8.
Hydraulic system for controlling the operation of rotary hydraulic motors. R. K. Jeffrey. 2,461,116, Feb. 8.
Hydrocarbon resins and products thereof, Treatment of. F. J. Soday. 2,461,004, Feb. 8.
Hydrocarbons in the presence of a gaseous diluent, Dehydrogenation of. C. J. G. Leesemann. 2,461,331, Feb. 8.
Hydrocarbons, Separation of. J. A. Patterson. 2,461,346, Feb. 8.
Ignition apparatus. M. G. Weatherly. 2,461,098, Feb. 8.
Ignition circuit. R. J. Miller. 2,461,293, Feb. 8.
Ignition device for ionic valves. U. Lamm. 2,461,428, Feb. 8.
Ignition system. W. E. Brown. 2,461,196, Feb. 8.
Imidazolines and making same. M. Hartmann and H. Isler. 2,461,156, Feb. 8.
Implement balance control link spring. H. W. Schwarz. 2,460,847, Feb. 8.
Indicating device, Pressure responsive. W. E. Naylor. 2,461,075, Feb. 8.
Indicator: *See*—
Aim indicator.
Aircraft structural limit indicator.
Soil moisture indicator.
Inhaler. P. H. Todd. 2,460,955, Feb. 8.
Inhibiting acidic corrosion in wells. P. S. Viles and E. Q. Camp. 2,461,359, Feb. 8.
Ink, White writing. W. E. Decker. 2,460,925, Feb. 8.
Instrument for testing the accuracy of the angle between two prism faces. B. E. Luboshez. 2,461,166, Feb. 8.
Insulating device, Vibration. N. Ivanovic. 2,460,820, Feb. 8.
Insulation and manufacture, Plastic. M. R. Ximenez, J. H. Ferguson, and S. C. Bunce. 2,460,962, Feb. 8.
Iron and stand, Pressing. W. P. Fox. 2,461,264, Feb. 8.
Iron-oxide type catalysts, Preparing pelleted. E. P. Davies and F. T. Eggertsen. 2,460,811, Feb. 8.
Isocyanate derivatives of proteins, Preparation of. H. L. Fraenkel-Conrat and H. S. Olcott. 2,460,980, Feb. 8.
Jig, Semiautomatic. R. S. De Martini. 2,460,812, Feb. 8.
Joint: *See*—
Housing joint.
Pipe joint.
Safety joint.
Steam joint.
Joint for pipes, Adapter. H. L. White. 2,461,100, Feb. 8.
Joint protector. T. E. Meany. 2,460,895, Feb. 8.
Kite, Airplane. R. P. Willis. 2,460,959, Feb. 8.
Knockdown sheet metal cabinet. H. Lew. 2,461,219, Feb. 8.
Label holder. L. A. Amis. 2,461,103, Feb. 8.
Labelling machine. R. J. Newman and D. S. Freund. 2,461,295, Feb. 8.
Latch: *See*—
Refrigerator latch.
Latching device, Flush type. W. A. Paxton. 2,461,393, Feb. 8.

Mounting of collector and free-piston gas generators. R. S. Thompson. 2,461,245, Feb. 8.
Mulling apparatus. W. F. Piper. 2,461,176, Feb. 8.
Multiply pasted end bag. E. B. Hoppe. 2,460,886, Feb. 8.

N-acylphenothiazines. P. S. Winnek and H. E. Faith. 2,461,460, Feb. 8.
Neck straightening device for musical instruments. W. W. Nelson. 2,460,943, Feb. 8.
Network, Transformer. R. G. Stephenson and W. M. Bush. 2,461,091, Feb. 8.
Nitriles, Manufacture of. P. Oxley, T. D. Robson, A. Koebner, and W. F. Short. 2,461,437, Feb. 8.
Oarlock, Portable. S. A. Black. 2,461,256, Feb. 8.
Oar protector. G. H. Sterling. 2,461,092, Feb. 8.
Ocarina. W. W. Gretsch. 2,460,931, Feb. 8.
Oil base drilling fluid. E. S. Self. 2,461,483, Feb. 8.
Oil filter. W. J. Kolnsan. 2,460,888, Feb. 8.
Oil, Manufacture of lubricating. F. C. Toettcher. 2,461,454–6, Feb. 8.
Oil, Manufacture of lubricating. F. C. Toettcher and J. R. Coley. 2,461,453, Feb. 8.
Oils, Dewaxing. C. F. Holm and B. K. Engel. 2,461,115, Feb. 8.
Opener and reshaper, Can. A. H. Withrow. 2,461,015, Feb. 8.
Operating mechanism, Valve. C. S. Davis. 2,461,313, Feb. 8.
Operating table. M. L. Sweat. 2,460,857, Feb. 8.
Organometallic compound. L. A. Mikeska. 2,461,335, Feb. 8.
Oscillating vane rotary pump. J. O. Hamren. 2,460,821, Feb. 8.
Overload protection device for power transmission apparatus. J. W. Drisko. 2,461,261, Feb. 8.
Package holder. F. W. Schmiedeberg. 2,460,906, Feb. 8.
Pad: *See*—
Scouring pad.
Paints containing a leafing pigment, Water-in-oil emulsion. V. R. Smith and D. E. Stevens. 2,461,352, Feb. 8.
Pallet. W. J. Philp and C. W. Parmentier. 2,461,297, Feb. 8.
Paper, Coating. H. E. Nelson. 2,460,998, Feb. 8.
Paper, Manufacture of. K. Crabtree. 2,461,109, Feb. 8.
Pattern material, pattern and method. R. W. Erdle and C. H. Schaar. 2,461,416, Feb. 8.
Peashooter, Stock supported. R. Daily. 2,460,924, Feb. 8.
Pedal, Bicycle. R. J. Gamble. 2,461,049, Feb. 8.
Peeling machine including travelling screw driven cutters, Vegetable. E. J. Anderson. 2,461,249, Feb. 8.
Pencil holder. L. Margulies. 2,461,221, Feb. 8.
Pencil, Mechanical. R. Brosseau. 2,461,408, Feb. 8.
Phase modulation system. R. Adler. 2,460,965, Feb. 8.
Photographic film and screen holder. W. L. Appling. 2,461,405, Feb. 8.
Photographic process for converting black-and-white or monochrome pictures into multicolor pictures. R. M. Haff. 2,461,469, Feb. 8.
Photography, Composite. L. B. Pickley. 2,461,127, Feb. 8.
Pillow, Folding mechanical. E. Moyers. 2,461,434, Feb. 8.
Pipe bowl turning machine. J. L. Rettke and E. H. Otto. 2,461,443, Feb. 8.
Pipe-cleaning machine. W. A. Kraner. 2,460,989, Feb. 8.
Pipe connection. W. H. Francisco, Jr., E. C. Steiner, and H. C. Hill. 2,460,981, Feb. 8.
Pipe connection. H. C. Hill and W. H. Francisco. 2,460,984, Feb. 8.
Pipe joint. C. W. Miskimen. 2,461,337, Feb. 8.
Piston, Pump. H. C. Sander. 2,460,948, Feb. 8.
Plastic mass in a liquid, Mixing a. C. I. F. Hjort and O. V. E. Jansa. 2,460,884, Feb. 8.
Plate and release bar, Safety strike. V. M. King. 2,461,426, Feb. 8.
Plates of welded ships, Arresting the cracking of the. F. M. MacCutcheon, Jr., D. F. Windenburg, and S. K. Smith. 2,460,893, Feb. 8.
Playground slide. G. W. Packer. 2,461,345, Feb. 8.
Playing steel. H. H. Pulsifer. 2,461,232, Feb. 8.
Plug: *See*—
Resonant spark plug.
Plug valve. J. R. Donaldson. 2,461,041, Feb. 8.
Plunger structure. H. E. Brandt. 2,461,106, Feb. 8.
Polishing attachment for electric sweepers. M. E. Cameron. 2,461,369, Feb. 8.
Polyalkylated cyclic sulfone halohydrins. R. C. Morris and J. L. Van Winkle. 2,461,340, Feb. 8.
Polyamides. D. E. Floyd. 2,461,495, Feb. 8.
Polyhydric alcohols, Separation of. E. J. Lorand. 2,461,220, Feb. 8.
Polymerizable chemicals. P. O. Tawney. 2,461,301, Feb. 8.
Polymerisation of conjugated diolefins, Low-temperature, hydrogen fluoride catalyzed. J. D. Calfee and J. H. Pearson. 2,460,973, Feb. 8.
Polymerization of organo-polysiloxanes with acid-activated bleaching earth. E. C. Britton, H. C. White, and C. L. Moyle. 2,460,805, Feb. 8.
Polystyrene, Making plastic. J. W. Church. 2,460,976, Feb. 8.
Portable door fastener. H. F. Sands. 2,461,398, Feb. 8.
Posture system. D. M. Ackerman. 2,461,102, Feb. 8.
Power and speed transmission, Variable. H. C. Barnack. 2,461,022, Feb. 8.
Power machine, Fluid. J. H. Crumble. 2,461,037, Feb. 8.
Power system, Electric. P. J. Walsh. 2,461,133, Feb. 8.
Presser, Trouser. I. P. Sowers. 2,461,006, Feb. 8.
Pressure pump. J. M. Schmied. 2,460,949, Feb. 8.
Pressure-regulating valve. J. E. Dube. 2,461,415, Feb. 8.
Pressure unit, Fluid. B. H. Urschel and L. H. Janser. 2,461,132, Feb. 8.
Printing apparatus, Signal-controlled. H. L. Tholstrup. 2,461,451, Feb. 8.
Process and composition for coloring copper and copper alloy surfaces. W. R. Meyer. 2,460,898, Feb. 8.
Process to produce a stabilized protein-formaldehyde dispersion. L. L. McKinney. 2,461,070, Feb. 8.
Progressive drawer support. R. Christopherson. 2,460,923, Feb. 8.
Projecting system, Motion-picture. F. H. Whiteley. 2,460,864, Feb. 8.
Projection and plotting device. W. L. Morey and R. A. Taylor. 2,460,841, Feb. 8.
Projection apparatus for training mechanisms. R. B. Johnson. 2,461,423, Feb. 8.
Prop, Clothesline. W. L. Baumeier. 2,460,916, Feb. 8.
Propeller. R. K. Odor. 2,460,902, Feb. 8.
Protector: *See*—
Joint protector.
Oar protector.
Protein from seeds, Extraction of. R. L. Wormell, A. F. Millidge, and C. L. Knight. 2,461,404, Feb. 8.
Proteins from milk products, Separation of. A. Leviton. 2,460,891, Feb. 8.
Pulse generator. M. Fischman. 2,461,110, Feb. 8.
Pulses, Production of electric. E. A. Guillemin. 2,461,321, Feb. 8.
Pump: *See*—
Electromagnetic pump.
Fluid pump.
Oscillating vane rotary pump.
Pressure pump.
Pump using deep well for a heat source, Heat. M. M. Smith and E. N. Kemler. 2,461,449, Feb. 8.
Pump with elastic rotor sealing rib, Rotary. J. Simer and E. E. Cook. 2,460,952, Feb. 8.
Pyrylium dye salts as filter and antihalation dyes in photographic materials. T. R. Thompson. 2,461,484, Feb. 8.
Quick-change battery support. H. C. Riggs. 2,461,002, Feb. 8.
Rack: *See*—
Receptacle supporting rack.
Radiation filter. M. O. Bassett. 2,461,254, Feb. 8.
Radio circuits, Oscillator-amplifier. J. J. Antalek. 2,461,306, Feb. 8.
Radio echo equipment, Testing. F. C. Isely. 2,460,827, Feb. 8.
Radio protective device. L. M. Hollingsworth and L. D. Smullin. 2,461,158, Feb. 8.
Rail for perambulators, Guard. S. Karson. 2,461,063, Feb. 8.
Reamer, Cylinder ridge. H. A. Berkman. 2,461,490, Feb. 8.
Receiver, Wide-band superheterodyne. W. H. Newbold. 2,460,900, Feb. 8.
Receptacle supporting rack. H. W. Custer. 2,461,374, Feb. 8.
Record handling and copying apparatus. A. E. Schubert and H. P. Hintz. 2,461,185, Feb. 8.
Recording apparatus. C. M. Hathaway. 2,461,322, Feb. 8.
Rectifier of the dry surface contact type, Alternating electric current. R. G. Sell and L. E. Thompson. 2,461,087, Feb. 8.
Reel: *See*—
Fishing reel.
Reel drive, Weight controlled. D. Canady. 2,461,033, Feb. 8.
Reel with adjustable drum port, Cable. A. A. Bureau. 2,460,972, Feb. 8.
Reflecting device. P. Rosenberg. 2,461,181, Feb. 8.
Refrigerant from the supply line to a compressor, Removal of liquid. J. W. Obreiter, Jr. 2,461,342, Feb. 8.
Refrigerating apparatus, Food. K. Eftihios. 2,461,375, Feb. 8.
Refrigerating means for dough mixers. M. A. Sticelber. 2,461,450, Feb. 8.
Refrigeration. N. E. af Kleen. 2,461,262, Feb. 8.
Refrigerator latch. H. Wallace. 2,461,361, Feb. 8.
Regulator: *See*—
High-frequency heating regulator.
Relay. A. W. Vincent. 2,461,360, Feb. 8.
Remote-control apparatus. H. L. Blum. 2,461,407, Feb. 8.
Remover, Bottle cap. A. Di Geronimo. 2,461,040, Feb. 8.
Replacement door handle. L. P. Roy. 2,461,085, Feb. 8.
Resin compositions, Forming granulated synthetic. L. Smidth. 2,461,089, Feb. 8.
Resins with the aid of aluminum alkoxide, Production of organopolysiloxane. A. J. Barry. 2,460,799, Feb. 8.
Resonant spark plug. O. T. McIlvaine. 2,461,168, Feb. 8.
Retainer for journal boxes, Packing. M. Lagreid and J. H. McGuire. 2,461,287, Feb. 8.
Ring and traveler, Spinning. H. E. Herr. 2,461,470, Feb. 8.
Rocket holding device. M. R. Goff. 2,460,929, Feb. 8.
Rod and plunger connection, Connecting. R. J. Hess. 2,461,056, Feb. 8.
Rope clamp. W. M. and J. A. Forsythe. 2,461,205, Feb. 8.
Rope splice, Wire. V. C. J. Peterson and H. M. Wilson. 2,461,079, Feb. 8.
Rosary unit. C. C. Szaj. 2,461,130, Feb. 8.
Rotary internal-combustion engine. C. A. Gilson. 2,461,377, Feb. 8.

Rotor construction for turbines. C. R. Soderberg. 2,461,242, Feb. 8.
Rotor for multistage axial flow compressors and turbines. L. T. Whitehead. 2,461,402, Feb. 8.
Rotor for turbines, Constant speed. J. A. Senn. 2,460,840, Feb. 8.
Rotors, Cooling turbine. J. Schuster, Jr. 2,461,239, Feb. 8.
Rubber, Reclaiming scrap vulcanized. F. H. Banbury, D. A. Comes, and C. F. Schnuck. 2,461,192, Feb. 8.
Safety control, Oil pressure. C. R. Neeson. 2,461,076, Feb. 8.
Safety device, Airplane flight. S. R. Ours. 2,460,843, Feb. 8.
Safety joint. W. L. Church. 2,461,107, Feb. 8.
Sampling device, Automatic. G. C. Fairbairn. 2,461,045, Feb. 8.
Saving power. G. D. Hanchett, Jr. 2,460,883, Feb. 8.
Scouring apparatus. C. A. Dreisbach. 2,460,926, Feb. 8.
Scouring pad. N. O. Ellström. 2,461,468, Feb. 8.
Screen: *See*—
Garment hanging screen.
Seal for gas compressors. E. Nathan. 2,461,294, Feb. 8.
Seal for turbines, Diaphragm. C. R. Soderberg. 2,461,243, Feb. 8.
Seat: *See*—
Collapsible or folding infant's auto seat.
Securing means for water-tight doors, Quick-acting. D. G. Wilson. 2,460,961, Feb. 8.
Seismic surveying. J. O. Parr, Jr. 2,461,173, Feb. 8.
Self-sealing gasoline tank. H. P. Wagner. 2,461,096, Feb. 8.
Separator: *See*—
Magnetic separator.
Settling method and apparatus. L. H. Logue. 2,460,834, Feb. 8.
Sewing machine. M. G. Ivandick. 2,460,828, Feb. 8.
Shaft taper gauge. W. L. Smith. 2,460,854, Feb. 8.
Shaped and carbonised articles from coal, Production of. J. G. Bennett, D. B. Foster, C. D. Greaves, G. C. Phillpotts, M. Pirani, and W. J. Kramers. 2,461,365, Feb. 8.
Shaping machine, Box. W. H. Lisle. 2,460,892, Feb. 8.
Sharpener, Razor blade. J. T. King. 2,461,161, Feb. 8.
Shears. S. M. Carper. 2,461,870, Feb. 8.
Sheet stretching mechanism. F. Feldmeier. 2,461,376, Feb. 8.
Shelf for electrical apparatus. L. T. Holden. 2,461,157, Feb. 8.
Shield for vehicles, Mud or splash. R. Ely. 2,461,044, Feb. 8.
Shift keying, Frequency. G. L. Usselman. 2,461,456, Feb. 8.
Shock absorber. H. J. Kent. 2,461,066, Feb. 8.
Shoe outsole. M. Margolin. 2,460,838, Feb. 8.
Shoes, Making slip lasted welt. J. Meltzer. 2,461,226, Feb. 8.
Shredding device, Vegetable and fruit. J. M. Newman. 2,460,901, Feb. 8.
Signal device for blind pedestrians, Street crossing. E. M. Smith. 2,461,448, Feb. 8.
Signal generator. B. D. Loughlin. 2,461,120, Feb. 8.
Signaling system, Coded. F. H. Nicholson. 2,461,077, Feb. 8.
Silver halide emulsions, Photographic. C. E. Barnes and W. O. Ney, Jr. 2,461,023, Feb. 8.
Skate. A. Hirschman. 2,461,057, Feb. 8.
Skate, Roller. G. A. Reich. 2,461,128, Feb. 8.
Ski-scooter. O. H. Dunkel. 2,460,815, Feb. 8.
Skimming device. T. W. F. Foster. 2,461,112, Feb. 8.
Skipperproof meat case. F. W. Mewherter and E. E. Smith. 2,461,227, Feb. 8.
Skiver, Leather. O. E. Zahn. 2,461,462, Feb. 8.
Slashing yarns, Method and apparatus for. R. A. Smith and J. S. Chaya. 2,461,090, Feb. 8.
Snap switch. H. E. Malone. 2,460,837, Feb. 8.
Soap dabber. F. A. Fortino. 2,461,319, Feb. 8.
Soap-thickened compositions and apparatus therefor, Manufacture of. C. R. Hetherington. 2,461,276, Feb. 8.
Soil moisture indicator. M. L. and J. H. Flinspach. 2,461,111, Feb. 8.
Soldering flux, Bensilic acid. T. A. Hale. 2,461,154, Feb. 8.
Soldering flux, Naphthoic acid. T. A. Hale. 2,461,155, Feb. 8.
Sole element for footwear, Transversely rigid, longitudinally flexible, internal. G. Supple. 2,461,355, Feb. 8.
Speed control for electric motors. W. H. Elliot. 2,460,927, Feb. 8.
Spinning machine. F. J. Coad. 2,461,466, Feb. 8.
Splitting machine. G. Haselton. 2,460,934, Feb. 8.
Spool for films, Developing. A. V. L. C. Debrie. 2,461,039, Feb. 8.
Sprayer, Liquid. H. G. Walters. 2,460,861, Feb. 8.
Spring: *See*—
Implement balance control link spring.
Lateral film edge pressure spring.
Stand: *See*—
Universal attachment stand.
Starch ester derivatives and making same. C. G. Caldwell. 2,461,130, Feb. 8.
Starting a fine heavy media separation plant. E. C. Bitser. 2,460,802, Feb. 8.
Steam and hot water boiler. H. A. Girouard. 2,461,061, Feb. 8.
Steam joint. R. Carpenter. 2,460,872, Feb. 8.
Steel polishing, Electrolytic stainless. I. C. Clingan. 2,461,035, Feb. 8.
Steel polishing, Stainless. I. C. Clingan. 2,461,036, Feb. 8.
Stereotype plate casting box. F. A. Foster. 2,461,151, Feb. 8.
Stilboestrol with camphor, Reaction of. R. H. Marriott and W. W. Myddleton. 2,460,941, Feb. 8.
Storage device, Electrical. J. C. Cook. 2,461,144, Feb. 8.
Stove, Downdraft. L. Lockwood. 2,461,066, Feb. 8.
Stretcher, Leg and sleeve. S. W. Henderson. 2,461,381, Feb. 8.
String closure affixing machine. S. Kilinski. 2,461,327, Feb. 8.
Sugar, Production of invert. W. A. La Lande, Jr. 2,461,163, Feb. 8.
Sulfolanyl amines, Secondary. R. C. Morris and A. V. Snider. 2,461,341, Feb. 8.
Support: *See*—
Centering support.
Curtain support.
Dispenser support.
Progressive drawer support.
Quick-change battery support.
Support for use in loading pallets or the like, Temporary. A. W. Moffat. 2,461,479, Feb. 8.
Supporting device. J. C. Bridges. 2,460,970–1, Feb. 8.
Suspension hanger. F. W. Stanke and L. F. Bender. 2,460,856, Feb. 8.
Switch: *See*—
Coin actuated electrical switch.
Electric switch.
Snap switch.
Tire deflation switch.
Syringe, Hypodermic. Z. M. Roehr. 2,461,481, Feb. 8.
Table: *See*—
Operating table.
Tackless display holder. T. E. Thomas. 2,461,400, Feb. 8.
Tank: *See*—
Self-sealing gasoline tank.
Tank for 35 mm. film, Developing. J. P. Mancuso. 2,461,289, Feb. 8.
Tantalum nitride, Production of. P. P. Alexander. 2,461,020, Feb. 8.
Tester, Photographic synchroniser. J. E. Wilcox, Jr. 2,461,403, Feb. 8.
Testing apparatus, Electrical insulation. S. G. Luts. 2,460,835, Feb. 8.
Testing device, Magnetic. W. B. Ellwood. 2,461,202, Feb. 8.
Therapeutic curare preparations, Standardization of. H. A. Holaday. 2,461,278, Feb. 8.
Thermal apparatus for compressing gases. V. Bush. 2,461,032, Feb. 8.
Thioethers of cyclic sulfones, Unsaturated. R. C. Morris, J. L. Van Winkle, and E. C. Shokal. 2,461,339, Feb. 8.
3-chloro methacrylonitrile, Production of. J. L. Mostek. 2,460,996, Feb. 8.
Timber sawing apparatus, Tractor-mounted. E. R. L. Kelly. 2,461,384, Feb. 8.
Timing device. G. R. F. Gay. 2,461,266, Feb. 8.
Timing system, Electronic. D. P. Faulk. 2,460,816, Feb. 8.
Tire chain holder. M. Givens. 2,461,267, Feb. 8.
Tire deflation switch. C. E. Sullivan. 2,461,299, Feb. 8.
Titanium nitride, Production of. P. P. Alexander. 2,461,018, Feb. 8.
Toilet seat cover. M. Joyce. 2,461,160, Feb. 8.
Toluenesulfonates. A. W. Anish. 2,461,463, Feb. 8.
Tool: *See*—
Chamfering tool.
Cutting tool.
Torque tool.
Tool and handle, Combination. F. W. Coffing. 2,461,108, Feb. 8.
Tool for reconditioning valves. J. W. Jackson. 2,460,985, Feb. 8.
Torch, Flashlight. J. G. Lippincott. 2,461,118, Feb. 8.
Torpedo nets, Making. A. E. Brickman. 2,461,030, Feb. 8.
Torque meter. P. H. Palen. 2,461,001, Feb. 8.
Torque tool. R. E. Booth. 2,461,491, Feb. 8.
Toy train, Magnetic. C. R. Shortt. 2,461,068, Feb. 8.
Track, Endless. T. P. Flynn and T. Coldwell. 2,461,150, Feb. 8.
Tractor boom, Telescoping. G. B. and A. C. Moulton. 2,461,433, Feb. 8.
Trailer combination, Boat. E. J. Henningsen. 2,460,935, Feb. 8.
Transformer, Permeability tuned. K. B. Ross. 2,461,397, Feb. 8.
Transformer, Resonant differential. H. Schaevitz. 2,461,238, Feb. 8.

Transmission and receiving apparatus, Signal. H. F. Olson. 2,461,344, Feb. 8.
Transmission belt, Power. E. A. Miller. 2,461,169, Feb. 8.
Transmission for automatic lathes, Change-speed. E. Bodmer. 2,461,027, Feb. 8.
Transmission for garden tractors, Drive. J. F. Osterhaus. 2,461,861, Feb. 8.
Transmission mechanism, Automatic. C. W. Brooks. 2,461,258, Feb. 8.
Transmission, Ultra high frequency. G. C. Southworth. 2,461,005, Feb. 8.
Transmitter for driving sewing machines and the like, Electric. E. P. Turner. 2,461,504, Feb. 8.
Treating shoes with steam and hot air, Method of and apparatus for. M. Maeser. 2,460,940, Feb. 8.
Treating waste material containing rubber. F. H. Banbury, D. A. Comes, and C. F. Schnuck. 2,461,193, Feb. 8.
Tree felling and log cutting saw rig, Self-propelled. F. H. Stoner. 2,461,188, Feb. 8.
Tremolo producing device. A. L. Appel. 2,460,868, Feb. 8.
Triamino-benzene compounds, Preparation of symmetrical. J. Krueger. 2,461,498, Feb. 8.
Trichloromethyl diarylmethanes, Manufacture of. C. E. Wilson, Jr. 2,460,865, Feb. 8.
Tricurler. J. J. Morretta. 2,461,170, Feb. 8.
Trimmer, Paper. E. B. Murphy and S. Segal. 2,460,842, Feb. 8.
Tripod head, Panoraming. C. W. Peterson. 2,461,175, Feb. 8.
Trouser hanger. R. G. Rogalla. 2,461,179, Feb. 8.
Truck, Hand. R. C. Evans. 2,461,203, Feb. 8.
Truss rod bracket. F. W. Schwinn. 2,461,003, Feb. 8.
Tube and sealing the anode leadin, Rectifier discharge. D. G. S. Rubwandi. 2,461,237, Feb. 8.
Tube forming device. F. V. Collins. 2,461,372, Feb. 8.
Tube system and apparatus, Luminescent. C. P. Boucher and F. A. Kubl. 2,461,029, Feb. 8.
Turpentine, Refining. G. H. Spiittgerber. 2,461,007, Feb. 8.
2-amino-6-hydroxy-8-(hydroxymethyl) pteridine, Manufacture of. H. Spiegelberg and G. Rey-Bellet. 2,461,503, Feb. 8.
Twostroke motor. H. Convert. 2,461,199, Feb. 8.
2-3 methyl butadiene 1-3, Preparation of. D. W. Young and C. E. Britton. 2,461,362, Feb. 8.
Tying machine, Wire. K. E. Schulse. 2,460,846, Feb. 8.
Typewriter, Platenless. C. W. Dobn. 2,460,813, Feb. 8.
Umbrella pocket and umbrella. E. P. Montague. 2,461,390, Feb. 8.
Universal attachment stand. H. E. and J. C. Geiser, Jr. 2,460,880, Feb. 8.
Utility cover. G. Wormull. 2,461,247, Feb. 8.
Vacuum distillation of trimethylamine from dimethylamine. D. F. Babcock. 2,461,191, Feb. 8.
Vacuum gauge. D. H. Clewell and D. C. Pfeiffer. 2,460,873, Feb. 8.
Valve: *See*—
Control valve.
Crankcase ventilator valve.
Plug valve.
Pressure-regulating valve.
Valve for container filling machines, Filler. J. Kantor and E. Marovits. 2,461,326, Feb. 8.
Valve mechanism. W. M. Scott, Jr. 2,460,908, Feb. 8.
Vehicle chocking device. A. T. Wright. 2,461,248, Feb. 8.
Vehicle heating arrangement. B. E. Jones and J. B. Stanley. 2,461,434, Feb. 8.
Vent, Automatic. E. C. Parry. 2,461,892, Feb. 8.
View finder for photographic cameras. C. B. McCathron. 2,461,490, Feb. 8.
Wall bracket hanger. W. C. Craver. 2,461,145, Feb. 8.
Washing and extracting machine, Clothes. H. E. Page. 2,461,078, Feb. 8.
Washing machine, Can. E. R. Laird. 2,461,162, Feb. 8.
Water gas, Manufacture of. H. V. Atwell. 2,461,021, Feb. 8.
Waterproof shipping container. H. J. Grampp. 2,461,209, Feb. 8.
Water purifier, Electrolytic. T. C. Jones. 2,461,325, Feb. 8.
Wear indicating attachment for drilling bits. F. F. Lewis. 2,461,164, Feb. 8.
Web severing method and apparatus. J. T. Weyenberg. 2,461,246, Feb. 8.
Weft-straightening apparatus. J. D. Robertson. 2,461,084, Feb. 8.
Weld rod, Coated. E. C. Rollason. 2,461,180, Feb. 8.
Welding apparatus. H. Chanowits. 2,460,807, Feb. 8.
Welding apparatus and process, Automatic electric fusion. J. A. Kratz and H. G. Thoma. 2,460,990, Feb. 8.
Welding flux. K. H. Koopman. 2,460,988, Feb. 8.
Wheel: *See*—
Cushion vehicle wheel.
Wheel setting mechanism, Price. O. Wild, Jr. 2,461,488, Feb. 8.
Winding machine. R. Oppenheim. 2,461,231, Feb. 8.
Wire terminal, Electric. R. H. Bentley. 2,461,135, Feb. 8.
Work holder. T. E. Mead. 2,461,292, Feb. 8.
Work-holding means. C. O. Lassy. 2,460,890, Feb. 8.
Wrench with wedge adjustment, Cam-actuated plier. E. S. Hanson, Jr. 2,461,272, Feb. 8.
Xanthylium dye salts as filter and antihalation dyes in photographic materials. T. R. Thompson. 2,461,485, Feb. 8.
Yeast, Production of. S. O. Rosenqvist. 2,460,947, Feb. 8.
Yielding drive. W. M. Siesel. 2,461,447, Feb. 8.
Yokes for garment hangers, Making. W. Ludwig. 2,460,939, Feb. 8.
Zinciferous surfaces for electroplating, Method of and material for preparing. D. L. Miles. 2,461,228, Feb. 8.
Zirconium nitride, Production of. P. P. Alexander. 2,461,019, Feb. 8.

Stand: *See*—
Universal attachment stand.

Starch ester derivatives and making same. C. G. Caldwell. 2,461,139, Feb. 8.

Transformer, Permeability tuned. K. B. Ross. 2,461,397, Feb. 8.

Transformer, Resonant differential. H. Schaevitz. 2,461,236, Feb. 8.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 8, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

Supreme Court of the United States

JUNGERSEN *v.* OSTBY AND BARTON COMPANY ET AL. OSTBY AND BARTON COMPANY ET AL. *v.* JUNGERSEN JUNGERSEN *v.* BADEN ET AL.

Nos. 7, 8, 48. Decided January 3, 1949

[— F.2d —; 80 USPQ 32]

1. CERTIORARI.

Where Court of Appeals for the Third Circuit held claims 1–4 of Jungersen Patent No. 2,118,468 valid, and Court of Appeals for the Second Circuit held all claims invalid, *Held*, we granted certiorari in both cases in order to settle the conflict.

2. PATENTABILITY—METHOD—STATE OF THE ART.

Where an examination of the prior art as it existed at the time of this alleged invention reveals that every step in the patented method was anticipated, *Held* that we think his combination of these steps was, in its essential features, also well known in the art.

3. SAME—INVENTION—COMBINATION.

Where it is clear that the "lost wax" process, the use of a flexible primary mould, and the use of centrifugal force were all old in the art of casting, but the patentee claims that the centrifugal forcing of wax into the primary mould had never before been combined with the other features of his process, *Held* that this fact is of no legal significance.

4. SAME—SAME—SAME.

Where centrifugal force was common as a means of introducing molten metal into the secondary mold, *Held* that its use in an intermediate step to force molten wax into the primary mould was not an exemplification of inventive genius such as is necessary to render the patent valid.

5. SAME—SAME—ANALOGOUS ART.

Where patentee contends that jewelry casting is a separate and distinct art, and that the advancements in other types of casting cannot be viewed as the prior art in reference to this patent, *Held* that the improvements in the art of casting which were disclosed by the prior art were so obviously applicable to the type of casting sought to be effected by the patentee that he was bound by knowledge of them.

6. SAME—SAME—COMMERCIAL SUCCESS.

Though the patented process has enjoyed considerable commercial success, and though it is true that in cases where the question of patentable invention is a close one, such success has weight in tipping the scales of judgment toward patentability, *Held* that, where, as here, invention is plainly lacking, commercial success cannot fill the void.

7. PARTICULAR PATENTS—JUNGERSEN, 2,118,468—CASTING ARTICLES OF INTRICATE DESIGN.

Jungersen Patent No. 2,118,468, method of casting articles of intricate design, *Held*, all claims invalid for want of invention.

ON WRIT of certiorari to United States Court of Appeals for the Third Circuit.

Nos. 7 and 48 AFFIRMED.

No. 8 REVERSED.

FRANKFURTER, BURTON, AND JACKSON, JJ., dissenting.

William H. Davis (*George E. Faithfull* and *Karl W. Flocks* on the brief) for Jungersen.

John Vaughan Groner (*Edward Winsor* and *Hugo J. Frankl* on the brief) for Ostby & Barton Co.

MR. JUSTICE REED delivered the opinion of the Court.

The issue here is the validity of United States Patent No. 2,118,468 which covers a "method of casting articles of intricate design and a product thereof."

[1] The patent was granted to Jungersen on May 24, 1938. In 1941, Ostby and Barton Company instituted in the United States District Court for the District of New Jersey, an action for a declaratory judgment that the patent was invalid and not infringed. Jungersen, by counterclaim, alleged infringement and sought an injunction. The district court held claims 1–4 valid but not infringed and claims 5–6 invalid because too broad, 65 F. Supp. 652, 69 USPQ 362. The United States Court of Appeals for the Third Circuit affirmed on the reasoning of the district court, 168 F.2d 312, 75 USPQ 151. We denied petitions by both parties for certiorari, 332 U. S. 851, 852.

In 1944, Jungersen filed suit against Baden in the United States District Court for the Southern District of New York, in which he alleged infringement of the patent and sought damages, profits, and injunctive relief. That court held all the claims invalid. 69 F. Supp. 922, 72 USPQ 426. The United States Court of Appeals for the Second Circuit affirmed. 166 F.2d 807, 76 USPQ 488.

Vacating the prior orders which denied it in the Ostby and Barton proceeding, we granted certiorari in both cases in order to settle the conflict. 334 U. S. 835,[1] 77 USPQ 676. Since the parties do not assert error in those portions of the lower court's decisions which concern infringement, the sole issue before us is the validity of the patent.

The method described in the Jungersen patent, claims 1–4, consists of the following steps: (1) the production of a model of the article to be cast, (2)

[1] In No. 7 we are asked to consider the decision of the Court of Appeals for the Third Circuit as to claims 5 and 6; in No. 8, the decision of that court as to claims 1 through 4; and in No. 48, the decision of the Court of Appeals for the Second Circuit as to all the claims of the patent.

Vol. 619 • No. 3 Tuesday, February 15, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

the formation around this model of a "primary mould" of plastic material "such as rubber" which is "capable of assuming intimate contact with the intri-

ent No. 748,996, issued to Spencer, described a substantially identical process in which the primary mould was made, as in the patent here involved, by

Centrifugal force was commonly used in dental casting prior to 1988.[6]

[3] Thus it is clear that the "lost wax" process,

388, and cases cited in footnote 5 thereof. Where, as here, however, invention is plainly lacking, commercial success cannot fill the void. *Dow Chemical*

the formation around this model of a "primary mould" of plastic material "such as rubber" which is "capable of assuming intimate contact with the intricate designs of the model" and which will "retain a lasting shape through subsequent treatment," (3) the casting in this mould of a pattern consisting of molten wax or other material of a low melting point which is made to assume the minute configurations of the mould by means of centrifugal force, (4) the removal of this pattern (which has become solid upon cooling) from the primary mould, and the formation around it of a "secondary mould" of refractory material, such as plaster of Paris, which "will assume all the contours of its intricate design," (5) the removal of the wax or similar material from the secondary mould, or "investment" as it is called, by the application of heat, thus melting it out, and finally (6) the casting of the desired molten metal into the cavity in the investment by the application of centrifugal force as in (3), above.

This method is capable of producing "small metal articles, particularly articles of intricate detail such as jewelry which frequently are designed with hollows, undercut portions and perforations, so that they will have a smooth clean surface faithful in detail to the original and free from imperfections or holes, and to enable such result being accomplished with the minimum of expense." The patentee claims that it made possible the accurate reproduction of intricate designs in far less time than had previously been required.

Claim 5 describes in more general terms the formation of a primary mould around the original pattern, the removal of the pattern from the mould, the introduction of molten wax into the mould "by force sufficient to deposit the material into the depression or depressions of the primary mould" and the employment of the wax pattern for the manufacture of a casting mould. Claim 6 covers "an article of jewelry" of intricate design made by the process disclosed by claim 5. It describes the article of jewelry only by reference to the process by which it is manufactured. Obviously if the first four claims are invalid, the last two must likewise fall.

[2] An examination of the prior art as it existed at the time of this alleged invention reveals that every step in the Jungersen method was anticipated. We think that his combination of these steps was, in its essential features, also well known in the art.

Jungersen's process is nothing more than a refinement of a method known as the "cire perdue" or "lost wax" process, which was in use as early as the sixteenth century.[2] The Treatises of Benvenuto Cellini on Goldsmithing and Sculpture, pp. 87–89, reveals a process which consists of filling a primary mould with molten wax, building a secondary mould around the wax model thus obtained, melting the wax from this mould and pouring the desired metal in the secondary mould. In 1904 United States Patent No. 748,996, issued to Spencer, described a substantially identical process in which the primary mould was made, as in the patent here involved, by vulcanizing rubber around the original model or pattern. In England a process similar to Spencer's had been the basis of a patent issued to Haseltine in 1875.[3]

The above described developments in the prior art suggested no limitation of their applicability to any particular type of casting. Spencer stated that the purpose of his process was to produce accurate replicas of the original pattern, which could be of "intricate form" and which could "have any number of sides or surfaces or undercut or projecting parts." Haseltine described his object as the production of "a casting in metal from a given pattern, which casting will be a perfect copy of such pattern without requiring much, if any, after finishing or chiselling work."

The patentee claims that the invention in his combination lies in the use, in conjunction with the "lost wax" process, of centrifugal force. Long before the issuance of this patent, however, those skilled in the art recognised and disclosed the necessity for the application of force in order to make molten materials fit snugly the intricate details of the mould. Haseltine applied pressure of about twenty pounds per square inch to cause the molten metal "to lie to the dense mould and produce a sharp and well-defined casting." He accomplished this by introducing the metal into the mould through a pipe about six feet in height.[4] United States Patent No. 1,238,789 issued to Kralund in 1917 teaches the application of pressure to the wax and the molten metal by means of an ordinary pressure die casting apparatus.

Whether these types of pressure are the equivalent of centrifugal force we need not decide since it is evident from patents and publications that the use of the latter was well known in the art. In 1923 McManus patented a casting machine which was adapted "to the casting of jewelry, such as gold rings, small trinkets, etc., where metal or other dies or moulds may be * * * filled by centrifugal casting methods." (United States Patent No. 1,457,040.) He claimed "a means for transferring fused material from the furnace [in which the material was melted] to the mould under the action of centrifugal force." In a paper on current casting methods which he presented to the Institute of Metals in England in 1926, one George Mortimer, with reference to the difficulty in filling a mould by gravity, stated:

"It was natural, therefore, that engineers should early turn their attention to some form of artificial pressure, whereby the mould could be filled by force, and soundness and clean definition seemingly assured.

"The simplest form of artificial pressure is that of centrifugal force * * *";

[2] 20 Encyclopedia Britannica (1948), p. 229.

[3] British Patent No. 2467.

A French publication by Verleye entitled "La Gravure, etc." (1924) describes in detail all of the elements of Jungersen's process except the use of centrifugal force.

[4] "La Gravure, etc.," supra, note 3, advocates the use of steam pressure.

[5] 35 Journal of the Institute of Metals, 371, 377.

Centrifugal force was commonly used in dental casting prior to 1923.[6]

[3] Thus it is clear that the "lost wax" process, the use of a flexible primary mould, and the use of centrifugal force were all old in the art of casting. The patentee claims that the centrifugal forcing of wax into the primary mould had never before been combined with the other features of his process. We think this fact is of no legal significance.

[4] Where centrifugal force was common as a means of introducing molten metal into the secondary mould, its use in an intermediate step to force molten wax into the primary mould was not an exemplification of inventive genius such as is necessary to render the patent valid. Cf. *Lincoln Engineering Co.* v. *Stewart-Warner Corp.*, 303 U. S. 545, 37 USPQ 1; *Cuno Engineering Corp.* v. *Automatic Devices Corp.*, 314 U. S. 84, 51 USPQ 272. The patentee himself admitted that the same principle was employed in both steps.[7] Thus Jungersen employed in his claimed invention well known skills and practices in a manner and for a purpose long familiar in the field of casting. His claimed improvement is therefore not patentable.

[5] The patentee contends, however, that jewelry casting is a separate and distinct art; that consequently the advancements in other types of casting mentioned above cannot be viewed as the prior art in reference to this patent. The answer to this is twofold. In the first place, this patent is not restricted to the casting of jewelry. Its stated object is to "facilitate the casting of small metal articles, particularly articles of intricate detail such as jewelry. * * *" Secondly we think that the improvements in the art of casting which were disclosed by the patents and publications discussed above were so obviously applicable to the type of casting sought to be effected by Jungersen that he was bound by knowledge of them. *Mandel Bros.* v. *Wallace*, 335 U. S. 291, 295–96, 79 USPQ 220, 221–222.

[6] Numerous licenses under the patent were issued in the United States and other countries. The fact that this process has enjoyed considerable commercial success, however, does not render the patent valid. It is true that in cases where the question of patentable invention is a close one, such success has weight in tipping the scales of judgment toward patentability. *Goodyear Tire & Rubber Co.* v. *Ray-O-Vac Co.*, 321 U. S. 275, 279, 60 USPQ 386, 388, and cases cited in footnote 5 thereof. Where, as here, however, invention is plainly lacking, commercial success cannot fill the void. *Dow Chemical Co.* v. *Halliburton Co.*, 324 U. S. 320, 330, 64 USPQ 412, 416; *Toledo Pressed Steel Co.* v. *Standard Parts, Inc.*, 307 U. S. 350, 356–57, 41 USPQ 598, 595; *Textile Machine Works* v. *Hirsch Co.*, 302 U. S. 490, 498–99, 36 USPQ 37, 40; 1 Walker, Patents (Deller, 1937) § 44. Little profit would come from detailed examination of the cases cited above or those indicated by reference. Commercial success is really a makeweight where the patentability question is close.

Increased popular demand for jewelry or alertness in exploitation of the process may well have played an important part in the wide use of the patent. We cannot attribute Jungersen's success solely or even largely to the novelty of his process.

[7] We hold all the claims of the patent invalid for want of invention.

Nos. 7 and 48 AFFIRMED.

No. 8 REVERSED.

MR. JUSTICE FRANKFURTER, with whom MR. JUSTICE BURTON joins (*dissenting*):

This is not one of those patent controversies that carry serious consequences for an important industry and thereby for the general public. The case does, however, raise basic issues regarding the judiciary's role in our existing patent system. These issues were stated by Judge Learned Hand when the litigation was before the Court of Appeals for the Second Circuit. Since this Court's opinion has not, to my mind, met the questions which he raised, and since I cannot improve upon what Judge Learned Hand wrote, I adopt his opinion as mine.

"In Jungersen's British patent, as my brothers truly say, he based his invention solely upon forcing the wax and the metal into completely intimate contact with every crevice of the mould, and for this he disclosed a centrifuge as the means. Moreover, it had already been known by other moulders of fine patterns that the metal might not fill all the spaces necessary for perfect reproduction. For example, in 1873 Haseltine disclosed a device which set up a pressure of twenty pounds to the square inch; and this too in a 'lost wax' process. True, he did not disclose using similar pressure for the wax, and he did not use a centrifuge; but McManus used a centrifuge to force fusible metal into all the crevices of the mould, and that too in a 'lost wax' process, the knowledge of which he appears to have assumed, for he does not disclose how to make the wax model. Kralund also showed a pressure die-casting process, as applied to the 'lost wax' method; and he used pressure to force his wax into intimate connection with the first die as well as upon the molten metal of the final casting; but his original die was of steel and he does not describe its manufacture.

"Nevertheless, in spite of all these approaches, and of the fact that all the elements of the disclosure were to be found in the prior art, it remains true that Jungersen's process in its entirety had never been assembled before; no one had ever thought of combining all those steps in a single sequence. True, had the combination not been new in this objective sense, it could not have been patented merely by turning it to a new use; and that would have been so, although it might have taken as much originality to see that it could be put to the new use, as it takes to make an outstanding invention. It would have been a final answer that Congress has never seen fit to extend its constitutional power to 'discoveries' as such, and bears limited patents to an 'art, machine, manufacture, or composition of matter,'[8] as we have often said—the last time in *Old Town Ribbon & Carbon Co., Inc.*, v. *Columbia Ribbon & Carbon Manufacturing Co.*[9] My point is that, if there is a new combination, however trifling the physical change may be, nothing more is required than that, to take the step or steps, added 'invention,' is needed; and 'invention,' whatever else it may be, is within the category of mental activities and of those alone. In the case at bar the

[6] "Dental-casting methods employ four distinct principles; namely, gravity, centrifugal, vacuum, and pressure. * * *

"The centrifugal method has the advantage of great simplicity, and fills the mold by the force exerted in throwing the metal off on a tangent while being revolved about a center." Stern, Die-casting Practice (1st ed., 1930), p. 10.

[7] An excerpt from the testimony follows:

"Q. And when the machine is revolved, when it is centrifuged, it makes no difference whether it be molten wax or molten metal, does it, in the fact that it throws out the molten material into the gate? A. It would throw out anything of weight if it is made free to leave.

"Q. And that applies to wax as well as metal, does it not? A. It applies to wax and metal, but in a greater amount to the metal than to the wax.

"Q. But they both operate in the same way under the influence of the centrifugal machine? A. The same principle is used, yes.

"Q. And the molten material in both cases is introduced into the mold? A. Yes.

answer must therefore depend upon how we shall appraise the departure from what had gone before in terms of creative imagination; indeed, I do not understand what other test could be relevant.

"If that be the test, I submit that Jungersen's process meets it. From time immemorial jewellry had been manufactured by the earlier processes; so that the need, if need there was, had existed for years. Moreover, two of those earlier processes—'cuttlefish casting and sand-casting'—have now become 'of little commercial significance'; 'die-stamping' and Jungersen's process 'are the only substantial methods now commercially used'; and in the manufacture of a hundred rings or less 'die-stamping' is more expensive. Had some technological advance held up the change, and had Jungersen made it only a short time after the obstacle had been removed, I should agree that the inference of outstanding originality would have been greatly weakened; but that was not the fact. Indeed, it is the very basis of the defence that for years all the elements lay open and available, and that nothing was needed but the paltry modification which has proved so fruitful. To that I make the answer on which courts in the past used to ring the changes with wearisome iteration. If all the information was at hand, why was the new combination so long delayed? What better test of invention can one ask than the detection of that which others had all along had a strong incentive to discover, but had failed to see, though all the while it lay beneath their eyes? True, the whole approach to the subject has suffered a shift within the last decade or so, which I recognise that we should accept as authoritative. Moreover, I am not aware of the slightest bias in favor of the present system: I should accept with equanimity a new system or no system. However, I confess myself baffled to know how to proceed, if we are at once to profess to apply the system as it is, and yet in every concrete instance we are to decide as though it did not exist as it is. In the case at bar, I can only say that, so far as I have been able to comprehend those factors which have been held to determine invention, and to which at least lip service continues to be paid, the combination in suit has every hall-mark of a valid patent."

(Judge Hand's opinion is reported at 166 F.2d 811, 76 USPQ 491.)

MR. JUSTICE JACKSON (dissenting):

I think this patent meets the patent statute's every requirement. And confronted by this record an industry heretofore galled by futility and frustration may well be amazed at the Court's dismissal of Jungersen's ingenious and successful efforts.

Of course, commercial success will not fill any void in an invalid patent. But it may fill the void in our understanding of what the invention has meant to those whose livelihood, unlike our own, depends upon their knowledge of the art. Concededly, in this high-pressure age sales volume may reflect only powerful promotion or marketing magic, and its significance as an index of novelty or utility may rightly be suspected. But Jungersen's success was grounded not in the gullibility of the public but in the hard-headed judgment of a highly competitive and critical if not hostile industry. Knowing well its need for and its failure to achieve improvements on available processes, that industry discarded them, adopted this outsider's invention and made it a commercial success.

It would take a singular self-assurance on the part of one who knows as little of this art as I do, or as I can learn in the few hours that can be given to consideration of this case, to ignore the judgment of these competitors who grew up in the industry and say that they did not know something new and useful when they saw it. And if Benvenuto Cellini's age-old writings are so revealing to us laymen of the appellate Bench, it is hard to see why this practical-minded industry which the Court says was following Cellini failed through all the years to get his message.

It would not be difficult to cite many instances of patents that have been granted, improperly, I think, and without adequate tests of invention by the Patent Office. But I doubt that the remedy for such Patent Office passion for granting patents is an equally strong passion in this Court for striking them down so that the only patent that is valid is one which this Court has not been able to get its hands on.

I agree with the opinion of Judge Learned Hand below.

U. S. Court of Customs and Patent Appeals

IN RE WILLIAMS

No. 5513. Decided December 7, 1948

(— F.2d —; 80 USPQ 150)

1. PATENTABILITY—COMPOUND—NOVELTY.

Where the appealed claim calls for the laevo rotary form of compound "substantially free from the dextro rotary form" and the compound described in the prior art is a racemic mixture, *Held* that the existence of the compound as the racemic mixture does not negative novelty in a claim to the pure compound.

2. SAME—SAME—STATE OF THE ART.

Where there is no evidence of record to show that the product of the reference was actually known to be racemic, prior to appellant's original filing date, or that it would have been obvious to one skilled in the art that the product was, in fact, racemic, *Held* that the rejection on the ground of lack of invention cannot be sustained.

3. SAME—LAEVO ALPHA-HYDROXY-BETA, BETA-DIMETHYL-GAMMA-BUTYRO LACTONE.

A claim to the laevo rotary form of alpha-hydroxy-beta, beta-dimethyl-gamma-butyro lactone *Held* patentable over the art of record.

APPEAL from the Patent Office. Serial No. 431,581.

REVERSED.

Stowell & Evans (*Harold T. Stowell* and *John O. Evans, Jr.*, of counsel) for Williams.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting claim 2 in appellant's application for a patent on a lactone. The method claims by which the lactone, called for in appealed claim 2, may be produced, were allowed by the Examiner.

The appealed claim reads as follows:

2. The laevo rotary form of α-hydroxy-β,β-dimethyl-γ-butyro lactone substantially free from the dextro rotary form.

The following references were relied on by the Patent Office tribunals: Monatschefte fur Chemie, vol. 25, pp. 46–54 (1899) (Glaser); Monatschefte fur Chemie, vol. 39, pp. 295–296; Levene [sic] and Haller, J. Biological Chemistry, vol. 69, p. 165 (1926); Gilman, Organic Chemistry, vol. 1, pp. 155, 159, 176, and 187–196 (1938); Journal American Chemical Society, vol. 62, pp. 1779–1784 (July 1940).

Appellant's application here involved was filed February 19, 1942, and is a division of an application filed April 8, 1939. Both applications disclose

the claimed compound and a method of producing it. The appealed claim calls for the laevo rotary form of the compound "substantially free from the dextro rotary form." The laevo rotary form of a compound has the property of deflecting polarized light to the left, while the dextro rotary form deflects it to the right. A mixture of these two forms, which produces no deflection of polarized light, is called a racemic mixture.

The Monatschefte publications disclose, according to the Board, the production of a compound having a formula identical with that of the compound recited in the appealed claim, but there is nothing in those publications to indicate that the product is racemic, dextro rotary or laevo rotary.

The Levene and Haller publication shows the resolution of a racemic lactone mixture, not the one here involved, into its laevo and dextro rotary components.

The Gilman publication was cited to show that a racemic mixture, not the one here involved, contains both the laevo rotary and dextro rotary forms.

The Journal American Chemical Society was cited by the Examiner as showing that the compound disclosed in the Monatschefte publications is a racemic mixture.

It is stated in the decision of the Board of Appeals that "There appears to be no question as to the utility of the particular form of the compound herein disclosed and claimed * * *." The rejection is based on lack of novelty and on lack of invention.

[1] In support of the rejection on the ground of lack of novelty, the Examiner and the Board point out that the compound of the Monatschefte publications is a racemic mixture and, therefore, necessarily contains both dextro rotary and laevo rotary components. It is the position of the Patent Office tribunals that, in view of that fact, the laevo rotary compound, having existed as part of the racemic mixture, cannot be novel. The appealed claim, however, calls for the laevo rotary form "substantially free from the dextro rotary form" and it is evident that the laevo rotary form did not exist in this condition in the mixture of the Monatschefte publications. The existence of a compound as an ingredient of another substance does not negative novelty in a claim to the pure compound, although it may, of course, render the claim unpatentable for lack of invention. Thus, in the so-called aspirin case—*Farbenfabriken of Elberfeld Co.* v. *Kuehmsted*, 171 Fed. 887—it was held that a pure compound may, under certain conditions, be patentable over the same compound in an impure form, and this principle was approved by this court in the case of *In re Merz*, 25 CCPA (Patents) 1314, 97 F.2d 599, 38 USPQ 143, 497 O. G. 547. In the aspirin case, supra, the claimed compound had previously existed as an ingredient of the impure product but that fact was not considered as rendering a claim to the pure compound void for lack of novelty. Accordingly, the holding by the tribunals of the Patent Office that the appealed claim, drawn to a laevo rotary compound substantially free from the dextro rotary form of the compound is fully anticipated by a mixture of the laevo and dextro rotary forms of the compound, must be reversed.

[2] The rejection of the appealed claim on the ground of lack of invention was based on the theory that the Monatschefte publications disclose a racemic mixture which includes the laevo rotary form claimed by appellant, and that the procedure by which such a racemic mixture may be broken down into its dextro and laevo rotary components, was known to those skilled in the art. That rejection presupposes that the Monatschefte compound was known to be racemic since, if this were not the case, the idea of resolving it into components, to produce a laevo rotary compound, would not occur to one skilled in the art. Accordingly, unless it can be shown that the Monatschefte product was actually known to be racemic, prior to appellant's original filing date, or unless it would have been obvious to one skilled in the art that the product was, in fact, racemic, the rejection on the ground of lack of invention cannot be sustained.

There is no evidence of record to show actual knowledge of the racemic nature of the Monatschefte product prior to April 8, 1939, when appellant's original application was filed. The evidence relied on by the Examiner and the Board as showing that compound to be racemic is the Journal American Chemical Society, July 1940. That publication is competent as showing that the product was actually racemic, but it does not establish knowledge of that fact prior to appellant's original filing date.

[3] The record contains nothing to support a holding that those skilled in the art should have known that the Monatschefte product was racemic, particularly in view of the fact that that product had been in existence for approximately forty years prior to the disclosure in a publication of the fact that it was a racemic mixture, and it would not be proper to presume such knowledge. Accordingly, we are of opinion that the appealed claim involves patentable subject matter over the art of record.

For the reasons stated, the decision of the Board of Appeals is reversed.

REVERSED.

Notice of Tentative Recordation of Trade Name

[T. D. 52137]

Tentative recordation of trade name under section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943

TREASURY DEPARTMENT
OFFICE OF THE COMMISSIONER OF CUSTOMS
Washington, D. C.

To Collectors of Customs and Others Concerned:

An application has been filed in the Treasury Department for the recordation of the following-described trade name under the provisions of section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943:

"SHEFFIELD," owned by Sheffield Merchandise, Inc., a corporation of New York, 9 East 46th Street, New York, N. Y., which is used in connection with the importation, distribution, and sale of watches, watch movements, and analogous products, the merchandise being manufactured in Switzerland.

The recordation of the foregoing trade name shall become final at the expiration of 30 days after February 1, 1949. Any person who desires to file an opposition to the recordation of this trade name shall file it with the Commissioner of Customs prior to the expiration of such 30-day period.

Until the expiration of the above-mentioned 30-day period any articles of foreign manufacture bearing names or marks which copy or simulate the above-mentioned trade name shall be detained, but not seized, and thereafter shall receive the treatment provided for in section 11.17, Customs Regulations of 1943, unless notice of the cancellation of the recordation is sooner received.

(Signed) FRANK DOW,
Acting Commissioner of Customs.

January 24, 1949.

Errata

The notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration No. 260,859, registered Aug. 27, 1929, Class 39, by Associated Apparel Industries, Inc., Chicago, Ill., appearing in the OFFICIAL GAZETTE of Aug. 17, 1948, page 622, was inadvertent and is vacated.

The notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration No. 261,458, registered Sept. 17, 1929, Class 42, by Associated Apparel Industries, Inc., Chicago, Ill., appearing in the OFFICIAL GAZETTE of Aug. 17, 1948, page 627, was inadvertent and is vacated.

The notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration No. 273,454, registered Aug. 5, 1930, Class 39, by Associated Apparel Industries, Inc., Chicago, Ill., appearing in the OFFICIAL GAZETTE of Aug. 10, 1948, page 341, was inadvertent and is vacated.

The notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration No. 274,396, registered Aug. 26, 1930, Class 39, by Associated Apparel Industries, Inc., Chicago, Ill., appearing in the OFFICIAL GAZETTE of Aug. 31, 1948, page 1181, was inadvertent and is vacated.

Classification Bulletins 129–137

Classification Bulletins containing the definitions of the following patent classes, complete as amended through the classification orders indicated are now available and may be obtained from the Commissioner of Patents at a cost of ten cents each:

Class	Title	Order No.	Bulletin No.
323	Electricity, Voltage Magnitude and Phase Control Systems	17	129[1]
332	Modulators	34	130
33	Geometrical Instruments	37	131
41	Ornamentation	37	132
77	Boring and Drilling	37	133
95	Photography	37	134
154	Laminated Fabric and Analogous Manufactures	37	135
181	Acoustics	37	136
188	Brakes	37	137

[1] Bulletin 129 also contains Classification Orders Nos. 12 through 17, pertaining to the classification of subjects of invention revised by the Classifications Group of the United States Patent Office during the period from Aug. 15, 1947, to Oct. 14, 1947.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,320,780. GREASE GUN AND FITTING. Patented June 1, 1943. A portable plunger-operated grease gun and fitting has a flat attaching plate surrounding the discharge end of the gun barrel. Plate has a slot open at one end which interlocks with an exteriorly threaded extension through which the bore of the barrel and fitting extends. A ball valve in fitting prevents backward flow but has sufficient movement in the bore to allow lubricant to be forced out to the work. Movement of the ball valve is limited by a tubular notched plug threaded into the bore of fitting. (Owners) William T. Jennings and Raymond F. Clark. Correspondence to Russell H. Wambaugh, 305 Ellsworth Drive, Silver Spring, Md. Group 35—61. Reg. No. 18,782.

Pat. 2,450,816. STERILIZER. Patented Oct. 5, 1948. A box-like container for sterilizing blades used in hair clippers, etc. A detachable hinged top has a shelf (for the blades) attached to the underside, which pivots upwardly when the container is opened. A body of sterilizing material is provided in the bottom of container. (Owner) Raymon W. Snider, Augusta, Mont. Group 39—91. Reg. No. 18,783.

Pat. 2,450,821. TILTING BALANCED DUPLEX PROPELLER. Patented Oct. 5, 1948. A double-screw, variable-pitch propeller is mounted on each wing of an airplane and is independently controlled. There are a change speed gear, separate tilting lever, and separate clutch control for each propeller. Provides a practical control of the airplane and of the speed and directional movement of the plane. (Owner) Arthur B. Zimmerman, 1660 Rockwood St., Los Angeles 26, Calif. Group 37—22. Reg. No. 18,784.

Pat. 2,371,535. SAFETY RAZOR OF THE DRY SHAVER TYPE. Patented Mar. 13, 1945. A self-cleaning electric dry shaver has three or more spring-controlled shearer heads which automatically take different angles, when pressed over the face, to fit the skin surface. A suction fan on the motor armature shaft causes a constant flow of air through the shearer heads and pulls the skin closer to shearer members. The flow of air keeps shearer retainers clean. (Owner) Harry H. McGuffin, Dorset, Vt. Group 36—21. Reg. No. 18,785.

Pat. 2,451,359. ROTARY AND SLIDING BALL BEARING. Patented Oct. 12, 1948. Ball bearing permits rotary as well as sliding movement of a shaft. It consists of an inner rotatable race sleeve (for surrounding shaft), an outer stationary sleeve, and a pair of end rings rigidly secured to inner sleeve. Longitudinal race slots are formed in inner sleeve, and longitudinal ball return passages are formed in outer sleeve. Radial slots in the end rings establish ball guiding paths at opposite ends of the race slots and opposite ends of the ball return passages to provide endless ball circuits. These circuits are completely filled with balls to form endless rows, with balls in the inner race sleeve constituting load-carrying balls for rolling contact between shaft and inner surface of outer sleeve. Sliding movement of shaft will cause the balls to roll in the circuits and longitudinally along shaft. (Owner) T. F. Schlicksupp, 52 Vanderbilt Ave., New York 17, N. Y. Group 35—66. Reg. No. 18,786.

Pat. 2,429,820. SAFETY VALVE FOR HYDRAULIC BRAKES. Patented Oct. 28, 1947. A cut-off for hydraulic brakes operates promptly on the occurrence of any abnormal condition when brakes are applied. The failure of a brake-operating conduit will result in the cut-off of the fluid supply to one or a pair of brakes without impairing its application to the remaining brakes. A chamber receives fluid pressure from a master cylinder which compresses a bellows at end of the chamber and applies pressure in the brake cylinders and an associated cut-off valve. One of these units is mounted in the conduits from the master brake cylinder to the individual cylinders at the wheels. The pressure of the braking fluid actuates the cut-off valve in the event of failure of pressure in the braking piping. (Owner) George W. Kean, Day St., Granby, Conn. Groups 35—61; 38—31. Reg. No. 18,787.

Pat. 2,451,179. HANDY SCAFFOLD BRACKET. Patented Oct. 12, 1948. Spaced parallel strap hangers are attached at center to a vertical tubular member. A braced horizontal angle iron is secured to the top of the tubular member to support a plank. Slots for nails are provided along lower edges of hangers so that it may be attached to a building. Channel members may be telescopically fitted on the hangers to support hangers at spaced positions. (Owner) Henry J. Steffes, 20 South 38th St., Great Falls, Mont. Groups 25—99; 38—69. Reg. No. 18,788.

Pat. 2,445,148. COMBINED PUMP AND MOTOR CYLINDER COAXIAL. Patented July 13, 1948. An internal combustion engine has a valved piston in opposed relation to the main piston to increase power. It is actuated by cam means on the crankshaft, including a spring-pressed arm. Arm is mounted at right angles to the cylinder block which through a linkage system connects with the piston rod mounted in the motor block in opposed relation to the main piston and causes the operation thereof. For use with radial, V-type, or in-line type engines. May also be used with engines of double acting, double piston construction, or with Diesel engines. (Owner) Raymond E. Minnix, Box 1403, Balboa, Canal Zone. Group 35—12—19. Reg. No. 18,789.

Pat. 2,446,748. PUMP. Patented Aug. 10, 1948. A reciprocal type pump to maintain a constant flow of fluid from a pipe to a discharge outlet. Three valve-controlled cylinders arranged in series have a piston operably associated therewith to simultaneously fill one of the cylinders while emptying another. (Owner) Henry L. Etter, Lemasters, Pa. Group 35—61. Reg. No. 18,790.

Pat. 2,450,572. DECOY. Patented Oct. 5, 1948. A collapsible decoy for bird hunting has a two-section body with hinged neck and legs. The body members are riveted along the back, and the head and neck are riveted to swing downwardly between the body members when collapsed. Pivoted legs swing upwardly when not in use. A brace hinged to one leg moves against the other body member when body members are spread apart. (Owners) Cleve Groome and Virgil Ballard. Correspondence to Cleve Groome, Caldwell, Idaho. Group 39—49. Reg. No. 18,791.

Pat. 2,451,775. HOLDER FOR INDIVIDUAL STENCILS AND THE LIKE. Patented Oct. 19, 1948. Device is used to securely hold stencils properly aligned in edge-to-edge relation when lettering windows, signs, etc. It is formed by laterally doubling a single elongated strip of sheet metal

charged from the blower in a plane parallel with the horizontal axis of the blower, through the ice bunker, and circulated through the interior of the trailer. (Owner) B. W. Curry, 1026 North Myrtle Ave., Jacksonville 4, Fla. Groups 85—64; 38—11. Reg. No. 18,793.

metal) blade, with other longitudinal edge forming a handle. Strips of molding secured along opposite sides of beard throughout its length are shaped so as to define with handle edge of board a convenient hand grip. Device is light, easy to grasp, and resistant to warping. (Owner) Albert J. Schumock, 1337 Pennsylvania Ave., S. E., Wash-

notatum-chrysogenum group. The feed supplement is recovered from the fermentation mass by removing the bulk of the water. The supplement consists of the mycelium, suspended matter, and other solids. The process is particularly applicable to the recovery of a valuable byproduct in the manufacture of penicillin. Group 28—31. Reg. No. 18,807.

Pat. 2,451,775. HOLDER FOR INDIVIDUAL STENCILS AND THE LIKE. Patented Oct. 19, 1948. Device is used to securely hold stencils properly aligned in edge-to-edge relation when lettering windows, signs, etc. It is formed by laterally doubling a single elongated strip of sheet metal upon itself, and then bending the doubled material at an angle along its length to provide opposed angular clamping members for engaging the lower ends of stencils. After insertion of stencils, an elongated U-shaped clamp is tightened to hold clamping surfaces tightly together to prevent displacement of stencils. (Owner) Harrison Rober, 1801 South Central Ave., Los Angeles 21, Calif. Groups 33—73; 35—79. Reg. No. 18,792.

Des. Pat. 148,964. DESIGN FOR AN ARTICULATED FIGURE. Patented Feb. 26, 1946. A toy rooster, with arms. (Owner) Kenneth R. Eames, 3 Rice St., Worcester, Mass. Group 39—41. Reg. No. 18,793.

Des. Pat. 146,398. DESIGN FOR A SADDLE. Patented Feb. 25, 1947. An ornamental tooled design for a saddle. (Owner) W. D. Allison, 316 Main St., Montrose, Colo. Group 31—91. Reg. No. 18,794.

Pat. 2,449,319. BOOKMARK. Patented Sept. 14, 1948. U-shaped resilient strip provides gripping jaws having curled ends adapted to engage the top of the back binding of a book. The jaws are held in closed position by a lever pivoted to the bent portion of the strip. The portion of the book being marked is designated by a hanging bookmark pivoted to end of the lever. (Owner) Emil Polak, 69-25 38th Ave., Woodside, Long Island, N. Y. Groups 37—89; 38—73; 40. Reg. No. 18,795.

Pat. 2,451,882. LIQUID PROPORTIONING GAUGE OR INDICATOR. Patented Oct. 19, 1948. A sight gauge is connected in a pipe line adjacent a pump for determining the proportion of light and heavy liquid as the mixture flows through the pipe. Upper and lower outlet pipes connected to a liquid chamber connect with a pipe which leads to the intake side of pump. A sight gauge is connected above and below baffles in the chamber. The two liquids are visible in the gauge and weigh the same as the mixture in the chamber. A line of demarcation in the gauge moves up or down in response to changes in proportion of the amount of each liquid in the chamber. (Owner) Walter C. J. Smith, 2256 Queen St., Regina, Saskatchewan, Canada. Group 35—65. Reg. No. 18,796.

Pat. 2,451,470. VEHICLE ANCHOR DEVICE. Patented Oct. 19, 1948. An anchoring device for crane or wrecking trucks. A metal base plate has a yoke mounted at center of the under surface to which a chain is secured for attachment to forward part of vehicle. Inwardly offset rods mounted on the under surface have forwardly and downwardly extending prongs for inserting in the ground or highway. One device is used for each rear wheel. The chains are secured to truck body, and the devices are placed on ground or highway, and the vehicle driven so the rear wheels will ride onto the bases until the chains are taut. When the crane or winch is used to pull a load toward the truck, the rear wheels are held stationary. (Owner) John Buckley, Georgetown, Colo. Group 33—72. Reg. No. 18,797.

Pat. 2,450,186. TURBINE BLOWER. Patented Sept. 28, 1948. A rotary air blower particularly useful in connection with the refrigerating apparatus in automotive vehicles of the semi-trailer type. The blower is connected with the ice bunker. The shaft of the blower is extended through the front wall of trailer and operated by an auxiliary motor exterior of the trailer. Air currents are discharged from the blower in a plane parallel with the horizontal axis of the blower, through the ice bunker, and circulated through the interior of the trailer (Owner) B. W. Curry, 1026 North Myrtle Ave., Jacksonville 4, Fla. Groups 35—64; 38—11. Reg. No. 18,798.

Pat. 2,451,531. WIRE TIGHTENER. Patented Oct. 19, 1948. Hand tool is used to secure tie wires to concrete forms. The ends of a tie wire are releasably clamped to head of tool and handle turned to tension the wire and twist the ends in a single operation. Several embodiments are shown. In one embodiment the head will move outwardly without rotating to initially tension wire to a certain degree. Thereafter the head will rotate without any substantial outward movement to twist ends of wire. In another embodiment the wire is initially tensioned a predetermined degree and then subjected to combined tensioning and twisting movement. The degree of initial tensioning may be regulated as desired by adjusting tool prior to beginning of the operation. (Owner) Burt J. Bradley, 2001 Harrison Blvd., Boise, Idaho. Group 33—52. Reg. No. 18,799.

Pat. 2,448,986. COMB DECAPPER. Patented Sept. 7, 1948. A metal rotating drum for removing caps from filled cells of honeycomb has two rows of overlapping spaced staggered teeth. A movable carriage supports a reversible honeycomb frame, and the teeth engage the entire capped surface at one side of frame as it is moved over the drum, cutting the wax into fine particles. Wax falls into a screened casing where honey adhered thereto drips into a container. (Owner) Walter C. Ladwig, 223 South York St., Elmhurst, Ill. Group 35—51—59. Reg. No. 18,800.

Pat. 2,142,436. FLAME CUTTING APPARATUS. Patented Jan. 3, 1939. Automatic gear-cutting machine embodies a casing mounted on swiveled rollers, a motor, a train of gears, a reciprocating torch, and a tracer cam for guiding the torch during the cutting operation. A micrometer adjusting device between cam and torch insures accuracy of the work. The machine is placed on a blank from which numerous gears may be cut. In operation, machine bodily revolves completely around a stationary pivot to form gear. The stationary pivot is formed prior to start of cutting operation by centering and rigidly securing the lower end of a vertical rod to gear to be cut, and then adjustably securing upper end of rod to the hub of a pair of the gears by set screws to prevent these gears from turning during cutting operation. The cam and certain gears are readily replaceable to produce gears of various types and sizes. (Owner) Robert J. Clabeaux, R. D. 1, Sierk Road, Attica, N. Y. Group 35—41—43. Reg. No. 18,801.

Pat. 2,450,736. BRUSH HOLDER. Patented Oct. 5, 1948. A paint brush may be held suspended from this holder by pressing handle of brush laterally between its jaws. Holder is made of two pieces of wire. One piece is bent to form a hanger having a suspendable hook with a pair of depending springable legs. The other piece is bent to form a jaw member, which includes an upper loop, a pair of laterally spaced lower loops, and a pair of forwardly extending springable jaws. Jaw member clutchingly engages legs of hanger so that it may be adjusted vertically to accommodate brushes of different sizes. Several modified forms of jaw members are shown. (Owner) Charles Howard Pierce, 926 South Rose St., Kalamazoo 32, Mich. Groups 33—49—50; 40. Reg. No. 18,802.

Pat. 2,450,385. PLASTERER'S FEATHEREDGE DEVICE. Patented Sept. 28, 1948. Device for use by plasterers for smoothing up plaster applied to walls, ceilings, etc. An elongated wooden board has one longitudinal edge provided with a slot for releasably receiving an aluminum (or other metal) blade, with other longitudinal edge forming a handle. Strips of molding secured along opposite sides of board throughout its length are shaped so as to define with handle edge of board a convenient hand grip. Device is light, easy to grasp, and resistant to warping. (Owner) Albert J. Schumock, 1337 Pennsylvania Ave., S. E., Washington, D. C. Groups 25—99; 33—52; 40. Reg. No. 18,803.

Pat. 2,431,105. LOCK AND LATCH. Patented Nov. 18, 1947. When this lock is installed, no projections extend outwardly from opposite sides. A pair of finger bars for withdrawing latch bolt are disposed inside housing of lock. These bars are accessible through openings in finishing plates, which are secured to opposite sides of lock housing and door when lock is installed. The latch bolt has rack teeth meshing with a pinion, and pinion meshes with a pair of vertical rack bars. The finger bars are connected by yokes to the upper ends of rack bars. To prevent withdrawal of latch bolt, a pair of finger buttons accessible through openings in finishing plates may be provided for shifting blocking members beneath the lower ends of vertical rack bars. (Owner) Gaylord A. Brinson, Mount Summit, Ind. Group 33—59. Reg. No. 18,804.

Pat. 2,448,764. ROUND WINDOW WITH REVOLVING SASH. Patented Sept. 7, 1948. Circular window has a pair of semicircular revolving sashes which may be rotated with respect to each other to assume any position between fully open and fully closed. Sashes are mounted in a circular window frame for rotation completely around a common axis by pivotally connecting overlapping cross bars of the sashes to a cross bar secured to window frame. The window frame, consisting of a pair of semicircular sections connected end to end, has a circular sash-retaining flange around its outer edge. The inner surface of frame is formed with stepped annular surfaces to receive the sashes and a circular sash-supporting frame insert. A circular framing rim is provided for attachment to inner side of frame to retain sashes in place. A latching device is provided for holding the sashes in open and closed positions. The use of sash weights, cords, etc., is eliminated. (Owner) Gaylord A. Brinson, Mount Summit, Ind. Groups 24—31; 33—83. Reg. No. 18,805.

United States Government Owned Patents

The following five patents have been assigned by the inventors to the United States of America as represented by the Secretary of Agriculture. Licenses to practice the inventions will be issued on a royalty-free, non-exclusive, non-transferable, revocable basis. Applications for licenses should be addressed to the Bureau of Agricultural and Industrial Chemistry, U. S. Department of Agriculture, Washington, D. C.

Pat. 2,445,931. PROCESS OF EXTRACTION FROM VEGETABLE MATERIALS. Patented July 27, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Fatty oils and waxy solids are extracted from vegetable materials, such as soybeans, cottonseed, flaxseed, peanuts, tung nuts, and the like, with a lower alcohol (ethanol). The material is subjected to hot alcohol and the extract cooled until oil separates (about 20° C. or lower). The oil is separated and the alcohol further cooled to separate solid material. The alcohol is then re-used without distillation refinement for further extraction of the material. The two cooling steps may be combined to cause removal of oil and solids together. The process has become known as the "no distillation" process. Group 28—23. Reg. No. 18,806.

Pat. 2,449,340. VITAMIN-B-COMPLEX CONCENTRATE. Patented Sept. 14, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A feed supplement rich in vitamin-B-complex is produced by fermenting under submerged aerated conditions a fermentation medium employing fungi of the *Penicillium notatum-chrysogenum* group. The feed supplement is recovered from the fermentation mass by removing the bulk of the water. The supplement consists of the mycelium, suspended matter, and other solids. The process is particularly applicable to the recovery of a valuable byproduct in the manufacture of penicillin. Group 28—81. Reg. No. 18,807.

Pat. 2,450,586. PROCESS FOR SACCHARIFYING PLANT MATERIALS. Patented Oct. 5, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) The saccharification of plant material is claimed, including the steps of progressive degradation in a plurality of successive stages. The plant material is first treated with 1 to 6 percent sulfuric acid at 100 to 121° C. to convert pentosans into pentoses and furfural. The residue, free of pentoses and containing entrained acid, is dried and mixed with 0.15 to 0.55 part concentrated sulfuric acid. The mixture, a free flowing powder, is subjected to mechanical mastication for a short period at below 45° C. The latter treatment converts the powder into a stiff plastic mass and is accompanied by further degradation of the cellulose. The mastication is stopped just short of the formation of substantial amounts of dextrose. The treated material is then hydrolysed to produce dextrose. Groups 20—61; 28—83. Reg. No. 18,808.

Pat. 2,450,940. POLYAMIDES FROM POLYMERIC FAT ACIDS. Patented Oct. 12, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A hard fusible polyamide resin is produced by heating polymerised polyene fatty acids or their functional derivatives with an equivalent amount of diamine. The temperature of reaction is below 160° C. at the start and thereafter is raised to 175° to 225° C. The product has a molecular weight of 3000 to 5000 and is valuable as a heat sealing resin. Group 28—83. Reg. No. 18,809.

Pat. 2,451,567. PROCESS FOR PREPARING STARCH HYDROLYZING ENZYME WITH ASPERGILLUS. Patented Oct. 19, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A starch hydrolysing ensyme complex containing dextrinising and saccharifying ensymes is prepared by cultivating certain strains of Aspergillus. The product is a fungal amylase capable of totally replacing barley malt for converting grain mashes in a distillery or for manufacturing food syrups and sweetening agents. Groups 20—61—94; 28—83. Reg. No. 18,810.

Removed from Register

The following patents have been removed from the Register of Patents Available for License or Sale:

Reg. No. 10,062. Pat. 2,443,355. PIPE CLEANER.
Reg. No. 10,163. Pat. 2,020,302. FUEL PUMP.

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the OFFICIAL GAZETTE, November 2, 1948. Publication of abstracts of the patents began in the November 9, 1948, issue of the OFFICIAL GAZETTE and is concluded in this issue. The following patents (Reg. Nos. 18,811 through 19,066) are the balance of Schedule 10. Groups 28 and 30.

SCHEDULE 10—Continued

Patents Relating to Elastomers and Elastomer Chemicals

P[illegible]2,005. Preservation of Rubber. Mar. 21, 1933. The [illegible]od of increasing the age-resisting properties of rubber which comprises incorporating in the rubber a compound obtainable by reacting boric acid with an ortho dihydroxy aromatic body and a basic salt-forming substance.

Pat. 1,907,590. Use of Fluoboric and Fluosilicic Acid in Acetylene Reactions. May 9, 1933. In the process for forming compounds by reacting an organic compound with acetylene in the presence of a mercuric catalyst, the step which comprises carrying out the reaction in the presence of an anhydrous fluoboric or fluosilicic acid.

Pat. 1,956,418. Coating Composition. May 15, 1934. A coating composition comprising a synthetic drying oil prepared from a non-benzenoid acetylene polymer and a toxic aromatic hydrocarbon substance, such as a nitrobenzene.

Pat. 2,018,643. Method of Plasticising Rubber and Product Thereof. Oct. 22, 1935. Unvulcanised rubber is plasticised by treating it, in the absence of more than 3% of sulfur, with an unsymmetrically substituted hydrazine to improve the raw characteristics.

Pat. 2,018,644. Plastic Rubber Product. Oct. 22, 1935.

Pat. 2,077,485. Polymers and Method for Preparing Same. Apr. 20, 1937. Polymerisation of pure vinylacetylene in the presence of a non-acetylenic film-forming material of the group consisting of resins, cellulose derivatives, and polymerisable materials containing at the least 2 C

cal is unsubstituted or substituted by at least one alkyl, alkoxy, hydroxy, or primary amino group.

Pat. 1,907,560. Use of Fluoboric and Fluosilicic Acid in Acetylene Reactions. May 9, 1933. In the process for forming compounds by reacting an organic compound with acetylene in the presence of a mercuric catalyst, the step which comprises carrying out the reaction in the presence of an anhydrous fluoboric or fluosilicic acid.

Pat. 1,908,093. Process of Producing Age-Resisting Rubber Compositions and Product Obtained Thereby. May 9, 1933. Process of producing a vulcanized rubber of improved age-resisting properties, which comprises vulcanizing a rubber mix in the presence of a product obtainable by condensing n-butyraldehyde with an equi-molecular amount of an aromatic primary amine prepared in the presence of at least 1/30 mol. of a weak organic acid for each molecular amount of aldehyde.

Pat. 1,913,621. Preservation of Rubber. June 13, 1933. Preservation of vulcanized rubber by incorporating in the rubber a 2-hydroxy-1-naphthyl-aryl-amino-methane or substituted amino-methane.

Pat. 1,915,979. Accelerator for the Vulcanization of Rubber. June 27, 1933. Process for treating rubber or similar material which comprises combining with an unvulcanized rubber compound a vulcanizing agent and the product obtained by reacting aniline and butyl aldehyde under essentially anhydrous conditions and in the presence of less than 5% by weight of an acidic material.

Pat. 1,920,242. Hydrogenation of Mono-Vinylacetylene. Aug. 1, 1933. The process which comprises reacting monovinylacetylene and hydrogen in the presence of a hydrogenating catalyst.

Pat. 1,928,773. Vulcanization of Rubber. Oct. 3, 1933. Dibensothiazyl 1-ss' dithio carbonates and their use in rubber as vulcanisation accelerators.

Pat. 1,938,651. Vulcanization of Rubber. Dec. 12, 1933. Rubber containing an alkali metal salt of a dialkyl dithiocarbamate as a vulcanization accelerator.

Pat. 1,940,280. Rubber Vulcanization. Dec. 19, 1933. In the process of vulcanising rubber the step of adding to the rubber a small amount of butyl substituted ammonium acetate and a member of the group consisting of tetramethyl-thiuram-monosulfide and mercaptobensothiasole.

Pat. 1,943,570. Accelerator for the Vulcanization of Rubber. Jan. 16, 1934. Method of treating an aldehyde-amine resin type of vulcanization accelerator which comprises treating the accelerators with a chemical material capable of reacting with the water therein to produce a compound noninjurious to rubber.

Pat. 1,947,458. Method of Compounding Rubber. Feb. 20, 1934. Rubber containing an antioxidant of the formula, HO—R—R'—OH or HO—R'—R''—H, where R=naphthyl or phenyl and R' and R''=phenyl.

Pat. 1,950,430. Process of Impregnation and Product Obtained Thereby. Mar. 13, 1934. Process of impregnating a porous object with a composition comprising essentially a non-benzenoid polymer of acetylene in the fluid state and an antioxidant.

Pat. 1,950,478. Method of Compounding Rubber. Mar. 13, 1934. Rubber containing an anti-aging compound of the formula, NH_2—R—NH—R'—Y, where R=aryl, R'=phenyl and Y=H, OH, or NH_2, e. g. p-amino-diphenylamine.

Pat. 1,952,116. Polymerization of Unsaturated Organic Materials. Mar. 27, 1934. Polymerisation of unsaturated aliphatic compounds having at least two conjugated double bonds, aromatic compounds having an unsaturated side chain, or unsaturated aliphatic esters, halides or aldehydes under a pressure of at least 6,000 atm.

Pat. 1,954,377. Method of Inhibiting the Deterioration of Rubber. Apr. 10, 1934. Diamino-diaryl-alkanes as age-resistors for rubber e. g., p-p'-diamino-di-o-anhyl-dimethyl-methane.

Pat. 1,958,418. Coating Composition. May 15, 1934. A coating composition comprising a synthetic drying oil prepared from a non-benzenoid acetylene polymer and a toxic aromatic hydrocarbon substance, such as a nitrobensene.

Pat. 1,959,408. Coating Composition. May 22, 1934. A partially polymerized hydrogenated polymerizable acetylene polymer in admixture with a paint or varnish adjunct of the group consisting of driers, pigments, fillers, antioxidants, volatile solvents, softeners, natural gums, drying oils, and synthetic resins.

Pat. 1,963,108. Esters and Process for Making the Same. June 19, 1934. Process of forming esters by reacting an organic carboxylic acid and a compound of the formula: $CH_2=CR—C\equiv CR_1$, where R and R_1=hydrogen or organic radical; and polymers thereof.

Pat. 1,963,934. Vinylethinyl Derivatives and Processes for Producing Same. June 19, 1934. Reaction of monovinyl acetylene with an alkali metal or alkali metal amide to form sodium vinyl acetylide. Also claims the reaction of this product with Grignard reactive compounds.

Pat. 1,967,864. Halogen-Vinyl Acetylene and Process of Preparing Same. July 24, 1934. Process of forming 1-halogen-2-vinylacetylenes by treating monovinylacetylene with an alkaline hypohalite, and polymers thereof.

Pat. 1,978,444. Preservation of Rubber. Oct. 30, 1934. Use of N-substituted naphthalene diamines as rubber antioxidants.

Pat. 1,989,788. Method of Compounding Rubber. Feb. 5, 1935. Use of mono-hydroxy-diaryl-methanes as rubber antioxidants.

Pat. 1,997,760. Vulcanization of Rubber. Apr. 16, 1935. Rubber containing a mercaptobensothiasole, diphenyl guanidine, tetramethyl thiuram monosulfide or butyraldehyde-aniline accelerator and a small amount of a zinc, lead, mercury or cadmium propionate as activator.

Pat. 2,002,622. Natural and Artificial Rubber Latex. May 28, 1935. Artificial and natural latices containing enough sulfonated abietane, sulfonated abietene or sulfonated abietine to increase the stability of the latex.

Pat. 2,002,639. Vulcanization of Rubber. May 28, 1935. Use of the products obtainable by hydrogenating carbazole until at least part of the product is soluble in 10% acetic acid as vulcanization accelerators for rubber.

Pat. 2,006,057. Vulcanization of Rubber. June 25, 1935. Treatment of rubber by incorporating into the rubber mix, prior to vulcanization, a thiuram polysulfide accelerator derived from a secondary amine together with a thiuram monosulfide accelerator derived from a secondary amine.

Pat. 2,010,828. Chemical Compound and Process for Preparing the Same. Aug. 13, 1935. Reaction of a compound having the formula RXH in which R is a hydrocarbon radical and X consists of 1–3 atoms selected from Group VI, subgroup B, of the periodic table, with $CH_2=CH—CO—R_1$, where R_1=hydrocarbon.

Pat. 2,014,198. Chemical Product and Process of Preparing Same. Sept. 10, 1935. Rubber composition containing carbon black and an open chain aliphatic alcohol of at least 8 carbon atoms which acts as a dispersing agent for the carbon black.

Pat. 2,015,207. Process of Vulcanising Rubber. Sept. 24, 1935. Use of a salt of a polybasic acid ester of an alcohol having 6–20 carbon atoms for coating metallic molds used in the molding of rubber to prevent the adhesion of rubber to the mold.

Pat. 2,015,234. Chemical Product and Process for Producing Same. Sept. 24, 1935. A rubber composition containing a pigment, e. g. carbon black, and an aliphatic dihydric or aliphatic trihydric alcohol having at least 8 carbon atoms.

Pat. 2,018,643. Method of Plasticising Rubber and Product Thereof. Oct. 22, 1935. Unvulcanised rubber is plasticised by treating it, in the absence of more than 3% of sulfur, with an unsymmetrically substituted hydrazine to improve the flow characteristics.

Pat. 2,018,644. Plastic Rubber Product. Oct. 22, 1935. Unvulcanized rubber is plasticised by treating it with a salt of an unsymmetrically substituted hydrazine to improve the flow characteristics.

Pat. 2,018,645. Rubber Cement of High Rubber Content and Low Viscosity. Oct. 22, 1935. Method of reducing the viscosity of unvulcanised rubber solutions which comprises the step of subjecting the rubber to the action of a small amount of unsymmetrically substituted hydrazine compound containing the hydrazine nucleus for a length of time sufficient to decrease its viscosity and in the absence of sufficient amounts of compounding ingredients to neutralise the viscosity reducing action of the hydrazine compound.

Pat. 2,018,678. Isomerization of Rubber. Oct. 29, 1935. Isomerisation of rubber dissolved in an inert solvent by adding anhydrous hydrofluoric acid.

Pat. 2,034,889. Inhibitor for Rubber Vulcanization. Mar. 24, 1936. Treatment of rubber by combining with unvulcanised rubber a vulcanising agent, a mercapto aryl thiazole accelerator which normally promotes at least partial vulcanisation below 110° C., and a substituted benzoic acid compound to inhibit vulcanization below 100° C.

Pat. 2,034,895. Molding Compositions. Mar. 24, 1936. Claims a thermoplastic composition of matter prepared by subjecting a mixture containing 25% by weight of a liquid non-benzenoid polymerizable polymer of acetylene which is non-volatile at 100° C., 1% phenyl-α-naphthylamine and 74% of wood flour, to a temperature of substantially 160° C. and a pressure of substantially 2000 lbs. per square inch for 40 minutes.

Pat. 2,036,300. Pigmented Coating Composition. Apr. 7, 1936. A coating composition comprising a liquid, relatively non-volatile polymer of acetylene vehicle and a pigment composition consisting of 15 parts asbestine, 13 parts barytes, 28 parts blanc fixe and 2 parts stearic acid disposed on the pigment particles by a pretreatment.

Pat. 2,037,717. Xanthates and Method of Making Same. Apr. 21, 1936. Xanthates of monohydric primary alcohols containing 17–18 carbon atoms and useful as rubber accelerators and flotation agents.

Pat. 2,041,854. Preservation of Rubber. May 26, 1936. Rubber containing, as a deterioration inhibitor a hydroxyphenylamino N-phenyl-morpholine, the indo-phenol from p-amino-phenyl-morpholine and o-cresol, or a methoxyphenylamino N-phenyl-morpholine.

Pat. 2,044,059. Method of Compounding Rubber. June 16, 1936. Rubber containing an alkoxy substituted diarylamine as a preservative.

Pat. 2,046,160. Hydrogenated Rubber and a Process for Producing Same. June 30, 1936. Hydrogenation of rubber in solution in decahydronaphthalene, methyl decahydronaphthalene, ethyl decahydronaphthalene, hydrogenated anthracene, or hydrogenated phenanthrene in the presence of a hydrogenation catalyst.

Pat. 2,067,172. Chemical Compounds and Process for Preparing Same. Jan. 12, 1939. Halogenated polymer of an alpha, gamma-diene containing a single halogen atom in the molecule, e. g. chloroprene.

Pat. 2,067,299. Rubber Solution. Jan. 12, 1937. Method of reducing the viscosity of solutions of unvulcanised rubber by treating with an unsymmetrically substituted hydrazine compound in the presence of an alcohol.

Pat. 2,067,978. Preservation of Rubber. Jan. 19, 1937. Preservation of rubber by incorporating therein a secondary phenyl naphthylamine whose phenyl group has a morpholyl or piperidyl substituent, and the naphthyl radical is unsubstituted or substituted by at least one alkyl, alkoxy, hydroxy, or primary amino group.

Pat. 2,077,485. Polymers and Method for Preparing Same. Apr. 20, 1937. Polymerisation of pure vinylacetylene in the presence of a non-acetylenic film-forming material of the group consisting of resins, cellulose derivatives, and polymerisable materials containing at the least 2 C atoms in an open-chain joined by more than one bond.

Pat. 2,077,502. Preservation of Rubber. Apr. 20, 1937. Preservation of rubber by incorporating therein an N,N'-disubstituted 1,5-naphthalene diamine in which each N substituted group is a benzene ring in which the substituent is a hydroxy, alkyl, or alkoxy radical, at least one of the benzene rings containing a hydroxy, alkyl, or alkoxy group.

Pat. 2,079,758. Unsaturated Ethers and Process for Producing Same. May 11, 1937. Compounds of the formula: CH_2—CX=CH—CH_2OR, X=halogen and R=radical from an alcohol or phenol, e. g., glycerol or p,p'-dihydroxy-diphenyl.

Pat. 2,082,568. Vinylethinyl Derivatives and Processes for Producing Same. June 1, 1937. Vinylethinyl derivatives are made by reacting a compound of the formula: $CH_2=CH—C\equiv CMgY$, where Y=halogen or vinylethinyl, with a compound containing an inorganic strong acid radical of the class consisting of alkyl halides, aralkyl halides, alkyl sulfates and alkyl esters of aryl sulfonic acids.

Pat. 2,082,569. Vinylethinyl Derivatives and Process for Preparing Same. June 1, 1937. Preparation of vinylethinyl derivatives by reacting an alkali metal vinylacetylide with a compound containing an inorganic strong acid radical of the class consisting of alkyl halides, aralkyl halides, alkyl sulfates and alkyl esters of aryl sulfonic acids.

Pat. 2,085,452. High Molecular Weight Sulphur Compounds. June 29, 1937. Preparation of dialkyl sulfides by heating a compound of the formula: R—Y, R=10–15 C atom straight chain saturated aliphatic radical and Y=radical of an oxygen free inorganic acid, with a sulfide salt of the formula: MSX, M=alkali metal and X=alkali metal or H. Example: dodecyl bromide + sodium sulfide=didodecyl sulfide.

Pat. 2,091,845. Accelerator for the Vulcanisation of Rubber. Aug. 31, 1937. Method of vulcanising rubber by incorporating therein an alkaline earth salt of a 1-mercapto arylene thiazole.

Pat. 2,093,501. Electrical Conductor. Sept. 21, 1937. An electrical conductor covered with a composition comprising a polymer of a hydro-halogen addition product of monovinylacetylene. Composition containing natural rubber is also claimed.

Pat. 2,099,773. Preparation of Tetraalkyl Thiuram Monosulphides. Nov. 23, 1937. Triethanolamine oleate as the dispersing agent in the preparation of tetramethyl thiuram monosulfide from cyanogen chloride and sodium dimethyl dithiocarbamate.

Pat. 2,100,370. Vulcanisation of Rubber. Nov. 30, 1937. Method of vulcanising rubber by incorporating therein an acidic type sulfur containing accelerator and a diaryl guanidine sulfate.

Pat. 2,109,940. New Catalysts. Feb. 22, 1938. Dihydroxyfluoboric acid $H_2BO_2F_2$, a new composition of matter, and its BF_3 addition compounds are prepared from boric oxide and anhydrous HF. The product is a new catalyst for polymerisation, alkylation of phenols, esterification and acetylene reactions, thus replacing BF_3.

Pat. 2,109,968. Products and Processes for Producing Same. Mar. 1, 1938. The process of forming a strong tear-resistant product resembling vulcanised natural rubber which comprises passing an electric current through a dispersion of chloro-2-butadiene-1,3 polymer containing an electrolyte and a salt of a water-soluble alkyd resin.

Pat. 2,110,199. Tertiary Nonaromatic Amines and Methods for Producing Same. Mar. 8, 1938. A compound of the formula: $CH_2=CH—C\equiv C—CH_2—X$, where X is a radical which results upon the removal of amino hydrogen from a secondary non-aromatic amine, and which contains one N atom and is otherwise composed of C and H.

Pat. 2,122,505. Plasticising Rubber. Oct. 11, 1938. In the process of making rubber articles, the steps which comprise plasticising unvulcanised rubber by subjecting the rubber to the action of a small amount of a complex organic compound, which is a chemical addition product of a metal salt and an unsymmetrically substituted hydrazine.

Pat. 2,183,342. Plasticising Rubber. Dec. 12, 1939. Method of producing non-tacky unvulcanised rubber of decreased resistance to flow by subjecting the unvulcanised rubber to the action of 0.05–0.8% of alpha-nitroso-beta-naphthol in the absence of a neutralising agent until the desired reduction in viscosity is obtained.

boxylic carbons by carbon linkages, and in the absence of more than 3% S and of a neutralizing agent.

Pat. 2,234,204. Plastic Polymer of Butadiene and Process of Producing Same. Mar. 11, 1941. Butadiene and hydrocarbon-substituted butadiene polymers made in the presence of sulfur are plasticised with various mercaptans

Pat. 2,110,199. Tertiary Nonaromatic Amines and Methods for Producing Same. Mar. 8, 1938. A compound of the formula: $CH_2=CH-C\equiv C-CH_2-X$, where X is a radical which results upon the removal of amino hydrogen from a secondary non-aromatic amine, and which contains one N atom and is otherwise composed of C and H.

Pat. 2,116,333. Preservation of Rubber. May 3, 1938. Rubber having incorporated therein an N,N' disubstituted naphthalene diamine in which the nitrogens are attached to different rings of the naphthalene nucleus and in which each N substituted group is a member of the group consisting of alkyl, aralkyl and aryl groups containing at the most one benzene ring and in which substituents are restricted to members of the group consisting of hydroxy, alkyl and alkoxy radicals.

Pat. 2,119,531. New Condensation Products of Acetylenic Compounds. June 7, 1938. Alpha-halo ethers are added to acetylenic triple bonds, particularly conjugate eneynes. The compounds obtained may be polymerised or copolymerised, e. g., with chloroprene. Example:

$$CH_2=CH-C\equiv CH + Cl-CH_2-O-CH_3 \rightarrow CH_2-O-CH_2CH=C=CHCH_2Cl$$

Pat. 2,121,618. Preservation of Rubber. June 21, 1938. Method of increasing the age-resisting properties of rubber by incorporating therein a small amount of a compound of the formula:

$$R-\underset{H}{N}-A-\underset{H}{N}-R'$$

where A = diphenyl, R = alkyl or aralkyl, and R' = H, alkyl or aralkyl.

Pat. 2,121,619. Preservation of Rubber. June 21, 1938. Method of increasing the age-resisting properties of rubber by incorporating therein a small amount of a compound of the formula:

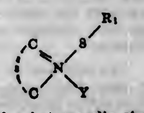
$$R-\underset{H}{N}-A-NH_2$$

where A = diphenyl, and R = alkyl or aralkyl.

Pat. 2,124,686. Ketals. July 26, 1938. Process for making ketals by reacting a 4 C chain ketone of the group consisting of $CH_3COCH=CH_2$ and $CH_3COCH_2CH_2OR$, with an orthoformate of the formula $HC(OR_1)_3$ and a hydroxy compound of the formula R_2OH, where R, R_1 and R_2 are hydrocarbon radicals.

Pat. 2,131,206. Preservation of Rubber. Sept. 27, 1938. Method of preserving rubber by incorporating therein a secondary N-aromatic ar.-tetra-hydro-naphthylamine in which the aromatic group contains a substituent, e. g., a hydroxy, alkoxy and amino groups.

Pat. 2,131,244. Vulcanisation of Rubber. Sept. 27, 1938. Method of vulcanising rubber by incorporating in a rubber mix, prior to vulcanisation, a compound of the type:



where N is part of a heterocyclic ring, R_1 represents a hydrocarbon radical having a carbon atom directly bonded to the S, and Y is an organic radical having a carbon atom directly connected to N. The preparation of compounds of this type is disclosed.

Pat. 2,131,245. Vulcanisation of Rubber. Sept. 27, 1938. Method of vulcanising rubber by incorporating into the rubber mix prior to vulcanisation a small amount of a quaternary ammonium compound in which one valence of the nitrogen is satisfied by an anion of an inorganic acid, organic dicarboxylic acid, phenol, alcohol, thio phenol or thio alcohol, and each of the remaining valences is satisfied by a distinct C atom, at least 2 of which are aliphatic.

Pat. 2,132,505. Plasticising Rubber. Oct. 11, 1938. In the process of making rubber articles, the steps which comprise plasticising unvulcanised rubber by subjecting the rubber to the action of a small amount of a complex organic compound, which is a chemical addition product of a metal salt and an unsymmetrically substituted hydrazine.

Pat. 2,137,820. Purification of Mercapto Aryl Thiazoles. Nov. 22, 1938. Method of purifying crude 2-mercapto arylene thiazoles of the benzene and naphthalene series containing tarry materials by treating the crude with a hot aqueous solution of 1–1,5 equivalents of an alkali metal bicarbonate or carbonate, until the mercapto arylene thiazole is dissolved, and separating the undissolved material from the solution.

Pat. 2,140,713. Addition Products of Acetylene and Alcohol and Process of Producing Them. Dec. 20, 1938. Reaction of alcohols with compounds of the formula $RC\equiv CR_1$, where R and R_1 are H or hydrocarbon radicals, but in which R and R_1 are never both H, in the presence of mercuric oxide, a boron fluoride affording compound, and a trichloroacetic acid.

Pat. 2,144,446. Preservation of Rubber. Jan. 17, 1939. Method of preserving rubber and rubber in latex which comprises incorporating therein a compound of the formula:

$$R-\underset{H}{N}-A$$

R = naphthyl, and A = allyl, crotyl or vinyl.

Pat. 2,145,388. Method of Preparing Diacetyl. Jan. 31, 1939. Diacetyl is prepared by heating methyl vinyl ketone at 80°–100° C. for a substantial period in the presence of an aqueous acid solution of a mercuric salt.

Pat. 2,158,530. Thermoplastic Derivatives of Rubber. May 16, 1939. Thermoplastic material formed by heating a mixture of unvulcanised rubber and a monohydric phenol with a sulfuric acid, halogen sulfonic acid, organic sulfonic acid, alkyl sulfate, boron trifluoride or dihydroxy fluoboric acid catalyst.

Pat. 2,165,525. Process for Increasing Plasticity of Polymers of Substituted Butadienes. July 11, 1939. The plasticity of halogen-substituted butadiene polymers is increased by treating them with an unsymmetrical substituted hydrazine compound.

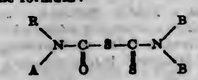
Pat. 2,167,067. Chemical Process. July 25, 1939. Olefines are prepared by reacting a diene-yne of the formula:

$$R-CH=\underset{R_1}{C}-C\equiv C-\underset{R_2}{C}=CH-R_3$$

where R, R_1, R_2, and R_3 = H or alkyl radicals having less than 6 C atoms, and in which at least one of the R's is an alkyl radical, with an excess of hydrogen in the presence of a catalytic amount of active nickel.

Pat. 2,171,420. Carbamyl Dithio-Carbamates. Aug. 29, 1939. Method of preparing aryl alkyl carbamyl dialkyl dithio-carbamates by adding one molecular proportion of an aryl alkyl carbamyl halide to a salt of a dialkyl dithiocarbamic acid in an inert volatile solvent and separating the aryl alkyl carbamyl dialkyl dithio-carbamate from the solvent.

Pat. 2,171,421. Vulcanisation of Rubber. Aug. 29, 1939. Method of vulcanising rubber by incorporating in a rubber mix, prior to vulcanisation, a small amount of a compound of the formula:



where R = radical of the benzene or naphthalene series, A = aliphatic hydrocarbon, and B = a carbon atom of an aliphatic hydrocarbon radical.

Pat. 2,183,342. Plasticising Rubber. Dec. 12, 1939. Method of producing non-tacky unvulcanised rubber of decreased resistance to flow by subjecting the unvulcanised rubber to the action of 0.05–0.8% of alpha-nitroso-beta-naphthol in the absence of a neutralising agent until the desired reduction in viscosity is obtained.

Pat. 2,186,714. Plasticising Polymeric Organic Sulphides. Jan. 9, 1940. Flow-resistance of polymeric organic sulfides is decreased by adding 0.05–1% of a thiophenol or thioalcohol and 0.05–1% of a thiuram disulfide, diaryl disulfide or arylene thiaxyl disulfide.

Pat. 2,190,587. Softening Rubber. Feb. 13, 1940. Method of decreasing the resistance to flow of unvulcanised rubber by subjecting the rubber at 130°–200° C. to the action 0.25% of a mercapto arylene thiazole containing only one thiazole ring as a part of any one aromatic ring or of a thiazole derivative which liberates free thiazole, in the absence of more than 0.5% S, 0.5% of a pigment, and of a neutralising agent.

Pat. 2,191,266. Softening Rubber. Feb. 20, 1940. Method of decreasing the resistance to flow of unvulcanised rubber by subjecting it to the action of a monothiocarboxylic acid in which the sulfur is in the carboxyl group, in the absence of more than 3% S, and in the absence of a neutralising agent.

Pat. 2,192,015. Polymerisation and Condensation Process Catalysed by Means of Dihydroxyfluoboric Acid and Dihydroxyfluoboric Acid-Boron Fluoride Addition Compounds. Feb. 27, 1940. Polymerisation and condensation process catalysed by means of dihydroxyfluoboric acid and dihydroxyfluoboric acid-boron fluoride addition compounds.

Pat. 2,192,298. Production of Levulinic and Homologous Acids and Intermediate Compounds From Dihalogen Butenes. Mar. 5, 1940. Production of levulinic acid and its homologs by reacting a strong nonoxidising oxygen acid with a member of the group consisting of halogen-4-pentene-3-oic acids and their homologs and hydrolysing.

Pat. 2,192,299. Halogen 2-Hydroxy-4-Butenes-2 and Their Derivatives and Methods of Producing Same. Mar. 5, 1940. Compounds of the formula:

$$RCH_2-\underset{X}{C}-\underset{Y}{CR_1}-CHR_2$$

R, R_1 and R_2 = H or hydrocarbon, X = halogen and Y = hydroxyl or carboxylic acyloxy.

Pat. 2,194,704. Unsaturated Ketones and Process for Producing Them. Mar. 26, 1940. Preparation of unsaturated ketones by reacting a carboxylic acid halide of the formula:

$$R-\underset{O}{C}-X$$

where R is a saturated aliphatic hydrocarbon radical, X = halogen, with an acetylenic compound of the formula $R_1-C\equiv C-R_2$, where R_1 is a hydrocarbon, and R_2 is H or a hydrocarbon, in the presence of a Friedel-Crafts type catalyst.

Pat. 2,200,941. Process for Producing Sodium Acetylide. May 14, 1940. Preparation of sodium acetylide by adding sodium to a liquid ammonia solution of acetylene at such a rate that during the major portion of the reaction, no dissolved excess of sodium is present.

Pat. 2,218,362. Rubberlike Interpolymers of Butadiene and Methyl Methacrylate and Process for Making Same. Oct. 15, 1940. Polymerization of an aqueous dispersion of a mixture of butadiene and methyl methacrylate.

Pat. 2,223,085. Softening Rubber. Nov. 26, 1940. Method of decreasing the resistance to flow of unvulcanised rubber by subjecting it to the action of a thiocarboxylic acid of the formula:

$$R-\underset{O}{C}-S-\underset{O}{C}-R_1$$

where R and R_1 = organic groups connected to the carboxylic carbons by carbon linkages, and in the absence of more than 3% S and of a neutralising agent.

Pat. 2,234,204. Plastic Polymer of Butadiene and Process of Producing Same. Mar. 11, 1941. Butadiene and hydrocarbon-substituted butadiene polymers made in the presence of sulfur are plasticised with various mercaptans and disulfides.

Pat. 2,236,389. Vulcanisation of Rubber. Mar. 25, 1941. Claims the vulcanisation of rubber using a salt sulfide or ester of hexamethylene dithiocarbamate as a vulcanisation accelerator.

Pat. 2,238,141. Process of Stabilising Composite Articles of Cellulose Material and Neoprene by the Addition of Fluorides and Products Resulting Therefrom. Apr. 15, 1941. Claims a method for retarding the deterioration of fabrics, through liberation of hydrogen chloride from polychloroprene deposited on the fabric, by incorporating an inorganic fluoride in the polymer or impregnating the fabric with an inorganic fluoride before coating it with the poly-chloroprene.

Pat. 2,261,042. Vulcanisation of Rubber. Oct. 28, 1941. Method of vulcanising rubber by incorporation into the rubber mix, prior to vulcanisation, a small amount of a 2-amino-thiazoline compound of the group consisting of 2-amino-thiazolines and their salts of weak acids.

Pat. 2,262,481. Accelerator for the Vulcanisation of Rubber. Nov. 11, 1941. Vulcanisation of rubber in the presence of a small proportion of a 2-mercapto-thiazoline in which the hydrogen of the mercaptan group has been substituted by an organic radical which is more strongly electron-attracting than the ortho-tolyl radical, the carbon of the electron-attracting group being connected to sulfur by a covalent bond, e. g. 2-mercapto 4-methyl thiazoline.

Pat. 2,269,472. Vulcanisation of Rubber. Jan. 13, 1942. Rubber having incorporated therein a small proportion of a combination of primary and secondary accelerators in which the primary accelerator is 2-mercapto-thiazoline or carbon substituted 2-mercapto-thiazolines in which the substituents are alkyl or hydroxyalkyl groups, and the secondary accelerator is an aldehydeamine or aryl guanidine, there being from about 1 to about 50 parts of the primary accelerator in the combination.

Pat. 2,276,203. Condensation of Allyl Halides and Substituted Allyl Halides. Mar. 10, 1942. Process which comprises condensing with itself a compound of the formula:

$$R'-CH=\underset{R}{C}-CH_2X$$

X = halogen, R = H, halogen, or alkyl, and R' = H, alkyl, halogen substituted alkyl, aryl, or carboxy ester, and wherein both R and R_1 contain less than 13 carbon atoms, by reacting it with an alkali metal or alkaline earth metal amide in the presence of liquid ammonia. Chloromethyl vinyl cyclohexene and derivatives are claimed as new products.

Pat. 2,283,334. Vulcanization of Rubber. May 19, 1942. Vulcanisation of rubber using 2-mercaptothiasoline as a primary accelerator, and a dithiocarbamic acid as a secondary accelerator, there being from about 1 to about 100 parts of the former to each part of the latter.

Pat. 2,283,335. Vulcanisation of Rubber. May 19, 1942. Vulcanization of rubber using as a primary accelerator 2-mercapto-thiasoline and as a secondary accelerator a dithiocarbamic acid with the acyl radical attached thru the sulfhydryl sulfur. About 1 to 50 parts of the former is used to each part of the latter.

Pat. 2,283,336. Vulcanization of Rubber. May 19, 1942. Vulcanisation of rubber using 2-mercaptothiasoline as a primary accelerator, and an accelerating metal salt of a dithiocarbamic acid as a secondary accelerator, there being from about 1 to about 100 parts of the former to each part of the latter.

Pat. 2,283,337. Vulcanisation of Rubber. May 19, 1942. Vulcanisation of rubber using 2-mercaptothiasoline as a primary accelerator, and an accelerating ester of a dithiocarbamic acid as a secondary accelerator, there being

light and converting the alkane sulfenyl chlorides formed into water soluble salts, are used as mold lubricants.

Pat. 2,370,987. Preserving Rubber. Mar. 6, 1945. Method of inhibiting the deterioration of rubber at ele-

genation catalyst at 300° C. or below. Example: dibenzyl disulfide-sbenzyl mercaptan. Products are useful as dye intermediates, rubber chemicals, and insecticides.

Pat. 2,402,642. Chemical Processes. June 25, 1946. Process for hydrogenating an ester of a thioacid with

Pat. 2,425,348. Mixture of Cyclised Rubber and Resorcinol-Formaldehyde Resol. Aug. 12, 1947. An adhesive for bonding textile materials to rubbery materials comprising a blend of a heat-convertible formaldehyde-resorcinol resol and a cyclised rubber made by heating a solution of natural rubber, a rubbery chloroprene polymer, or

Pat. 2,283,337. Vulcanisation of Rubber. May 19, 1942. Vulcanisation of rubber using 2-mercaptothiazoline as a primary accelerator, and an accelerating ester of a dithiocarbamic acid as a secondary accelerator, there being from about 1.5 to about 25 parts of the primary accelerator to each part of the secondary accelerator.

Pat. 2,283,342. Vulcanisation of Rubber. May 19, 1942. The use of a substituted ammonium salt of a dithiocarbamic acid as an activator for 2-mercaptothiazoline in the vulcanisation of rubber.

Pat. 2,285,259. Preservation of Rubber. June 2, 1942. Claims the method of retarding the deterioration of vulcanised rubber, due to the catalytic effect of copper, which comprises incorporating in the rubber the compound obtained by condensing 1 mole of a primary aliphatic polyamine with at least 2 moles of an ortho hydroxy substituted aldehyde, i. e., disalicylal ethylene diamine.

Pat. 2,285,260. Preservation of Rubber. June 2, 1942. Claims the method of retarding the deterioration of vulcanised rubber, due to the catalytic effect of copper, which comprises incorporating in the rubber the compound obtained by condensing 1 mole of a primary cyclic polyamine with at least 2 moles of an ortho hydroxy substituted aldehyde, i. e. disalicylal o-phenylene diamine.

Pat. 2,290,262. Salts of Dimethylene Dithio-Carbamic Acids. July 21, 1942. Claims salts of dimethylene dithiocarbamic acids, useful as vulcanisation accelerators, in which the basic salt-forming group is a guanidine, secondary amine, tertiary amine, quaternary ammonium base and heterocyclic imine containing at least 6 atoms in the ring.

Pat. 2,295,030. Process for Gelling an Aqueous Dispersion of Neoprene. Sept. 8, 1942. Process of causing an aqueous dispersion of neoprene, wherein the dispersion agent is a water-soluble abietate or hydroabietate and wherein the dispersion is stabilised with ammonia, a methanol amine, ethanol amine or propanol amine, to gel by bringing boric acid or its ester into contact with the dispersion.

Pat. 2,303,593. Vulcanisation of Rubber. Dec. 1, 1942. Method of vulcanising rubber by incorporating into a rubber mix, prior to vulcanisation, a small amount of a salt of a dimethyl dithiocarbamic acid which salt is devoid of acidic substituents, e. g. zinc dimethylene dithiocarbamate.

Pat. 2,306,669. Vulcanisation of Rubber. Dec. 29, 1942. Rubber, having incorporated therein, prior to vulcanisation, a small proportion of 2-mercapto-thiazoline, and a small proportion of at least one aliphatic monocarboxylic acid which, except for the oxygen of the COOH group, consists of carbon and hydrogen.

Pat. 2,319,057. Preparation of Long Chain Organic Isocyanates. May 11, 1943. Claims decamethylene diisocyanate, having a boiling point of 154–157° C. at 4.5 mm., useful as a waterproofing agent.

Pat. 2,326,555. Vulcanization of Rubber. Aug. 10, 1943. Use of a combination of a long chain aliphatic acid together with an aromatic acid as an activator for 2-mercaptothiazoline accelerators in the vulcanization of rubber.

Pat. 2,338,403. Process for Making Plastic Polymeric Materials Which Comprises Polymerising Butadiene in the Presence of Selenium or Tellurium and Product so Made. Nov. 2, 1943. Butadiene or methylbutadiene alone or mixed with styrene, acrylonitrile, methyl methacrylate and the like is polymerised in the presence of selenium and tellurium as plasticising agents.

Pat. 2,356,814. Treatment of Molds and Compositions Therefor. Aug. 29, 1944. A mixture of alkali metal salts of alkane and chloralkane sulfonic acids, obtainable by reacting a hydrocarbon of at least 12 C atoms with SO_2 and Cl_2 while irradiating the reaction zone with actinic light and converting the alkane sulfenyl chlorides formed into water soluble salts, are used as mold lubricants.

Pat. 2,370,987. Preserving Rubber. Mar. 6, 1945. Method of inhibiting the deterioration of rubber at elevated temperatures in the presence of oxygen by incorporating therein 25 to 1% of N,N'-diphenylbenzidine or its C-substituted alkyl, aralkyl, aryl, halogen, alkoxy, or aralkoxy derivatives, and 75 to 99% of a different secondary aromatic amine devoid of —COOH, —SO_3H, or —NO_2 groups, e. g., N-(p-tolyl)-B-naphthylamine.

Pat. 2,374,340. Preparation of Hexamethylene Diisocyanate. Apr. 24, 1945. Preparation of hexamethylene diisocyanate by heating hexamethylenediamine dihydrochloride and phosgene to at least 165° C. in a hydrocarbon of 10 or 11 C atoms of which at least 4 are aliphatic and six are cyclic.

Pat. 2,378,169. Esters. June 12, 1945. Esters of a monohydric aliphatic nitro alcohol with an aliphatic alpha,beta-ethylenically unsaturated carboxylic acid, e. g., 2-nitro-2-methylpropyl methacrylate, their polymers, and their interpolymers with compounds having at least one vinyl group.

Pat. 2,379,297. Esters of Alpha-Cyanoalcohols. June 26, 1945. Rubber-like, oil resistant polymerisates of a conjugated butadiene and an alpha,beta-ethylenically unsaturated aliphatic carboxylic acid ester of an alpha-cyanoalcohol. Example: 2-chloro-1,3-butadiene + cyanomethyl methacrylate.

Pat. 2,380,356. Interpolymers of Vinylidene Halides and 1,3-Dienes and Process of Producing the Same. July 10, 1945. Rubber-like vinylidene halide-diene polymers, resistant to the swelling action of solvents, are made by emulsion polymerization of vinylidene chloride, bromide, or chlorobromide with 1,3-butadiene, isoprene, or 2,3-dimethyl-1,3-butadiene in the presence of an alkali metal hydroxide.

Pat. 2,383,547. Absorption and Recovery of Acetylene by a Cryogenic Method. Aug. 28, 1945. Acetylene is purified by dissolving impure acetylene in dioxane, and freezing the dioxane to liberate acetylene.

Pat. 2,387,481. Butadiene-Styrene Elastomers. Oct. 23, 1945. The processability of butadiene-styrene interpolymers containing 5 to 60% styrene is improved by incorporating .5 to 5.0% by weight of o-sulfobensoic anhydride.

Pat. 2,388,562. Preserving Rubber. Nov. 6, 1945. The deterioration of rubber at elevated temperatures is inhibited by incorporating a mixture containing 25 to 2.5% of an amine, A—CH_2—R, A = secondary amino group and R = aromatic group having 1 or 2 oxy or amino groups on the aromatic ring attached to the CH_2 group, e. g., 4-hydroxy-3-(N-piperidinomethyl)-diphenylamine, and 75 to 97.5% of a different secondary diaryl amine, e. g., N-phenyl-β-naphthylamine, the mixture being free from amines having COOH, SO_3H, and NO_2 groups.

Pat. 2,390,446. Vulcanizates of Furylethylene Polymers. Dec. 4, 1945. Sulfur vulcanised polyfurylethylene.

Pat. 2,394,952. Betadiene-Styrene Elastomers. Feb. 12, 1946. Method for improving the processing characteristics of butadiene interpolymers containing 5 to 60% styrene by incorporating in the interpolymer 0.5 to 5.0%, based on the weight of the interpolymer, of a polyvalent metal salt of a terpene mercaptan.

Pat. 2,397,372. Vulcanisable Composition. Mar. 26, 1946. A vulcanisable composition comprising Hevea rubber or a vulcanisable polymeric conjugated diene elastomer, e. g., neoprene, and 15–45% by weight of a monomeric ester of beta furylacrylic acid to improve the oil resistance of the elastomer, and the vulcanisate obtained therefrom.

Pat. 2,402,614. Catalytic Process. June 25, 1946. Preparation of thiols by reacting an acyclic or alicyclic sulfide with H_2 in the presence of a base metal sulfide hydrogenation catalyst at 300° C. or below. Example: dibenzyl disulfide→benzyl mercaptan. Products are useful as dye intermediates, rubber chemicals, and insecticides.

Pat. 2,402,642. Chemical Processes. June 25, 1946. Process for hydrogenating an ester of a thioacid with hydrogen in the presence of a sulfactive hydrogenation catalyst to obtain a product comprising thiols. Example: 2-mercaptothiazole→β-aminoethanethiol.

Pat. 2,402,643. Chemical Processes. June 25, 1946. Preparation of thiols by catalytically hydrogenating a sulfurised ethylenic compound in the presence of a sulfactive hydrogenation catalyst. Example: sulfurised ethylene→ethanedithiol.

Pat. 2,402,644. Chemical Processes. June 25, 1946. Preparation of mercapto carboxylic compounds by catalytically hydrogenating a sulfurized ethylenic carboxylic compound at 100° to 200° C. at at least 10 atmospheres pressure in the presence of a sulfactive hydrogenation catalyst.

Pat. 2,402,665. Chemical Process. June 25, 1946. Preparation of hydroxythiols by reacting an aliphatic hydroxymultisulfide with H_2 in the presence of a sulfactive hydrogenation catalyst. Example: bis-1-sorbityl disulfide→1-thiosorbitol.

Pat. 2,405,693. Acetylene Solutions. Aug. 13, 1946. Separation of acetylene from its by-product gases by absorbing in an N-substituted morpholine solvent, freezing the solution and recovering the acetylene in the gaseous form.

Pat. 2,416,434. Sulfur-Containing Polymers and Their Preparation. Feb. 25, 1947. Compounds of the formula: R—S—CH_2—X, R = rubber-like diolefine polymer, X = OR_1, SR_1 or —NR_1—CO—R_2, R_1 = lower alkyl, R_2 = H or lower alkyl, and their preparation by reacting a thioacylate of a diolefine polymer, formaldehyde, and an active hydrogen-containing organic compound in the presence of an acidic catalyst.

Pat. 2,416,667. Treatment of Rubbery Diene Hydrocarbon Polymers Prior to the Incorporation of Compounding Ingredients. Mar. 4, 1947. Milling characteristics of an unvulcanised acyclic conjugated diene hydrocarbon polymer by masticating with a small amount of a polyvalent heavy metal salt of an N-halogen amide, the halogen being Cl, Br, or I, e. g., zinc salt of N-chloro-5,5-dialkylhydantoin.

Pat. 2,416,668. Process of Improving Compound Characteristics of Butadiene-1,3-Copolymers by Means of N-Halogen Amides. Mar. 4, 1947. Milling characteristics of a butadiene polymer are improved by masticating with 0.25–5% of an N-halogen amide, the halogen being Cl, Br, or I, e. g., N-chloro-hydantoin.

Pat. 2,419,943. Preparation of Sulphur-Containing Polymers. May 6, 1947. A reaction product of an ethylenically polyunsaturated macromolecular polymer having an iodine number of at least 25 with a monocarbothiolic acid, e. g., CH_3COSH, the product containing 1 to 4 acylthio groups per 4 ethylenic linkages in the polymer.

Pat. 2,420,194. Reaction Product of a Polyethylenically Unsaturated Polymer and a Carbothiolic Acid. May 6, 1947. Process comprising reacting a polymeric organic compound having a plurality of ethylenic linkages and an iodine number of at least 25 in an inert solvent with at least 10% by weight of the polymer of a carbothiolic acid, e. g., thiolbensoic or thiolbutyric acid.

Pat. 2,422,932. Improved Synthetic Rubbers. June 24, 1947. The milling characteristics of 1,3-butadiene-styrene polymers are improved by adding sorbic acid.

Pat. 2,424,182. Synthetic Rubberlike Butadiene-Acrylonitrile-Aliphatic Vinylethinyl Carbinol Material. July 15, 1947. A rubbery copolymer having high oil- and freeze-resistance and good processing characteristics obtained by copolymerizing butadiene, acrylonitrile and an aliphatic vinylethinyl carbinol.

Pat. 2,425,348. Mixture of Cyclised Rubber and Resorcinol-Formaldehyde Resol. Aug. 12, 1947. An adhesive for bonding textile materials to rubbery materials comprising a blend of a heat-convertible formaldehyde-resorcinol resol and a cyclised rubber made by heating a solution of natural rubber, a rubbery chloroprene polymer, or a rubbery 1,3-butadiene polymer with H_2SO_4 and phenol.

Pat. 2,427,063. Butadiene-Styrene Copolymer Plasticized With a Metallic Dryer and a Ketone or Aldehyde. Sept. 9, 1947. A millable elastomeric emulsion copolymer of butadiene and styrene isolated from aqueous soap emulsion by brine-acid coagulation having incorporated therein an oil-soluble metal drier carried in a hydrocarbon solvent and an aldehyde or ketone boiling at 70° C. or above which contains only C, H and oxo oxygen atoms.

Patents Relating to Fine Chemicals

Pat. 1,981,257. Compound of the Abietene Family. Oct. 17, 193.. Process of producing water-soluble compounds by condensing a sulfonic acid body of hydrocarbons of the group consisting of abietene, abietine, and abietane with a member of the group consisting of aldehydes and compounds which react like aldehydes.

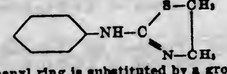
Pat. 1,996,116. Process for Producing Ionones. Apr. 2, 1935. Preparation of ionones by isomerising pseudo-ionones at elevated temperatures with an aqueous solution of ZnI_2, $ZnBr_2$ or $ZnCl_2$.

Pat. 2,001,275. Ether of Hydroabietyl Alcohol. May 14, 1935. A compound of the formula: Ab—CH_2—O—R, Ab = the hydrocarbon nucleus of a hydroabietic acid and R = alkyl, aralkyl or cycloalkyl, and wherein either nucleus may carry sulfonic acid groups.

Pat. 2,005,538. Alkoxy-Phenyl-Imidasoles. June 18, 1935. Process for producing an alkoxy-phenyl imidasole by reacting an alkoxy-phenyl-isothiocyanate with amine acetal, ring closing the resulting thiourea by the aid of acid, and oxidising the resulting alkoxy-phenyl-imidasole-mercaptan.

Pat. 2,015,239. New Compositions of Matter. Sept. 24, 1935. A composition of matter comprising a perfume and, as a fixative therefor, an ester of a hexahydrophthalic acid.

Pat. 2,027,030. Thiasoline Compound. Jan. 7, 1936. Preparation of compounds of the formula:



where the phenyl ring is substituted by a group which does not neutralise the basicity nor deprive it of a capacity to form a salt with HCl, by reacting the corresponding isothiocyanate with a beta-halogen-ethyl-amine.

Pat. 2,035,494. Perfume-Emitting Materials. Mar. 31, 1936. Production of perfume-emitting materials by forming the bisulfite compound of an aldehyde or ketone perfume, and adding to an alkaline detergent capable of liberating the original perfume upon addition of water.

Pat. 2,046,011. Catalytic Hydrogenation of Aromatic Aldehydes. June 30, 1936. Catalytic hydrogenation of aromatic aldehydes to alcohols in the presence of ferrous metal catalysts.

Pat. 2,047,656. Manufacture of 4-Acetyl-5-Tertiary-Butyl-1, 3-Xylene. July 14, 1936. Production of 4-acetyl-5-tertiary-butyl-1,3-xylene by acetylation of tertiary-butyl-meta-xylene, whereby the acetylating agent is first mixed with the xylene, and then a metal halide condensing agent is added.

Pat. 2,080,497. Process for the Manufacture of Perfume Bases. May 18, 1937. Manufacture of an ionone by reacting a pseudo-ionone with formic acid of a strength between 55–80%.

Pat. 2,080,498. Manufacture of Perfume Bases. May 18, 1937. Separation into its isomers a mixture of a-meth-

yl-ionone "b" and a-methyl-ionone "a" by fractionally separating from a solution in aqueous formic acid of 60–80% strength.

Pat. 2,088,080. Manufacture of Terpineol From Terpin

Pat. 1,893,264. Cellulose Derivative Composition. Jan. 3, 1933. A composition comprising a cellulose derivative and, as a plasticizer therefor, a compound from the group consisting of the alkyl ethers of ortho- and para-cyclohexyl-phenol.

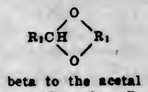
melts above 100° C. e. g. quinone, camphor, benzoic acid, and which is volatile with steam, from a crude mass of which the compound is the major organic constituent, which comprises steam distilling the compound and condensing the vapors in the presence of an added organic

Pat. 2,007,199. Aniline Hydrohalide Preparation. July 9, 1935. Preparation of aniline hydrohalides by reacting aniline vapor and a hydrogen halide by bringing them into contact at temperatures greater than 250° C. but lower than 550° C.

yl-ionone "b" and α-methyl-ionone "a" by fractionally separating from a solution in aqueous formic acid of 60–90% strength.

Pat. 2,088,030. Manufacture of Terpineol From Terpin Hydrate. July 27, 1937. Process for producing terpineol which comprises heating together terpin hydrate and dilute aqueous acid in the presence of an organic liquid which is a solvent for terpineol but immiscible with water.

Pat. 2,110,499. Depolymerization of Linear Polyacetals. Mar. 8, 1938. Preparation of cyclic acetals of the formula:



wherein each atom beta to the acetal carbon is carbon, R_2=H, or monovalent hydrocarbon, R_1=divalent organic radical having a chain of 5–18 C atoms between the acetal oxygens, by polymerizing the corresponding linear polyacetal.

Pat. 2,136,044. 2,3,6-Triamino-Pyridine and Process of Making It. Nov. 8, 1938. 2,3,6-Triamino pyridine is prepared by reducing 3-nitroso-2:6-diamino pyridine. The product, 2,3,6-triamino pyridine, is claimed and also the oxidation product, a blue dye, which is converted into a greenish yellow dye having a brilliant blue fluorescence by boiling in water. The product is useful as a dye intermediate and a pharmaceutical.

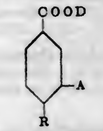
Pat. 2,234,554. Process of Recovering Vitamins. Mar. 11, 1941. The process which comprises dissolving a provitamin D containing material in an organic solvent, adding a sugar amine thereto, exposing the solution to ultra violet light and recovering a vitamin D concentrate therefrom.

Pat. 2,382,313. Hydroxy Acid Derivatives of Camphene. Aug. 14, 1945. Ester-ethers of hydroxy acids are prepared by reacting camphene with malic, glycolic, lactic, di-mandelic, or tartaric acid in the presence of H_2SO_4 or a sulfonic acid. Example: camphene + malic acid→di-isobornyl ester of isobornyloxy-succinic acid.

Pat. 2,385,852. Hormone Derivatives. Oct. 2, 1945. Diesters and dialkyl ethers of 3,4-di-(p-hydroxyphenyl)-3,4-dibromohexane and their preparation by bromination with the assistance of a peroxide and actinic irradiation, of the esters and ethers of 3,4-di-(p-hydroxyphenyl)-hexane.

Pat. 2,385,853. Processes for Producing Hormones. Oct. 2, 1945. Preparation of 3,4-di-(p-hydroxyphenyl)-hexadiene-2,4, useful as a synthetic hormone, by heating a diester of 3,4-di-(p-hydroxyphenyl)-3,4-dibromohexane with KI in alcohol and saponifying the resulting product.

Pat. 2,419,093. Catalytic Hydrogenation of Cuminic Acid Compounds. Apr. 15, 1947. Catalytic hydrogenation of a compound of the formula:



A=OH, NO_2, or NH_2, R=isopropyl, D=H, alkyl, or —CO—C_6H_4AR, in the presence of a chromite of Cu, Ni, Co, or Fe. Example: 3-hydroxycuminic acid→menthol + thymol.

Patents Relating to Miscellaneous Organic Compounds

Pat. 1,893,283. Cellulose Derivative Composition. Jan. 3, 1933. A composition comprising a cellulose derivative and, as a plasticiser therefor, a compound from the group consisting of the ortho- and para-alkoxy derivatives of diphenyl.

Pat. 1,893,284. Cellulose Derivative Composition. Jan. 3, 1933. A composition comprising a cellulose derivative and, as a plasticizer therefor, a compound from the group consisting of the alkyl ethers of ortho- and para-cyclohexyl-phenol.

Pat. 1,908,361. Process of Producing Butyl Alcohol. May 9, 1933. The process that comprises adding to a water-soluble, non-amylaceous carbohydrate mash, a culture of a micro-organism capable of producing, unaided, from the carbohydrate in the mash, butyl alcohol and acetone.

Pat. 1,913,367. Preservation of Oils, Fats, Fatty Oils, Fatty Esters, Fatty Acids, Fatty Acid Salts, and Related Compounds. June 13, 1933. A composition of matter including a substance of the group fats, fatty oils, fatty esters, fatty acids, and fatty acid salts together with a compound adapted to inhibit rancidification, the compound having a plurality of aryl groups joined to a nucleus and in which at least one of the aryl groups has a substitution radical attached thereto.

Pat. 1,913,368. Preservation of Oil, Fats, Fatty Oils, Fatty Esters, Fatty Acids, Fatty Acid Salts, and Related Compounds. June 13, 1933. Incorporation of diarylalkanes, diaryl ethers or diaryl amines into animal and vegetable fats to prevent deterioration thereof.

Pat. 1,915,054. Seed Disinfectant. June 20, 1933. A disinfecting agent for controlling seed and plant diseases, comprising a diluent having deposited thereon a water-insoluble inorganic iodide free mercury compound.

Pat. 1,919,729. Seed and Plant Disinfectant. July 25, 1933. A composition of matter for the control of seed and plant diseases comprising a substantial quantity of a substantially inert solid material and a lesser quantity of the double salt of an aromatic diazonium compound and a mercuric salt.

Pat. 1,919,732. Seed Disinfectant Composition. July 25, 1933. A seed disinfectant comprising a coordination compound of an organic monoamine with a mercuric salt.

Pat. 1,919,936. Disinfectant Composition. July 25, 1933. A disinfectant in dust form for the control of seed and plant diseases, comprising a mercury compound of the type R—Hg—I, in which R=a hydrocarbon radical.

Pat. 1,920,311. Germicide, Fungicide, Etc., and Method of Using the Same. Aug. 1, 1933. The method of treating small grains which consists in intermixing with the grains a dry mixture comprising a mercurised substituted aniline compound having a mercury atom attached to a carbon of a substituted benzene ring and an inert filler.

Pat. 1,927,842. Non-Corrosive Alcohol. Sept. 26, 1933. Process for preventing the corrosion of metal when in contact with full strength commercial alcohol by incorporating in the alcohol a member of the group consisting of sodium carbonates, sodium acetate, sodium borate, sodium lactate, and the corresponding potassium salts.

Pat. 1,933,166. Heat Transfer Medium. Oct. 31, 1933. Process of transferring heat by condensing a gaseous substance containing a compound of sulfur, oxygen and fluorine, e. g. sulfuryl fluoride, and evaporating the condensate.

Pat. 1,934,803. Seed Disinfectant. Nov. 14, 1933. A composition of matter for the control of seed and plant diseases the active constituent of which comprises a halogenated mercurised derivative of thiophene.

Pat. 1,939,591. Purification of Phenolic Bodies. Dec. 12, 1933. Catalyser poisons are removed from phenols by agitating with H_2SO_4.

Pat. 1,954,517. Contact Insecticide. Apr. 10, 1934. Method of killing insects by contacting the insects with a liquid containing a small amount of B,B-dichlordiethyl ether.

Pat. 1,957,484. Purification of Organic Bodies. May 8, 1934. Process of recovering an aromatic compound which

by heating an o-phthalyl halide with phthalide in the presence of a polyvalent metal chloride at 130°–150° C.

Pat. 2,053,430. Hydrogenation of Aroyl Aromatic Acids and Their Derivatives. Sept. 8, 1936. Catalytic hydro-

Pat. 2,067,096. Antifreeze Solutions. July 13, 1937. A liquid suitable for use in heat exchange devices comprising a volatile water-soluble aliphatic alcohol having incorporated therein an evaporation retarder which comprises

melts above 100° C. e. g. quinone, camphor, benzoic acid, and which is volatile with steam, from a crude mass of which the compound is the major organic constituent, which comprises steam distilling the compound and condensing the vapors in the presence of an added organic compound which is a solvent for the compound being purified but immiscible with water.

Pat. 1,962,175. Process for Making Benzoic Acid From Phthalic Acid. June 12, 1934. Formation of benzoic acid by the interaction of phthalic anhydride and water in the vapor phase at 175°–350° C., in the presence of a phthalate of an alkali metal, alkaline earth metal, or nickel.

Pat. 1,979,154. Production of N-Benzyl-Para-Aminophenol. Oct. 30, 1934. Purification of N-benzyl-p-aminophenol by sulfating to remove it from any p-aminophenol present which causes discoloration.

Pat. 1,985,597. Fungicide. Dec. 25, 1934. Method of preserving materials normally subject to attack by fungi by treating the materials with a member of the group consisting of kerosene, benzene, o-di-chlorbenzene, and a naphtha containing a nitronaphthalene.

Pat. 1,987,321. Preservation of Oils, Fats, Fatty Oils, Fatty Esters, Fatty Acids, Fatty Acid Salts, and Related Compounds. Jan. 8, 1935. Incorporation of diarylalkanes, diaryl ethers or diaryl amines into animal and vegetable fats to prevent deterioration thereof.

Pat. 1,993,771. Preserving Agents for Animal and Vegetable Fats, Fatty Oils, and Soap. Mar. 12, 1935. A composition of matter comprising a member of the group consisting of fats, fatty oils, fatty esters, fatty acid salts, soap stock and soap, and di-p:p'-hydroxy-diphenyl as an oxidation inhibitor.

Pat. 1,993,773. Non-Corrosive Liquid. Mar. 12, 1935. A corrosion inhibitor for cooling systems employing water in the absence of substantial amount of electrolytes which comprises a soluble oil having incorporated therein a small amount of mercapto-benzothiazole and a small amount of a primary aromatic amine, in which the aromatic group consists of C and H.

Pat. 1,998,489. Benzyl Esters of Halogenated Ortho-Benzoyl-Benzoic Acids and Process for Preparing the Same. Apr. 23, 1935. Preparation of the benzyl ester of an orthobenzoyl-benzoic acid compound by heating an orthobenzoyl-benzoic acid or its neutral substitution derivatives in an excess of benzyl alcohol until the water of formation has distilled off, removing the excess benzyl alcohol, and recovering the ester.

Pat. 2,000,061. Manufacture of Diaryl Sulphones. May 7, 1935. A volatile aryl compound having at least one carbon-hydrogen group in the aromatic ring, e. g., phenetole, is reacted in vapor phase with sulfur trioxide, and the diaryl sulphone formed recovered from the reaction mass.

Pat. 2,002,627. Oxidation Process. May 28, 1935. An oxidation process which comprises treating the compounds to be oxidised with a suspension of wet ground manganese dioxide containing material.

Pat. 2,005,815. Manufacture of Meta-Cresol-Methyl-Ether. June 25, 1935. Preparation of the methyl ether of m-cresol comprising adding .5–1 mol of dimethyl sulfate to an aqueous solution of an alkali metal m-cresolate, heating until equilibrium is reached and then adding caustic alkali to maintain pH 11.5–12.5.

Pat. 2,006,710. Acid Inhibitor. July 2, 1935. A composition of matter useful as an acid inhibitor comprising a product obtainable by the chemical combination of an aliphatic aldehyde and CS_2 with a mixture of polyamines and monoamines.

Pat. 2,007,189. Preparation of Amine Hydrohalides. July 9, 1935. The process which comprises contacting an atomised amine and a hydrogen halide gas at a temperature not exceeding 471° C.

Pat. 2,007,190. Aniline Hydrohalide Preparation. July 9, 1935. Preparation of aniline hydrohalides by reacting aniline vapor and a hydrogen halide by bringing them into contact at temperatures greater than 250° C. but lower than 550° C.

Pat. 2,007,243. Noncorrosive Aqueous Liquid. July 9, 1935. A fluid medium suitable for use in heat-exchange devices and the like comprising water and a small percent of a corrosion inhibitor comprising 50–90% of refined paraffin oil and 50–10% of an emulsifying agent from the group consisting of soap and oleic acid, sulfonated castor oil and oleic acid, and sulfonated alkylated polynuclear aromatic hydrocarbons.

Pat. 2,009,767. Manufacture of Substituted Aminophenols. July 30, 1935. A Schiff's base of an aromatic amino compound of the benzene or naphthalene series is reduced with Zn and caustic alkali below 10° C.

Pat. 2,012,609. Flotation Process. Aug. 27, 1935. Froth flotation of ores by agitating and aerating an aqueous suspension of finely divided minerals in the presence of both a flotation agent, comprising a salt of a sulfuric acid ester of a normal primary alcohol having 8–18 C atoms and a free normal primary alcohol having 6–18 C atoms.

Pat. 2,016,085. Acid Inhibiting Agent. Oct. 1, 1935. The product obtainable by simultaneously reacting a sulfonated primary or secondary aromatic amine and a primary or secondary aliphatic or aromatic amine with an aldehyde in proportions corresponding to 1.5–6.0 moles of sulfonated amine to each mole of amine, and pickling acid solution containing the product.

Pat. 2,016,112. Process for Producing Butyl Alcohol and Acetone. Oct. 1, 1935. Production of butyl alcohol and acetone by fermentation of a sterile aqueous solution of water-soluble non-amylaceous carbohydrates.

Pat. 2,025,032. Dehalogenation of Organic Halides. Dec. 24, 1935. Hydrogenation of a halogenated hydrocarbon in the vapor phase with a molar excess of H_2 in the presence of a catalyst, the active constituent of which comprises essentially a sulfide of a metal taken from Group VI, sub-group A, of the periodic table at 200°–600° C.

Pat. 2,033,949. Organic Fluorine Compounds. Mar. 17, 1936. 1-Amino-5-fluorobenzothiazoles, useful as dye intermediates.

Pat. 2,036,353. Process for the Production of Esters. Apr. 7, 1936. The process which comprises reacting an amide with an organic compound containing a hydroxyl group attached to a carbon which, in turn, is linked by all of its valences to carbon or hydrogen in the presence of boron fluoride.

Pat. 2,037,876. Process of Preparing Hydroaromatic Alcohols. Apr. 21, 1936. Catalytic hydrogenation of lactones of hydroxymethyl hydroaromatic carboxylic acids to cyclic alcohols and their derivatives.

Pat. 2,040,849. Monocarboxylic Acid Esters and Their Production. May 19, 1936. Preparation of monocarboxylic acid esters by the substantially solely carboxylic reduction of a natural acidic resin.

Pat. 2,047,946. Process for the Chlorination of Phthalide and Further Treatment of the Chlorination Product. July 21, 1936. Preparation of aromatic aldehydic acids by reacting an aromatic lactone of the formula:

where R=ortho or peri residues of aromatic nuclei, with chlorine, and hydrolyzing.

Pat. 2,053,269. Phthalide Halide and Process of Making It. Sept. 8, 1936. Preparation of a phthalide halide

Pat. 2,130,480. Process of Hydrogenating 5-Nitro-phthalide. Sept. 20, 1938. Preparation of 5-amino-phthalide by catalytically hydrogenating 5-nitro-phthalide with a catalyst consisting of nickel on kieselguhr.

Pat. 2,150,595. Process of Preparing Alpha Aryl

Pat. 2,238,826. Monoacyl Ethenones and a Process of Making Them. Apr. 15, 1941. An intermolecular dehydrohalogenation is brought about between two different primary monoacyl halides in the presence of tertiary saturated acyclic mono amines to produce unsymmetrical ethenones.

by heating an o-phthalyl halide with phthalide in the presence of a polyvalent metal chloride at 130°–150° C.

Pat. 2,053,430. Hydrogenation of Aroyl Aromatic Acids and Their Derivatives. Sept. 8, 1936. Catalytic hydrogenation of ketonic structures of aroyl aromatic carboxylic acids in the presence of base metal hydrogenating catalyst at 30°–300° C.

Pat. 2,054,282. Non-Corrosive Aqueous Solutions. Sept. 15, 1936. A non-corrosive liquid suitable for use in heat exchange devices containing iron and copper-bearing metals which comprises water having incorporated therein at least 0.03% of a nitrite of a metal above aluminum in the electromotive series and a small amount of a member of the group consisting of mercapto arylene thiazoles, hydrocarbon mercaptans and the corresponding disulfides.

Pat. 2,064,728. Colloidal Sulphur. Dec. 15, 1936. Process of producing colloidal sulfur by emulsifying molten law viscosity sulfur at 120°–130° C. in a liquid dispersion medium comprising water and a water soluble polyhydric aliphatic alcohol containing at least 3 C atoms and 3 hydroxyl groups.

Pat. 2,070,770. Hydrogenation of Alkyl Phthalates. Feb. 16, 1937. Process of selectively hydrogenating the ring of an aromatic ester by reacting a dialkyl ester of a phthalic acid and hydrogen in the presence of a hydrogenating metal catalyst at 160°–260° C. and 750–5000 pounds per square inch.

Pat. 2,072,861. Processes for the Catalytic Hydrogenation of Dicarboxylic Anhydride. Mar. 9, 1937. Preparation of a lactone of a hydroxy acid by heating an intramolecular anhydride of a dicarboxylic acid while intimately admixed with hydrogen in the presence of a catalyst from the group of hydrogenating metals and metal oxides intimately associated with an acidic oxide of Cr, V, Mo, W, Ti, U.

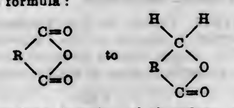
Pat. 2,074,699. Flotation Process. Mar. 23, 1937. Froth flotation of ores by frothing a suspension of ore in the presence of a flotation agent having the formula: R—X—Y, where R=hydrocarbon group of at least 8 C atoms, X=sulfonic acid or sulfuric acid group, and Y=residue of an organic amine.

Pat. 2,075,971. Manufacture of Phenyl Mercury Acetate and Phenyl Mercury Hydroxide. Apr. 6, 1937. Method which comprises mixing 1 mol of mercuric oxide with at least 1 mol of acetic acid and at least 3 mols of benzene, and heating to 120°–160° C. at 30–110 pounds per square inch until reaction is complete.

Pat. 2,078,230. Process for Hydrogenating Substituted Aromatic Alcohols. Apr. 27, 1937. Preparation of substituted aromatic hydrocarbons of the formula: X—Ar—CH_2—R from alcohols of the type

where R=H, aryl; Ar=aromatic hydrocarbon radical, and X=carboxyl or salt, ester or amide.

Pat. 2,079,325. Process for the Preparation of Lactones. May 4, 1937. Catalytic hydrogenation of an anhydride of the formula:



where R=phenylene, homolog of phenylene, naphthalene, hexahydrophenylene, 1,1,5-trimethyl cyclopentylene (2,5), or $(CH_2)_x$ where x=2–4, in the presence of a lower monohydric aliphatic alcohol esterified with a lower fatty acid.

Pat. 2,080,299. Inhibiting Corrosion of Metals. May 11, 1937. Method of inhibiting corrosion of a metal surface by treating with a rust-proofing composition comprising a non-hardening oil and an organic ester of a phosphorus acid.

Pat. 2,087,096. Antifreeze Solutions. July 13, 1937. A liquid suitable for use in heat exchange devices comprising a volatile water-soluble aliphatic alcohol having incorporated therein an evaporation retarder which comprises at least one higher alkanol boiling at 150°–300° C. and having a specific gravity below 0.96.

Pat. 2,088,633. Process for Preparing Hydroaromatic Lactones. Aug. 3, 1937. Preparation of hydroaromatic lactones by bringing a lactone of a hydroxymethyl aromatic carboxylic acid into contact with hydrogen in the presence of a base metal hydrogenation catalyst at 100°–225° C. above 10 atmospheres pressure.

Pat. 2,093,990. Improvement in the Manufacture of Polynaphthyl Alkylene Ethers. Sept. 28, 1937. Naphthyl alkylene ethers, e. g., ethylene glycol di-β-naphthyl ether, are prepared by stepwise addition of alkylene halides and caustic soda to sodium naphthalates.

Pat. 2,097,435. Thiophthalide and Process of Making the Same. Nov. 2, 1937. Process which comprises reacting a water soluble hydrosulfide under anhydrous conditions at 100°–250° C. with a gamma to epsilon lactone.

Pat. 2,099,120. Flotation Process. Nov. 16, 1937. In a froth flotation process, the step which comprises utilizing as a flotation agent a water soluble salt of an organic dicarboxylic acid having one carboxyl group esterified by an alcohol selected from the group consisting of long chain primary aliphatic alcohols having from 8–18 C atoms and alicyclic alcohols formed in the carboxylic reduction of a naphthenic acid or a natural resin acid.

Pat. 2,099,357. Halide Esters of Polyunsaturated Alcohols and Process of Preparing Same. Nov. 16, 1937. Preparation of a polyunsaturated halide by reacting a polyunsaturated alcohol mixture, obtainable by sodium reduction from a drying oil, with a phosphorous trihalide.

Pat. 2,100,228. Process for the Dealkylation of Alkyl-Aryl Ethers. Nov. 23, 1937. Dealkylation of arylalkyl ethers by heating an aryl alkyl ether in the presence of an aliphatic amine hydrohalide.

Pat. 2,109,941. Preparation of Amides. Mar. 1, 1938. Preparation of acid amides by reacting carboxylic acids with urea or substituted urea at a temperature of at least 130° C. Examples: acetic acid + urea→acetamide, stearic acid and monophenyl urea→stearic acid amide + stearic acide anilide.

Pat. 2,111,552. Process for the Preparation of Dispersible Sulphur. Mar. 22, 1938. Process of agitating a mixture of molten sulfur and a solid water-soluble organic non-electrolyte at a temperature above the melting point of sulfur and below that at which appreciable reaction between the organic substance and sulfur occurs.

Pat. 2,112,362. Flotation Process. Mar. 29, 1938. Froth flotation of coal by agitating and aerating an aqueous suspension of coal in the presence of a mineral oil which has been emulsified with a compound of the formula: R—X—Y, where R=residue of a normal primary alcohol of 6–18 C atoms, X=sulfuric acid or sulfonic acid group, and Y=salt-forming compound.

Pat. 2,114,696. Process of Producing Phthalide. Apr. 19, 1938. Preparation of phthalide by reacting hydrogen and phthalic anhydride in the presence of a lower monohydric aliphatic alcohol at 100°–200° C.

Pat. 2,116,727. Flotation Process. May 10, 1938. Oil froth flotation of mineral ores by floating a desired component of the ore in an aqueous medium containing oil and a water-soluble sulfate ester salt of a normal straight-chain primary alcohol having at least 8 C atoms.

Pat. 2,127,377. Preparation of Polynuclear Hydroaromatic Amines. Aug. 16, 1938. Preparation of decahydro-beta-naphthylamine by hydrogenating in the liquid phase beta-naphthylamine and then subjecting the product to a superatmospheric pressure at 250°–300° C.

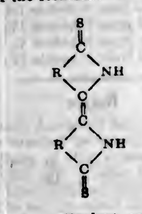
Pat. 2,130,480. Process of Hydrogenating 5-Nitrophthalide. Sept. 20, 1938. Preparation of 5-aminophthalide by catalytically hydrogenating 5-nitro-phthalide with a catalyst consisting of nickel on kieselguhr.

Pat. 2,150,595. Process of Preparing Alpha Aryl Phthalides. Mar. 14, 1939. Preparation of phthalidyl-naphthalenes from naphthalene and alpha-monochloro-phthalide in the presence of zinc chloride.

Pat. 2,156,800. Cyclic Amides and Their Production. May 2, 1939. Preparation of cyclic amides of at least 8 annular atoms by heating an ester of a dibasic aliphatic dicarboxylic acid with an aliphatic diamine in the presence of an aliphatic alcohol.

Pat. 2,194,446. Pest Destroying Emulsion. Mar. 19, 1940. A pest destroying aqueous emulsion consisting of a poison of the group consisting of rotenone, dihydrorotenone, pyrethrines, pyrethrum- and derris-root extracts; cyclo-hexanone; hydrogenated naphthalene; with kerosene as a solvent; a fatty alcohol sulfonate having eight to ten carbon atoms in the molecule as an emulsifying agent and water, the cyclo-hexanone and hydrogenated naphthalene being present in substantial proportions and sufficient to produce a clear and lasting solution.

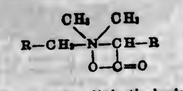
Pat. 2,198,166. Aryle-Pyrrolinethione Compounds and Process of Producing. Apr. 23, 1940. Process of preparing a compound of the formula:



where R=mononuclear divalent aromatic radical whose two valences are attached to adjacent ring carbons, by reacting an o-phthalonitrile with H_2S in the presence of a basic compound such as NH_3, and a primary or secondary amine, wherein the carbons attached to the N are aliphatic.

Pat. 2,212,150. Organic Sulphur Compounds. Aug. 20, 1940. Preparation of thiols by reacting an alpha-beta-unsaturated ketone with hydrogen sulfide.

Pat. 2,217,684. Flotation Process for Concentrating Oxides of Iron. Oct. 15, 1940. Process of concentrating non-magnetic oxides of iron from pulp mixtures containing the same and siliceous gangue by adding to the pulp a small amount of a betaine of the formula:



where one R=a long chain aliphatic hydrocarbon radical of 8–18 C atoms and the other R=H.

Pat. 2,217,685. Flotation Process for Concentrating Carbonate Minerals. Oct. 15, 1940. Process for concentrating carbonate minerals from pulp mixtures containing the same and siliceous impurities by adding to the pulp a small amount of a salt of an amino-naphthalene derived from naphthenic acids having an average carbon content of 11–19 C atoms, and subjecting the mixture to a froth flotation operation.

Pat. 2,221,485. Flotation Process. Nov. 12, 1940. Froth flotation process of concentrating carbonate minerals containing siliceous gangue, by adding to the pulp a small amount of a water soluble cation active flotation agent and a small amount of a water soluble inorganic salt of a polybasic inorganic acid.

Pat. 2,238,626. Monoacyl Ethenones and a Process of Making Them. Apr. 15, 1941. An intermolecular dehydrohalogenation is brought about between two different primary monoacyl halides in the presence of tertiary saturated acyclic mono amines to produce unsymmetrical ethenones.

Pat. 2,279,973. Stabilization of Organic Substances. Apr. 14, 1942. Claims an organic substance subject to oxidative deterioration accelerated by a catalytically active metal, having incorporated therein a small proportion, sufficient to inhibit the catalytic effect of the metal, of a hydroxamic acid.

Pat. 2,323,714. Chemical Process. July 6, 1943. Preparation of an amino propane sulfonate by reacting an N-allylamine with a water-soluble bisulfite in the presence of a catalytic amount of an oxidizing agent.

Pat. 2,336,359. Process for Making a Phenyl Mercuric Carboxylic Acid Amide. Dec. 7, 1943. Process of making a phenyl mercuric carboxylic acid amide by fusing a mixture containing phenyl mercuric hydroxide and a carboxylic acid amide that contains two hydrogen atoms directly attached to the nitrogen atom of the amido group. Example: phenyl mercuric hydroxide + benzamide→phenyl mercuric benzamide. Products are seed disinfectants.

Pat. 2,337,118. Beneficiation of Ores. Dec. 21, 1943. Froth flotation process for concentrating negatively charged minerals by incorporating in the pulp a cationic surface active agent having a long chain aliphatic hydrocarbon radical of 8–22 C atoms and a water soluble open chain aliphatic carboxylic acid salt or amide containing not more than 9 C atoms. Example: dodecyl amine hydrochloride and hydroxy acetic acid.

Pat. 2,341,046. Flotation. Feb. 8, 1944. Froth flotation of negatively charged gangue materials comprising adding a cationic surface active agent and a small amount of a water soluble substance taken from the group consisting of tannic, pectic, and alginic acids and their water-soluble salts.

Pat. 2,365,638. Sulphonation of Organic Compounds. Dec. 19, 1944. Process of making a sulfonating mixture comprising H_2SO_4, BF_3 and an organic compound of the aromatic or heterocyclic series and maintaining the reaction mixture at sulfonating temperatures until the organic compound is sulfonated.

Pat. 2,371,757. Fluoroacetic Acids. Mar. 20, 1945. Preparation of a fluoro acetic acid by reacting a compound of the formula: $CF_2XCY=CYZ$ in which each of Z, Y, and X is one of the group: H, F, and Cl: e. g., CHF_2—$CHCl_2$ with a permanganate in an aqueous alkaline medium at 25°–80° C. and isolating the fluoro acetic acid.

Pat. 2,390,835. Method of Alkylating Aromatic Compounds. Dec. 11, 1945. Process of alkylating an aromatic compound by reacting it with an aliphatic alcohol of at least 8 C atoms in the presence of boron trifluoride and phosphorus pentoxide or boric oxide.

Pat. 2,390,836. Method of Alkylating Aromatic Compounds. Dec. 11, 1945. Process of alkylating an aromatic compound by reacting it with an aliphatic alcohol of at least 3 C atoms in the presence of boron trifluoride and sulfuric acid or bensene-sulfonic acid.

Pat. 2,396,076. Preparation of Trifluoro Acetic Acid. Mar. 5, 1946. Preparation of CF_3COOH by adding oleum to CF_3CCl_3, allowing the reaction to proceed until substantially complete, decomposing the reaction mixture with water and isolating the CF_3COOH.

Pat. 2,410,358. Process for Preparing Antimony Pentafluoride. Oct. 29, 1946. Preparation of SbF_5 by reacting $SbCl_5$ with HF in aluminum apparatus.

Pat. 2,410,401. Preparation of a Thiophene. Oct. 29, 1946. Preparation of a thiophene compound by reacting a conjugated diene such as butadiene in the gaseous state with sulfur vapor at a temperature of at least 350° C. and the thermal decomposition of the diene.

Pat. 2,422,246. Carboxylic Acids Vicinally Substituted With Two Mercapto Groups. June 17, 1947. Compounds of the formula: $HSCH_2$—$CHSH$—$(CH_2)_x$—$COOH$ x=0 to 8.

Pat. 2,423,344. Process for Stabilizing Dithioglycerols.

Miscellaneous Mechanical Patents

Pat. 2,178,720. Induction Heated Pipe. Nov. 7, 1939. An insulated non-magnetic pipe heated by electrical induction. Group 36—19.

Pat. 2,178,721. Heating Pipe Fixture. Nov. 7, 1939.

TRADE-MARKS

OFFICIAL GAZETTE, FEBRUARY 15, 1949

Pat. 2,422,246. Carboxylic Acids Vicinally Substituted With Two Mercapto Groups. June 17, 1947. Compounds of the formula: $HSCH_2$—$CHSH$—$(CH_2)_n$—$COOH$ n=0 to 8.

Pat. 2,423,344. Process for Stabilising Dithioglycerols. July 1, 1947. 1,2-Dithioglycerol containing as a thermal stabiliser ammonia, an ammonium salt, or a carbonamide, such as ammonium acetate or urea.

Pat. 2,423,470. Alkylation of an Acyclic Organic Compound With an Alkylation Agent Using Hydrogen Fluoride as Catalyst. July 8, 1947. Process of alkylating an acyclic organic compound in the presence of HF as the sole catalyst.

Pat. 2,436,137. Process for Producing Mercaptans. Feb. 17, 1948. Production of aliphatic dithiols, e. g., 2,3-di-mercaptopropanol, comprising adding CO_2 to a mixture of an aliphatic dihalide and NaHS in 40–50% excess of that equivalent to the dihalide and CO_2 at 60–100° C. until the pressure induced thereby is 50–100 p. s. i.

Patents Relating to Miscellaneous Inorganic Compounds

Pat. 1,906,440. Process for the Manufacture of Phosphorus Pentachloride. May 2, 1933. Preparation of phosphorus pentachloride in finely divided form by reacting chlorine upon phosphorus trichloride in phosphorus oxychloride solution.

Pat. 2,008,753. Manufacture of Alkali Metal Selenides and Tellurides. July 23, 1935. Preparation of alkali selenides and tellurides by heating a caustic alkali solution containing selenium, tellurium or their soluble compounds and adding a member of the group consisting of aluminum and zinc.

Pat. 2,112,567. Complex Salts of Zinc Hydrosulphite and 1,2-Aliphatic Diamines and Process for Preparing Them. Mar. 29, 1938. Process of producing complex addition salts of zinc hydrosulfite and aliphatic 1,2-diamines by interacting a solution of zinc hydrosulfite and ethylene diamine or its homolog.

Pat. 2,112,689. Manufacture of Sulphuric Acid by the Contact Process. Mar. 29, 1938. Process and apparatus for the manufacture of sulfuric acid by the contact process whereby the temperature is regulated within the converter, and the sulfur trioxide gases issuing from the converter are cooled, prior to their entry into the absorption tower, where they are absorbed in dilute sulfuric acid.

Pat. 2,123,766. Process of Preparing Aluminum Chloride. July 12, 1938. Anhydrous aluminum chloride is prepared by reacting metallic aluminum with a body of liquid chlorine, and maintaining a source of chlorine supply in constant communication with the body of chlorine.

Pat. 2,205,552. Method of Preserving the Catalytic Activity of a Metallic Nickel Hydrogenation Catalyst. June 25, 1940. The activity of a nickel catalyst is maintained during storage prior to use by maintaining the catalyst in a wet condition with a solution of a substance selected from the group consisting of lower alkyl amines and ammonia.

Pat. 2,315,988. Treatment of Sulphuric Acid for Removal of Nitrogen Oxides. Apr. 6, 1943. Process of removing nitrogen oxides from concentrated sulfuric acid by adding a ferrous salt to the sulfuric acid and then blowing with a relatively inert gas.

Pat. 2,325,066. Removal of Nitrogen Oxide From Gases. July 27, 1943. Process for removing nitrogen oxide from combustion gases which comprises forming solid $(SO_3)_2NO$ by passing the gases into contact with fuming sulfuric acid containing about from 20 to 60% free SO_3, and removing the $(SO_3)_2NO$ and most of the entrained SO_3 by passing the gas stream through a filter.

Miscellaneous Mechanical Patents

Pat. 2,178,720. Induction Heated Pipe. Nov. 7, 1939. An insulated non-magnetic pipe heated by electrical induction. Group 36—19.

Pat. 2,178,721. Heating Pipe Fixture. Nov. 7, 1939. Pipe line construction for conveying substances of high melting point with heated fixture which may be maintained at the same temperature as the pipe. Groups 36—19.

Pat. 2,251,185. Distillation Apparatus. July 29, 1941. Reflux distillation apparatus in which the ratio of reflux to ratio of take off is controlled by an energised magnet. Group 36—19.

Pat. 2,395,450. Tool. Feb. 26, 1946. A device suitable for use in making linings of plastic material for apparatus such as pipes and tanks. Group 33—52.

Pat. 2,430,273. Tool for Lining Pipe. Nov. 4, 1947. A tool for lining pipes of small diameter, e. g., with rubber. Group 33—52.

Correction

The following patents appear twice in the listings of patents offered for license by E. I. du Pont de Nemours & Company. They should be deleted as follows:

Pat. 1,961,251 delete from Schedule IV.
Pat. 2,069,983 delete from Schedule I.
Pat. 2,125,143 delete from Schedule III.
Pat. 2,125,376 delete from Schedule III.
Pat. 2,190,829 delete from Schedule IV.
Pat. 2,263,254 delete from Schedule V.
Pat. 2,418,661 delete from Schedule IV.

Notice

American Telephone and Telegraph Company has placed its patents on the Register of Patents as available for licensing. Patent numbers will be published at a later date as space and time permit. The following is a statement of policy with respect to the patents of the American Telephone and Telegraph Company and of its subsidiaries:

"It is the Bell System's policy to make available upon reasonable terms to all who desire them non-exclusive licenses under its patents for any use. In order to realise the value of the inventions it is necessary to employ different types of patent license agreements in different situations, of which the following are some illustrations:

"(a) Licenses are exchanged with other patent owners, either with or without royalties, so that each gets the particular rights he desires under the patents of the other.

"(b) Licenses are granted to manufacturers to make, use and sell apparatus to others on a royalty basis.

"(c) Licenses are granted on a royalty basis to those who desire to use specified apparatus in their own businesses (as distinct from those who sell such apparatus to others). Such licenses include the right to have the licensed apparatus made by anyone for the licensee.

"Most of the System's license agreements fall within (a) or (b) above, or a combination of the two. For example, licenses are granted to manufacturers covering telephone systems and apparatus for sale to operating telephone companies, both Bell and non-Bell.

"Where the proposed licensee has patents upon inventions which the System desires to use in the communication business, a non-exclusive license under such patents is always expected and any difference between values involved is adjusted through royalties.

"In all cases the System seeks to fix the terms of licenses to others under System patents, whether in the form of royalties or licenses to it, or both, in such a way as to be reasonably related to the value of the patented inventions covered by the license.

. . . . . .

"For the general convenience of all those desiring licenses under Bell System patents, the Western Electric Company has been designated as the agency to make agreements for rights under all Bell System patents."

The company calls attention to the fact that the foregoing statement relates to all patents of the American Telephone and Telegraph Company; Western Electric Company, Incorporated; Bell Telephone Laboratories, Incorporated; Teletype Corporation and Nassau Smelting & Refining Company, Incorporated, and that inquiries regarding licenses should be addressed to Patent Licensing Division, Western Electric Company, Incorporated, 195 Broadway, New York 7, N. Y.

TRADE-MARKS

OFFICIAL GAZETTE, FEBRUARY 15, 1949

[VOL. 619. No. 3]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 523,783. HERSKE KIRSCH, INC., New York, N. Y. Filed June 7, 1947.

FOR FURS AND SKINS.
Claims use since July 1, 1935.

Ser. No. 524,524. CONSOLIDATED PAPER CORPORATION LIMITED, Montreal, Quebec, Canada. Filed June 20, 1947.

FOR WOOD PULP.
Claims use since 1929.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 472,499. BONNE BELL, INC., Cleveland, Ohio. Filed July 22, 1944.

PLUS 30

FOR FACE CREAMS.
Claims use since July 13, 1944.

Ser. No. 494,536. AMERICAN EXTRACT COMPANY, Port Allegany, Pa. Filed Jan. 10, 1946.

AMEREX

FOR VEGETABLE EXTRACTS USED IN THE CONVERSION OF HIDE INTO LEATHER, COMPOUNDS FOR THE FILLING OF LEATHER, DERMABATES, AND ENZYME BATES FOR THE TREATMENT AND PREPARATION OF HIDES AND SKINS IN THE PREPARATION OF LEATHER.
Claims use since May 1915.

Ser. No. 497,470. EASTMAN KODAK COMPANY, Flemington, N. J., and Rochester, N. Y. Filed Mar. 1, 1946.

PHOTO-FLO

The term "Photo" is disclaimed apart from the mark.
FOR PHOTOGRAPHIC WETTING AGENT.
Claims use since May 14, 1945.

Ser. No. 509,975. CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Sept. 30, 1946.

MAIZENA

FOR CORN STARCH FOR LAUNDRY PURPOSES.
Claims use since 1858.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 517,015. H. B. SHERMAN MANUFACTURING COMPANY, Battle Creek, Mich. Filed Feb. 5, 1947.

DART

FOR HOSE NOZZLES.
Claims use since Jan. 12, 1940.

Ser. No. 521,101. WHITTET-HIGGINS COMPANY, Providence, R. I. Filed Apr. 21, 1947.

PLIES—NAMELY, CORDS, INDUCTION COILS, RECEIVER SWITCHES, CONDENSERS, RINGERS, TERMINALS, TERMINAL STRIPS, GONGS, CHIMES, BUZZERS, JACKS, PLUGS, RELAYS, SIGNAL ALARMS,

CLASS 30

CROCKERY, EARTHENWARE, AND PORCELAIN

CLASS 39

CLOTHING

Ser. No. 510,248. CLAUDIA GLENN, Denver, Colo. Filed

Ser. No. 521,101. WHITTET-HIGGINS COMPANY, Providence, R. I. Filed Apr. 21, 1947.

The representation of the lock nut and washer are disclaimed apart from the mark.

FOR LOCK NUTS AND LOCK WASHERS, INCLUDING BALL AND ROLLER BEARING TYPES.

Claims use since Dec. 13, 1943.

CLASS 19

VEHICLES

Ser. No. 524,980. D. P. HARRIS HARDWARE & MANUFACTURING CO., INC., New York, N. Y. Filed June 27, 1947.

FOR BICYCLES.

Claims use since Jan. 21, 1940.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 491,323. INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, Washington, D. C. Filed Nov. 9, 1945. Under the act of February 20, 1905, as amended June 10, 1938.

No claim is made to the words "Electrical," "Affiliated With," "American," and "Union Made" apart from the mark.

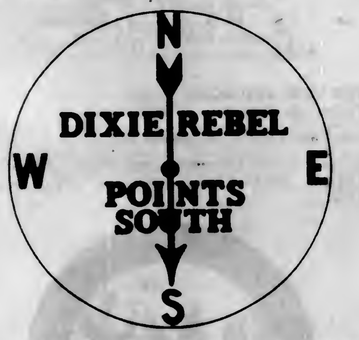
FOR ELECTRICAL EQUIPMENT AND SUPPLIES—NAMELY, CONDUITS AND FITTINGS FOR CONDUITS; SWITCHBOARDS, PANEL BOARDS AND ENCLOSED SWITCHES; TELEPHONES AND TELEPHONE SUPPLIES—NAMELY, CORDS, INDUCTION COILS, RECEIVER SWITCHES, CONDENSERS, RINGERS, TERMINALS, TERMINAL STRIPS, GONGS, CHIMES, BUZZERS, JACKS, PLUGS, RELAYS, SIGNAL ALARMS, ARRESTERS, GROUND RODS, AND GENERATORS, OUTLET BOXES; WIRE AND CABLE; LIGHTING FIXTURES, POWER LINE TRANSFORMERS, LUMINOUS TUBE TRANSFORMERS; ELECTRIC PORTABLE LAMPS, ELEVATOR CONTROL BOARDS; ELECTRICAL METAL MOLDING AND SURFACE METAL RACEWAYS; RADIO RECEIVING AND TRANSMITTING SETS; FLASHLIGHTS AND BATTERIES, SOCKETS, SWITCH PLATES, DRY CELL BATTERIES AND FUSES; NON-METALLIC ELECTRODES; FLOOR BOXES; WET CELL BATTERIES; ARMATURE AND MOTOR WINDINGS; MOTORS; HOUSEHOLD APPLIANCES—NAMELY, HOT PLATES, TOASTERS, SPACE HEATERS, HAIR CURLERS, FOOD MIXERS, VACUUM CLEANERS, AND FLATIRONS.

Claims use since Oct. 27, 1926.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 517,643. HAMILTON A. LONG, Chicago, Ill. Filed Feb. 17, 1947.



No exclusive rights to a circle, the cardinal point directions "N, E, S" and "W" or the words "Points South" are claimed apart from the mark.

FOR POCKET COMPASSES.

Claims use since Jan. 22, 1947.

Ser. No. 518,104. PIERRE ROCH S. A. R. L., Rolle, Switzerland. Filed Feb. 25, 1947.

The words "Rolle, Suisse" on the drawing are disclaimed. The representation of the gauge is disclaimed apart from the mark.

FOR CALIPERS, HEIGHT GAUGES, DEPTH GAUGES, INDICATOR GAUGES, UNIVERSAL PROTRACTORS, MICROMETER LEVELS, MICROMETERS, AND INDICATING MICROMETERS.

Claims use since July 1, 1943.

CLASS 30

CROCKERY, EARTHENWARE, AND PORCELAIN

Ser. No. 500,841. SPAULDING & COMPANY, Chicago, Ill. Filed Apr. 24, 1946.

The trade-mark consists of a right angle triangle in solid black color, with the hypotenuse thereof extending obliquely with respect to the container to which the trade-mark is applied.

FOR ARTICLES OF CHINAWARE, CROCKERY, POTTERY, EARTHENWARE, AND PORCELAIN—NAMELY, JARS, POTS, VASES, DISHES, SERVICE PLATES, DINNER PLATES, SALAD PLATES, BREAD AND BUTTER PLATES, DESSERT PLATES, SOUP PLATES, CUPS, SAUCERS, PITCHERS, TEAPOTS, COFFEE POTS, CHOCOLATE POTS, SOUP BOWLS, FRUIT BOWLS, VEGETABLE BOWLS, PUNCH BOWLS, SALAD BOWLS, AND PLATTERS.

Claims use since Oct. 1, 1932.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 523,628. TRANSOLENE CORPORATION, Barrington, Ill. Filed June 5, 1947.

TRANSOLENE

FOR THIN SHEETS OF COLORED TRANSPARENT AND TRANSLUCENT HEAT- AND MOISTUREPROOF PLASTIC FILM SOLD IN SHEETS OR FROM THE ROLL FOR USE AS COLOR SCREENS FOR SPOTLIGHTS.

Claims use since November 1925.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 508,482. THE LINDE AIR PRODUCTS COMPANY, New York, N. Y. Filed Sept. 4, 1946.

Linde **TIPS**

FOR PERIODICAL PUBLICATION.

Claims use since July 16, 1946.

CLASS 39

CLOTHING

Ser. No. 510,248. CLAUDIA GLENN, Denver, Colo. Filed Oct. 4, 1946.

The words "Created by" and the representation of a bridal gown are disclaimed apart from the mark. The person represented on the drawing is fanciful.

FOR BRIDAL GOWNS.

Claims use since Aug. 1, 1946.

Ser. No. 511,963. M. J. SAKS SHOE CORP., New York, N. Y. Filed Nov. 2, 1946.

Em Jay
ORIGINALS

The word "Originals" is disclaimed apart from the mark.

FOR WOMEN'S SHOES MADE FROM LEATHER, FABRIC, COMPOSITION MATERIAL, PLASTICS, OR COMBINATIONS OF SUCH MATERIALS.

Claims use since Oct. 16, 1946.

Ser. No. 521,115. DANDON SALES, INC., New York, N. Y. Filed Apr. 22, 1947.

Judy 'n' Johnny

FOR SWIM CAPS AND BABY PANTS.

Claims use since Nov. 1, 1946.

CLASS 42

KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR

Ser. No. 490,595. LEVINSOHN TEXTILE CO., New York, N. Y. Filed Oct. 27, 1945.

FEATHERQUEEN

FOR TICKINGS, READY-MADE PILLOW TICKS.

Claims use since Jan. 1, 1945.

Ser. No. 524,039. ALGEMEENE KINSTZIJDE UNIE, N. V., Arnhem, Netherlands. Filed June 12, 1947.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL

Ser. No. 546,352. A. BERSLAUER EXPORT CORP., New York, N. Y. Filed Jan. 7, 1948.

Ser. No. 550,790. THE CUDAHY PACKING COMPANY, Chicago, Ill. Filed Feb. 28, 1948. Under section 2f of the act of 1946.

Ser. No. 524,039. ALGEMEENE KUNSTZIJDE UNIE, N. V., Arnhem, Netherlands. Filed June 12, 1947.

ENKA

FOR KNITTED, NETTED, AND TEXTILE FABRICS IN THE PIECE, MADE OF RAYON, NYLON, AND PROTEIN FIBERS AND YARNS.
Claims use since 1913.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Ser. No. 522,583. BELTX CORPORATION, St. Louis, Mo. Filed May 17, 1947.

Beltx Nylox

FOR SANITARY BELTS AND CLASPS AND OTHER PARTS THEREOF.
Claims use since Mar. 24, 1947.

ACT OF 1946

The following trade-marks are published in compliance with section 12(a) of the Trade-Mark Act of 1946. Notice of opposition under section 13 may be filed within thirty days of this publication. See Rules 20.1 to 20.5.
As provided by section 31 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 516,585. SUGAR BEET PRODUCTS COMPANY, INC., Saginaw W. S., Mich. Filed Dec. 15, 1947; originally filed, act of 1905, Jan. 29, 1947.

All terms enclosed in the circle with the exception of "Capsuds" are disclaimed apart from the mark.
FOR CONCENTRATED SOAP.
Claims use since Dec. 17, 1946.

Ser. No. 527,932. THE HEWITT SOAP COMPANY, INC., Dayton, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

SHOWER BAR

Applicant claims ownership of registration No. 418,468.
FOR SUDSING CLEANER, CLEANSER, AND DETERGENT.
Claims use since Feb. 26, 1942.

Ser. No. 536,568. WESTVACO CHLORINE PRODUCTS CORPORATION, New York, N. Y., Carteret, N. J., South Charleston, W. Va. and Newark Calif., assignor to Food Machinery and Chemical Corporation, New York, N. Y., a corporation of Delaware. Filed Oct. 2, 1947.

POLYSAN

FOR DAIRY EQUIPMENT CLEANSER.
Claims use since June 1944.

Ser. No. 544,653. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed Oct. 21, 1947.

METSO

Applicant claims ownership of registration No. 292,106.
FOR CLEANSING COMPOUND CONTAINING SILICATE OF SODA AND ESPECIALLY USEFUL FOR INDUSTRIAL CLEANING OF FOOD CONTAINERS, METALS, GLASS, CERAMICS, TEXTILES, AND THE LIKE.
Claims use since Oct. 10, 1930.

Ser. No. 545,919. JOHN WANAMAKER NEW YORK, New York, N. Y. Filed Dec. 31, 1947. Under section 2f of the act of 1946.

BLU-MOTTLE

Applicant claims ownership of registration No. 184,068.
FOR SOAP.
Claims use since Feb. 1, 1921.

Ser. No. 546,352. A. BERSLAUER EXPORT CORP., New York, N. Y. Filed Jan. 7, 1948.

Contouré

FOR SOAP.
Claims use since Aug. 15, 1947.

Ser. No. 547,520. THE DIVERSEY CORPORATION, Chicago, Ill. Filed Jan. 20, 1948.

TEMBRITE

FOR CLEANING COMPOUND IN POWDERED FORM HAVING INCIDENTAL WATER SOFTENING PROPERTIES.
Claims use since Jan. 2, 1948.

Ser. No. 548,322. THE BLACK DIAMOND PAINT & VARNISH WORKS, INC., Cincinnati, Ohio. Filed Jan. 30, 1948.

BLACK DIAMOND

Applicant claims ownership of registrations Nos. 51,204 and 51,205.
FOR BELT DRESSINGS.
Claims use since Dec. 15, 1902.

Ser. No. 549,154. THE ANDREW JERGENS COMPANY, Cincinnati, Ohio. Filed Feb. 9, 1948. Under section 2f of the act of 1946.

JERGENS

Applicant claims ownership of registrations Nos. 85,132 and 85,133.
FOR TOILET SOAP.
Claims use since 1890.

Ser. No. 550,687. THE GREAT AMERICAN TEA COMPANY, New York, N. Y. Filed Feb. 27, 1948.

Applicant claims ownership of registrations Nos. 220,795 and 244,825.
FOR LIQUID PREPARATION FOR REMOVING SPOTS FROM FABRICS, CLOTHING, CARPETS, AND UPHOLSTERY, AND A CLEANING PREPARATION IN POWDER FORM FOR GENERAL HOUSEHOLD AND LAUNDRY USE.
Claims use since Feb. 27, 1943.

Ser. No. 550,790. THE CUDAHY PACKING COMPANY, Chicago, Ill. Filed Feb. 28, 1948. Under section 2f of the act of 1946.

Applicant claims ownership of registrations Nos. 50,697, 68,007, 68,213, 139,514, 182,217, 224,182, and 231,395.
FOR SOAP POWDER COMBINED WITH MINERAL INGREDIENTS.
Claims use since Jan. 1, 1905.

Ser. No. 550,791. THE CUDAHY PACKING COMPANY, Chicago, Ill. Filed Feb. 28, 1948. Under section 2f of the act of 1946.

OLD DUTCH

Applicant claims ownership of registrations Nos. 50,697, 68,007, 68,213, 139,514, 182,217, 224,182, and 231,395.
FOR SOAP POWDER COMBINED WITH MINERAL INGREDIENTS.
Claims use since Jan. 1, 1905.

Ser. No. 555,803. THE DIVERSEY CORPORATION, Chicago, Ill. Filed Apr. 29, 1948.

ALUMINUX

Applicant claims ownership of registration No. 398,752.
FOR CLEANING COMPOUND IN PULVERULENT FORM.
Claims use since Oct. 6, 1933.

Ser. No. 557,547. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed May 21, 1948.

MONSANTO

FOR INORGANIC PHOSPHATES AND ALUMINA IN THE FORM OF PARTICULATE SOLIDS FOR GENERAL USE IN THE INDUSTRIAL ARTS AS ABRASIVES AND POLISHING AGENTS.
Claims use since May 1935.

Ser. No. 559,234. THE LINCOLN INDUSTRIAL CHEMICAL CO. INC., Lincoln Park, Pa. Filed June 15, 1948.

CLASS 5

ADHESIVES

Ser. No. 535,272. THEE PRODUCTS CO., Denver, Colo. Filed Sept 22, 1947.

Ser. No. 568,943. ROBERT L. GLADKE, doing business as Pakay Company, Elmira, N. Y. Filed Nov. 17, 1948.

Ser. No. 559,234. THE LINCOLN INDUSTRIAL CHEMICAL CO. INC., Lincoln Park, Pa. Filed June 15, 1948.

Alli

FOR LIQUID SOAP.
Claims use since Mar. 1, 1947.

Ser. No. 559,235. THE LINCOLN INDUSTRIAL CHEMICAL CO. INC., doing business as The Lincoln Industrial Insecticide Co., Lincoln Park, Pa. Filed June 15, 1948.

Steralli

FOR LIQUID SOAP HAVING STERILIZING PROPERTIES.
Claims use since May 1, 1948.

Ser. No. 562,062. HYSAN PRODUCTS COMPANY, Chicago, Ill. Filed July 23, 1948.

SNOAP

FOR CHEMICAL CLEANING POWDER FOR GENERAL CLEANING PURPOSES, INCLUDING CLEANING OF GLASS, PORCELAIN, TILE, MARBLE, WOOD, LINOLEUM, COMPOSITION FLOORS, PAINTED OR ENAMELED WALLS AND SIMILAR SURFACES.
Claims use since Jan. 15, 1945.

Ser. No. 563,184. IKTHOLINE LIMITED, Brentford, Middlesex, England. Filed Aug. 11, 1948.

IK-THOL-INE

Applicant claims ownership of British registration No. 510,862 dated Mar. 3, 1930.
FOR SHAVING SOAP.

CLASS 5

ADHESIVES

Ser. No. 545,783. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill. Filed Dec. 30, 1947. Under section 2f of the act of 1946.

STAYBIND

Applicant claims ownership of registration No. 359,015.
FOR VEGETABLE DERIVATIVE ADHESIVE FOR COMBINING PLIES OF PAPER AND OTHER ARTICLES.
Claims use since Apr. 2, 1931.

Ser. No. 555,498. GENERAL GUMMED PRODUCTS, INC., Richmond Hill, N. Y. Filed Apr. 24, 1948.

WOLCOR

FOR GUMMED PAPER TAPE AND GUMMED CLOTH TAPE FOR GENERAL USE.
Claims use since Dec. 10, 1947.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 502,802. CHEMICO, INC., Cuyahoga Falls, Ohio. Filed Sept. 22, 1947; originally filed, act of 1905, May 27, 1946.

SOAC

FOR RUBBER COMPOUNDING MATERIAL HAVING A PETROLATUM-LIKE CONSISTENCY WHICH SERVES FOR INCREASING THE PLASTICITY OF THE RUBBER AND INCREASING THE ACTIVITY OF THE ACCELERATOR EMPLOYED IN THE RUBBER BATCH.
Claims use since Mar. 28, 1946.

Ser. No. 522,524. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo. Filed July 5, 1947; originally filed, act of 1905, May 16, 1947.

JIFFIX

FOR AMMONIUM THIOSULFATE FIXING BATH COMPOSITIONS TO BE USED IN THE DEVELOPMENT OF PAPER PRINTS, FILMS AND PLATES.
Claims use since Apr. 21, 1947.

Ser. No. 535,272. THEE PRODUCTS CO., Denver, Colo. Filed Sept 22, 1947.

THEE

FOR SCALP AND HAIR LOTIONS AND OIL SHAMPOOS.
Claims use since Aug. 1, 1947.

Ser. No. 550,371. WHITEHALL PHARMACAL COMPANY, New York, N. Y. Filed Feb. 21, 1948. Under section 2f of the act of 1946.

DELICA BROW

Applicant claims ownership of registration No. 144,299.
FOR MASCARA.
Claims use since Aug. 20, 1920.

Ser. No. 554,797. KEUFFEL & ESSER COMPANY, Hoboken, N. J. Filed Apr. 16, 1948.

Photact

FOR CHEMICALS USED IN PROCESSING PHOTOSENSITIVE PRODUCTS—NAMELY, DEVELOPERS, FIXERS, AND BLEACHERS FOR "ERASING."
Claims use since May 21, 1943.

Ser. No. 561,169. TWIN CITY WHOLESALE GROCER CO., St. Paul, Minn. Filed July 10, 1948.

Fairway

Applicant claims ownership of registrations Nos. 197,673 and 243,059.
FOR SYNTHETIC FOOD COLORING MATERIALS.
Claims use since December 1934.

Ser. No. 568,943. ROBERT L. GLADKE, doing business as Pakay Company, Elmira, N. Y. Filed Nov. 17, 1948.

Pakay

FOR WATER SOLUBLE DOUCHE POWDER.
Claims use since Aug. 5, 1948.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 559,661. A. B. DICK COMPANY, Chicago, Ill. Filed June 18, 1948.

AB

Applicant claims ownership of registrations Nos. 415,230, 420,026, and 432,257.
FOR DUPLICATING INK AND INK PADS.
Claims use since September 1944.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 530,921. COWIN & CO. INC., Minneapolis, Minn. Filed Aug. 9, 1947.

STEELDROME

FOR ALUMINUM AND STEEL PREFABRICATED BUILDING STRUCTURES.
Claims use since Aug. 5, 1940.

Ser. No. 537,563. CLINTON METALLIC PAINT COMPANY, Clinton, N. Y. Filed Oct. 11, 1947. Under section 2f of the act of 1946.

Clinton

Applicant claims ownership of registration No. 82,052.
FOR CEMENT COLORING MATERIAL, FOR MORTAR COLORING MATERIAL, FOR FURNACE CEMENT AND FOR FIREBRICK CEMENT.
Claims use since Sept. 1, 1886.

Ser. No. 542,565. THE HALLEMITE MANUFACTURING CO., Cleveland, Ohio. Filed Nov. 28, 1947.

Ser. No. 564,131. LACLEDE-CHRISTY COMPANY, St. Louis, Mo. Filed Aug. 25, 1948.

Ser. No. 556,674. ROCKWELL MANUFACTURING COMPANY, Pittsburgh, Pa. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

CLASS 15

OILS AND GREASES

Ser. No. 542,565. THE HALLEMITE MANUFACTURING CO., Cleveland, Ohio. Filed Nov. 28, 1947.

SILACRON

FOR QUICK SETTING NON-SHRINKING CEMENT FOR REPAIRING CONCRETE AND MASONRY.
Claims use since May 2, 1938.

Ser. No. 543,788. CORALTEX, INC., Los Angeles, Calif. Filed Dec. 9, 1947.

CORALETHER

FOR FIBER BOARD FOR CONSTRUCTION PURPOSES.
Claims use since Nov. 10, 1947.

Ser. No. 546,680. DETROIT GRAPHITE COMPANY, Detroit, Mich. Filed Jan. 10, 1948. Under section 2f of the act of 1946.

Seal-Gard

FOR CALKING AND GLAZING COMPOUND.
Claims use since 1935.

Ser. No. 547,496. TIMMERMAN LUMBER & MFG. CO., Hibbing, Minn. Filed Jan. 19, 1948.

TIMCO

FOR PREFABRICATED, WOOD, FRAME, BUILDINGS—NAMELY, LOG CABINS, MILK HOUSES, AND BUNGALOWS.
Claims use since May 1, 1947.

Ser. No. 552,876. PLIBRICO JOINTLESS FIREBRICK COMPANY, Chicago, Ill. Filed Mar. 24, 1948. Under section 2f of the act of 1946.

BURNER-SET

Applicant claims ownership of registration No. 383,916.
FOR CASTABLE REFRACTORY MATERIAL.
Claims use since Aug. 4, 1939.

Ser. No. 552,877. PLIBRICO JOINTLESS FIREBRICK COMPANY, Chicago, Ill. Filed Mar. 24, 1948. Under section 2f of the act of 1946.

FIRE HEARTH

Applicant claims ownership of registration No. 402,456.
FOR DRY AGGREGATE READY TO MIX WITH WATER TO FORM A PLASTIC HEAT INSULATING MATERIAL.
Claims use since Nov. 13, 1941.

Ser. No. 564,131. LACLEDE-CHRISTY COMPANY, St. Louis, Mo. Filed Aug. 25, 1948.

MABCO

FOR FIRE BRICK.
Claims use since Apr. 10, 1942.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 528,197. DEUS FASTENER CO., INC., West Islip, N. Y. Filed July 9, 1947.

SUPERSONIC

FOR QUICK-ACTING, SELF-LOCKING FASTENERS, AND FASTENER PARTS AND ACCESSORIES—NAMELY, FASTENER STUDS, FASTENER SPRINGS, FASTENER GROMMETS, AND FASTENER RECEPTACLES.
Claims use since June 9, 1947.

Ser. No. 532,432. DIXON VALVE & COUPLING CO., Philadelphia, Pa. Filed Aug. 26, 1947.

"G J BOSS"

Applicant claims ownership of registration No. 280,875.
FOR HOSE COUPLINGS.
Claims use since June 1934.

Ser. No. 536,345. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Oct. 1, 1947. Under section 2f of the act of 1946.

WILMINGTON

FOR PLUMBING FIXTURES—NAMELY, VITREOUS CHINA LAVATORIES.
Claims use since January 1940.

Ser. No. 536,346. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Oct. 1, 1947.

ZECO

FOR PLUMBING FIXTURES—NAMELY, VITREOUS CHINA WATER CLOSETS AND WATER CLOSET TANKS AND BALLCOCKS THEREFOR.
Claims use since January 1926.

Ser. No. 536,347. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Oct. 1, 1947. Under section 2f of the act of 1946.

WESTON

FOR PLUMBING FIXTURES, NAMELY—VITREOUS CHINA LAVATORIES.
Claims use since July 1939.

Ser. No. 556,674. ROCKWELL MANUFACTURING COMPANY, Pittsburgh, Pa. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

NORDSTROM

Applicant claims ownership of registrations Nos. 413,654 and 349,221.
FOR PLUG VALVES AND PARTS THEREOF.
Claims use since 1919.

CLASS 14

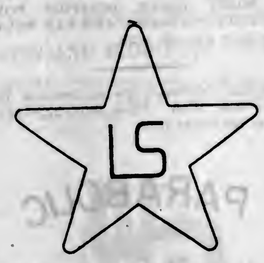
METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 455,544. REPUBLIC STEEL CORPORATION, Cleveland, Ohio. Filed May 5, 1948; originally filed, act of 1905, Sept. 15, 1942. Under section 2f of the act of 1946.

ELECTRO ZINCBOND

Applicant disclaims the term "Electro" apart from the mark. Applicant claims ownership of registration No. 395,814.
FOR ELECTRICALLY COATED FERROUS METAL SHEET, STRIP, AND PLATE.
Claims use since May 1, 1942.

Ser. No. 527,838. NATIONAL LEAD COMPANY, New York, N. Y. Filed July 5, 1947.



FOR ANTIMONY METAL AND ALLOYS THEREOF IN THE FORM OF BARS, PIGS, OR INGOTS.
Claims use since January 1931.

Ser. No. 557,882. THE AMERICAN METAL COMPANY, LIMITED, New York, N. Y. Filed May 27, 1948.

AMCO

FOR METAL PRODUCTS—NAMELY, ZINC METAL IN THE FORM OF SLABS, CAKES, BARS, OR INGOTS, AND COPPER IN CAKES, BARS, OR INGOTS.
Claims use since July 19, 1930.

619 O. G.—42

CLASS 15

OILS AND GREASES

Ser. No. 534,690. D. A. STUART OIL CO., LIMITED, Chicago, Ill. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

Thred Kut

FOR CUTTING OILS.
Claims use since Jan. 31, 1924.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 539,667. CONTINENTAL PAINT & VARNISH CO., Chicago, Ill. Filed Oct. 31, 1947.

ZINCAPONE

FOR PAINT IN PASTE FORM.
Claims use since 1932.

Ser. No. 539,778. STETSON PAINT AND VARNISH COMPANY, Chicago, Ill. Filed Oct. 31, 1947.

CORRU-KOTE

Applicant disclaims use of the word "Kote" per se.
FOR PAINT IN LIQUID AND PASTE FORM.
Claims use since 1937.

Ser. No. 540,910. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Filed Nov. 12, 1947.

"67" LINE

The word "Line" is disclaimed apart from the mark.
FOR PAINT ENAMELS (AIR-DRYING AND BAKING).
Claims use since Oct. 1, 1945.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 502,886. CONTINENTAL ELECTRIC COMPANY, Geneva, Ill. Filed Dec. 16, 1947; originally filed, act of 1905, May 28, 1946. Under section 2f of the act of 1946.

CETRON

FOR ELECTRONIC AND LIGHTING DEVICES—NAMELY, PHOTO-ELECTRIC TUBES, RECTIFIER TUBES, CHARGER BULBS, ELECTRONIC TUBES, PROJECTOR LAMPS, SPACE DISCHARGE LAMPS, NEON LAMPS, AND GAS DISCHARGE LAMPS.
Claims use since 1934.

Ser. No. 536,825. WARD LEONARD ELECTRIC COMPANY, Mount Vernon, N. Y. Filed Oct. 4, 1947. Under section 2f of the act of 1946.

Ser. No. 534,622. GERBER LEGENDARY BLADES, Portland, Oreg. Filed Sept. 16, 1947.

Ser. No. 536,094. THE JOYCE-CRIDLAND CO., Dayton, Ohio. Filed Sept. 29, 1947.

Ser. No. 512,885. THE WHITE-HAINES OPTICAL COMPANY, Columbus, Ohio. Filed July 5, 1947; originally filed, act of 1905, Nov. 19, 1946.

Ser. No. 536,825. WARD LEONARD ELECTRIC COMPANY, Mount Vernon, N. Y. Filed Oct. 4, 1947. Under section 2f of the act of 1946.

WARD LEONARD

FOR ELECTRIC RESISTANCE UNITS OR TUBES OR COILS, ELECTRIC RHEOSTATS, ELECTRIC MOTOR STARTERS, ELECTRIC VOLTAGE, CURRENT AND SPEED REGULATORS, ELECTRIC SWITCHES, ELECTRIC CIRCUIT CONTROLLERS FOR CHANGING CIRCUIT CONNECTIONS IN A PREDETERMINED MANNER AND OTHERWISE, ELECTRIC CURRENT CUT-OUTS AND ELECTRO-MAGNETIC CIRCUIT BREAKERS, AND ELECTRIC CONTROLLING PANELS.
Claims use since 1911.

Ser. No. 539,503. EASTERN TUBE AND TOOL CO., INC., Brooklyn, N. Y. Filed Oct. 30, 1947.

Ettco Flex

FOR NON-METALLIC CABLE CONDUIT OR TUBE.
Claims use since August 1926.

Ser. No. 540,383. A. B. CHANCE COMPANY, Centralia, Mo. Filed Nov. 7, 1947. Under section 2f of the act of 1946.

CHANCE

FOR LINE TAP CLAMPS (SCREW TYPE AND SNAP TYPE), TAP CONNECTIONS, GROUNDING SETS COMPRISING MOUNTED CLUSTERS OF TAP CLAMPS AND SUPPORTS THEREFOR, BUS BAR CLAMPS, ANGULAR GROUNDING CLAMPS, SWITCH BLADE GROUNDING CLAMPS, TERMINAL BLOCKS, GROUNDING TERMINALS, TERMINAL LUGS, INSULATED JUMPER CLAMPS, FLEXIBLE GROUNDING CABLE AND CABLE SPLICES, FUSED TAP-OFF CLAMPS, AND DROP-OUT FUSED CUT-OUTS.
Claims use since Feb. 1, 1939.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 531,888. WILLIAM CARMEL, Chicago, Ill. Filed Aug. 20, 1947.

SMASH-O-MATIC

No claim is made to the word "Smash" apart from the mark.
FOR BOTTLE CRUSHERS FOR BREAKING INTO FRAGMENTS BEVERAGE BOTTLES AND THE LIKE.
Claims use since July 1, 1947.

Ser. No. 534,622. GERBER LEGENDARY BLADES, Portland, Oreg. Filed Sept. 16, 1947.

MIMING

FOR STEAK KNIVES MADE OF NON-PRECIOUS MATERIALS.
Claims use since July 1946.

Ser. No. 534,894. K-D MANUFACTURING COMPANY, Lancaster, Pa. Filed Sept. 18, 1947.

K-D

Applicant claims ownership of registrations Nos. 137,808 and 276,115.
FOR HACK-SAW FRAMES, HACK-SAW BLADES, NAIL PULLERS, AND AUTOMOTIVE TOOLS AND ACCESSORIES—TO WIT, VALVE SPRING LIFTERS, SPRING COMPRESSORS, VALVE-STEM-KEEPER-INSERTERS, VALVE-STEM-KEEPER-RECEIVERS OR SHIELDS, VALVE-STEM-KEEPER REMOVERS, WRIST-PIN-INSERTING TOOLS, VALVE GRINDERS, BUSHING REMOVERS, WHEEL PULLERS, STUD RIVETTING AND SETTING AND REMOVING DIES, VALVE SPRING AND OTHER SPRING HOLDERS, BENCH VISE ATTACHMENTS FOR USE IN COMPRESSING SPRINGS, PLIERS, WRENCHES, PISTON RINGERS, PISTON RING FILERS, VALVE GUIDE RETAINERS, IGNITION POINT TOOLS, IGNITION POINT REFACERS, PISTON PIN TOOLS, AND FAN BELT TOOLS.
Claims use since Apr. 30, 1920.

Ser. No. 535,255. NATIONAL TWIST DRILL & TOOL COMPANY, Rochester, Mich. Filed Sept. 22, 1947. Under section 2f of the act of 1946.

PARABOLIC

Applicant claims ownership of registration No. 169,920.
FOR MILLING CUTTERS.
Claims use since Apr. 14, 1922.

Ser. No. 536,006. STEEL PRODUCTS MANUFACTURING COMPANY, St. Louis, Mo. Filed Sept. 27, 1947.

SWING-A-WAY

Applicant claims ownership of registration No. 373,866.
FOR CAN OPENERS, JAR OPENERS, AND KNIFE SHARPENERS.
Claims use since May 1, 1938.

Ser. No. 536,094. THE JOYCE-CRIDLAND CO., Dayton, Ohio. Filed Sept. 29, 1947.

Liftmaster
NU-HYDRO JACK

The words "Nu-Hydro Jack" are disclaimed apart from the mark. Applicant claims ownership of registration No. 351,262.
FOR HYDRAULIC LIFTING JACKS.
Claims use since May 1946.

CLASS 25

LOCKS AND SAFES

Ser. No. 528,395. THE AMERICAN SWISS COMPANY, Toledo, Ohio. Filed July 12, 1947. Under section 2f of the act of 1946.

SWISS

Applicant claims ownership of registration No. 332,280.
FOR VEHICLE DOOR LATCHES.
Claims use since August 1926.

CLASS 26

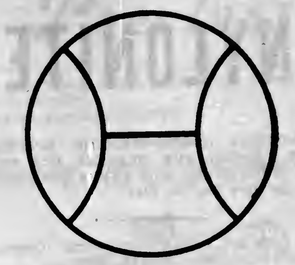
MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 496,187. WHITE-RODGERS ELECTRIC COMPANY, St. Louis, Mo. Filed Nov. 17, 1947; originally filed, act of 1905, Feb. 7, 1946.

WR

Applicant claims ownership of registrations Nos. 365,781 and 396,361.
FOR INSTRUMENTS AND CONTROLS RESPONSIVE TO CHANGES IN PHYSICAL CONDITIONS—NAMELY, ELECTRO-THERMOSTATIC GAS VALVES; ROOM AND SPACE THERMOSTATS; AND PRESSURE-ELECTRIC AND THERMO-ELECTRIC CONTROLS OF WARM AIR, SURFACE AND IMMERSION HOT WATER TYPES, FOR HEATING AND AIR-CONDITIONING SYSTEMS, FOR FAN AND BLOWER SYSTEMS, INDUSTRIAL OVENS, AND REFRIGERATION SYSTEMS; AND ELECTRO-TIMERS FOR STOKERS.
Claims use since September 1937.

Ser. No. 512,885. THE WHITE-HAINES OPTICAL COMPANY, Columbus, Ohio. Filed July 5, 1947; originally filed, act of 1905, Nov. 19, 1946.



FOR OPHTHALMIC LENSES FOR OPTICAL PURPOSES.
Claims use since Aug. 25, 1946.

Ser. No. 521,976. ARNOLD U. HUGGENBERGER, Zurich, Switzerland. Filed July 5, 1947; originally filed, act of 1905, May 6, 1947.

Tepic

Applicant claims ownership of Swiss registration No. 117,496.
FOR STRAIN GAGES AND ELECTRO-MECHANICAL MEASURING APPARATUS IN WHICH STATIC AND DYNAMIC PHENOMENA ARE TRANSMITTED BY STRAIN GAGES.

Ser. No. 521,977. ARNOLD U. HUGGENBERGER, Zurich, Switzerland. Filed July 5, 1947; originally filed, act of 1905, May 6, 1947.

Tecup

Applicant claims ownership of Swiss registration No. 117,495, dated Oct. 25, 1946.
FOR STRAIN GAGES AND ELECTRO-MECHANICAL MEASURING APPARATUS IN WHICH STATIC AND DYNAMIC PHENOMENA ARE TRANSMITTED BY STRAIN GAGES.

Ser. No. 524,968. CHARLES FOSTER & CO., New York, N. Y., assignor to Charles Foster & Co., Inc., New York, N. Y. Filed Aug. 1, 1947. Under section 2f of the act of 1946.

FOSTER

FOR SHOES.
Claims use since Jan. 1, 1947.

Ser. No. 520,842. THE VINCENT-McCALL COMPANY, Kenosha, Wis. Filed Nov. 19, 1947; originally filed, act of 1905, Feb. 7, 1946.

VINCENT-McCALL

FOR SHOES.
Claims use since Jan. 1, 1947.

Ser. No. 535,498. DREXEL FURNITURE COMPANY, Drexel, N. C. Filed Sept. 24, 1947.

DREXEL

FOR FURNITURE.
Claims use since Aug. 1, 1947.

Ser. No. 544,403. TUCKER DUCK & RUBBER CO., Fort Smith, Ark. Filed Dec. 15, 1947. Under section 2f of the act of 1946.

TUCKER

FOR SHOES.
Claims use since Jan. 1, 1947.

Ser. No. 524,968. CHARLES FOSTER & Co., New York, N. Y., assignor to Charles Foster & Co., Inc., New York, N. Y., a corporation of New York. Filed Aug. 16, 1947; originally filed, act of 1905, June 27, 1947.

NYLONITE

FOR OPTICAL GOODS—NAMELY, SPECTACLES, GOGGLES, LENSES, SUN GLASSES, EYE SHADES, FRAMES, MOUNTINGS, AND PARTS THEREOF.
Claims use since May 16, 1947.

506,628. VITAMIN PREPARATIONS, ANALGESICS, HYPNOTICS, ETC. PARKE, DAVIS & COMPANY, Detroit, Mich.
Filed July 7, 1947, Serial No. 528,094. Published Oct.

506,638. PRODUCT CONTAINING THE ACTIVE PRINCIPALS OF DIGITALIS FREED FROM INERT MATERIAL, FOR ADMINISTRATION BY MOUTH IN THE TREATMENT OF VARIOUS CARDIAC CONDITIONS. BURROUGHS WELLCOME & CO. (U. S. A.) INC., Tuckahoe, N. Y.

506,652. LIQUID COMPOUNDS OR SOLUTIONS CONTAINING ORGANIC PEROXIDES IN COMBINATION WITH ORGANIC OR INORGANIC FILLERS OR DILUENTS. NOVADEL-AGENE CORPORATION, Belleville, N. J., and Buffalo, N. Y.

506,615. FACE POWDER, LIPSTICK, TOILET WATER, GLYCERINE AND ROSE WATER, SHAMPOO, AND SKIN FRESHENER. THE LANDER CO., INC., New York, N. Y.
Filed July 24, 1947; originally filed, act of 1905, Mar. 4, 1947, Serial No. 518,468. Published Oct. 5, 1948. Class 6.

506,616. HYDRAULIC BRAKE FLUID. JULIUS GOLDNER, doing business as Regal Chemical Co., Brooklyn, N. Y.
Filed Nov. 4, 1947; originally filed, act of 1905, Mar. 29, 1947, Serial No. 519,816. Published Oct. 19, 1948. Class 6.

506,617. THERMOSTATIC TEMPERATURE CONTROLS FOR HEAT TRANSFER SYSTEMS. HENRY T. KUCERA, doing business as Automatic Devices Co., Chicago, Ill.
Filed Oct. 18, 1947; originally filed, act of 1905, Apr. 1, 1947, Serial No. 519,961. Published Sept. 28, 1948. Class 26.

506,618. SINGLE POLE SWITCH CIRCUIT BREAKERS AND DOUBLE POLE JUNCTION BOXES, ETC. THE OHIO BRASS COMPANY, Mansfield, Ohio.
Filed July 9, 1947; originally filed, act of 1905, Apr. 2, 1947, Serial No. 520,053. Published Oct. 19, 1948. Class 21.

506,619. ELECTRICAL CAPACITORS. SOLAR MANUFACTURING CORPORATION, North Bergen, N. J.
Filed Mar. 5, 1948; originally filed, act of 1905, Apr. 8, 1947, Serial No. 520,359. Published Oct. 19, 1948. Class 21.

506,620. ELECTRICAL LAMPS FOR AUTOMOBILES. GENERAL MOTORS CORPORATION, Detroit, Mich.
Filed Jan. 28, 1948; originally filed, act of 1905, Apr. 21, 1947, Serial No. 521,068. Published Oct. 19, 1948. Class 21.

506,621. RIBOFLAVIN SUPPLEMENT FOR POULTRY AND LIVE STOCK FEEDS. PUBLICKER INDUSTRIES INC., Philadelphia, Pa.
Filed July 5, 1947, Serial No. 526,592. Published Nov. 2, 1948. Class 6.

506,622. FISHING LINES. B. F. GLADDING & CO., INC., South Otselic, N. Y.
Filed July 5, 1947, Serial No. 527,062. Published Oct. 5, 1948. Class 22.

506,623. WOOD PULP. THE CHAMPION PAPER AND FIBRE COMPANY, Hamilton, Ohio.
Filed July 5, 1947, Serial No. 527,302. Published Nov. 9, 1948. Class 1.

506,624. PREPARATION FOR THE TREATMENT OF RHEUMATISM, ARTHRITIS, COLDS, INFLUENZA, TONSILITIS, AND OTHER CONDITIONS THAT AN ANALGESIC OF THIS KIND WOULD BE PRESCRIBED, AND GOUT AND RHEUMATIC FEVER. TABLE ROCK LABORATORIES, INC., Greenville, S. C.
Filed July 5, 1947, Serial No. 527,427. Published Oct. 5, 1948. Class 6.

506,625. ELECTRIC LIGHTING FIXTURES, ELECTRIC LAMPS, ETC. ZEON, Chicago, Ill.
Filed July 5, 1947, Serial No. 527,559. Published Oct. 19, 1948. Class 21.

506,626. ION EXCHANGE COMPOSITIONS USED IN THE SOFTENING AND PURIFYING OF WATER AND IN THE PURIFYING OF LIQUID MEDIUMS, OTHER THAN WATER. NATIONAL ALUMINATE CORPORATION, Chicago, Ill.
Filed July 5, 1947, Serial No. 527,935. Published Oct. 19, 1948. Class 6.

506,627. VITAMIN PREPARATIONS, ANALGESICS, HYPNOTICS, ETC. PARKE, DAVIS & COMPANY, Detroit, Mich.
Filed July 7, 1947, Serial No. 528,093. Published Oct. 5, 1948. Class 6.

506,628. VITAMIN PREPARATIONS, ANALGESICS, HYPNOTICS, ETC. PARKE, DAVIS & COMPANY, Detroit, Mich.
Filed July 7, 1947, Serial No.. 528,094. Published Oct. 5, 1948. Class 6.

506,629. VITAMIN PREPARATIONS, ANALGESICS, HYPNOTICS, ETC. PARKE, DAVIS & COMPANY, Detroit, Mich.
Filed July 7, 1947, Serial No. 528,095. Published Oct. 5, 1948. Class 6.

506,630. TEXTILE TREATMENT CHEMICALS—NAMELY, DETERGENTS, SCOURING AGENTS, DYEING ASSISTANTS, AND PENETRANTS FOR USE IN THE PROCESSING OF TEXTILE FIBERS AND FABRICS, NATURAL AND SYNTHETIC. JOSEPH GEORGE NATHANSON, Natick, R. I.
Filed July 12, 1947, Serial No. 528,502. Published Nov. 9, 1948. Class 6.

506,631. ELECTRIC LIGHTING FIXTURES AND LUMINOUS SIGNS. MOORE-MONTROY ELECTRIC CO., Los Angeles, Calif.
Filed July 14, 1947, Serial No. 528,576. Published Nov. 2, 1948. Class 21.

506,632. JEWELRY, NOT INCLUDING WATCHES—NAMELY, COLLAR PINS, COLLAR HOLDERS, COLLAR BUTTONS, BELT CHAINS, BELT BUCKLES, CUFF BUTTONS, SHIRT STUDS, TIE CLASPS, SCARF PINS, KEY CHAINS, TIE CHAINS, AND MONEY CLIPS, MADE IN WHOLE OR IN PART OF PRECIOUS METALS. DOLAN & BULLOCK CO., Providence, R. I.
Filed July 16, 1947, Serial No. 528,703. Published Oct. 26, 1948. Class 28.

506,633. JEWELRY, NOT INCLUDING WATCHES—NAMELY, COLLAR PINS, COLLAR HOLDERS, COLLAR BUTTONS, BELT CHAINS, BELT BUCKLES, CUFF BUTTONS, SHIRT STUDS, TIE CLASPS, SCARF PINS, KEY CHAINS, TIE CHAINS, AND MONEY CLIPS, MADE IN WHOLE OR IN PART OF PRECIOUS METALS. DOLAN & BULLOCK CO., Providence, R. I.
Filed July 16, 1947, Serial No. 528,704. Published Oct. 26, 1948. Class 28.

506,634. JEWELRY, NOT INCLUDING WATCHES—NAMELY, COLLAR PINS, COLLAR HOLDERS, COLLAR BUTTONS, BELT CHAINS, BELT BUCKLES, CUFF BUTTONS, SHIRT STUDS, TIE CLASPS, SCARF PINS, KEY CHAINS, TIE CHAINS, AND MONEY CLIPS, MADE IN WHOLE OR IN PART OF PRECIOUS METALS. DOLAN & BULLOCK CO., Providence, R. I.
Filed July 16, 1947, Serial No. 528,707. Published Oct. 26, 1948. Class 28.

506,635. JEWELRY, NOT INCLUDING WATCHES—NAMELY, COLLAR PINS, ETC. DOLAN & BULLOCK CO., Providence, R. I.
Filed July 16, 1947, Serial No. 528,708. Published Oct. 26, 1948. Class 28.

506,636. DENTIFRICES—NAMELY, TOOTH PASTE, TOOTH POWDER, AND MOUTH WASHES, AND ON CONCENTRATED COLLOIDAL MINERALS FOR USE AS NASAL DOUCHE. JOHN J. HARRIS, doing business as No Equal Products Company Not Inc. and Nature's Mineral Health Food Shop, Chicago, Ill.
Filed July 16, 1947, Serial No. 528,718. Published Sept. 28, 1948. Class 6.

506,637. MEDICINAL PREPARATION CONTAINING ANTACIDS, USED IN THE TREATMENT OF GASTRIC HYPERACIDITY. BURROUGHS WELLCOME & CO. (U. S. A.) INC., New York, N. Y.
Filed July 22, 1947, Serial No. 529,136. Published Oct. 19, 1948. Class 6.

506,638. PRODUCT CONTAINING THE ACTIVE PRINCIPALS OF DIGITALIS FREED FROM INERT MATERIAL, FOR ADMINISTRATION BY MOUTH IN THE TREATMENT OF VARIOUS CARDIAC CONDITIONS. BURROUGHS WELLCOME & CO. (U. S. A.) INC., New York, N. Y.
Filed July 22, 1947, Serial No. 529,138. Published Oct. 19, 1948. Class 6.

506,639. CAMPHOR, CAMPHORATED OIL, GLYCERINE, COUGH SYRUP, AND FOOD COLORING COMPOUNDS. BAKER EXTRACT COMPANY, Springfield, Mass.
Filed July 31, 1947, Serial No. 530,054. Published Jan. 20, 1948. Class 6.

506,640. TOOTHBRUSHES. OWENS BRUSH COMPANY, Toledo, Ohio.
Filed Aug. 1, 1947, Serial No. 530,246. Published Oct. 5, 1948. Class 29.

506,641. TOOTHBRUSHES. OWENS BRUSH COMPANY, Toledo, Ohio.
Filed Aug. 1, 1947, Serial No. 530,247. Published Oct. 5, 1948. Class 29.

Filed Oct. 14, 1947, Serial No. 537,859. Published Nov. 9, 1948. Class 1.

506,681. CHEMICAL PREPARATION USED IN THE TREATMENT OF THE HAIR AND SCALP. FRANCES JEANENE ROBINSON, doing business as Jeanene Robinson Preparations, Ely, Nev.
Filed Oct. 16, 1947, Serial No. 538,040. Published Nov. 2, 1948. Class 6.

506,682. POWDER FOR PRICKLY HEAT, NETTLE RASH, AND CHAFED SKIN FOR EXTERNAL USE ONLY. PLOUGH, INC., Memphis, Tenn.
Filed Oct. 17, 1947, Serial No. 538,172. Published Oct. 19, 1948. Class 6.

506,683. ORNAMENTAL PINS, JEWELRY CLIPS, HAIR ORNAMENTS, BADGES, COIN PURSES, MESH BAGS, ETC. CORO, INC., New York, N. Y.
Filed Oct. 23, 1947, Serial No. 538,726. Published Oct. 26, 1948. Class 28.

506,684. ELECTRIC ALARM BELL AND CONTROL INSTRUMENTS AND PARTS THEREOF FOR BURGLAR AND FIRE ALARM SYSTEMS. AMERICAN ELECTRICAL CORPORATION OF MASSACHUSETTS, Boston, Mass.
Filed Nov. 4, 1947, Serial No. 540,017. Published Oct. 26, 1948. Class 21.

506,685. BILLIARD BALLS. ALBANY BILLIARD BALL COMPANY, Albany, N. Y.
Filed Nov. 6, 1947, Serial No. 540,235. Published Oct. 5, 1948. Class 22.

506,686. HOLLOW WARE INCLUDING DISHES, TRAYS, JUGS, BRANDYWARMERS, CIGARETTE BOXES, JARS, CAFE BRULES, CRUMBERS, LADLES, JIGGERS, AND GOBLETS, MADE IN WHOLE OF OR IN PART OF PRECIOUS METAL. W. & S. BLACKINTON CO., INC., Meriden, Conn.
Filed Nov. 6, 1947, Serial No. 540,243. Published Oct. 26, 1948. Class 28.

506,687. RADIO RECEIVING SETS AND PARTS THEREOF. OAKES & COMPANY, Chicago, Ill.
Filed Nov. 8, 1947, Serial No. 540,561. Published Sept. 7, 1948. Class 21.

506,688. BOWLS; DISHES; FLOWER HOLDERS; COCKTAIL SHAKERS; CANDLESTICKS; TOILET SETS; BABY CUPS; SERVING FORKS AND SPOONS, ETC. THE NAPIER COMPANY, Meriden, Conn.
Filed Nov. 12, 1947, Serial No. 540,854. Published Oct. 26, 1948. Class 28.

506,689. BASKETBALLS. A. G. SPALDING & BROS. INC., Chicopee, Mass.
Filed Nov. 13, 1947, Serial No. 541,084. Published Oct. 5, 1948. Class 22.

506,690. TENNIS RACKETS, BASEBALLS, FOOTBALLS, BASKETBALLS, SOCCER BALLS, VOLLEY BALLS, BASEBALL MITTS, BASEBALL GLOVES, AND FOOTBALL HELMETS. A. G. SPALDING & BROS. INC., Chicopee, Mass.
Filed Nov. 13, 1947, Serial No. 541,041. Published Oct. 5, 1948. Class 22.

506,691. NECKLACES, BRACELETS, BROOCHES, DRESS CLIPS, BAR PINS, FINGER RINGS, DRESS BUCKLES, SHOE BUCKLES, ORNAMENTAL COMBS, ETC. THE NAPIER COMPANY, Meriden, Conn.
Filed Nov. 14, 1947, Serial No. 541,166. Published Oct. 26, 1948. Class 28.

506,692. BELT BUCKLES, NECKTIE PINS, NECKTIE CLASPS, LAPEL ORNAMENTS, BRACELETS, AND FINGER RINGS MADE OF OR PLATED WITH PRECIOUS METAL. RICARDO METAL MFG. CO., Denver, Colo.
Filed Nov. 14, 1947, Serial No. 541,182. Published Oct. 26, 1948. Class 28.

506,693. LIQUID COMPOSITION FOR TREATING SEED CORN, BEANS, PEAS, ETC., TO PROTECT THEM FROM SEED PULLING BIRDS AND ANIMALS. THE CEDAR HILL FORMULAS CO., New Britain, Conn.
Filed Nov. 15, 1947, Serial No. 541,259. Published Oct. 26, 1948. Class 6.

506,694. SUN LAMPS FOR GENERAL USE. ASSOCIATED MERCHANDISING CORPORATION, New York, N. Y.
Filed Nov. 18, 1947, Serial No. 541,492. Published Oct. 26, 1948. Class 21.

506,695. CATTLE HIDES, SHEEPSKINS, AND CALF SKINS. FRIEND HIDE CO., Chicago, Ill., and St. Louis, Mo.
Filed Nov. 18, 1947, Serial No. 541,533. Published Nov. 9, 1948. Class 1.

506,696. CATTLE HIDES, SHEEPSKINS, AND CALF SKINS. FRIEND HIDE CO., Chicago, Ill., and St. Louis, Mo.
Filed Nov. 18, 1947, Serial No. 541,534. Published Nov. 9, 1948. Class 1.

506,697. STAPLE FIBRE MANUFACTURED FROM CELLULOSE ACETATE FOR USE IN THE MANUFACTURE OF TEXTILE YARNS OR THREADS. COURTAULDS, LIMITED, London, England.
Filed Nov. 19, 1947, Serial No. 541,649. Published Nov. 9, 1948. Class 1.

506,698. STORAGE BATTERIES. HOBBS BATTERY COMPANY, San Francisco, Calif.
Filed Nov. 19, 1947, Serial No. 541,678. Published Oct. 26, 1948. Class 21.

506,699. WEIGHING SCALES. ROCK-OLA MANUFACTURING CORPORATION, Chicago, Ill.
Filed July 31, 1947, Serial No. 541,786. Published Oct. 19, 1948. Class 26.

506,700. NECKWEAR TIE INTERLININGS SOLD ONLY IN THE PIECE, YARD, ROLL, OR BOLT. MYRON B. LEVY CO., INC., New York, N. Y.
Filed Nov. 20, 1947, Serial No. 541,847. Published Oct. 19, 1948. Class 42.

506,701. ELECTRIC MOTORS. RAYTHEON MANUFACTURING COMPANY, Newton, Mass.
Filed Nov. 21, 1947, Serial No. 541,964. Published Aug. 31, 1948. Class 21.

506,702. BODY CLEANSING OIL. LAMBERT W. HORN, San Francisco, Calif.
Filed Nov. 26, 1947, Serial No. 542,471. Published Oct. 5, 1948. Class 6.

506,703. WRIST WATCH BANDS MADE PRIMARILY OF LEATHER AND LIKE MATERIAL AND METAL COMPONENTS. THE ZIPLOC COMPANY, New York, N. Y.
Filed Nov. 26, 1947, Serial No. 542,497. Published Oct. 26, 1948. Class 28.

Filed Nov. 28, 1947. Serial No. 542,593. Published Oct. 5, 1948. Class 26.

506,705. CONTROL APPARATUS FOR TEMPERATURE AND HUMIDITY REGULATING SYSTEMS. MINNEAPOLIS-HONEYWELL REGULATOR COMPANY, Minneapolis, Minn.
Filed Nov. 28, 1947, Serial No. 542,622. Published Oct. 19, 1948. Class 26.

506,706. EMBALMING FLUID. H. F. REMMERS, doing business as Remmer Chemical Company, Chicago, Ill.
Filed Nov. 28, 1947, Serial No. 542,655. Published Sept. 28, 1948. Class 6.

506,707. ADJUSTABLE CURVED RULER. COOK SPECIALTY COMPANY, Green Lane, Pa.
Filed Dec. 3, 1947, Serial No. 543,098. Published Oct. 26, 1948. Class 26.

506,708. FABRICS IN THE PIECE COMPOSED OF COTTON, WOOL, SILK, AND SYNTHETIC FIBERS. CROMPTON COMPANY, Crompton, R. I.
Filed Dec. 3, 1947, Serial No. 543,110. Published Oct. 19, 1948. Class 42.

506,709. FABRICS IN THE PIECE COMPOSED OF COTTON, WOOL, SILK, AND SYNTHETIC FIBERS. CROMPTON COMPANY, Crompton, R. I.
Filed Dec. 3, 1947, Serial No. 543,125. Published Oct. 19, 1948. Class 42.

506,710. FABRICS IN THE PIECE COMPOSED OF COTTON, WOOL, SILK, AND SYNTHETIC FIBERS. CROMPTON COMPANY, Crompton, R. I.
Filed Dec. 3, 1947, Serial No. 543,131. Published Oct. 19, 1948. Class 42.

506,711. FABRICS IN THE PIECE COMPOSED OF COTTON, WOOL, SILK, AND SYNTHETIC FIBERS. CROMPTON COMPANY, Crompton, R. I.
Filed Dec. 3, 1947, Serial No. 543,135. Published Oct. 19, 1948. Class 42.

506,712. FABRICS IN THE PIECE COMPOSED OF COTTON, WOOL, SILK, AND SYNTHETIC FIBERS. CROMPTON COMPANY, Crompton, R. I.
Filed Dec. 3, 1947, Serial No. 543,138. Published Oct. 19, 1948. Class 42.

506,713. FABRICS IN THE PIECE COMPOSED OF COTTON, WOOL, SILK, AND SYNTHETIC FIBERS. CROMPTON COMPANY, Crompton, R. I.
Filed Dec. 3, 1947, Serial No. 543,140. Published Oct. 19, 1948. Class 42.

506,714. PICTURE PROJECTORS AND COMBINED PHONOGRAPHS AND PROJECTORS. OPERADIO MANUFACTURING CO., St. Charles, Ill.
Filed Dec. 3, 1947, Serial No. 543,212. Published Oct. 26, 1948. Class 26.

506,715. A PREPARATION FOR THE TREATMENT AND RELIEF OF FROZEN OR FROST-BITTEN PARTS OF THE HUMAN BODY. MABLE EVELYN ECK, Montoursville, Pa.
Filed Dec. 6, 1947, Serial No. 543,579. Published Oct. 5, 1948. Class 6.

506,716. FOLIC ACID. RALPH I. GUY, doing business as THE RIG COMPANY, Glendale, Calif.
Filed Dec. 8, 1947, Serial No. 543,708. Published Nov. 9, 1948. Class 6.

506,717. VITAMIN AND MINERAL COMPOUND FOOD SUPPLEMENT FOR HUMAN CONSUMPTION, TO ASSIST IN WEIGHT REDUCING. B. H. STAUFFER, doing business as B. H. Stauffer Laboratories, Los Angeles, Calif.
Filed Dec. 10, 1947, Serial No. 544,001. Published Aug. 17, 1948. Class 6.

506,718. EYEGLASS AND SPECTACLE FRAMES. THE KONO MANUFACTURING CO., Woodside, N. Y.
Filed Dec. 12, 1947, Serial No. 544,169. Published Oct. 26, 1948. Class 26.

506,719. PIECE GOODS OF COTTON, WOOL, SILK, SYNTHETIC FIBERS, AND MIXTURES THEREOF. WELLINGTON SEARS COMPANY, New York, N. Y.
Filed Dec. 12, 1947, Serial No. 544,234. Published Oct. 19, 1948. Class 42.

506,720. RAYON FABRICS IN THE PIECE. OTTO WISE, Los Angeles, Calif.
Filed Dec. 12, 1947, Serial No. 544,238. Published Oct. 19, 1948. Class 42.

506,721. RAYON FABRICS IN THE PIECE. OTTO WISE, Los Angeles, Calif.
Filed Dec. 12, 1947, Serial No. 544,240. Published Oct. 19, 1948. Class 42.

506,767. LINIMENT. THE GREAT AMERICAN TEA COM-

506,722. PROTRACTORS. ERLING P. BUGGE, doing business as Machine-Research, Santa Monica, Calif.
Filed Dec. 15, 1947, Serial No. 544,321. Published Oct. 26, 1948. Class 26.

506,723. OBJECTIVE LENSES. BAUSCH & LOMB OPTICAL COMPANY, Rochester, N. Y.
Filed Dec. 17, 1947, Serial No. 544,531. Published Oct. 26, 1948. Class 26.

506,724. ELECTRIC CONDENSERS. AEROVOX CORPORATION, New Bedford, Mass.
Filed Oct. 11, 1947, Serial No. 544,645. Published Nov. 2, 1948. Class 21.

506,725. MEASURING SCOOPS. THE ROBSON CORPORATION, New York, N. Y.
Filed Dec. 16, 1947, Serial No. 544,676. Published Oct. 26, 1948. Class 26.

506,726. MERCURIAL DIURETIC, CONTAINING THE SODIUM SALT OF METHOXYOXIMERCURIPROPYLSUCCINYLUREA WITH THEOPHYLLINE, INDICATED AS A DIURETIC IN THE EDEMA OF CARDIORENAL DISEASE AND OF NEPHROSIS, ASCITES OF LIVER DISEASE, AND OTHER CONDITIONS. LAKESIDE LABORATORIES, INC., Milwaukee, Wis.
Filed Dec. 18, 1947, Serial No. 544,742. Published Oct. 26, 1948. Class 6.

506,727. MECHANO-ELECTRIC ENERGY TRANSDUCERS—NAMELY, PHONOGRAPH PICK-UPS AND PARTS AND ACCESSORIES THEREOF. SONOTONE CORPORATION, Elmsford, N. Y.
Filed Dec. 19, 1947, Serial No. 544,921. Published Nov. 2, 1948. Class 21.

506,728. HAIR AND SCALP PREPARATION. THERESA V. RIVERS, New York, N. Y.
Filed Dec. 20, 1947, Serial No. 545,038. Published Oct. 26, 1948. Class 6.

506,729. COUGH SYRUP. SEARS, ROEBUCK AND CO., Chicago, Ill.
Filed Dec. 22, 1947, Serial No. 545,173. Published Oct. 26, 1948. Class 6.

TRENTWELD

FOR METAL TUBING.
Claims use since June 12, 1945.

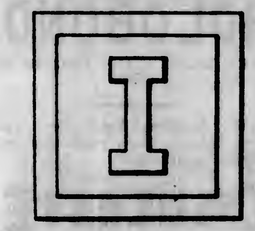
CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 120,320. Registered Feb. 5, 1918. THE AJAX METAL COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR INGOTS AND BABBITT METAL.
Claims use since about July 1, 1881.

Reg. No. 156,690. Registered July 11, 1922. IOWA MALLEABLE IRON COMPANY, Fairfield, Iowa, a corporation of Iowa. Republished by registrant.



FOR MALLEABLE-IRON CASTINGS.
Claims use since Oct. 1, 1918.

Reg. No. 371,713. Registered Oct. 3, 1939. GENERAL STEEL WAREHOUSE CO., INC., New York, N. Y., a corporation of Illinois. Republished by registrant, present address Chicago, Ill.

GENSCO

FOR HIGH CARBON SPRING METAL, METAL STRIP, AND WIRE.
Claims use since Jan. 2, 1938.

Reg. No. 415,104. Registered July 10, 1945. THE AJAX METAL COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

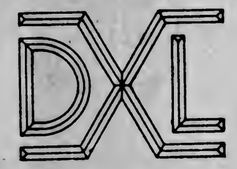
TOMBASIL

FOR COPPER BASE ALLOYS CONTAINING SILICON.
Claims use since about April 1930.

Reg. No. 435,552. Registered Dec. 30, 1947. MID-WESTERN DIE CASTING CO., Chicago, Ill., a partnership. Republished by registrant.

FOR DIE CAST PARTS.
Claims use since Mar. 1, 1947.

Reg. No. 436,224. Registered Jan. 27, 1948. ATLANTIC STEEL COMPANY, Atlanta, Ga., a corporation of Delaware. Republished by registrant.



FOR FORGINGS.
Claims use since Oct. 15, 1945.

CLASS 15

OILS AND GREASES

Reg. No. 306,377. Registered Sept. 19, 1933. SUNRAY OIL CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant, present address Tulsa, Okla.

The words "Natural Power Oils" are disclaimed apart from the mark as shown.
FOR LUBRICATING OILS AND GREASES.
Claims use since Nov. 1, 1930.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 233,524. Registered Oct. 4, 1927. VARNISH PRODUCTS CO., Brooklyn, N. Y. Republished by Dutch Masters Paint & Varnish Company, Brooklyn, N. Y.

DUTCH MASTERS

FOR READY-MIXED PAINTS AND VARNISHES.
Claims use since Nov. 11, 1926.

Reg. No. 329,821. Registered Nov. 12, 1935. GRAND RAPIDS VARNISH CORPORATION, Grand Rapids, Mich., a corporation of Michigan. Republished by registrant.

Permatone

FOR WOOD STAINS.
Claims use since July 1, 1930.

Reg. No. 371,714. Registered Oct. 3, 1939. GENERAL STEEL WAREHOUSE CO., INC., New York, N. Y., a corporation of Illinois. Republished by registrant, present address Chicago, Ill.

GENSCO

FOR HIGH CARBON SPRING METAL, METAL STRIP, AND WIRE.
Claims use since Jan. 2, 1938.

Reg. No. 415,105. Registered July 10, 1945. THE AJAX METAL COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

TOMBARIUM

FOR COPPER BASE ALLOYS CONTAINING SILICON.
Claims use since about April 1930.

Reg. No. 435,553. Registered Dec. 30, 1947. MID-WESTERN DIE CASTING CO., Chicago, Ill., a partnership. Republished by registrant.

FOR DIE CAST PARTS.
Claims use since Mar. 1, 1947.

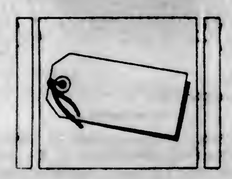
CLOVER FARM

FOR SALAD DRESSING, VINEGAR, CANNED FRUITS, CANNED VEGETABLES, SLICED BEEF IN TWO AND ONE-HALF OUNCE AND FIVE OUNCE GLASS, LAMB'S TONGUE, PINT GLASS LUNCHEON TONGUE, PINT AND QUART GLASS PIGS' FEET, TEAS, COFFEES, CONDIMENTS, SPICES, CONFECTIONERY CHOCOLATE DROPS, CHOCOLATE COVERED CHERRIES, CHOCOLATE BARS, ASSORTED CHOCOLATE CREAMS, COUGH DROPS AND GUMS, HARD CANDIES, MARSHMALLOWS, CHOCOLATE, COCOA, TABLE SIRUPS, AND MOLASSES; BLACK PEPPER, CANDY, FLAVORING EXTRACT FOR FOODS, PICKLES, CANNED FISH, OLIVES, CANNED, EVAPORATED AND POWDERED MILK, BREAKFAST CEREALS, SUGAR, CHEESE, FRUIT JELLY, FRUIT PRESERVES.
Claims use since 1882.

Reg. No. 426,710. Registered Jan. 7, 1947. CHARLES LEE DE BOAR, Johnson City, Tenn. Republished by registrant.

WHITE TAG



The representation of a white tag is disclaimed apart from the mark as shown.
FOR WHITE FLOUR MADE FROM SOFT RED WINTER WHEAT.
Claims use since July 15, 1946.

Reg. No. 431,262. Registered July 15, 1947. RICHGROVE-JASMINE CITRUS ASSOCIATION, Delano, Calif., a corporation of California. Republished by registrant.

RICHMINE

FOR FRESH CITRUS FRUITS.
Claims use since May 4, 1946.

Reg. No. 432,231. Registered Aug. 26, 1947. REDMURD CORPORATION, Terre Haute, Ind., a corporation of Delaware. Republished by registrant.

DUBLEGG

FOR PURE CONCENTRATED EGGS.
Claims use since Dec. 1, 1945.

Reg. No. 432,575. Registered Sept. 9, 1947. FISHER FLOURING MILLS COMPANY, Seattle, Wash., a corporation of Washington. Republished by registrant.

Fisher's
CORN MIX

The words "Corn Mix" are disclaimed apart from the mark as shown.
FOR PREPARED CORNMEAL FOR USE IN PREPARATION OF MUFFINS, CORNBREAD, PANCAKES, AND THE LIKE.
Claims use since June 7, 1944.

Reg. No. 434,696. Registered Dec. 2, 1947. PORTER & WENTZ, INC., Brownsville, Tex., a corporation of Texas. Republished by registrant.

FROMTEX

FOR FRESH VEGETABLES.
Claims use since Nov. 20, 1945.

Reg. No. 436,058. Registered Jan. 20, 1948. NASH-DE CAMP COMPANY, Berkeley, Calif., a corporation of California. Republished by registrant, present address Visalia, Calif.

TIPPY

FOR FRESH DECIDUOUS FRUITS AND FRESH CITRUS FRUITS.
Claims use since Aug. 5, 1938.

CLASS 47

WINES

Reg. No. 48,569. Registered Jan. 2, 1906. JOSEPH TRINER, Chicago, Ill. Republished by Joseph Triner Corporation, Chicago, Ill., a corporation of Illinois.

FOR BITTER WINE.
Claims use since Oct. 1, 1891.

Reg. No. 410,850. Registered Dec. 19, 1944. WINE GROWERS GUILD, Lodi, Calif., a corporation of California. Republished by registrant.

FOR WINE.
Claims use since Mar. 1, 1944.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 106,434. Registered Oct. 19, 1915. THE JAMES HANLEY BREWING COMPANY, Providence, R. I. Republished by The James Hanley Company, Providence, R. I., a corporation of Rhode Island.

HANLEY'S

FOR ALE, PORTER, AND LAGER-BEER.
Claims use since January 1894.

Reg. No. 316,493. Registered Aug. 28, 1934. GENERAL BREWING CORPORATION, San Francisco, Calif., a corporation of California. Republished by registrant.

FOR BEER.
Claims use since Apr. 27, 1934.

Reg. No. 317,659. Registered Oct. 2, 1934. GENERAL BREWING CORPORATION, San Francisco, Calif., a corporation of California. Republished by registrant.

The drawing is lined for red and gold. The word "Bonded" is disclaimed apart from the mark as shown.
FOR MALT BEVERAGES.
Claims use since Jan. 18, 1933.

Reg. No. 357,221. Registered May 24, 1938. GENERAL BREWING CORPORATION, San Francisco, Calif., a corporation of California. Republished by registrant.

Bankers Ale

FOR ALE.
Claims use since Jan. 20, 1938.

Reg. No. 368,318. Registered June 13, 1939. GENERAL BREWING CORPORATION, San Francisco, Calif., a corporation of California. Republished by registrant.

LUCKY

FOR BEER AND ALE.
Claims use since Jan. 18, 1933.

FOR FRESH CITRUS FRUITS.
Claims use since May 4, 1946.

FOR FRESH DECIDUOUS FRUITS AND FRESH CITRUS FRUITS.
Claims use since Aug. 5, 1938.

FOR ALE, PORTER, AND LAGER-BEER.
Claims use since January 1894.

FOR BEER AND ALE.
Claims use since Jan. 18, 1933.

Reg. No. 368,319. Registered June 13, 1939. GENERAL BREWING CORPORATION, San Francisco, Calif., a corporation of California. Republished by registrant.

LUCKY LAGER

The word "Lager" is disclaimed apart from the mark as shown.
FOR BEER.
Claims use since January 18, 1933.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 305,189. Registered Aug. 8, 1933. THOMAS C. DENNEHY, doing business as Clear Spring Distilling Co., Chicago, Ill. Republished by Pebbleford Distillery Company, Wilder, Newport, Ky., a corporation of Kentucky.

PEBBLE-FORD

FOR WHISKEY.
Claims use since Dec. 25, 1906.

Reg. No. 381,732. Registered Oct. 1, 1940. G. F. HEUBLEIN & BRO., Hartford, Conn., a corporation of Connecticut. Republished by registrant.

The representation of the label is disclaimed apart from the mark as shown.
FOR WHISKEY.
Claims use since Apr. 30, 1940.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 245,548. Registered Aug. 14, 1928. CORK MANUFACTURING COMPANY LTD., London, England, a company organized under the laws of Great Britain. Republished by registrant.

LANGITE.

FOR MATS FOR MOTOR VEHICLES.
Claims use since 1920.

Reg. No. 361,039. Registered Oct. 4, 1938. AKTIESELSKABET BING & GRONDAHLS PORCELLAENSFABRIK, Copenhagen, Denmark, a corporation of Denmark. Republished by registrant.

B&G KJØBENHAVN

B&G

The geographical word "Kjobenhavn" is disclaimed apart from the mark as shown.
FOR ART PORCELAIN AND STONEWARE FIGURES OF HUMANS AND ANIMALS.
Claims use since Dec. 12, 1907.

REISSUES

FEBRUARY 15, 1949

23,084
PURIFYING NITRILES
Andersen W. Ralston, Chicago, Lowell T. Crews, Homewood, and Edwin W. Colt, Evanston, Ill., assignors to Armour and Company, Chicago, Ill., a corporation of Illinois
No Drawing. Original No. 2,401,772, dated June 11, 1946, Serial No. 537,370, May 25, 1944. Application for reissue November 10, 1948, Serial No. 59,404
7 Claims. (Cl. 260—465.1)

1. The process of purifying an unconjugated fatty acid nitrile which comprises heating the nitrile with a small amount of maleic anhydride and washing the thus treated nitrile with water.

PLANT PATENTS

GRANTED FEBRUARY 15, 1949

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

823
ROSE PLANT
Eugene S. Boerner, Newark, N. Y., assignor to Jackson & Perkins Company, Newark, N. Y., a corporation of New York
Application May 14, 1947, Serial No. 748,086
1 Claim. (Cl. 47—61)

A new and distinct variety of rose plant characterized as to novelty by the color and high center form of the flowers; the reflex development and veining of the petals; vigorous, hardy and extremely free blooming habits of the plant and the red coloring of the under surface of the foliage, substantially as shown and described.

824
ROSE PLANT
Eugene S. Boerner, Newark, N. Y., assignor to Jackson & Perkins Company, Newark, N. Y., a corporation of New York
Application May 27, 1947, Serial No. 750,824
1 Claim. (Cl. 47—61)

A new and distinct variety of rose plant, characterized as to novelty by the sturdy and vigorous growing habit with upright branches and heavy foliage; by the distinctive coloring of its flowers resistant to sunburn, and their long lasting quality, and by the characteristic green veining of the petals both in bud and open flower, substantially as shown and described.

PATENTS

GRANTED FEBRUARY 15, 1949

2,461,505

REMOVAL OR REPLACEMENT OF ELECTROLYTES IN PHYSIOLOGICALLY ACTIVE MATERIALS

Frederick K. Daniel, Kew Gardens, N. Y., assignor, by mesne assignments, to Sun Chemical Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application December 2, 1944, Serial No. 566,403
4 Claims. (Cl. 167—78)

1. The method of refining acid sensitive biological fluid preparations of the character that have a deleterious electrolyte content, said electrolyte consisting of cation replaceable by sodium ion and anion replaceable by chloride ion, which consists in passing the preparation through a duplex ion exchanger comprising two sets of salt activated resin particles mixed together, one set serving as an anion and the other as a cation exchanger, and thereupon regenerating both sets of resin particles of the exchanger without separation of said mixed resin particles by flowing therethrough substantially dissociated sodium chloride solution preparatory to reuse of the exchanger.

2,461,506

PROCESS FOR REGENERATION OF ION EXCHANGE MATERIAL

Frederick K. Daniel, Kew Gardens, N. Y., assignor to Sun Chemical Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application October 18, 1946, Serial No. 704,269
4 Claims. (Cl. 252—182)

1. The process of regenerating a deactivated duplex ion exchanger comprising a mixture of cation resin exchange and anion resin exchange components, said cation exchange component having an apparent density different from said anion exchange component, which comprises the steps of flooding said duplex ion exchanger with a liquid material whose density is intermediate between the apparent densities of said cation exchange component and said anion exchange component in amount sufficient to effect stratification of said cation exchange component from said anion exchange component, effecting separation of said stratified ion exchange components, effecting regeneration of said separated ion exchange components, and thereafter admixing said regenerated ion exchange components.

2,461,507

ELECTRODEPOSITING COMPOSITION AND PROCESS

Allen G. Gray, Rocky River, Ohio, and William Franklin Gresham and Donald John Loder, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application July 7, 1943, Serial No. 493,756
13 Claims. (Cl. 204—54)

1. In a process for the electrodeposition of tin the step comprising effecting electrodeposition from an aqueous, tin-plating bath which contains a soluble tin compound, the process comprising effecting electrodeposition in the presence of 0.001 to 25 grams per liter of a bath-soluble compound containing at least two 1,3-dioxalane groups.

2,461,508

FRICTION ELEMENT COMPRISING DISCRETE PARTICLES OF INSOLUBLE FURFURALDEHYDE KETONE RESIN

Mortimer T. Harvey, South Orange, N. J., assignor to Harvel Research Corporation, a corporation of New Jersey

No Drawing. Application February 12, 1948, Serial No. 7,994
9 Claims. (Cl. 260—37)

1. A friction element comprising asbestos, a binder, a mass of discrete particles in said binder, said particles being in the size range that at least 90% by weight of said mass will pass a 20-mesh screen and at least 95% by weight of said mass passing said screen will be retained on a 200-mesh screen, said particles comprising a solid substantially infusible resin selected from the group consisting of a resin produced by polymerizing under acidic conditions such that the pH thereof is no greater than 3 an organic reaction product produced by reacting under alkaline conditions furfuraldehyde and a ketone having a hydrogen atom on an alpha carbon, and a resin produced by curing under alkaline conditions a potentially heat reactive thermosetting resin produced by polymerizing under acidic conditions such that the pH thereof is no greater than 3 an organic reaction product produced by reacting under alkaline conditions furfuraldehyde and a ketone having a hydrogen atom on an alpha carbon.

2,461,509

PROCESS FOR MAKING TERTIARY ALKYL AMIDES

Mortimer T. Harvey, South Orange, N. J., and Solomon Caplan, New York, N. Y., assignors to Harvel Research Corporation, a corporation of New Jersey

No Drawing. Application October 12, 1946, Serial No. 702,890
7 Claims. (Cl. 260—558)

1. The method of making a mono tertiary hydrocarbon amide of the general formula $R—R^1$ in which R represents a tertiary alkyl group of 4 to 6 carbon atoms and connected to and replacing a hydrogen atom of an amino group of R^1, in which R^1 represents an amide which comprises reacting in the presence of a mineral acid a tertiary alkyl alcohol with an amide selected from the group consisting of oxamide, acetamide and benzoic acid amide, the alkyl group of said alcohol having 4–6 carbon atoms.

2,461,510

COMPOSITIONS OF MATTER AND METHODS AND STEPS OF MAKING AND USING THE SAME

Mortimer T. Harvey, South Orange, N. J., assignor to Harvel Research Corporation, a corporation of New Jersey

No Drawing. Application October 30, 1947, Serial No. 783,230
9 Claims. (Cl. 260—64)

1. The method for producing a thermosetting resin comprising under pH conditions in the

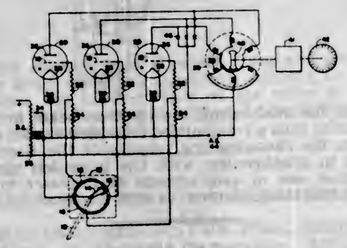
range of 0.5–1.5 homopolymerizing by externally heating at a temperature of 180° F.–260° F. until said resin is produced an organic condensation reaction mass produced by reacting under alkaline conditions furfuraldehyde and a ketone having at least two hydrogen atoms on an alpha carbon, said mass including a resin measuring about 5–50% by weight of said mass.

2,461,511

ELECTRONIC RELAY TRANSMITTER AND RECEIVER SELF-SYNCHRONOUS SYSTEM

Bernard J. Baecher, Brooklyn, N. Y.

Application December 26, 1945, Serial No. 637,294
1 Claim. (Cl. 318—27)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



In a system for actuating a device to a position determined by the setting of a remote object, a tap switch having a movable arm mechanically connected with said remote object and a plurality of spaced contacts, a like number of electronic tubes each having an anode, a cathode, and a control grid, a like number of pairs of electromagnetic devices each having thereon an energizing coil and the energizing coils of each of said pairs being serially connected, the electromagnetic devices in each of said pairs being diagonally and radially disposed about an axis, the said several pairs being in consecutive sequence and at equiangular positions relative to each other, with the inner ends of the said electromagnetic devices tangent to a circle enclosing a circular area about said axis, means connecting corresponding ends of said serially connected energizing coils to one terminal of a source of alternating current, means connecting the remaining ends of said serially connected energizing coils to the anodes of said electronic tubes, respectively, means connecting the cathodes of said electronic tubes to the other terminal of the source of alternating current, biasing means for rendering said electronic tubes normally non-conducting, a source of potential of sufficient magnitude to render said tubes conducting connected between the cathodes of said tubes and the movable arm of said switch, means connecting said spaced contacts of said switch to the control grids of the tubes respectively in consecutive order, a magnetic armature supported within the circular space between the inner ends of said electromagnetic devices and pivoted about the axis thereof, and means mechanically connecting said armature with the device to be positioned, whereby the magnetic armature is caused to assume a position determined by the tube rendered conducting by said switch.

2,461,512

FLOW BARREL

Evander B. Barnes, Cody, Wyo.

Application November 19, 1946, Serial No. 710,815
2 Claims. (Cl. 103—232)

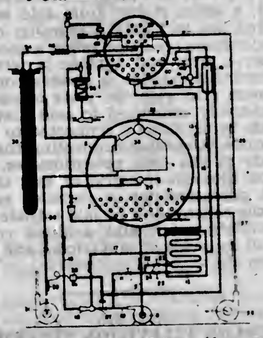
1. A flow barrel for wells comprising a tubular body threaded at its ends for interposition between sections of well tubing and provided with a pair of longitudinal hollow external perforated projections affording elongated fluid entrance pockets therein, an inverted Y-shaped element providing a pair of upwardly converging tubular members communicating at their lower ends through the body with the upper ends of said pockets, and a single tubular member spaced from and disposed axially of and within the body, said single tubular member projecting above the body and communicating at its lower end with the upper ends of said converging tubular members.

2,461,513

CONTROL ARRANGEMENT FOR ABSORPTION REFRIGERATION SYSTEMS

Alexis A. Berestneff, Syracuse, N. Y., assignor to Carrier Corporation, Syracuse, N. Y., a corporation of Delaware

Application July 13, 1946, Serial No. 683,388
6 Claims. (Cl. 62—119)



1. In an absorption refrigeration system including a generator and an absorber, a line connecting the absorber and the generator, a second line connecting the generator and the absorber, a heat exchanger disposed in said lines for placing solutions passing therethrough in heat ex-

692

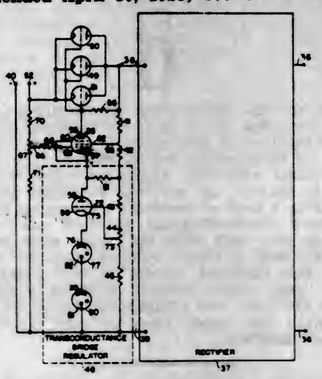
1. In a process for the electrodeposition of tin the step comprising effecting electrodeposition from an aqueous, tin-plating bath which contains a soluble tin compound, the process comprising effecting electrodeposition in the

No Drawing. Application October 30, 1947, Serial No. 783,230
9 Claims. (Cl. 260—64)

1. The method for producing a thermosetting resin comprising under pH conditions in the

change relation, said exchanger including a casing member and a coil member having the sections of the coil disposed in series extending through the casing, strong solution flowing through one of said members and weak solution flowing through the other of said members in an opposite direction, and means for operating the system at a concentration of solution leaving the generator greater than concentration of solution leaving the generator during normal operation of the system by rendering at least one of the coil sections ineffective for substantial heat transfer.

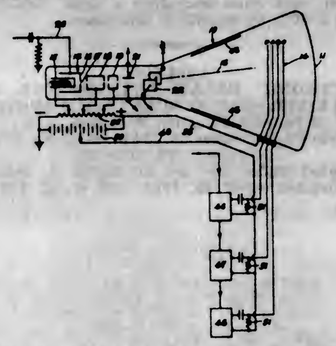
2,461,514
VOLTAGE REGULATOR
Jack L. Bowers, San Diego, Calif.
Application May 2, 1946, Serial No. 666,781
3 Claims. (Cl. 323—22)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A direct voltage regulator circuit connected between first and second direct voltage buses, said circuit including first and second potentiometers connected across said buses, a plurality of triodes having cathodes, grids, and plates, the cathode-anode circuits of said triodes being connected in parallel with respect to each other and in series with said first bus at a point between said potentiometers, a series circuit from said second bus to said first bus including a plurality of serially connected voltage regulator tubes, a triode having a cathode, a grid, and a plate, a tetrode, said tetrode having a cathode, a plate, a control grid, and a screen grid with the plate of said tetrode being resistively connected to said first bus and its cathode being directly connected to the plate of said triode, a resistor connecting the plate of said triode to the first potentiometer, a direct connection between the grid of said triode and said first potentiometer, a resistive connection between the control grid of said tetrode and said second potentiometer, and a direct connection between all the grids of said triodes and the plate of said tetrode.

2,461,515
COLOR TELEVISION SYSTEM
Arthur B. Bronwell, Evanston, Ill.
Application July 16, 1945, Serial No. 605,388
16 Claims. (Cl. 178—5.2)

1. In a multi-color television system, the combination of an electron gun for producing an electron beam, means for deflecting the beam both horizontally and vertically, image-creating means in the path of the beam including a plurality of closely associated parallel screens each being relatively transparent to light and electrons and coated with a fluorescent material which radiates a desired color under electron bombardment,



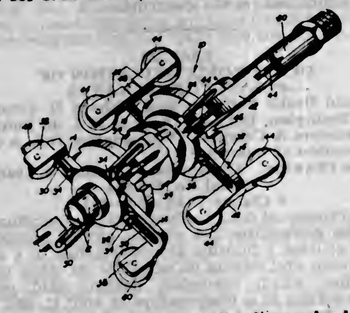
means for modulating the electron beam in accordance with a tranamitted television signal, and means for changing the velocity of the electron beam in synchronism with the television signal to cause one of said screens to fluoresce more brilliantly than another of said screens.

2,461,516
WATER METER REDUCING ADAPTER
Martin T. Bullock, Meridian, Miss.
Application April 11, 1945, Serial No. 587,733
1 Claim. (Cl. 285—160)

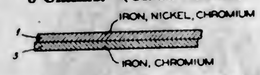
In a pipe fitting, a water meter reducing adapter comprising a sleeve of substantially uniform diameter throughout the greater portion of the length thereof and having a comparatively short unthreaded outer surface at one end with the remainder of the outer surface threaded from the unthreaded part to the opposite end of the fitting, said fitting having an internally threaded bore extending inwardly from the end thereof on which the said smooth surface is positioned, and a smooth bore of smaller diameter than that of the threaded bore forming an abutment to engage the end of a nipple extending from the meter providing uniform flow through the adapter, said smooth bore extending from the threaded bore to the opposite end of the fitting and aligned with the threaded bore.

2,461,517
SPRAY GUN FOR COATING THE INTERIOR OF CONDUITS
John C. Carnevale, Menlo Park, Calif.
Application January 5, 1945, Serial No. 571,487
4 Claims. (Cl. 91—44)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A device for coating the inside surface of an elongated hollow member, comprising means movable lengthwise of the hollow member adapted to emit a diffused spray of coating composition from a substantially point source, substantially at the longitudinal axis of said hollow member, radially outward, an articulated support for said means, each portion of said articulated support having radially disposed adjustable arms extending therefrom adapted to bear against the inner surface of the walls of said hollow member and to hold said means concentric with respect thereto.



2,461,518
CORROSION-RESISTING THERMOSTAT METAL
Paul G. Chace, Attleboro Falls, Mass., assignor to Metals & Controls Corporation, Attleboro, Mass., a corporation of Massachusetts
Application March 29, 1944, Serial No. 528,614
8 Claims. (Cl. 29—195.5)



1. A corrosion-resisting thermostat metal composed of an alloy having substantially the following composition:

	Per cent
Manganese	0.2–0.6
Carbon	0.01–0.2
Chromium	12–20
Silicon	0.2–1.5
Copper	0.5–1.5
Iron	Remainder

and an alloy having substantially the following composition:

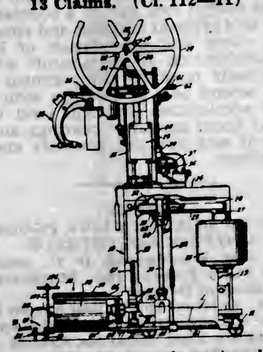
	Per cent
Nickel	16–20
Chromium	10–13
Silicon	0.2–1.0
Manganese	0.35–0.8
Carbon	0.05–0.2
Iron	Remainder

the surfaces of said alloys being fused together at the junction.

2,461,519
METHOD OF PRODUCING CARBOXYLIC SUBSTITUTED ALIPHATIC AMINES AND METALLIC SALTS THEREOF
Frederick C. Bersworth, Verona, N. J.
No Drawing. Application March 17, 1948, Serial No. 15,514
7 Claims. (Cl. 260—534)

1. The method of forming carboxylic substituted aliphatic amines which comprises forming an aqueous reaction solution containing a known weight of ethylene diamine, a smaller quantity of an alkali metal cyanide and an alkali metal hydroxide sufficient to produce a pH of at least 8 in the reaction solution, heating the solution to a determined and maintained reaction temperature within the range 60–100° C. under a refluxing condenser maintaining a low positive pressure of uncondensed gases over the solution sufficient to exclude atmospheric gases from contact with the solution, adding formaldehyde in aqueous solution to the reaction solution while vigorously agitating the same, the rate of addition of said formaldehyde being at a substantially constant rate providing at any one instant a relatively low concentration of formaldehyde in the solution as compared with the concentration of alkali metal cyanide therein, and adding separately to the solution during the formaldehyde addition a sufficient amount of hydrogen cyanide and alkali metal hydroxide in aqueous solution to maintain the alkali metal cyanide content and the pH of the reaction solution substantially constant therein, terminating the alkali metal hydroxide addition when the alkali metal ion content of the solution approximates that providing one alkali metal ion per amino hydrogen to be displaced in the diamine, terminating the hydrogen cyanide addition to the solution when the cyanide ion content of the solution approximates one cyanide ion per amino hydrogen to be displaced from the diamine, terminating the formaldehyde addition when the formaldehyde additions approximate one molar weight per amino hydrogen to be displaced, and heating the reaction solution to a temperature above the reaction temperature but not over about 120° C. for an extended time interval to complete the chemical reactions involved and to expel therefrom all residual gaseous ammonia.

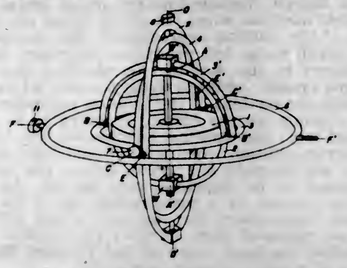
2,461,520
CONTROL MECHANISM FOR SEWING MACHINES AND THE LIKE
Philip B. Clark, Morton Grove, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application April 12, 1945, Serial No. 587,973
13 Claims. (Cl. 112—11)



1. In apparatus of the character described, a conveyor adapted to carry a bag having an open end, a mechanism for closing said open end of said bag, a first driving means for actuating said conveyor, a second driving means for actuating said mechanism, a member movable in opposite directions, means for imparting movement to said member in one direction, means for imparting movement to said member in a reverse di-

rection, means responsive to predetermined movement of said member in opposite directions for placing both of said driving means respectively into and out of service, and detent means normally permitting sufficient movement of said member in said reverse direction to place only one of said driving means out of service, said detent means being adapted to be released by said bag in the course of its travel on said conveyor to allow continued movement of said member in said reverse direction.

2,461,521
SENSITIVE ELEMENT FOR SPACE SPEED, TRACK AND ANGLE OF ATTACK INDICATORS
Mortimer L. Clopton, South Pasadena, Calif.
Application September 19, 1947, Serial No. 775,093
6 Claims. (Cl. 74—5.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An aircraft instrument comprising a constant-speed gyrostat mounted in a gimbal ring having a pair of bearings normal to the axis of said gyrostat, a weight on said gimbal ring for unbalancing said gyrostat and gimbal ring about said bearings, a second gimbal ring for supporting said bearings and having a second pair of bearings normal thereto, a third gimbal ring for supporting said second pair of bearings and mounted for universal rotation in said aircraft, said second gimbal ring having a counterbalance to balance said gyrostat and first and second gimbal rings, about said second pair of bearings, whereby acceleration of the aircraft will cause said universally mounted third gimbal ring to aline said second pair of bearings with the direction of acceleration and will tend to move said weight about said first bearings and cause precession of said balanced assembly about said second bearings.

2,461,522
PACKAGED MEAT AND LIKE PRODUCTS AND PROCESS THEREOF
Mayne R. Coe, Washington, D. C., assignor to Rile-Coe Filter Process, Inc., Pinehurst, N. C., a corporation of Delaware
No Drawing. Original application August 14, 1941, Serial No. 406,909. Divided and this application September 19, 1946, Serial No. 697,924
13 Claims. (Cl. 99—174)

2. An article of commerce comprising a meat product which normally would be deleteriously affected by the photo-chemical action resulting from the absorption thereby of wave lengths of light lying below 4900 Angstrom units as well as lying in the region of 6300–6700 Angstrom units, said meat product having an applied color screen having a spectral transmission of substantially all light in the region delimited by 4900–6300 Angstrom units as well as above 6700 Angstrom units, but excluding an appreciable portion of substantially all other light and particularly such other light having wave lengths from 6300–6700 Angstrom units of the spectrum.

2,461,523
DEHYDROFLUORINATION OF POLYFLUOROALKANES
Donald Drake Coffman and Richard D. Cramer, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 4, 1946, Serial No. 713,924
5 Claims. (Cl. 260—653)

1. Process of dehydrofluorinating a polyfluoroalkane containing 2–4 carbon atoms, inclusive, with at least 2 fluorine atoms attached to 1 carbon atom and having no substituents other than fluorine, which comprises heating said polyfluoroalkane at a temperature of 400° C.–850° C. in the presence of chromium trifluoride.

2,461,524
NUT PEELER
Harold J. Cook, United States Army, New Orleans, La.
Application July 25, 1945, Serial No. 607,077
5 Claims. (Cl. 146—13)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

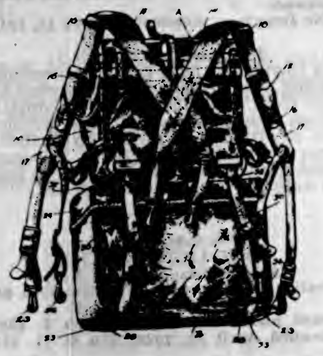
1. An implement for removing the shells from nuts, comprising a handle and a pair of opposed arcuate jaws mounted thereon in fixed spaced-apart relationship, one of said jaws having a sharpened elongated shell-prying edge provided with a shell-penetrating point, the other of said jaws being curved on an arc of a longer radius than the first-mentioned jaw and having an elongated blunt bearing edge adapted to bear on the shell of the nut and projecting beyond the sharpened shell-prying edge of the first-mentioned jaw.

2,461,525
POULTRY FEEDER
Andrew W. Corrigan, Rockford, Ill.
Application March 29, 1945, Serial No. 585,443
2 Claims. (Cl. 119—52)

1. A poultry feeder comprising a housing having a bottom, side walls, end walls, and a top, said side walls converging downwardly and having their lower edges spaced upwardly from the bottom, the end walls having lower portions projecting beyond the side walls and together with portions of the bottom forming troughs communicating with the housing through the space between the side walls and the bottom, covers for said troughs hinged to the side walls in upwardly spaced relation to lower edges of the side walls and extending at a downward incline toward their lower side edges when closed, partitions dividing the troughs into inner main feeding troughs communicating with the housing through space between the side walls and the bottom and

outer auxiliary troughs along outer sides of the main troughs, bars carried by the end walls above the troughs and projecting outwardly from the side walls, in upwardly spaced relation to the troughs, and wires carried by said bars in outwardly spaced relation to the side walls, the said wires constituting beak cleaners disposed over said troughs.

2,461,526
CARGO AND COMBAT PACK
John W. Cull, Normandy, Mo., and Einar Nilsson, Berkeley, Calif.
Application August 26, 1946, Serial No. 692,943
5 Claims. (Cl. 224—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. In a two-bag pack of the type adapted to be suspended on pack-carrying suspenders, means for suspending the bags on said suspenders comprising suspension straps secured to the cover of the first bag, said straps each having an end adapted to be engaged with said suspenders for supporting the first bag thereon and an end adapted to be secured in position for closing the cover of said first bag, strap-engaging means secured on the front and back panels of said first bag, straps on the second bag securable in said second bag, said straps also being adapted to be secured in encircling position with the ends thereof extending freely beyond the sides of said second bag in position for engaging in the strap-engaging means on said first bag for supporting said second bag from said first bag, and means on said second bag engageable with said suspenders to form a pair of shoulder loops engageable over the shoulders of a carrier.

2,461,527
PERCUSSIVE TOOL
John C. Curtis and Elmer G. Gartin, Claremont, N. H., assignors to Joy Manufacturing Company, a corporation of Pennsylvania
Application February 13, 1943, Serial No. 475,782
9 Claims. (Cl. 121—7)

7. In a percussive tool, a member providing a longitudinal bore and a communicating reduced front bore, the latter having concentric inner and outer walls and closed at its forward end, a hammer piston reciprocable in said longitudinal bore and having an impact surface adapted to strike against an element to be percussively actuated, fluid distribution means for distributing pressure fluid with respect to said bores to effect movement of said piston, said piston also having a reduced front end portion of annular cross section receivable in said reduced front bore in fluid tight engagement with the concentric walls thereof, but only after the piston assumes its position wherein it normally delivers a blow to the percussively actuated element, thereby to trap fluid in said reduced bore in advance of said piston to cushion the forward piston movement after the blow is struck.

2,461,528
ROCK DRILL
John C. Curtis and Elmer G. Gartin, Claremont, N. H., assignors to Joy Manufacturing Company, a corporation of Pennsylvania
Application July 1, 1943, Serial No. 493,086
13 Claims. (Cl. 121—9)

7. In a stoper rock drill, the combination comprising a fluid actuated steel actuating motor, fluid actuated feeding means for said motor arranged in axial alinement therewith, a drill supporting handle secured to and disposed laterally of the drill, and control valve means including a control valve having an operating handle disposed laterally of the drill, said handles arranged in fixed relation, and the axes of said handles respectively lying in planes extending longitudinally of the drill and disposed at a

circling the elongated electrode, a contact plate

substantial angle with respect to each other and with said handle axes both wholly at one side of a longitudinal plane including the longitudinal axis of the drill.

2,461,529
VALVE MECHANISM
John C. Curtis and Elmer G. Gartin, Claremont, N. H., assignors to Joy Manufacturing Company, a corporation of Pennsylvania
Original application July 1, 1943, Serial No. 493,086. Divided and this application June 22, 1944, Serial No. 541,568
9 Claims. (Cl. 251—91)

2. In a valve mechanism, the combination comprising means providing spaced bearing portions, a rotary handle extending between said portions and journaled by means of the bearings thereof, said handle being mounted for limited axial movement and one of said bearings being a thrust bearing and receiving the axial thrust of said handle, a control valve arranged in alinement with said handle and operatively connected thereto, said valve having a pressure area, means for supplying pressure fluid to said valve, the fluid acting on said pressure area of said valve to exert an endwise thrust thereon in one direction, pressure fluid operated means effective upon fluid supply to said valve and associated with said handle for exerting in all positions of the valve an axial thrust on said valve in the opposite direction to reduce the net end-wise thrust on the valve in said one direction, and operative connections between said handle and said valve permitting limited relative axial movement therebetween while preventing relative rotative movement.

2,461,530
ROCK DRILL
John C. Curtis and Elmer G. Gartin, Claremont, N. H., assignors to Joy Manufacturing Company, a corporation of Pennsylvania
Application July 2, 1943, Serial No. 493,240
10 Claims. (Cl. 121—32)

2. In a rock drill, a chuck mechanism for a drill steel comprising a chuck housing, a chuck sleeve rotatable in said housing, a chuck member detachably secured to said sleeve for rotation therewith and adapted to receive the shank of a drill steel, and a dirt and water guard rigidly clamped between said sleeve and chuck member and enclosing the forward portion of said housing.

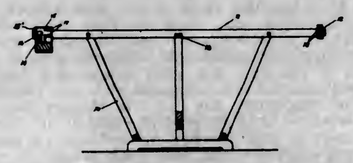
10. A water and dirt guard for rock drills, comprising a circular guard body having alined stepped bores adapted to surround with a close running fit relatively rotatable parts of a rock drill chuck to provide a dirt seal, and having at one end an inwardly directed annular flange adapted to be clamped firmly between relatively

adjustable rotatable parts of a drill chuck for rotation therewith.

2,461,531
COLOR STABILIZATION OF VINYL HALIDE RESINS
Fred W. Cox, Cuyahoga Falls, and James M. Wallace, Jr., Akron, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application June 15, 1945, Serial No. 599,770
9 Claims. (Cl. 260—78.5)

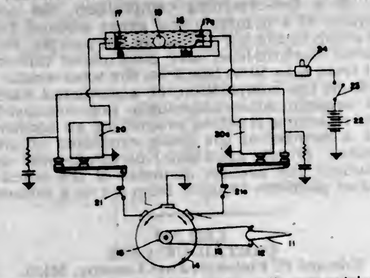
1. A vinyl halide resin capable of resisting discoloration upon heating which comprises a polymer of from 70 to 100 percent of vinyl halide and from up to 30 percent of mono-olefinic compound copolymerizable with vinyl halide, said polymer containing from 0.05 to 10 percent by weight based on the polymer content of the resin of an antimony alkali metal tartrate.

2,461,532
EDGE LIGHTING UNIT
John C. Dixon, Sewell, N. J.
Application September 25, 1945, Serial No. 618,600
2 Claims. (Cl. 240—2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



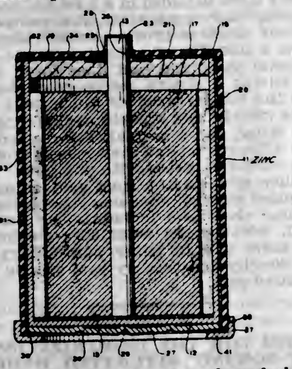
1. Testing equipment for transparent sheeting comprising a rectangular frame and support, a padded groove on one end of said frame to receive and support one end of a transparent sheet, a box and a hinged lid to receive and support the other end of said transparent sheet, padding in said box and on said lid to give a tight fit around said sheet, and lights in said box arranged to shine into the edge of said sheet.

2,461,533
AUTOMATIC SKID CORRECTOR
Robert G. Dosé, United States Navy, Chevy Chase, Md.
Application February 4, 1946, Serial No. 645,429
2 Claims. (Cl. 318—489)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



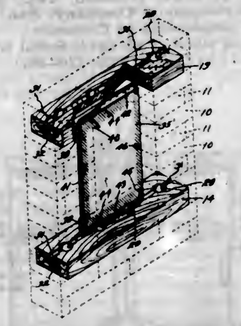
1. A skid corrector for aircraft comprising a source of electric current, a rotatable reversible electric motor, adapted to selectively shift a flight control surface in either direction, circuit means connecting the motor and source, and a switch mechanism in the circuit means and including a mercury globule movable in opposite directions to selected circuit closing positions in response to skidding of the aircraft for starting the motor in one direction or the other whereby to cause selective movement of the control surface in a direction to correct the skidding condition of the aircraft.

2,461,534
LEAK RESISTANT ELECTRICAL CELL
Grenville B. Ellis, Little Silver, N. J., assignor to the United States of America as represented by the Secretary of War
Application May 16, 1945, Serial No. 594,146
4 Claims. (Cl. 136—133)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



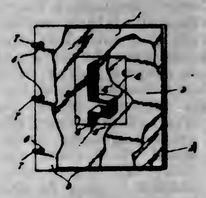
1. In an electrical cell, a can shaped electrode closed at one end and open at the other, an elongated electrode of opposite polarity disposed within said can shaped electrode and having one end extending beyond the rim of the open end of said can shaped electrode, a closure of sealing material across the open end of said can shaped electrode and level with the rim thereof and encircling the elongated electrode, a contact plate of electrically conducting springy material of substantially the same size and shape as the bottom of the can shaped electrode and provided with at least one upwardly extending contact bulge in electrical contact with the closed bottom of said can shaped electrode, a liner of absorbent material covering the lateral surface of the can shaped electrode and extending over the rim of said electrode and over the closure aforesaid and forming a neck about a portion of the elongated electrode which extends beyond the closure and also extending inwardly below the peripheral edge of the contact plate, a cover of nonconducting material extending about those portions of the liner aforesaid which cover the lateral surface and rim of the can shaped electrode and the closure and making a snug fit about the neck aforesaid, and a gripping ferrule secured to the lower end of the cover and extending below that portion of the liner which extends below the peripheral portion of the contact plate and springing the said peripheral portion of the contact plate upwardly so as to cause the cover and ferrule and liner to form a leak resistant container about the electrodes aforesaid and the closure.

2,461,535
TOY BUILDING BLOCKS WITH CLOSURE PANES
Oscar P. Erhardt, West Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application January 24, 1944, Serial No. 519,433
7 Claims. (Cl. 46—25)



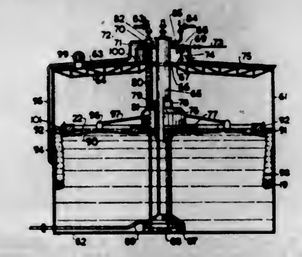
1. In a toy constructional set, a plurality of rigid toy building blocks adapted to be piled one upon the other in horizontally oriented relation, each of said blocks comprising a rigid solid body having miniature brick-like shape and proportions and each of whose broadside faces consists in major part of a relatively depressed hard panel surface, straight marginal ridges standing in relief with respect to and bordering each of said panel surfaces along the edges of each of said blocks, at least two spaced apart block orienting dowel sockets sunk in one of said panel surface of each of said blocks, and a plurality of block orienting dowel projections outstanding from the other panel surface of each of said blocks receivable in and sufficiently fitting said dowel sockets respectively when said blocks are laterally aligned to maintain said straight marginal ridges of different blocks in abutting register with one another whereby said panel surfaces are kept separated and spaced apart when one block is piled upon another block.

2,461,536
DISPLAY DEVICE
Emil N. Farkas, Chicago, Ill.
Application November 23, 1944, Serial No. 564,876
4 Claims. (Cl. 283—63)



4. A display book comprising a sheet of transparent and relatively flexible material, a sheet of relatively rigid material contacting on both of its surfaces with the first sheet, the two sheets being formed into triple-layer folds forming the leaves of the book, the outside ones of the triple-layer folds being the transparent layers of each leaf, said outside layers bearing cooperating indicia and the intervening rigid layer having a window in aligment with the indicia, the triple-layer folds forming each leaf being perforated along one edge to accommodate mechanical binding means.

2,461,537
FLOATING ROOF STORAGE TANK
Alexander S. Feild, Houston, Tex., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application October 10, 1944, Serial No. 558,099
15 Claims. (Cl. 220—85)



1. In a storage device of the class described, the combination comprising a container, a guide column extending upwardly in said container, gas accumulator means slidably mounted on said guide column, a floating diaphragm attached to said gas accumulator means, a non-metallic, flexible sealing element attached to said floating diaphragm and to the side wall of said container, said floating diaphragm and said sealing element forming at least a portion of the top and side walls of a liquid storage chamber, an annular float mounted on said floating diaphragm adjacent the periphery thereof and a plurality of conduits extending through said floating diaphragm between said gas accumulator means and said annular float in flow communication with said storage chamber and leading to said gas accumulator means in flow communication therewith.

2,461,538
FIRE-RETARDING COMPOSITIONS
Earl K. Fischer, Long Island City, N. Y., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application May 25, 1944, Serial No. 537,256
3 Claims. (Cl. 260—28)

1. In a fire-retarding composition, the combination of a flameproofing agent selected from the group consisting of chlorinated paraffin, chlorinated naphthalene, and chlorinated diphenyl and from 5 to 50%, based on the total weight of solids in the composition, of a powdered water- and organic solvent-insoluble non-combustible glow-retarding reaction product of an aldehyde with a member of the group consisting of urea, thiourea, biuret, guanidine, dicyandiamide and melamine, the average diameter of the reaction product particles ranging from 0.2 to 5 microns.

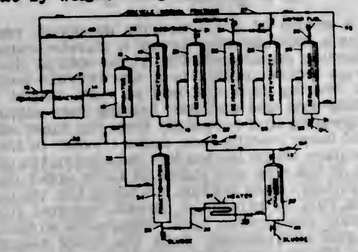
2,461,539
CARTRIDGE CASE
Edward C. Fletcher, East Lansing, Mich.
Application March 16, 1945, Serial No. 583,139
5 Claims. (Cl. 102—43)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An inclosure comprising a body sheet including a base fiber sheet wound upon itself in a plurality of convolutions to form a tubular laminated member, a metal sheet forming part of the body sheet included in a terminal portion and extending over more than one convolution of said body sheet to provide an overlapping edge portion, a thin film of adhesive material between said metal sheet and said fiber sheet, said fiber sheet having a slotted region extending axially across the tubular member in the part underlying the metal sheet at said overlapping portion of the latter, and a normally solid elastic plastic highly adhesive to said metal sheet and of high tensile strength united with the metal sheet on the other side thereof from said adhesive film and united with at least one convolution of the base fiber sheet and including the slotted part thereof, whereby the outer edge portion of the metal sheet and its inner lapped part are secured directly together by said plastic through said slotted part.

2,461,540
PROCESS FOR THE ISOMERIZATION OF A LOW-BOILING SATURATED HYDROCARBON
Frederick E. Frey, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application October 5, 1942, Serial No. 460,867
15 Claims. (Cl. 260—666)

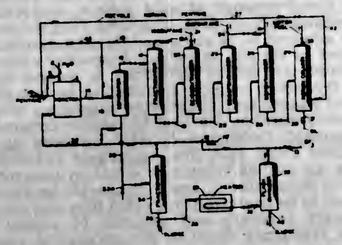
13. A process for the isomerization of a low-boiling saturated hydrocarbon having from four

to six carbon atoms per molecule to produce an isomeric saturated hydrocarbon having the same number of carbon atoms per molecule while contained in a saturated hydrocarbon fraction, which comprises subjecting said saturated hydrocarbon fraction with intimate admixing to the action of a liquid conversion catalyst consisting essentially of concentrated liquid hydrofluoric acid and boron trifluoride in an amount between about 1 and 5 per cent by weight of said hydrofluoric acid, the hydrocarbon to catalyst ratio by weight being in the range of about 0.1



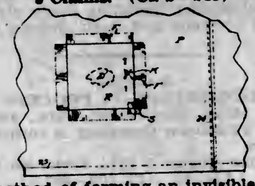
to about 3, at a conversion temperature between about 0 and about 400° F. under a pressure sufficient to maintain said catalyst and said hydrocarbon as liquids and for a time between about 1 minute and about 2 hours and sufficient to effect a substantial amount of hydrocarbon conversion as evidenced by a substantial extent of change in the carbon skeleton of said saturated hydrocarbon having from four to six carbon atoms per molecule, and subsequently recovering from effluents of said isomerization a hydrocarbon fraction comprising an isomer of said saturated hydrocarbon so produced.

2,461,541
PROCESS FOR ISOMERIZING A LOW-BOILING ISOMERIZABLE SATURATED HYDROCARBON
Frederick E. Frey, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application November 23, 1943, Serial No. 511,444
12 Claims. (Cl. 260—666)



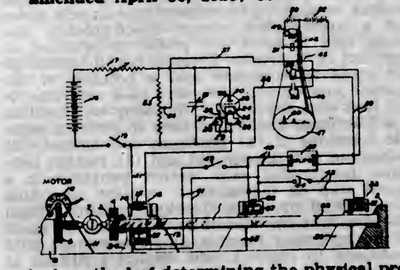
1. A process for isomerizing a low-boiling paraffin hydrocarbon having at least four carbon atoms per molecule, which comprises continuously subjecting in a reaction zone a stream of a saturated hydrocarbon material comprising such a low-boiling paraffin hydrocarbon to the catalytic action of concentrated liquid hydrofluoric acid as the effective catalyst together with boron fluoride in an amount between about 1 and about 10 per cent by weight of said hydrofluoric acid, said liquid hydrofluoric acid containing water in an amount between about 0.05 and about 1.0 per cent by weight thereof and less than that molecularly equivalent to the boron trifluoride present, under isomerization conditions of temperature, pressure and time to produce a paraffin hydrocarbon isomeric with the first said paraffin hydrocarbon, continuously withdrawing a hydrocarbon stream from said reaction zone and recovering therefrom a fraction containing a paraffin hydrocarbon so produced, and continuously adding to said reaction zone water in an amount sufficient to maintain the concentration thereof in said catalyst within the aforesaid range.

2,461,542
INVISIBLE SEAM
Bertha Gottlieb, Cleveland, Ohio
Application October 22, 1946, Serial No. 704,811
3 Claims. (Cl. 2—243)



1. A method of forming an invisible seam in a fabric body, consisting in fraying a first piece of fabric at an edge thereof to present a fringe of projecting warp or woof ends, placing the frayed piece of fabric over a second piece of fabric in position to match the pattern and without any initial alteration of said second piece of fabric, drawing the frayed fringe edge of said first piece of fabric through said second piece of fabric, and securing the frayed fringe edge of said first piece of fabric to said second piece of fabric while preserving the original condition of the warp and woof of said second piece of fabric.

2,461,543
APPARATUS AND METHOD FOR STUDYING WAVE PROPAGATION
Ross Gunn, Washington, D. C.
Application February 1, 1941, Serial No. 377,067
11 Claims. (Cl. 73—67)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A method of determining the physical properties of an elastic body which includes the steps of supporting an elastic body to substantially prevent the reflection at its ends of an elastic wave set up therein, subjecting the body to a series of intermittent substantially equal impulses to set up in the body a succession of similar elastic waves, the periodicity of the impulses being such that the energy of one elastic wave is substantially dissipated before the succeeding

wave is initiated, substantially simultaneously

2,461,546

around its sight opening and a flange protruding

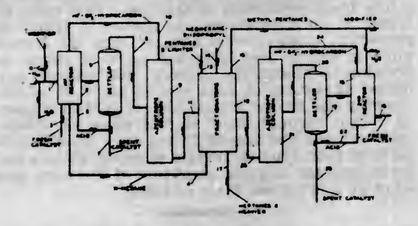
spaced stationary elements, a sinker bar carrying a series of filler sinkers, and a sinker bar drive

wave is initiated, substantially simultaneously with the initiation of each wave initiating relative movement between an electron beam and a surface to establish a time axis, thereafter deflecting the beam transversely of its time axis an amount proportional to the amplitude of the elastic wave at a plurality of points in the said body, and noting the wave pattern formed by the beam on the surface.

2,461,544
FUSE POWDER COMPOSITION
George C. Hale and David Hart, Dover, N. J.
No Drawing. Application June 9, 1944, Serial No. 539,504
6 Claims. (Cl. 52—2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A fuze powder including finely divided zirconium 75 per cent and finely divided sulfur 25 per cent.

2,461,545
ISOMERIZATION PROCESS
Harold J. Hepp, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application August 7, 1944, Serial No. 548,379
7 Claims. (Cl. 260—683.5)

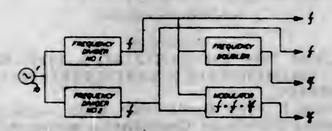


1. A process for isomerizing normal hexane to diisopropyl and neohexane which comprises isomerizing normal hexane in a first step by means of a catalyst consisting essentially of hydrogen fluoride containing from 1 to 10 weight per cent of boron trifluoride based on the hydrogen fluoride under relatively severe conditions to produce methyl pentanes as the principal product, separating the effluent into an acid phase and a hydrocarbon phase, azeotropically distilling said hydrocarbon phase to produce an overhead of hydrogen fluoride, boron trifluoride and some hydrocarbon and a bottoms of the heavier components, recycling said overhead to said first step, fractionally distilling said bottoms in a fractional distillation zone to produce separate fractions of (1) pentanes and lighter, (2) neohexane and diisopropyl and (3) methyl pentanes, isomerizing said methyl pentanes in a second step by means of a catalyst consisting essentially of hydrogen fluoride containing from 1 to 10 weight per cent of boron trifluoride based on the hydrogen fluoride under relatively mild conditions to convert said methyl pentanes to diisopropyl and neohexane, separating the effluent into an acid phase and a hydrocarbon phase, azeotropically distilling said hydrocarbon phase to produce an overhead of hydrogen fluoride, boron trifluoride and some hydrocarbon and a bottoms of the heavier components, recycling said last-named overhead to said second step, and passing said last-named bottoms to said fractional distillation zone and distilling it therein together with said first-named bottoms.

2,461,546
SPINNING RING AND TRAVELER
Harvey E. Herr, Buffalo, N. Y., assignor to Herr Manufacturing Company, Inc., Buffalo, N. Y., a corporation of New York
Application December 13, 1945, Serial No. 634,680
3 Claims. (Cl. 57—120)

1. A device of the character described, comprising a spinning ring having a traveler-engaging portion of substantially frusto-conical shape in cross section providing a downwardly-facing lower bearing face disposed at right angles to the ring-axis and an inner bearing face extending upwardly and outwardly from the inner edge of said lower bearing face, and a traveler of complementary shape having legs paralleling the side faces of the ring and joined at their upper ends in a curved vertex portion spanning the top side of the ring to provide a thread-engaging loop, the inner traveler leg being engageable straightwise and coextensively with the inner bearing face of the ring and both legs terminating at their lower ends in opposing feet, the foot of the inner traveler leg being horizontal and engageable with the lower bearing face of the ring.

2,461,547
TELEPHONE RINGING CURRENT GENERATOR
Henry M. Huge, Lorain, Ohio, assignor to Lorain Products Corporation, a corporation of Ohio
Application October 13, 1947, Serial No. 779,516
14 Claims. (Cl. 172—281)



1. A frequency converter adapted to be energized by a source of alternating current and to supply outputs at four frequencies different from the frequency of said source, comprising, in combination, a first magnetic frequency reducer adapted to be energized by said source and adapted to supply an output frequency equal to one-third the source frequency, a second magnetic frequency reducer adapted to be energized by said source and adapted to supply an output frequency equal to one-half the source frequency, a magnetic frequency doubler adapted to be energized from said first frequency reducer to supply an output frequency equal to two-thirds the source frequency, and a magnetic modulator adapted to be energized from said first and second frequency reducers and adapted to supply an output frequency equal to five-sixths the source frequency.

2,461,548
WINDOW STRUCTURE FOR PROTECTIVE DEVICES
Francis D. Huntsman, Salt Lake City, Utah
Application May 20, 1945, Serial No. 594,611
5 Claims. (Cl. 2—8)

1. In association with a shield wall of sheet material having a sight opening, a window structure comprising an outer frame including a marginal plate on the outside of the shield wall around its sight opening and a flange protruding over that opening and encompassing a sight opening, an inner frame including a marginal plate of dimensions and shape corresponding to those of said outer frame on the inside of the shield wall opposite to said outer plate and a marginal wall on said inner plate protruding inwardly therefrom and encompassing a sight opening aligned with that of said outer frame, fasteners holding

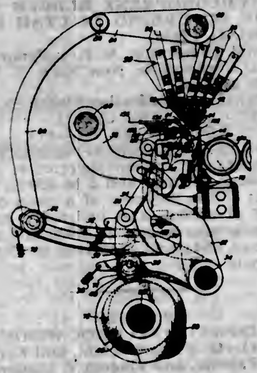
said plates against said shield wall, a lens in said outer frame closing the sight opening thereof, a spring urging said lens toward the flange of said outer frame, a removable cover frame comprising a wall fittable closely around the marginal wall of said inner frame, and a marginal flange encompassing a sight opening alignable with the sight openings of said inner and outer frames, and means to lock said cover frame on said inner frame.

2,461,549
SELF-LUMINOUS ASH TRAY
Helen Hull Jacobs, United States Navy
Application July 14, 1945, Serial No. 605,157
3 Claims. (Cl. 250—71)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An ash tray comprising a container and an overhanging ledge, a self-luminous material applied to the under surface of the ledge and positioned shielded thereby.

2,461,550
WARP KNITTING MACHINE
Fritz Lambach, Tenafly, N. J.
Application September 20, 1945, Serial No. 617,537
22 Claims. (Cl. 66—84)

9. A warp knitting machine comprising: a needle bar carrying a series of needles, a needle bar drive associated with said needle bar for imparting periodic reciprocating movements to same with its needles in a predetermined direction, at least one guide bar carrying a series of warp guides, a guide bar drive associated with said guide bar for periodic actuations thereof with its warp guides so as to feed warp yarns to said needles, at least one filler thread carrier, a carrier drive associated with said filler thread carrier for imparting periodic reciprocating movements to same so as to lay filler thread substantially parallel to said series of needles, a series of spaced stationary elements arranged in such a relationship to said reciprocable filler thread carrier that filler thread laid by the latter is placed onto said series of spaced stationary elements, a sinker bar carrying a series of filler sinkers, and a sinker bar drive associated with said sinker bar for imparting periodic movements toward and away from the direction of the strokes of said needles, said filler sinkers being arranged for placing, during their movement toward said needles, the filler thread laid onto said spaced stationary elements in position to be incorporated into fabric produced by the knitting implements of the machine, and said filler sinkers and said spaced stationary elements being arranged in such a relationship to each other that each of said filler sinkers extends into a space between adjacent elements and that in any position of the filler sinkers at least a portion of each filler sinker is embraced by such adjacent elements.



2,461,551
COMPOSITION COMPRISING A RUBBERY COPOLYMER OF BUTADIENE AND STYRENE AND A RESIN OCCURRING IN UTAH RESIN-BEARING COAL
Ernest D. Lee, Teaneck, and Loy S. Engle, Harrington Park, N. J., assignors to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application January 11, 1946, Serial No. 640,676
6 Claims. (Cl. 260—27)

1. A composition comprising a rubbery copolymer of butadiene and styrene and 5–25% on the weight of the copolymer of a resin consisting essentially of carbon and hydrogen, having an average molecular weight on the order of 1000 and a refractive index of 1.544 and occurring in Utah resin-bearing coals.

2,461,552
ADHESIVE COMPOSITION CONTAINING AN ISOBUTENE-DIOLEFIN RUBBERY COPOLYMER AND A RESIN OCCURRING IN UTAH RESIN-BEARING COAL
Lino J. Radi, Union City, N. J., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application March 27, 1946, Serial No. 657,604
6 Claims. (Cl. 260—27)

1. An adhesive composition comprising a solution in an organic solvent therefor of an isobutene-diolefin rubbery copolymer and 5 to 200%, based on the weight of the copolymer, of a resin

consisting essentially of carbon and hydrogen,

2,461,556
METHOD AND APPARATUS FOR THE ELEC-

resilient stopper sealing an aperture in said con-

2,461,566
ELECTRIC IRON

consisting essentially of carbon and hydrogen, having an average molecular weight of 1,000 and a refractive index of 1.544 and occurring in Utah resin-bearing coals.

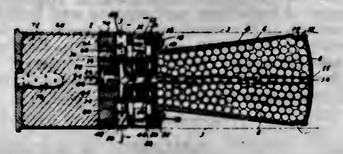
2,461,553
ADHESIVE COMPOSITION CONTAINING POLYCHLOROPRENE RUBBER AND A RESIN OCCURRING IN UTAH RESIN-BEARING COAL
Lino J. Radi, Union City, N. J., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application March 29, 1946, Serial No. 656,231
2 Claims. (Cl. 260—27)

1. An adhesive composition comprising a solution in an organic solvent therefor of a chloroprene rubbery polymer and 5 to 200%, based on the weight of the polymer, of a resin consisting essentially of carbon and hydrogen, having an average molecular weight of 1,000 and a refractive index of 1.544 and occurring in Utah resin-bearing coals.

2,461,554
AROMATIC FLUOROCARBON
Waldo B. Ligett, Detroit, Mich., and Earl T. McBee, La Fayette, and Vincent V. Lindgren, West Lafayette, Ind., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application November 13, 1945, Serial No. 628,380
1 Claim. (Cl. 260—650)

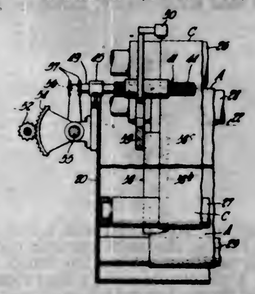
An aromatic fluorocarbon, containing six carbon atoms and six fluorine atoms, having a boiling point from about 81.0 to 82.0 degrees centigrade at 743 millimeters of mercury pressure absolute, a freezing point from about −11 to −13 degrees centigrade, a refractive index of about 1.3760 at 20 degrees centigrade and a density of about 1.612 grams per milliliter at 25 degrees centigrade.

2,461,555
CANISTER SHELL
Douglas F. Linsley, Greenwich, Conn.
Application March 28, 1945, Serial No. 585,376
9 Claims. (Cl. 102—42)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



6. A canister shell comprising a casing forming a forwardly-opening chamber, a plurality of shot in said casing, cover means removably secured over said opening, a plurality of vanes carried by said casing means yieldingly urging said vanes from a first position within the confines of said casing radially to a second position outwardly of said casing, common means normally holding said vanes in first position and said cover means over said opening, and severing means operated by firing of said shell to sever said common means and release said vanes for movement to said second position.

2,461,556
METHOD AND APPARATUS FOR THE ELECTROLYTIC COATING OF METAL STRIP
Edwin T. Lerig, Bellevue, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application April 1, 1943, Serial No. 481,467
5 Claims. (Cl. 204—28)



1. Electroplating apparatus comprising means for guiding a cathode strip through an electrolyte, means for guiding a strip anode in parallel, proximate relation to a cathode strip traversing said first-named means, shields extending between the edges of the cathode and anode strips, mountings for said shields adjustable transversely of the path of the cathode strip, a motor actuating said mountings and a control mechanism for said motor responsive to lateral shifting of the cathode strip.

2,461,557
PRESET PRESSURE CAN FOR FROZEN FOODS OR THE LIKE
Rosario Lo Vico, Astoria, Long Island, N. Y.
Application April 17, 1944, Serial No. 531,462
5 Claims. (Cl. 220—89)

1. A pre-set pressure can having a can body with an end hermetically sealed by means of a wall which flexes in the presence of excessive pressure in the can and having a score line of considerable depth with respect to the thickness of said wall, dividing off an area, said scored area being substantially concentric with respect to the edge of said wall, a relatively unyielding wall-rupturing member transversely disposed in the interior of said can body, extended across the inner side of said wall and having a center portion secured to the center of said scored area with means securing the peripheral edge portion of said wall rupturing member against outward movement so as to cause shearing action between said area and the outer portion surrounding said area when the pressure in said can body increases and moves said wall at its portion surrounding said scored area away from said member.

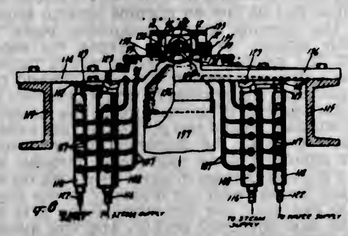
2,461,558
TRANSFUSION APPARATUS
James E. Meagher, Glendale, Calif.
Application December 15, 1945, Serial No. 635,847
18 Claims. (Cl. 128—214)

I. Apparatus for withdrawing and storing animal body fluids comprising a container, a

resilient stopper sealing an aperture in said container and formed with a compartment therein substantially wholly within said container, an administering set positioned in said compartment including a hypodermic needle and means to penetrate said stopper to connect said set in-

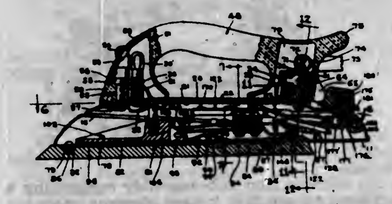
teriorly to the sealed interior of said container, and means sealing said compartment, whereby said apparatus in its completely assembled form may be sterilized as a unit, and said sterility maintained until the instant of inserting said hypodermic needle in a patient.

2,461,559
APPARATUS FOR WASHING THE SIDE SEAMS OF CAN BODIES
William McK. Martin, River Forest, Walter F. Pillisk, Harvey, and Delbert R. Webbe, Maywood, Ill., assignors to American Can Company, New York, N. Y., a corporation of New Jersey
Application December 13, 1943, Serial No. 514,124
7 Claims. (Cl. 134—82)



1. In a machine for making tubular sheet metal can bodies each having a soldered side seam, the combination of a support for the soldered can bodies, means for advancing can bodies along said support, and a spray nozzle member located adjacent said support for spraying a cleaning fluid onto the side seams on the interior of the can bodies advanced past and over said nozzle member for washing from the bodies any excess soldering flux and other foreign materials that may adhere to the side seams as a result of a seam soldering operation, adjacent wall portions of said member constituting a shield disposed contiguous to the inside of the can bodies adjacent their side seams for protecting the major portion of the can bodies against said spray of cleaning fluid and for limiting the action of the cleaning fluid to the side seam areas of the can bodies.

2,461,560
ELECTRIC IRON
William H. McLelland, Mansfield, Ohio, and Eric J. Ajax, Minneapolis, Minn., assignors, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich., a corporation of Michigan
Application May 17, 1944, Serial No. 535,918
17 Claims. (Cl. 219—25)



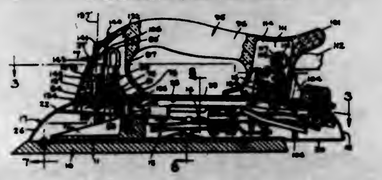
1. In an electrical device having a plate and an electric heating element therefor, a control for said heating element comprising a composite strip of metal composed of two relatively stiff pieces aligned end to end with a space between them and having their outer ends fastened to said plate, said pieces being joined together across said space with an upwardly flexed loop of thinner material and a pair of electric contacts connected in circuit with said electric heating element, said contacts being operable by change in elevation of said loop to open and close the circuit to said heater responsive to variations in temperature of the plate and composite strip assembly.

2,461,561
SADIRON ASSEMBLY
William H. McLelland, Mansfield, Ohio, and Eric J. Ajax, Minneapolis, Minn., assignors, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich., a corporation of Michigan
Application May 17, 1944, Serial No. 535,919
2 Claims. (Cl. 219—25)

1. An electric iron sub-assembly comprising a sole plate, a flat, insulated electric heating element positioned on and overlying the sole plate, a pressure plate overlying the heating element, said pressure plate comprising a relatively thin flat base portion having an elongated narrow longitudinal aperture through the center portion thereof, said pressure plate having heavy walls integral with the base portion immediately adjacent each side of said longitudinal aperture, stiffening webs integral with the walls and base portion extending radially from the walls to the edges of the thin flat base portion, fastening means extending downwardly through the walls into the sole plate near the central portion of said sole plate for holding the pressure plate in clamping relation on the heating element, and a thermostatic element and switch contacts operated thereby located between said walls in alignment with said aperture.

said plate, said segmental expanding elements being increased by the cut away clearance por-

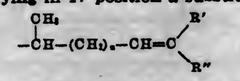
2,461,563
ELECTRIC IRON ASSEMBLY
William H. McLelland, Mansfield, Ohio, and Eric J. Ajax, Minneapolis, Minn., assignors, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich., a corporation of Michigan
Application May 17, 1944, Serial No. 535,926
8 Claims. (Cl. 219—25)



4. An electric iron sub-assembly comprising a sole plate, an electric heater element mounted thereon, a covering shell mounted on the sole plate so as to enclose the upper part thereof and said heater element, a plate shaped so as to cover the top part of the shell mounted on the shell, a rib extending upwardly in the covering shell and extending forwardly thereon, said plate having a smooth portion in contact with said shell rib and said plate extending forward beyond the rib and said forward extended portion of the plate being formed with a downwardly extending center line rib of a size to rest in contact with the forward end of the covering shell, and fastening means between the plate and shell for maintaining them in engagement throughout the length of said rib.

2,461,563
PROCESS FOR THE DEGRADATION OF THE SIDE-CHAIN OF STEROIDS AND STEROIDS SUITABLE THEREFOR
Karl Miescher, Riehen, Hugo Frey, Olten, and Charles Meystre and Albert Wettstein, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Incorporated, Summit, N. J., a corporation of New Jersey
No Drawing. Application August 5, 1943, Serial No. 497,556. In Switzerland August 18, 1942
23 Claims. (Cl. 260—397.1)

1. In a process for the degradation of the side-chain of a steroid, the steps of causing a steroid carrying in 17-position a substituent

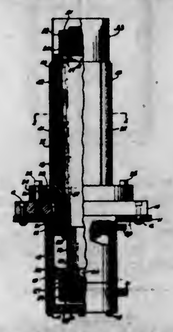


wherein R' and R'' each represents a member of the group consisting of hydrogen and lower aliphatic and lower aromatic hydrocarbon radicals, and n is one of the integers 1 and 2, to react with a member of the group consisting of a carboxylic acid imide, amide and arylamide, substituted by halogen at the nitrogen atom, and subjecting the product so obtained to the action of a dehydrohalogenating agent.

2,461,564
PROCESS OF PREPARING OIL-ACID MODIFIED ALKYD MATERIAL
Charles G. Moore, River Forest, Ill., assignor to The Glidden Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application June 8, 1945, Serial No. 598,405
5 Claims. (Cl. 260—22)

1. The process which consists in heating together with agitation, equimolecular proportions of glycerine and fatty acids selected from the class consisting of drying oil and semi-drying oil fatty acids dispersed in glyceride oil selected from the class consisting of drying oils and semi-drying oils until the reaction between the glycerin and free fatty acids is at least 54% complete as shown by the acid number, and then gradually adding maleic anhydride to the reaction mixture in an equimolecular quantity to the glycerin employed.

2,461,565
METAL SLEEVE EXPANDING DEVICE WITH INTEGRAL WEDGE AND PISTON ROD
Wayne J. Morrill, Fort Wayne, Ind.
Application December 7, 1944, Serial No. 567,102
2 Claims. (Cl. 153—80)



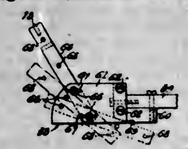
1. An expanding device comprising, a mounting plate having a first and a second side with an opening therethrough, said mounting plate having a plurality of raised guide keys on the first side thereof and extending radially outwardly about said opening, a cylinder adapted to be fastened to the second side of said mounting plate, said cylinder having a first end and a second end, said first end having an opening therein aligned with the opening in the mounting plate, removable closure means for closing the second end of the cylinder, a tapering wedge member having a first end portion and a second end portion, said first end portion having a diameter less than the diameter of the opening in the mounting plate, and said second end portion having a diameter greater than the diameter of the opening in the mounting plate, said wedge member also having a shank portion integral therewith on said first end portion with the diameter of the shank portion less than the diameter of the first end portion, said first end portion and the integral shank portion insertable in said cylinder through the aligned openings in the mounting plate and in the first end of the cylinder, a piston insertable in the second end of the cylinder, threaded means insertable in the second end of the cylinder and engaging the shank portion to hold the piston on the said shank portion of the tapering wedge member, seal means between the wall of the opening in the first end of the cylinder and the shank portion, a plurality of segmental expanding elements defining substantially an inner annular tapering surface surrounding said tapering wedge member and being slidable in a radial direction on said plate, each of said segmental expanding elements having a groove therein to cooperate with a respective guide key, a collar having an annular shoulder slidably receiving said substantially annular flange and holding the segmental expanding elements on the first side of said plate, said segmental expanding elements terminating at a spaced distance from said plate, said tapering wedge member having an extended portion projecting beyond the terminating ends of the segmental expanding elements, and threadably adjustable stop means carried by the extended portion of the tapering wedge member and adapted to abut the terminating ends of the segmental expanding elements to limit expanding movement thereof.

2,461,566
DYNAMOELECTRIC MACHINE ROTOR CONSTRUCTION
Wayne J. Morrill, Fort Wayne, Ind.
Application December 22, 1944, Serial No. 569,210
6 Claims. (Cl. 171—209)

1. In a dynamo-electric machine having a stator, the improvement of a rotor comprising a permanent magnet field element, said element having pole surface regions and interpole surface regions, a reinforcing sleeve member of magnetic material surrounding said element, said sleeve member having first body portions substantially embracing said polt surface regions and having second body portions substantially embracing said interpole surface regions, said first body portions having slots, distributed short circuited winding means in said slots, said first body portions providing a by-path for the cross-magnetizing stator flux and thereby preventing stator flux from entering the permanent magnet field element, said second body portions having peripherally removed sections to provide peripheral recesses, whereby the radial thickness of the wall sections of the second body portions is thinner than that of said first body portions, heavy short circuited winding means in said recesses, said heavy short circuited winding means comprising a greater cross-sectional area than the distributed winding means and short circuiting the main flux path of the permanent magnet field element and thereby preventing demagnetization thereof, said heavy short circuited winding means supplanting the peripherally removed sections and thereby effecting a greater non-magnetic gap between the rotor and stator at the interpole surface regions than at the pole surface regions.

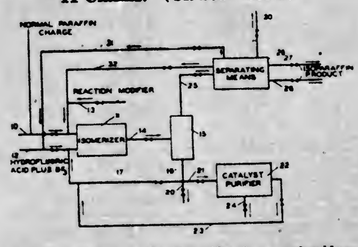
2,461,567
MULTIPLEX PHOTOGRAPHIC EQUIPMENT SUPPORT
John T. Pennington, Alexandria, Va.
Application October 31, 1944, Serial No. 561,247
1 Claim. (Cl. 33—20)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

An adapter for a multiplex projecting device comprising two spaced parallel plates, an angle bar, formed with an angularly cut away clearance portion, rigidly mounting said plates, a second bar pivotally mounted on the plates intermediate thereof, and angularly adjustable therebetween, the extent of said angular adjustment being increased by the cut away clearance portion of said angle bar, and means for selectively



securing said angularly adjustable bar to said plates in a predetermined position.

2,461,568
PARAFFIN ISOMERIZATION PROCESS
John L. Richmond, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application November 9, 1943, Serial No. 509,611
11 Claims. (Cl. 260—683.5)



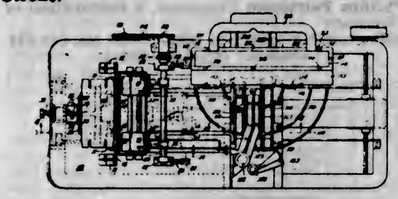
1. A process for effecting the isomerization of a low-boiling normally liquid paraffin hydrocarbon with a minimum of conversion to paraffin hydrocarbons of lower and higher molecular weights, which comprises admixing with a low-boiling paraffin hydrocarbon having at least five carbon atoms per molecule a low-boiling cycloparaffin having at least five carbon atoms in the ring in an amount between about 5 and about 25 per cent by weight of the total hydrocarbons, subjecting the resulting admixture to reaction at a temperature between about 50 and about 300° F. in the presence of and intimately admixed with a liquid catalyst consisting of hydrofluoric acid and between about 0.1 and 10 per cent by weight of boron trifluoride, with a ratio of catalyst to hydrocarbon phases between about 0.1:1 and about 3:1, for a reaction time not exceeding about two hours to isomerize said low-boiling paraffin hydrocarbon, and recovering from effluents of said reaction a hydrocarbon fraction containing an isomeric paraffin so produced.

2,461,569
PACKAGING APPARATUS
John Riemer, Green Bay, Wis., assignor to Kraft Foods Company, a corporation of Delaware
Application August 29, 1946, Serial No. 693,782
9 Claims. (Cl. 93—39)

6. In apparatus of the class described, a reciprocable mandrel and means for effecting reciprocation thereof, means for folding a blank around one portion of said mandrel when the mandrel is at one end of its stroke, means for shifting the blank folded around said mandrel to another portion thereof upon movement of the mandrel to the other end of its stroke, a pawl mounted in said mandrel so as to be movable inwardly and outwardly thereof for engaging, when the pawl is in an outwardly disposed position, an

cellulose is esterified with an aliphatic acid anhy- lever, and having on its distal end a plunger ar-

edge portion of the shifted folded blank on the mandrel when the latter returns to the first mentioned end of its stroke, thereby to effect unitary movement of said mandrel and shifted folded blank, said pawl being movable inwardly of the mandrel so as to be slidable through a folded blank on the first mentioned portion of the mandrel when the mandrel moves to said other end of its stroke, a die aligned with said mandrel for movement of a portion of the mandrel through said die when the mandrel moves to said first mentioned end of its stroke, means for positioning a box blank between said mandrel and die when the mandrel is located at the other end of its stroke, said die being operative to fold said blank around the shifted folded blank on said mandrel when the mandrel is moved into and through said die to said first mentioned end of its stroke.



7. In apparatus of the class described, box forming means comprising a die and a plunger reciprocable into and out of said die for forcing a box blank into and through said die so as to form said blank into an open-topped box, means for receiving the box so formed upon its discharge from said die, said means being mounted for pivotal movement for transporting said open-topped box and inverting the same to constitute the same a downwardly facing flanged box cover, an upwardly tapering funnel structure positioned to receive said box cover in outwardly telescoped position on the smaller end of said funnel structure, and means for moving a package element upwardly through said funnel structure and into said cover.

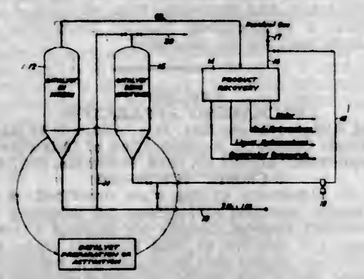
2,461,570

SYNTHESIS OF LIQUIDS FROM CARBON MONOXIDE AND HYDROGEN

Joseph K. Roberts, Flossmoor, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application May 3, 1947, Serial No. 745,744

9 Claims. (Cl. 260—449.6)



1. The method of effecting synthesis of normally liquid products from carbon monoxide and hydrogen which method comprises contacting a previously conditioned synthesis catalyst in a synthesis step with a hydrogen-carbon monoxide gas charge under synthesis conditions, separating from synthesis effluent both normally liquid products and a residual gas consisting essentially of hydrogen, carbon dioxide and light normally gaseous hydrocarbons with only a small amount of carbon monoxide, contacting a fresh active synthesis catalyst with at least a portion of said residual gas at a temperature and pressure for conditioning the catalyst, and periodically changing the contacting sequence by employing catalyst from the conditioning step in the synthesis step and adding other fresh active catalyst to the conditioning step.

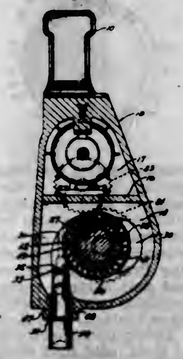
2,461,571

POWER-DRIVEN HAMMER

Girard C. Robinson, Maywood, Ill.

Application June 4, 1947, Serial No. 752,507

7 Claims. (Cl. 125—33)



1. In a power driven implement, a tool holder, a reciprocatory tool slidably mounted in said holder, a rotatable impact member having a circular opening therein and having a part positioned for impact engagement with said tool which is releasable by radial movement of said part out of engagement with said tool, means including a driving spindle having an eccentric rotatable within said circular opening of said impact member for effecting said radial movement after impact, a compression spring extending circumferentially around at least a portion of said eccentric, means on said spindle engageable with one end of said spring to transmit a driving force thereto in a circumferential direction when the spindle is rotated, means for transmitting said driving force from the other end of said spring to said rotatable impact member, said spring being positioned to be compressed after impact and to cause automatic forcible re-engagement with said tool after release, and a counterweight on said spindle projecting in a direction opposite from the direction which said impact part projects.

2,461,572

PROCESS OF RIPENING CELLULOSE ESTERS

Robert D. Rowley and Robert F. Thompson, Narrows, Va., assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application November 6, 1945, Serial No. 627,106

7 Claims. (Cl. 260—236)

1. In a process for the production of highly stable organic acid esters of cellulose wherein

cellulose is esterified with an aliphatic acid anhydride employing an aliphatic acid as solvent and an inorganic acid catalyst, the steps which comprise neutralizing the acid catalyst in the primary cellulose ester solution obtained on completion of esterification by adding a neutralizing agent thereto, positively heating the neutralized primary solution to a temperature above the esterification temperature and maintaining it at said elevated temperature for a short period of time while said solution contains unreacted aliphatic acid anhydride, adding water for ripening to said neutralized solution, and ripening the primary cellulose ester in solution to a secondary cellulose ester at an elevated temperature.

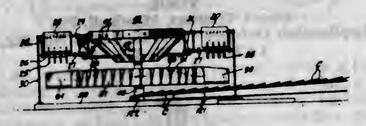
2,461,573

MACHINE FOR STUFFING NEWSPAPERS OR SIMILAR SHEET MATERIAL ASSEMBLAGES

Paul Schweizer, Easton, Pa., assignor to T. W. & C. B. Sheridan Company, New York, N. Y., a corporation of New York

Application April 2, 1945, Serial No. 586,084

23 Claims. (Cl. 270—55)



1. Machine for stuffing newspapers or like assemblages by insetting loosely within the folded jacket section one or more inner sections thereof, comprising an endless series of upright open-top conveying pockets with carrier mechanism to guide and advance the same around a horizontal orbit, a plurality of section feeding means operative at predetermined section receiving stations along such orbit and adapted to feed downwardly into each pocket during travel first a jacket section and therebeyond one or more inner sections, and means for opening the jacket section into V-form in each pocket before the reception of inner sections therein; each pocket being normally closed at bottom to retain received sections but openable for gravity delivery of the stuffed assemblage therefrom, and means for causing such bottom opening of the successive pockets upon each thereof reaching a predetermined delivery station beyond such receiving stations thereby to deliver downwardly the successive stuffed products to an outfeeding means.

2,461,574

FIRING MECHANISM

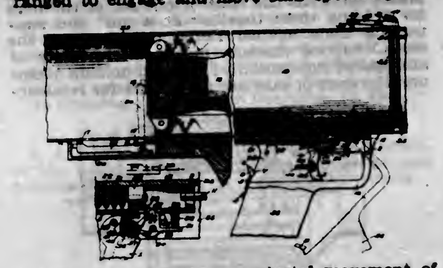
Leslie A. Skinner, Berkeley, Calif., and Julius A. Felse, Miami, Fla., assignors to the United States of America as represented by the Secretary of War

Application January 31, 1944, Serial No. 520,418

3 Claims. (Cl. 42—69)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a firearm of the type having a trigger housing and a hammer pivotally movable into and out of the bore of the firearm and controlled by a spring-pressed operating rod terminating forwardly in the trigger housing, the improvement comprising a trigger guard pivotally mounted on said trigger housing as a first-class lever, and having on its distal end a plunger arranged to engage and move said operating rod



to the cocked position on pivotal movement of said trigger guard.

2,461,575

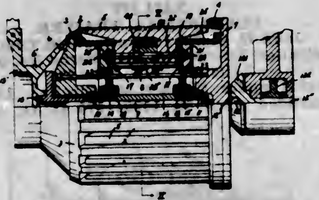
THREAD ADVANCING REEL

Richard W. Stanley, Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

Application July 21, 1945, Serial No. 606,383

In Canada July 21, 1944

15 Claims. (Cl. 28—71.6)



1. A thread-advancing reel comprising a set of spaced bars, means for rotatably mounting said set of bars comprising an end plate secured thereto at one end of the reel closing that end of the reel at which it is positioned, a second set of bars interdigitating with the bars of the first set, means for rotatably mounting the second set of bars comprising at least one supporting member extending inwardly therefrom, a shaft arranged generally centrally within the two sets of bars and extending between the end plate and the adjacent supporting member, an annular flexible sealing member connected to the second set of bars and connected to the end plate adjacent the juncture thereof with the first set of bars, and means protected within the region enclosed by the sealing member for imparting relative motion between the two sets of bars to effect advancing motion of the thread endwise of the reel.

2,461,576

REINFORCED THREAD-ADVANCING REEL

Richard W. Stanley, Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

Application July 21, 1945, Serial No. 606,384

9 Claims. (Cl. 28—71.6)

2. Reel mechanism for handling strands and the like comprising two sets of annularly arranged, longitudinally extending bars, the bars of one set alternating with those of the other, means for simultaneously rotating the sets bodily as a unit, means for imparting relative motion between the bars of the two sets to effect advanc-

ing motion of the strand endwise of the reel, means adjacent the ends of one set of the bars

sleeve inserted through a perforation in said spacing member, an electrode supporting rod

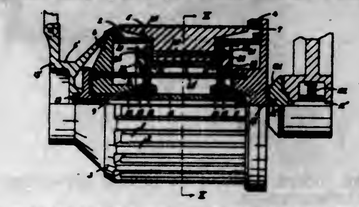
relative rotational movement to effect adjustment of said cutter bit shank radially of said

2,461,582

NITRAMINES AND THEIR PREPARATION

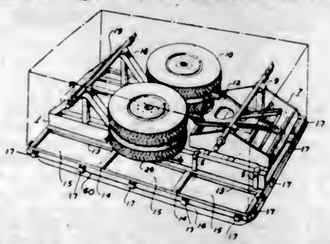
George F. Wright, Toronto, Ontario, and Walter

ing motion of the strand endwise of the reel, means adjacent the ends of one set of the bars for holding them together as a unit and supporting them against radial deflection by the strand carried thereon, means intermediate of and spaced substantially from said holding means and the ends of said one set of bars for reinforc-



ing said set against pressure exerted by the strand carried thereon, and means intermediate of and spaced substantially from the ends of the other set of bars for reinforcing them against pressure exerted by the strand carried thereon, the reinforcing means for each set of bars being spaced from the reinforcing means for the other set of bars sufficiently to avoid interference with relative movement between the sets of bars.

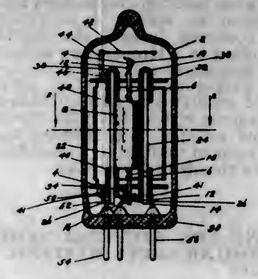
2,461,577
COLLAPSIBLE TRAILER
John H. Stark, Jr., Springfield, Ohio
Application February 6, 1945, Serial No. 576,438
5 Claims. (Cl. 296—27)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A vehicle trailer collapsible into a complete self-contained crate for packaging comprising, in combination, a frame, wheeled means supporting said frame, a floor carried by said frame, sill members rigidly secured on said floor and parallel to side edges thereof, side and end panels disposed about said floor, and separable means securing said floor and panels together to form a vehicle body, said floor with said sill members thereon being invertible to form respectively a base and external skids thereon of said crate, said panels being securable by said separable means to said base to form therewith closure members of said crate for packaging therein remaining portions of said trailer.

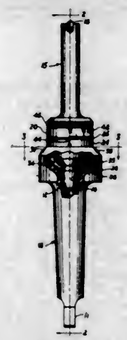
2,461,578
ELECTRODE ASSEMBLY FOR ELECTRON-DISCHARGE TUBES
Paul W. Stutsman, Needham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 1, 1945, Serial No. 597,056
7 Claims. (Cl. 250—27.5)

1. An electrode assembly comprising an insulating electrode spacing member, an insulating sleeve inserted through a perforation in said spacing member, an electrode supporting rod having a portion thereof surrounded by said in-



sulating sleeve, and means carried by said electrode supporting rod for supporting said insulating sleeve.

2,461,579
TOOL
Albert Thomas, Munhall, Pa.
Application October 15, 1945, Serial No. 622,309
1 Claim. (Cl. 279—6)



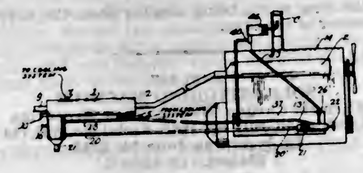
An adjustable boring bar comprising a shank member adapted at one end for attachment to a spindle and having at its other end a substantially conical, elongated bore axially offset with respect to but having its axis parallel with the axis of said shank member, and opposed symmetrically arranged, tapped bores intersecting said conical bore in a common annular plane; a tool supporting shank adapted at one end to receive a cutter bit and having at its other end a substantially conical, elongated boss axially offset with respect to but having its axis parallel with the axis of said tool supporting shank and coincident with the axis of said conical bore and provided with an annular V-shaped groove, said boss being adapted for mating assembly within said conical bore to dispose said V-shaped groove in coincident relation to the intersecting ends of said tapped bores; and pin means threadedly engaged in said tapped bores with their inner ends protruding into said annular V-shaped groove and adapted when loosened to secure said shank member and said tool supporting shank against axial dislocation while permitting

to be carried along with it for distances varying inversely with the specific gravity of the drops,

tatable motion relative to the arm alongside the full length of the package, the inside diameter

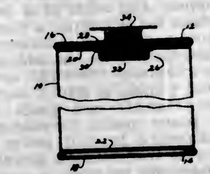
relative rotational movement to effect adjustment of said cutter bit shank radially of said shank member to overcome objectionable eccentric rotation of the tool when in use and adapted when tightened to abut a wall of said V-shaped groove at symmetrically disposed points to force said tool supporting shank axially into tight frictional engagement with said conical bore to lock said shank member and said tool supporting shank together for unitary rotation.

2,461,580
METHOD AND APPARATUS FOR EMULSIFYING FUELS
Sol B. Wieser, Washington, D. C., and Vaman R. Kokatnur, New York, N. Y.
Application January 28, 1944, Serial No. 520,098
10 Claims. (Cl. 123—25)



1. An internal combustion engine having a fuel emulsifier actuated thereby, means to supply a nonhomogeneous liquid in adjustably variable proportions as fuel mixture to the emulsifier, carburetor means to supply a homogeneous fuel mixture formed in the emulsifier to the engine and means to recycle excessive homogeneous fuel to the emulsifier.

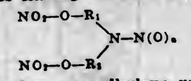
2,461,581
CONTAINER AND METHOD OF MANUFACTURE
Allen B. Wilson, Evanston, Ill., assignor, by mesne assignments, of one-half to Kimberly Stuart and one-half to Elizabeth R. B. Stuart, both of Menasha, Wis.
Application December 23, 1944, Serial No. 569,610
5 Claims. (Cl. 229—5.5)



1. A container comprising a hollow body with a continuous side wall formed of a sheet of paper-like material having reversely bent internal flanges along the two edges thereof at the ends of said container, sheet metal reinforcing rims of generally C-shaped cross-section clenched along and about said edges with the opposite lateral edges of said rims biting into the material of said sheet and flange respectively, the portion of each flange beyond its associated rim being formed into a series of radially inwardly projecting tabs; and end walls for the container each formed from a sheet of paper-like material disposed within said body portion at the inner side of the corresponding series of tabs and secured to said tabs.

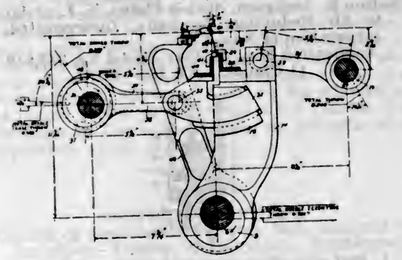
2,461,582
NITRAMINES AND THEIR PREPARATION
George F. Wright, Toronto, Ontario, and Walter John Chute, Kentville, Nova Scotia, Canada, assignors to The Honorary Advisory Council for Scientific and Industrial Research, Ottawa, Ontario, Canada, a corporation of Canada
No Drawing. Application December 30, 1944, Serial No. 570,813
8 Claims. (Cl. 260—467)

1. As a new composition of matter, a member of the group consisting of the nitramines and nitroso-amines having the structural formula



wherein R_1 and R_2 are alkylene radicals and n is a whole number less than 3.

2,461,583
KNITTING MACHINE
George O. Young, Robesonia, Pa., assignor to Vanity Fair Mills, Inc., Reading, Pa., a corporation of Pennsylvania
Application December 30, 1946, Serial No. 719,229
15 Claims. (Cl. 66—86)



1. In a knitting machine employing sinkers and thread guides, the improvement which includes a needle-bar-carrying arm; a main eccentric-carrying shaft having an eccentric on which said arm is carried; a tongue-bar carrier carried by said needle-bar-carrying arm; a needle bar mounted on said needle-bar-carrying arm; a needle mounted on said needle bar; a tongue bar mounted on said tongue-bar carrier; a tongue mounted on said tongue bar; and means for moving said needle-bar-carrying arm and said tongue-bar carrier transversely in timed relation to the movements of said needle-bar-carrying arm under the influence of said eccentric to cause the needle and tongue to effect their knitting cycles.

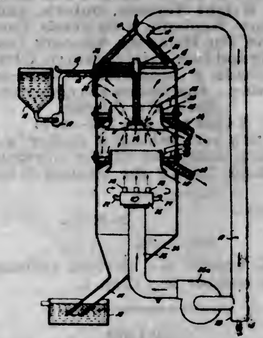
2,461,584
AIR SEPARATION METHOD FOR SLURRY SEPARATION
Axel Brix Andersen, Larchmont, and Knud Horn, New York, N. Y., assignors to F. L. Smidth & Co., New York, N. Y., a corporation of New Jersey
Application June 14, 1944, Serial No. 540,284
6 Claims. (Cl. 202—139)

1. A method of treating slurry, which comprises creating a current of air through an enclosed space, discharging slurry into the air current by atomizing the slurry to form a fine spray thereof, the air current causing the drops of slurry

to provide a closure for said handbag, of a pair of crossed extensions of said frame arms, a compressible expansive member interposed between said extensions and adapted to be compressed thereby

material between the electrode and the casing, an exteriorly threaded metallic shell, and a heat insulating material between the casing and the shell surrounding and partly enclosing the ex-

to be carried along with it for distances varying inversely with the specific gravity of the drops,



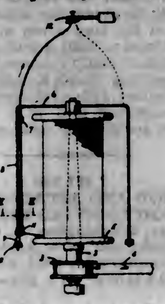
and separately collecting fractions of the slurry at points spaced along the path of flow of the air.

2,461,585
TRACER WITH POWER-DRIVEN STEERABLE TRACTION WHEEL
Nelson E. Anderson, Scotch Plains, N. J., assignor to Air Reduction Company, Incorporated, a corporation of New York
Application May 22, 1947, Serial No. 749,810
11 Claims. (Cl. 250—41.5)

1. Self-propelled steerable apparatus comprising a traction wheel, a member in which the traction wheel is rotatably mounted, a drive shaft for the traction wheel whose axis intersects the axis of rotation of the traction wheel, said member being rotatable about the axis of the drive shaft to steer the traction wheel, power means for rotating the drive shaft at a substantially constant speed, and reduction gearing between the drive shaft and the traction wheel, said traction wheel being positioned so that its point of contact with the surface along which the traction wheel travels is located to one side of the axis of the drive shaft.

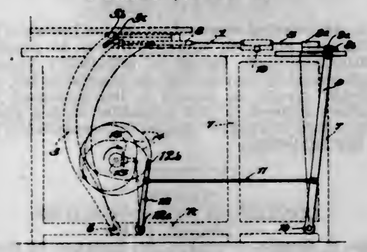
2,461,586
UP-TWISTER
René Bouvet, Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application March 7, 1946, Serial No. 652,580
4 Claims. (Cl. 57—116)

1. In an up-twister, the combination of a rotatable spindle, means for rotating the spindle, a package carrier on the spindle, a flyer rotatably mounted on the spindle having a guide eye fixedly secured to an upper portion of the flyer and having an arm extending downwardly from said guide eye and being free of obstruction along the full length of the package, said guide eye being disposed inwardly of the arm, and a ring guide mounted on said arm for freely slidable and rotatable motion relative to the arm alongside the full length of the package, the inside diameter



of the ring guide being greater than the outside diameter of the arm.

2,461,587
SOLE STITCHING MACHINE
Carmelo Carlino, Buenos Aires, Argentina
Application July 18, 1945, Serial No. 605,784
In Argentina June 14, 1945
3 Claims. (Cl. 112—2)

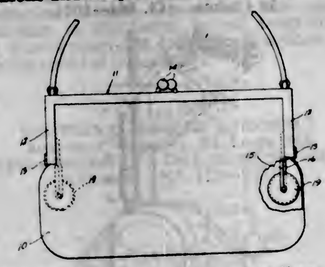


1. A machine for stitching the soles of canvas shoes or the like comprising a frame, guide means supported on the top of the frame, molds movably mounted in the guide, feeder means for moving said molds step-by-step from one end of the frame to the other, said molds being formed to hold the uppers and soles of a canvas shoe in proper position for stitching, a needle carrier mounted on the said frame transverse the said mold guide, a needle mounted in said carrier having associated integrally therewith an auxiliary punch, a second punch, a punch carrier oppositely positioned across said guide from said needle carrier, power means for said machine, a drive shaft connected to said power means, a driven shaft, a gear transmission operatively connecting said shafts for rotation, a cam disc carried by the driven shaft, a lever actuated by said cam for driving said mold feeder means, and means actuated by the pressure of one of the molds for causing a double alternate linear displacement of the feeder movable into the guide passage between molds, whereby an alternate punching and sewing operation is provided.

2,461,588
HANDBAG SOUNDING DEVICE
Abraham S. Cooper, Brooklyn, N. Y.
Application August 6, 1943, Serial No. 42,876
3 Claims. (Cl. 116—99)

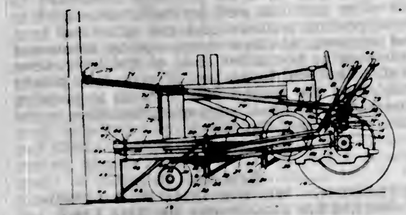
1. The combination with a handbag including a pair of frame arms hingedly connected together

to provide a closure for said handbag, of a pair of crossed extensions of said frame arms, a compressible expansive member interposed between said extensions and adapted to be compressed thereby



as said arms are moved to a handbag-closing position, means for expanding said member as said extensions move apart upon opening of said arms, and said member being adapted to emit a sound upon at least the expansion thereof.

2,461,589
PORTABLE POWER-DRIVEN TREE FELLING CIRCULAR SAW
James R. Crawford, Clinton, S. C.
Application November 13, 1944, Serial No. 563,238
4 Claims. (Cl. 143—43)



1. A tractor including a hydraulic lift embodying a swinging arm to move longitudinally of the tractor, a support mounted upon the tractor, a pusher device extending longitudinally of the tractor and mounted upon the support and extending forwardly beyond the tractor, a sleeve slidably receiving the rear end of the pusher device and pivotally connected with the swinging arm, a lever pivotally mounted upon the swinging arm, a link connecting the lever and pusher device, and means to lock the lever in the selected adjusted position.

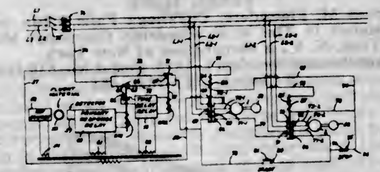
2,461,590
SPARK PLUG
Louis H. Crook, Washington, D. C.
Application December 9, 1943, Serial No. 513,561
8 Claims. (Cl. 123—169)

8. In a spark plug having a hollow metallic casing, an electrode within the casing, a dielectric material between the electrode and the casing, an exteriorly threaded metallic shell, and a heat insulating material between the casing and the shell surrounding and partly enclosing the exposed end of said electrode and casing, said shell protecting the exposed end of said heat insulating material.

2,461,591
WHEEL BALANCING MACHINE
Loren C. Currier, Tulsa, Okla.
Application April 17, 1947, Serial No. 741,967
1 Claim. (Cl. 73—66)

The combination with a wheel balancing machine comprising a wheel support, said wheel support having an outer sleeve, an inner balance point sleeve within the first mentioned sleeve, said first mentioned sleeve having a vertical slot with spaced lugs, thereby forming spaced notches, said balance point sleeve having a lug adapted to be placed in any of said notches for varying the elevation of the balance point on the axis of a supported wheel.

2,461,592
INSPECTION SYSTEM
Camiel de Brabander, Newport, Del., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application September 28, 1946, Serial No. 700,151
16 Claims. (Cl. 103—11)



1. In combination, a ray source, a ray detector, means for feeding a fluent material through a path comprising an inspecting station disposed in the ray path from the source to the detector, two actuatable elements, means for actuating one of the elements in response to an impulse of the detector, means the operation of which is initiated by the actuation of said one element for actuating the other element only after the actuated condition of the first is maintained for a minimum predetermined interval of time by an impulse of sustained character on the detector, and means influenced by the simultaneous existence of the actuated condition of both elements for altering the operation of the feeding means.

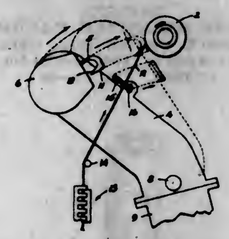
2,461,593
WINDING MACHINE
Ferdinand A. Decker, Jr., Parkersburg, W. Va., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

2,461,595
RETRACTABLE LANDING GEAR
Edwin E. Foster, Austin, Tex.
Application October 15, 1943, Serial No. 506,405
14 Claims. (Cl. 244—102)

overrunning clutch connecting said steering mechanism to the power takeoff from the engine when the speed of the engine exceeds the speed of the vehicle, and means including an overrunning clutch connecting said steering

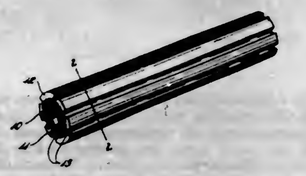
ing about two hours to isomerize said low-boiling paraffin hydrocarbon, and recovering from

2,461,593
WINDING MACHINE
Ferdinand A. Decker, Jr., Parkersburg, W. Va., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application August 5, 1944, Serial No. 548,151
10 Claims. (Cl. 242—18)



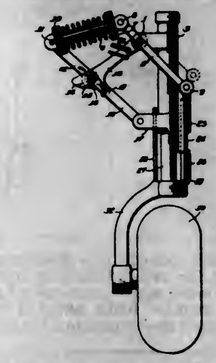
1. In combination, a rotatable winding head, means spaced from the head for engaging a yarn and controlling the path of the yarn on its way to the head, a reciprocable guide for traversing the yarn longitudinally of the head, supporting means for the guide, said supporting means being movable toward and away from said head to bring the guide respectively into and out of a position adjacent the head in which it is in winding relationship with the yarn and the head, a tail guide mounted on the movable supporting means and arranged to guide the yarn independently of the reciprocable guide to a winding position axially offset from that of the reciprocable guide, said guides being arranged for movement thereof toward the head along parallel offset paths directed at an acute angle to the plane of the yarn path from the controlling means to the head so that movement of the guides toward the head causes release of the yarn from the non-reciprocable guide and pick-up of the released yarn by the reciprocable guide.

2,461,594
STEAM HOSE
James M. Flounders, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application October 1, 1945, Serial No. 619,513
5 Claims. (Cl. 138—55)



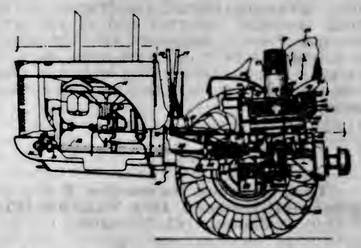
1. A flexible hose for handling heated fluids, said hose comprising a tubular lining of flexible material resistant to heated fluids, a reinforcing body on said lining, and a covering of flexible material having high resistance to penetration of fluids, said covering being recessed in the outer surface thereof substantially to said reinforcing body for venting communication of said reinforcing body with the atmosphere outside said hose.

2,461,595
RETRACTABLE LANDING GEAR
Edwin E. Foster, Austin, Tex.
Application October 15, 1942, Serial No. 506,405
14 Claims. (Cl. 244—102)



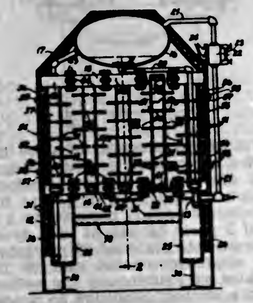
1. A retractable landing gear for an aircraft wheel comprising a shaft secured on a part of the aircraft, a wheel supporting member mounted to rotate on the shaft, a pair of lever arms rotatably mounted on said shaft intermediate their ends and abutting at one end on the supporting member, a pair of arms pivotally connected to each other and one end pivotally connected to the supporting member and the other end to a fixed support, a compression spring connected at one end to the other ends of the lever arms and the other end to the pair of arms, and means for latching the second pair of arms in position to maintain the wheel supporting member in the "down" position of the wheel.

2,461,596
STEERING MECHANISM FOR TWO-WHEELED TRACTORS OR THE LIKE
Henry C. French, Elm Grove, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin
Application November 18, 1946, Serial No. 710,636
11 Claims. (Cl. 180—79.4)



3. In combination, a wheeled pulling vehicle having an engine, a trailer vehicle, a first fifth wheel pivot member on the pulling vehicle, a cooperating fifth wheel pivot member rotatable with respect to said first fifth wheel pivot member and connected to the trailer vehicle, a power takeoff from said engine, a power takeoff from the wheels of the pulling vehicle, steering mechanism at the fifth wheel for causing relative rotation in a selected direction between said two fifth wheel pivot members, means including an overrunning clutch connecting said steering mechanism to the power takeoff from the engine when the speed of the engine exceeds the speed of the vehicle, and means including an overrunning clutch connecting said steering mechanism to the power takeoff from the vehicle wheels when the speed of the vehicle overtakes the speed of the engine.

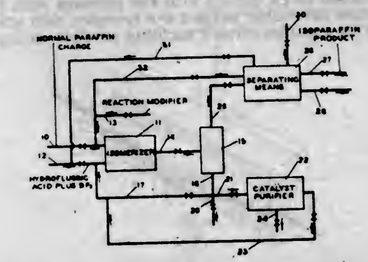
2,461,597
SECTIONAL BOILER ASSEMBLY
Andrew J. Gallaher, St. Louis, Mo.
Application April 27, 1945, Serial No. 590,677
5 Claims. (Cl. 122—223)



3. In a sectional boiler, a plurality of sections each including a box-like body characterized by substantially planar side wall elements and each section including a plurality of planar baffle plates, each extending through and laterally beyond each side of the section, the baffle plates being arranged in vertical rows in each section with adjacent such rows staggered in such manner that adjacent sections may be relatively inverted, and so present a corresponding arrangement of baffles in adjacent sections, but in vertically spaced relation, whereby to provide a zigzag flame path of substantial width extending between and substantially co-extensive with the lateral surfaces of each pair of adjacent sections from bottom to top of the assembled boiler, and a pair of header elements external to each section, and providing separable connections enabling introduction and removal of each section, separately from other sections.

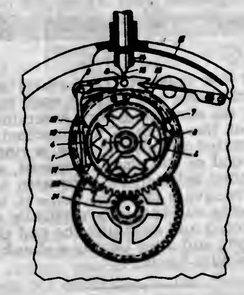
2,461,598
PROCESS FOR THE ISOMERIZATION OF PARAFFINS
James D. Gibson, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application January 1, 1944, Serial No. 516,659
19 Claims. (Cl. 260—683.5)

1. A process for effecting the isomerization of a low-boiling normally liquid paraffin hydrocarbon with a minimum of conversion to paraffin hydrocarbons of lower and higher molecular weights, which comprises admixing with a low-boiling paraffin hydrocarbon having at least five carbon atoms per molecule a low-boiling aromatic hydrocarbon in an amount not greater than about 5 per cent by weight of the total hydrocarbons, subjecting the resulting admixture to reaction at a temperature between about 50 and about 300° F. in the presence of a liquid catalyst consisting of hydrofluoric acid and between about 0.1 and 10 per cent by weight of boron trifluoride for a reaction time not exceeding about two hours to isomerize said low-boiling paraffin hydrocarbon, and recovering from



effluents of said reaction a hydrocarbon fraction containing an isomeric paraffin so produced.

2,461,599
HOUR-INCREMENT HOUR HAND SETTING MECHANISM
Jean Pierre Graef, La Chaux-de-Fonds, Switzerland
Application September 2, 1944, Serial No. 552,489
In Switzerland July 22, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires July 22, 1963
5 Claims. (Cl. 58—80)



1. In a watch, a star-shaped wheel, an hour hand in connection with said star-shaped wheel, an hour wheel, a means in relation with said star-shaped wheel, adjusted to drive the latter in either rotating direction relative to said hour wheel in order to rotate said hour hand independenly of any movement of said hour wheel, and a pawl in driven connection with said hour wheel and in engagement with said star-shaped wheel to drive said latter on normal advance movement of said hour hand provoked by said hour wheel and to trail over said star-shaped wheel when the latter is driven by said means.

2,461,600
APPARATUS FOR VULCANIZING ARTICLES
Alvin N. Gray, Joppa, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application January 11, 1945, Serial No. 572,324
3 Claims. (Cl. 18—43)

3. In a molding apparatus including a pair of complementary mold sections having complementary elongated, tapered recesses formed

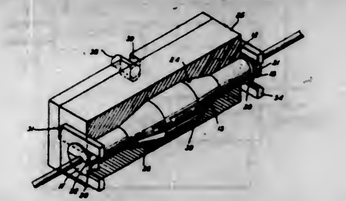
therein, the improvement which comprises a pair of rigid shells having flanges on the ends thereof, designed to fit closely into the recesses with the

2,461,602
PATTERNED TEXTILE MATERIAL
Robert Lee Hunter and Ralph Donnel Cramer,

ible inner and outer end portions slidable one against the other, one of said portions having a series of spaced seats, a stud on the other of said portions to selectively engage said seats, a

said pole, strained toward each other and wedgingly inserted and retained in the open end of

therein, the improvement which comprises a pair of rigid shells having flanges on the ends thereof, designed to fit closely into the recesses with the flanges extending beyond the recesses, said shells having complementary molding cavities enlarged



at the central portions thereof, tapering to semi-cylindrical grooves at the ends thereof and also being provided with grooves in the flanges thereof for providing clearance for a core, and a pair of U-shaped clamps for clamping the shells together at the flanges thereof.

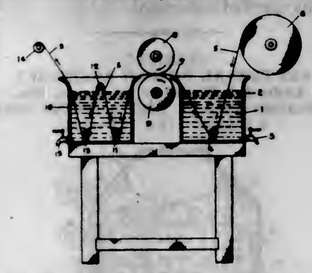
2,461,601
PORTABLE GOLF TEE SUPPORT
Homer D. Hendricks, Seattle, Wash.
Application May 2, 1947, Serial No. 745,607
3 Claims. (Cl. 273—33)

1. A golf tee support, comprising a flexible pad provided at one end with an open notch, said pad having an elongated bore extending to the closed end of the notch, a longitudinally elastic element mounted within the bore, a ring secured to the free end of the elastic element, a tubular holder provided between its ends with a reduced portion for receiving the ring thereon, the tubular holder being substantially vertically arranged within the notch and engaging the pad above and below the bore, and a tee having a shank inserted within the tubular holder.

2,461,602
METHOD OF MANUFACTURING SYNTHETIC SUTURES AND THE LIKE
John P. Heilihan, Jr., Garden City, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 17, 1946, Serial No. 641,865
5 Claims. (Cl. 18—54)

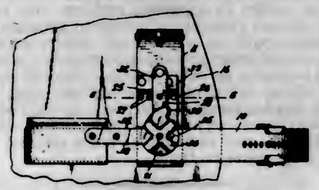
1. Method for the manufacture of threads and the like comprising an integral mass of fibers which occur in animal sinews, tendons, and the like, which comprises suspending the fibers in an aqueous acid solution, extruding the suspension into a non-basic coagulating and dehydrating medium to form acidic filaments, withdrawing and drying the thus formed acidic filaments and raising the pH on the filaments while swelling the fibers to approximately twice their normal dry size by treating them with water to which has been added from about 6 to 6.5 cc. of concentrated ammonium hydroxide and from about 1 to 1.2 grams of ammonium chloride, per liter, and thereafter drying the filaments while stretching them from about 14 to 16%.

2,461,603
PATTERNED TEXTILE MATERIAL
Robert Lee Hunter and Ralph Dennal Cramer, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
Application July 14, 1944, Serial No. 544,948
1 Claim. (Cl. 8—17)



Process for the production of dyed and patterned fabrics, the pattern of which is delineated by lustrous and substantially lusterless areas, which comprises immersing a fabric having a basis of a cellulose acetate material in a solution consisting of 2 parts by weight of a dyestuff for the cellulose acetate material 68 parts by weight of a lower aliphatic alcohol and 30 parts by weight of water, and subjecting the wetted material while in a swollen condition to pressure between a pair of unheated rotating, cylindrical surfaces, one of which surfaces is smooth and the other of which is engraved in the desired pattern.

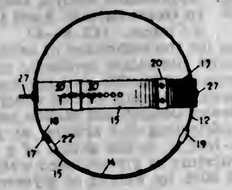
2,461,604
PROTECTIVE DEVICE
Francis D. Huntsman, Salt Lake City, Utah
Application May 28, 1945, Serial No. 596,233
2 Claims. (Cl. 2—8)



1. In a protective device, a headgear member, a shield having a side member disposed outside of said headgear member, a pivot on one side of the device on which said members are mounted, a plate fixed to one of said members adjacent to said pivot, a rack on said plate, a control element comprising a disc turnable on said pivot and a spring arm disposed over and cooperable with said rack, another control disc on said pivot fixed on said other member, said discs having interlocking radial ridges ridable over one another, a spring urging said discs together, and a pivot on the other side of the device on which said headgear member and shield member are mounted.

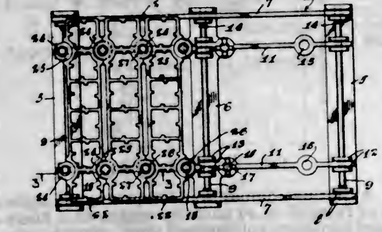
2,461,605
HEADGEAR
Francis D. Huntsman, Salt Lake City, Utah
Application May 29, 1945, Serial No. 596,461
3 Claims. (Cl. 2—8)

1. In headgear of the character described, a head contacting band comprising lapping flexible inner and outer end portions slidable one against the other, one of said portions having a series of spaced seats, a stud on the other of said portions to selectively engage said seats, a laterally projecting finger piece on said stud-carrying portion near said stud, a slide member



fixed to one of said portions near its end and having parts between which the other of said portions is slidable, and another member for holding said inner and outer band portions together and slidable thereon between said stud and fixed slide member to and from its holding position in transverse alinement with the stud.

2,461,606
WORK SUPPORTING MEANS FOR HEAT TREATING FURNACES
Harold F. Jackson, Springfield, Ohio, assignor to The Ohio Steel Foundry Company, Lima, Ohio, a corporation of Ohio
Application August 2, 1946, Serial No. 688,129
8 Claims. (Cl. 263—47)



1. In a work supporting means of the class described, a flexible structure having transversely spaced bars, and a plurality of tray sections of oblong rectangular form mounted in side-by-side relation on said bars and capable of flexing movements relative to each other and to the bars.

2,461,607
CLOTHESLINE PROP
Fred E. Kuff, Baltimore, Md.; William Foreman and H. Levin Morvitz, executors of said Fred E. Kuff, deceased, assignors to The Southern Galvanizing Company, Baltimore, Md., a corporation of Maryland
Application January 10, 1945, Serial No. 572,231
6 Claims. (Cl. 248—353)

1. A prop for clotheslines or the like comprising a pole, consisting of a length of pipe, having a recess at one end thereof, a resilient clip having two spaced resilient legs, said clip including means connecting said legs at their ends where they join the clip, and said legs having their free ends extending from the clip towards said pole, strained toward each other and wedgingly inserted and retained in the open end of

said pipe, and a snap hook on said clip for releasable connection with a line.

2,461,608
VALVE CONTROL APPARATUS
Marvin R. Laing, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application August 17, 1942, Serial No. 455,089
8 Claims. (Cl. 236—68)

1. In a condition control system, in combination, a step-opening electric valve for supplying a fluid fuel to a burner at minimum and maximum rates of flow comprising a pair of valves, an actuating winding for each valve operable to move the same between closed and open positions when energized, and an electric time switch having an electric heater therein associated with the windings for providing a time delay between the energization of the windings, means responsive to a condition indicative of a need for operation of the burner for concurrently initiating the energization of one of the windings and said time switch to open one of said valves thereby providing a minimum rate of flow of the fuel, said time switch initiating a time period and being operable at the end of the period to concurrently reduce the flow of energizing current to said electric heater and energize the other of the windings to open the other of said valves to provide a mixmum rate of flow.

2,461,609
COMBINATION CRADLE AND PERAMBULATOR
Harry B. Light, San Gabriel, Calif.
Application November 23, 1946, Serial No. 711,871
7 Claims. (Cl. 280—31)

3. In a combination rocker and perambulator, a body, a vertically swinging running gear on said body for movement to and from a retracted or an advanced position embodying a wheeled axle, a yoke pivotally attached to said axle, a rocker-arm pivoted on said body, a link leading from one

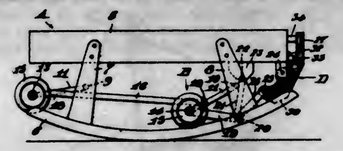
end of said rocker-arm to said yoke, a pivot con-

2,461,612
DYEING OF RESINS WITH POLYHYDROXY

device comprising a support provided with aperture means positioned to align with and be held

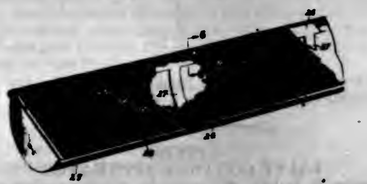
2,461,616
CONTACT FIXTURE
Charles W. P. Walter, Woodhaven, N. Y., assignor

end of said rocker-arm to said yoke, a pivot connecting said link to the outer end of said yoke,



and a link connected to said pivot having its outer end connected relative to said body.

2,461,610
SCREENED EAVES TROUGH
Chester R. Lord, Mineral City, Ohio
Application November 1, 1946, Serial No. 707,101
1 Claim. (Cl. 108—28)



The combination with an eaves trough, of a screening means supported within said trough, said means comprising an open frame positioned within said trough, and a reticulated member extending across the open end of said trough and having its ends interposed between said frame and said trough for securing the reticulated member thereto, said frame embodying a pair of longitudinally extending side strips and a plurality of curved strips arranged in spaced relation with respect to each other and secured to the longitudinal strips.

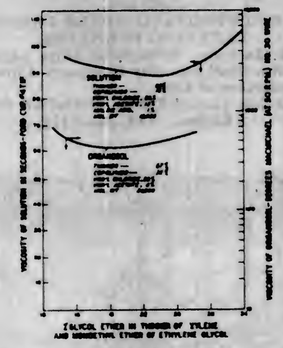
2,461,611
GUN FOR SPRAYING POWDER
David L. Lott, Denver, Colo.
Application March 3, 1947, Serial No. 731,975
3 Claims. (Cl. 222—193)

1. A dust gun comprising, an elongated housing closed at both ends, an air manifold near one end, a branched discharge opening in the wall of the manifold, a tube extending from one of the branches to a point near the other end of the housing, the wall of the housing having a discharge nozzle in substantial axial alignment with the open end of the tube, a second tube communicating the other branch of the discharge opening with the first mentioned tube at a point adjacent the discharge end of the latter, a valve means positioned in the discharge opening for directing air from the manifold to either tube, a gravity responsive means for positioning the valve to direct an air stream into the first mentioned tube when it is upwardly inclined and into the second mentioned tube when the parts are downwardly inclined, the first mentioned tube having its wall provided with an opening adjacent the valve, and means for supplying the manifold with air under pressure.

2,461,612
DYEING OF RESINS WITH POLYHYDROXY ALCOHOL ASSISTANTS
Henry Charles Olpin and Alexander James Wesson, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application April 5, 1945, Serial No. 586,230. In Great Britain April 18, 1944
2 Claims. (Cl. 8—4)

1. Process for the coloration of articles of polymerized diallyl phthalate synthetic resins which are substantially infusible and substantially insoluble in organic liquids and of which the skeleton of the molecules contain carbon atoms, which comprises subjecting the articles at a temperature of 130–180° C. to the action of a solution of a dye in a mixture of glycerol and water containing at least 50% by weight of glycerol.

2,461,613
DISPERSIONS OF VINYL CHLORIDE RESINS
Richard W. Quarles, Pittsburgh, and Clayton I. Spessard, Leechburg, Pa., assignors to Carbide and Carbon Chemicals Corporation, a corporation of New York
Application July 5, 1947, Serial No. 759,200
7 Claims. (Cl. 260—33.2)

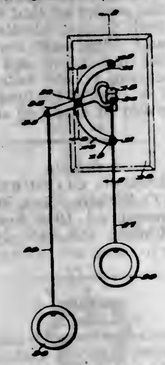


1. A coating composition comprising a suspension of from 25 to 40 parts by weight of a finely-divided emulsion-polymerized vinyl chloride polymer containing from 90 to 100% vinyl chloride by weight and having an average molecular weight above 20,000, in from 50 to 100 parts by weight of a suspension media composed of from 10 to 40% by weight of a lower monoalkyl ether containing up to six carbon atoms in the alkyl radical of a glycol from the group consisting of ethylene and diethylene glycol and from 60 to 90% by weight of a liquid aromatic hydrocarbon, said suspension media containing dissolved therein from 2 to 10 parts by weight of a copolymer including combined vinyl chloride and vinyl acetate containing from 80 to 92% vinyl chloride by weight and having an average molecular weight of from 6000 to 15000.

2,461,614
FLUSH TOGGLE SWITCH ATTACHMENT
Robert E. Seaman, Lansing, Mich.
Application July 9, 1946, Serial No. 682,196
4 Claims. (Cl. 200—172)

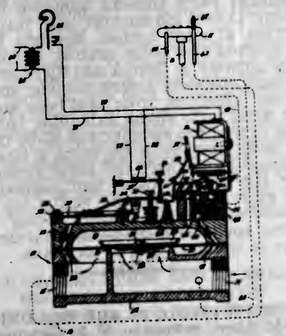
2. A device for attachment to a wall type toggle switch of the type provided with a toggle protruding through a flat removable switch plate; said

device comprising a support provided with aperture means positioned to align with and be held in place by the switch plate securing means of the switch, a pivot carried by said support and positioned to lie laterally of the toggle of the switch, a lever of the first class mounted on said pivot



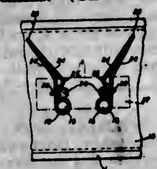
and swinging in a plane parallel to the plane of the switch plate, said lever having a bifurcated end adapted to embrace the toggle of the switch, and pull cords secured to the opposite ends of said lever whereby said lever may be swung in either direction about said pivot.

2,461,615
FLUID CONTROL DEVICE
Daniel G. Taylor, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application September 25, 1943, Serial No. 503,771
23 Claims. (Cl. 137—139)



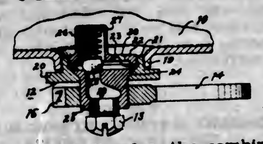
10. In a flow control device, a main valve, pressure responsive means for positioning said main valve, control means for actuating said pressure responsive means, a first means for operating said control means to move said main valve to a predetermined partly open position, a second means responsive to pressure in the outlet portion of said device for operating said control means to move said main valve to a predetermined substantially fully open position, heat responsive means yieldably resisting said last named movement, and adjustable means for regulating the flow in ratio to the pressure in the outlet portion of said device.

2,461,616
CONTACT FIXTURE
Charles W. P. Walter, Woodhaven, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 29, 1945, Serial No. 585,477
6 Claims. (Cl. 173—328)



6. A contact fixture for electrically connecting a unit, having terminals mounted adjacent the limits of a given overall distance with respect to each other, in an electrical circuit, the contact fixture comprising a panel of dielectric material having spaced apertures therein, supporting posts extending through the apertures in the panel and having outer and inner end portions, the latter being connected electrically to leads of an electrical circuit, and contact springs having like ends secured to the outer portions of the posts, adjacent first portions wound spirally on the outer end portions, like second portions extending diagonally toward each other to positions short of the said distance of the terminals, third portions extending diagonally away from each other to positions greater distances apart than the said distances of the terminals, substantially reverse bends formed at the ends of the third portions, fourth portions extending diagonally toward each other to positions short of the said distance of the terminals and fifth portions extending diagonally away from each other to cooperate with the first and second portions to form resilient pockets for removably locking the terminals in place.

2,461,617
ROTARY BALL VALVE
John Landon Waters, Salem, Oreg., assignor, by mesne assignments, to Carl F. Gerlinger, Dallas, Oreg.
Application July 31, 1944, Serial No. 547,353
6 Claims. (Cl. 251—132)



6. In a rotary ball valve, the combination of a valve supporting collar adapted to be connected to a source of fluid supply, said valve supporting collar having a central opening with a conical shoulder formed intermediate its ends, a rotatable valve seat member having a conical portion adapted to engage the conical shoulder of said collar and a fluid conduit extending therethrough and terminating at one end thereof eccentric to the axis about which said rotary valve seat member turns, a spring retaining member extending over the inner end of said valve seat forming member, an eccentrically disposed compression spring carried by said spring retaining member, a spherical ball interposed between one end of said spring and said valve seat forming member, said spring being arranged and adapted to operate through said spherical ball and bias said

valve seat forming member into sealing relation with the conical shoulder within the opening of said threaded valve supporting collar and also

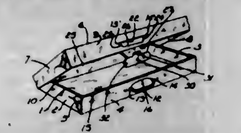
pipe supply and servicing connections to the tank above and below said bed of treating material respectively, and a series of fixed water jet ele-

openings aligned with the openings of said plate and having an extension beyond the periphery of said disc sharpened to a wedge edge at one side,

silhouette or image to be observed and the reading obtained when viewed from the non-illuminated face of said diaphragm, means for supporting said metering device closely adjacent the face

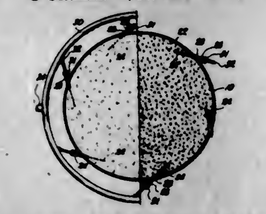
valve seat forming member into sealing relation with the conical shoulder within the opening of said threaded valve supporting collar and also position and bias said spherical ball into valve closing relation with the eccentrically disposed inner end of the fluid conduit of said valve seat forming member, and means at the other end of said valve seat forming member by which it may be turned to move the eccentrically disposed end of its fluid conduit out of and into registering relation with said spherical ball.

2,461,618
FOLDING BOX
Alvin Whittaker, Burbank, Calif.
Application October 9, 1945, Serial No. 621,201
1 Claim. (Cl. 229—52)



In a one-piece folding box adapted to form a bottom provided with upstanding side walls and a front end wall, a cover provided with upstanding side walls and a front end wall, and an end wall common to the bottom and cover, the provision of: a slit formed in the mid portion of the front end wall connected to the bottom, said slit having end portions extending from longitudinally spaced aligned points of origin substantially midway between the longitudinal edges of the front end wall in a direction toward the free edge of said wall, and a central portion adjacent such free edge; an aperture in the mid portion of the front end wall of the cover, said aperture having one longitudinal edge extending between points in substantial registry with the points of origin of the slit when said front end wall of the cover is placed in overlapping relation to the front end wall of the bottom, and a curved marginal edge having end portions extending toward the free edge of the end wall and a central portion adjacent such free edge; said aperture being of a size and shape to freely receive the bail of a handle extending from the points of origin of the slit while lying substantially flat against said first front end wall, the front end wall of the cover adjacent the longitudinal edge of the aperture covering the slit and holding the bail against lateral movement.

2,461,619
AUXILIARY BACKWASH FOR WATER-TREATING SYSTEMS
Herbert Wolcott, Columbia, Mo.
Application January 12, 1945, Serial No. 572,526
3 Claims. (Cl. 210—144)



1. In a closed water treating system, a tank having a bed of granular water-treating material, pipe supply and servicing connections to the tank above and below said bed of treating material respectively, and a series of fixed water jet elements projecting in substantially coplanar relation from the interior wall of the tank at the bottom of said bed of material at equally spaced intervals about the center of said bed and having the discharge ends thereof all directed at angles intersecting radii from said center which are traversed by the jets from said water jet elements, for producing a joint water action operative to impart a rotary washing movement to the bottom portion of said bed of treating material.

2,461,620
DISPENSING CLOSURE CAP
Ray C. Wright, Flint, Mich.
Application November 1, 1946, Serial No. 707,160
1 Claim. (Cl. 215—74)

A sealing and dispensing closure for attachment to the lip of the open mouth of the container adapted to contain a liquid, comprising a cap made of resilient material and including a substantially flat top member and substantially cylindrical walls depending therefrom so as to form a chamber for the reception therein of said lip, said top member having an opening arranged substantially centrally thereof and communicating with the interior of the mouth of the bottleneck, a dispensing valve element mounted for sliding movement in said top member, said valve element embodying a lower arched disc-like base normally bearing upwardly against the bottom of said top member to form a seal therebetween and a vertically-disposed hollow tubular shank open at its top projecting from said base and carried by the latter, said shank extending through the opening in said top member and slidably movable in the latter opening, there being a lateral aperture extending through the lower portion of the wall of the hollow shank and normally sealed by the walls of the opening in the top member, said dispensing valve element being openable upon the application of a downwardly-directed pressure to the open end of its shank.

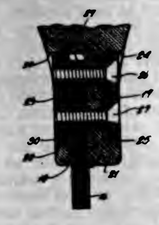
2,461,621
MICROTOME BLADE HOLDER
Robert R. Allen, Arlington, N. J., assignor to Custom Scientific Instruments, Inc., Arlington, N. J., a corporation of New Jersey
Application April 23, 1947, Serial No. 743,335
6 Claims. (Cl. 88—40)

5. Microtome cutting element which comprises a blade mounting disc having a hub to receive a spindle, an intermediate zone of decreasing thickness and a peripheral margin of relatively less thickness, said margin having slots at balanced positions extending inwardly from the periphery, said disc having openings one for each slot, entering from one side face to said slot, a plate in each said opening, said plate having a pair of tapped holes, a blade for one of said slots having a shank mounted in said slot and having a pair of spaced

2,461,625
TELESCOPIC STRUCTURE
George O. Benson, Niagara Falls, N. Y., assignor to Chisholm-Ryder Company, Incorporated, Niagara Falls, N. Y., a corporation of New York
Application July 26, 1945, Serial No. 607,213

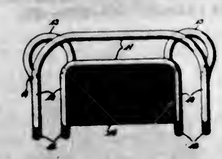
tion and providing a supporting surface for the body of the patient, a pair of spaced semi-circular rods concentric with said axis, secured to and depending from the under side of said section, a transverse rod fast to said support and arranged generally parallel with said axis adjacent said

openings aligned with the openings of said plate and having an extension beyond the periphery of said disc sharpened to a wedge edge at one side,



and a pair of screws extending from the face of said disc opposite said opening through the holes in said blade and into the holes in said plate and a balancing blank in the other of said slots.

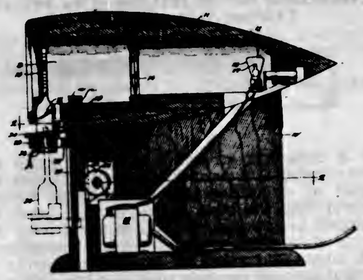
2,461,622
FOOTREST
Nicholas Alikas, Plainville, Conn.
Application July 18, 1946, Serial No. 684,422
1 Claim. (Cl. 155—169)



A foot rest comprising a rod of pliable resilient material doubled into an endless loop of parallel counterparts which in turn are bent at certain points from the middle of said loop to form two horizontally disposed U-shaped portions, one of them being within and parallel to the other, the arms of said U-shaped portions being in turn bent at certain points forming two pair of perpendicularly disposed parallel legs, said legs being in turn bent at certain points in a horizontal direction forming two pair of parallel feet running directly beneath and parallel to the arms of the said U-shaped portions and terminating in a somewhat paw-shaped flared loop; and covering material laid across the open space of the inner one of the said U-shaped portions and securely fastened to the base and arms thereof.

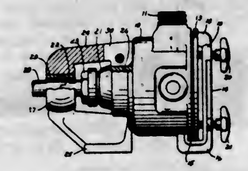
2,461,623
VISUAL OBSERVATION AND SILHOUETTE PROJECTION APPARATUS
George D. Armerding, Oak Park, Ill., assignor to Mojonnier Bros. Co., a corporation of Illinois
Application April 22, 1944, Serial No. 532,294
7 Claims. (Cl. 88—24)

1. Observation equipment for facilitating accurate visual reading of a metering device, comprising, in combination, means including a light source and a lens for producing a beam of substantially parallel light rays of sufficient cross-sectional area to include the desired zone of observation, a diaphragm having a face acted on and illuminated by said beam and disposed in a plane perpendicular to said beam for displaying a silhouette or image of a metering device disposed in said beam adjacent the illuminated face of said diaphragm and having the capacity of transmitting sufficient light to enable such silhouette or image to be observed and the reading obtained when viewed from the non-illuminated face of said diaphragm, means for supporting said metering device closely adjacent the face



of said diaphragm which is illuminated by said light beam, and heater means for maintaining the metering device at a predetermined elevated temperature during the use of said equipment.

2,461,624
SANITARY PUMP
William E. Bakewell, Cedar Falls, Iowa, assignor to Viking Pump Company, Cedar Falls, Iowa, a corporation of Iowa
Application September 27, 1945, Serial No. 618,907
1 Claim. (Cl. 103—218)



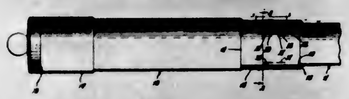
A pump comprising a casing having a main body portion containing a pump, a cylindrical extension on the main body portion of the casing through which a pump shaft passes, an inlet and outlet in the main body portion of the casing to and from the pump, a support member for supporting the pump having a cylindrical receiving portion on one end of the support member to receive the cylindrical extension on the main body portion of the casing therein, said cylindrical receiving portion for the extension on the main body portion of the casing being split and having a clamp member to draw the split sections together, said cylindrical extension for the extension on the main body portion of the casing being rotatable in the receiving portion to vary the location of the inlet and outlet on the pump when the clamp member is released, said clamp member when tightened clamping the receiving portion around the cylindrical extension on the main body portion of the casing to render the cylindrical extension and main body portion immovable within the support member, a second receiving portion on the support member spaced from the first mentioned receiving portion having a bearing therein and the pump shaft extending into the bearing and coupled to a shaft extended from a motive source within the bearing in the second receiving portion.

2,461,629
CLUTCH AND BRAKE MECHANISM
Kendall Clark, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Original application May 31, 1942, Serial No. 447,075, now Patent No. 2,346,152, dated April

of such surfaces, whereby when said shafts are driven said die member gyrates around the mandrel to knead and roll the material being extruded.

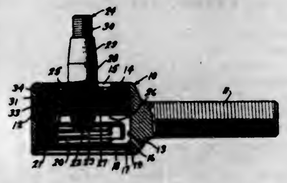
2,461,631
MACHINE TOOL

2,461,625
TELESCOPIC STRUCTURE
George O. Benson, Niagara Falls, N. Y., assignor to Chisholm-Ryder Company, Incorporated, Niagara Falls, N. Y., a corporation of New York
Application July 26, 1945, Serial No. 607,213
6 Claims. (Cl. 287—58)



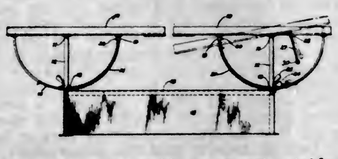
3. A telescopic structure including inner and outer slidably and rotatably interfitted tubes, and a pair of circumferentially extending tongues integral with the body of one of said tubes and arranged in opposed relation to each other and having ends offset radially toward the other of said tubes, said other of said tubes having an opening through one side receiving the outwardly offset ends of said pair of tongues to limit the axial and circumferential movement of said tubes relative to each other.

2,461,626
JOINT
James H. Booth, Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application December 9, 1944, Serial No. 567,470
5 Claims. (Cl. 287—90)



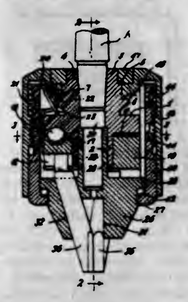
4. A tie rod joint comprising a socket having a resiliently backed plastic material bearing wall accommodating tilting and rotating movements, a stud having a head seated on said bearing wall, a spring-urged retainer in said socket having a rounded dimple therein, and a plastic material bearing member seated in said dimple and acting against said stud to transmit forces of the spring to the stud for maintaining the stud head in good bearing relation with the seat.

2,461,627
OPERATING TABLE
George A. Brewster, Buffalo, N. Y.
Application March 29, 1946, Serial No. 658,065
2 Claims. (Cl. 311—7)



1. In an operating table, a support, a table section pivoted on said support to swing about a horizontal axis adjacent the center of said section and providing a supporting surface for the body of the patient, a pair of spaced semi-circular rods concentric with said axis, secured to and depending from the under side of said section, a transverse rod fast to said support and arranged generally parallel with said axis adjacent said semi-circular rods, a pair of stop plates fast to said transverse rods and projecting toward a corresponding one of said semi-circular rods, a stop on each of said semi-circular rods and arranged to prevent one end of said section from swinging downwardly about said axis from a generally horizontal position, a collar around the upper end of each of said semi-circular rods at the opposite end of said section, means for adjusting each of said collars lengthwise of said semi-circular rods, and a helical compression spring around each of said semi-circular rods and interposed between said collars and said stop plates to bias said opposite end of said section upwardly to effect engagement between said stop and stop plate.

2,461,628
CHUCK
Lee S. Chadwick, Shaker Heights, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a corporation of Ohio
Application April 30, 1945, Serial No. 591,197
24 Claims. (Cl. 279—69)

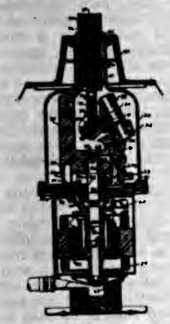


14. In a chuck, the combination of a driver, a thrust element and a jaw holder, all rotatable about a common axis, jaws slidable in the jaw holder along forwardly converging axes that intersect one another on the axis of the jaw holder, the thrust element and jaw holder being non-rotatable with respect to each other while being capable of limited rotation with respect to the driver, the jaw holder and thrust element being relatively movable toward each other to cause the jaws to assume gripping position and away from each other to cause the jaws to open, means for effecting said relative movement between the jaw holder and thrust element, said thrust element having radial guideways in its front face and the jaws having undercut heads at their rear ends that are slidable in said guideways, the open side of the guideways being no less in width than the maximum width of said heads, jaw retainers having parts interengaged with parts of the thrust element and other parts underlying the heads of the jaws for coupling the jaws to the thrust element, and means responsive to resistance of the thrust element to rotation and a consequential regression of said element with respect to the driver for urging said element toward the jaw holder thereby to increase the gripping force of the jaws on an object grasped thereby.

dered clevis pieces and a bearing washer, said clevis pieces being positioned on the respective sides of the centrally extending element, each said clevis piece having a shank portion presenting an outer surface concentrically formed to correspond with the inner face of the spring and hav-

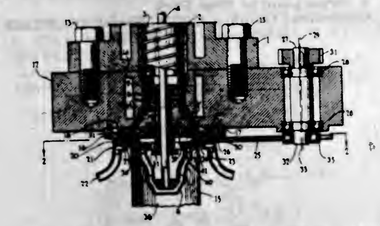
second of said two conductors in said casing, said leaf spring having an offset portion acting as a movable electrical contact overlying the metallic rivet-like member and normally spaced apart therefrom, a flexible moisture proof diaphragm fitted within said recess, said recess hav-

2,461,629
CLUTCH AND BRAKE MECHANISM
Kendall Clark, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Original application May 21, 1942, Serial No. 447,075, now Patent No. 2,346,152, dated April 11, 1944. Divided and this application March 2, 1944, Serial No. 524,695
9 Claims. (Cl. 192—12)



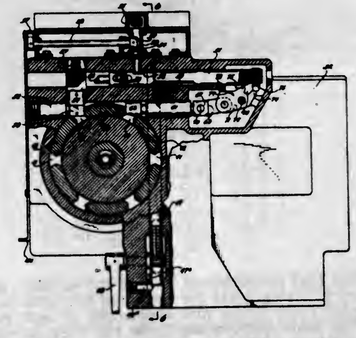
1. In combination, a rotatable member, a reversible driving means, means including an axially movable inertia device axially operable by the rotation of said driving means in one direction for connecting said driving means and said rotatable member and operable by the reverse rotation of the driving means to disconnect the driving means from said rotatable member, and a friction clutching means for clutching said inertia device to said rotatable member.

2,461,630
PLASTIC MATERIAL EXTRUSION HEAD
Giuseppe Cosso, New York, N. Y., assignor to Hydropress, Incorporated, New York, N. Y., a corporation of Delaware
Application August 8, 1945, Serial No. 609,641
3 Claims. (Cl. 18—14)



1. A machine for extruding tubes of plastic material comprising a mandrel having an external cylindrical surface, a die member having an internal cylindrical surface of greater diameter than said external surface, a pair of parallel shafts, means to drive said shafts at the same speed and in the same direction during extrusion of material between said surfaces, eccentrics carried by said shafts and similarly oriented with respect thereto, and means mounting said die member on said eccentrics around the mandrel, the eccentricity of said eccentrics being less than the difference between the radii of such surfaces, whereby when said shafts are driven said die member gyrates around the mandrel to knead and roll the material being extruded.

2,461,631
MACHINE TOOL
Nicholas P. Darash, Cleveland, Ohio, assignor to The Warner & Swasey Company, Cleveland, Ohio, a corporation of Ohio
Application November 11, 1943, Serial No. 509,841
10 Claims. (Cl. 29—49)



1. In a machine tool, an indexible member provided with spaced abutment portions, a movable locking element adapted to cooperate with one end of an abutment portion in each indexed position of said member, locating means including a locating stop in alignment with said locking element, and a locating element cooperating with said stop and the opposite end of said abutment portion in each indexed position of said member and movable transversely to the path of movement of said locking element, and actuating means for said locking and locating elements.

2,461,632
METHOD OF NITRATING CELLULOSE LACE-BACKING FABRICS
Joseph Datlow, New York, N. Y.
No Drawing. Application January 24, 1947, Serial No. 724,246
4 Claims. (Cl. 8—120)

1. The process of producing lace backing fabric comprising treating natural cellulose, open mesh fabric with mixed acid comprising from 60 to 40 parts by volume 97% nitric acid and from 40 to 60 parts by volume 75% phosphoric acid for about 0.5 minute and exposing the treated fabric to air for about 4.5 minutes.

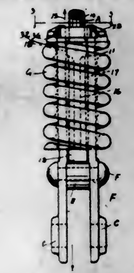
2,461,633
RESILIENT CONNECTION FOR BRAKE RODS AND THE LIKE
George B. Dorey, Westmount, Quebec, Canada
Application March 17, 1945, Serial No. 583,349
4 Claims. (Cl. 267—72)

4. As an article of manufacture, a resilient extensible connection including a coil spring and oppositely movable shouldered elements embracing the opposite ends of said spring; one of said elements extending centrally through the spring and the other of said elements being in the form of a yoke assembly including a pair of shoul-

an output connection are subjected to the forces of compression and tension to unbalance said circuit, a source of electrical energy for said bridge circuit, a variable transformer connected to said source, a potentiometer upon which the variable voltage at said transformer is impressed, a second transformer the primary of which is

valve and a condenser shunted thereacross, the output from said valve and charging circuit being fed through an integrating circuit to the control electrode of a second electronic valve, and a tuned transformer fed by the output of said second valve.

dered clevis pieces and a bearing washer, said clevis pieces being positioned on the respective sides of the centrally extending element, each said clevis piece having a shank portion presenting an outer surface concentrically formed to correspond with the inner face of the spring and having a flat inner face constituting a guiding wall for the centrally extending member; said bearing washer having a ring shaped body portion encircling the shank portions of the pair of clevis pieces, said body portion of the washer being interposed between the shoulders of the clevis

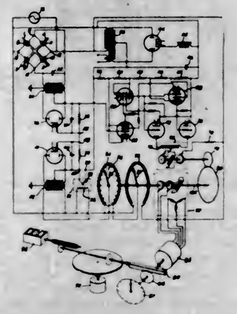


pieces and the adjacent end of the spring, said washer having seats for receiving the shoulders of said clevis pieces and abutments at each end of the seats outstanding from the body portion of the washer, said abutments extending between the pair of clevis pieces to maintain the same in definite spaced relation, said shoulder receiving seats on the washer being slightly inclined downwardly towards the abutments to maintain the clevis pieces in engagement with the abutments when longitudinally acting tensional pressure is applied on the connection.

2,461,634
FLASHLIGHT
Otto Doose, Clifton, N. J., assignor to Bright Star Battery Company, Clifton, N. J., a corporation of New Jersey
Application December 15, 1945, Serial No. 635,278
1 Claim. (Cl. 200—60)

A flashlight comprising a tube of insulating material having an outwardly facing recess, a pair of conductors in said tube and underlying said recess, said conductors being spaced apart and electrically insulated from each other, a metallic rivet-like member extending through said casing in the recess and being secured to one of said two conductors, said rivet-like member constituting a stationary electrical contact, a metallic leaf spring positioned in said recess, metallic means extending through said casing and securing said leaf spring electrically to the second of said two conductors in said casing, said leaf spring having an offset portion acting as a movable electrical contact overlying the metallic rivet-like member and normally spaced apart therefrom, a flexible moisture proof diaphragm fitted within said recess, said recess having a ledge on which said diaphragm rests and to which said diaphragm is hermetically sealed, a stationary strip of resilient material having an outwardly bowed tongue, one end of said tongue being free, said stationary strip overlying the diaphragm directly above said offset portion of said leaf spring, a contact box overlying said stationary strip, means for securing said contact box and said stationary strip fixedly to said tube and over said recess, a slidable flexible strip within said contact box, said flexible strip having an offset portion, button means externally carried on said contact box for slidably supporting said slidable strip internally of said box with one end of said slidable strip free for flexion, said button means also being operable to slide said slidable strip, locking tongue means on said contact box with which said one end of said slidable strip is engageable in one of its slidable positions to then preclude flexion of said slidable strip, a second button means extending outwardly of said contact box and overlying the offset portion of said slidable strip, said last-named offset portion being engageable with said outwardly bowed tongue of said stationary strip in a second of the slidable positions of said slidable strip to thereby flex said diaphragm and maintain said offset portion of said leaf spring in contact with said metallic rivet-like member, and said offset portion of said slidable strip being engageable with said outwardly bowed tongue of said stationary strip in a position intermediate the said two slidable positions of said slidable strip only upon manual depression of said second-named button means to thereby only then flex said diaphragm and then maintain said offset portion of said leaf spring in contact with said metallic rivet-like member.

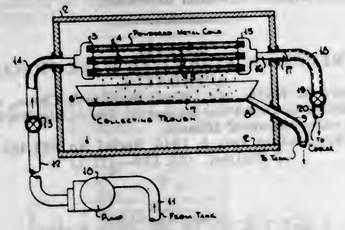
2,461,635
MAGNETOSTRICTIVE PRESSURE INDICATOR
Anton M. Feller, Rahway, N. J., assignor to Control Instrument Company, Inc., Brooklyn, N. Y., a corporation of New York
Application October 6, 1944, Serial No. 557,528
6 Claims. (Cl. 73—398)



4. In a measuring system in which magnetically energized magnetostrictive elements included in a normally balanced bridge circuit having

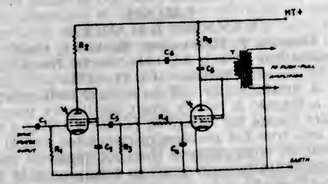
an output connection are subjected to the forces of compression and tension to unbalance said circuit, a source of electrical energy for said bridge circuit, a variable transformer connected to said source, a potentiometer upon which the variable voltage at said transformer is impressed, a second transformer the primary of which is supplied by said potentiometer, a third transformer upon which unbalanced voltage in said output connection is impressed, and rectifying circuits including resistors in series opposition connected to the secondaries of said second and third transformers.

2,461,636
SELF-DEFROSTING REFRIGERATION SYSTEM
Peter J. Gaylor, Union, N. J.
Application October 11, 1944, Serial No. 558,279
7 Claims. (Cl. 62—1)



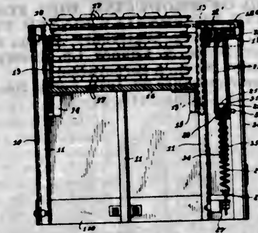
1. The method of refrigeration employing a normally liquid refrigerating medium, cooled to below the freezing point of water, under conditions tending to form a coating of frost on the outside of the refrigerating coils, comprising passing said cooled liquid medium through porous refrigerating coils under pressure sufficient to cause said medium to ooze out slowly through said pores and cover the outer surface in an amount sufficient to prevent or remove the formation of adherent crust-like deposit of frost.

2,461,637
CIRCUIT ARRANGEMENT FOR PRODUCING A SINE WAVE VOLTAGE FROM A PULSE WAVEFORM
Leslie W. Germany, Cambridge, England
Application June 30, 1945, Serial No. 602,599
In Great Britain April 3, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires April 3, 1964
3 Claims. (Cl. 171—97)



2. Arrangement for producing a sine wave voltage from a pulse waveform comprising an electronic valve to the control electrode of which the pulse waveform is fed, a charging circuit comprising a resistance in the anode circuit of the valve and a condenser shunted thereacross, the output from said valve and charging circuit being fed through an integrating circuit to the control electrode of a second electronic valve, and a tuned transformer fed by the output of said second valve.

2,461,638
APPARATUS FOR STORING AND DISPENSING STACKED ARTICLES
William J. Gibbs, Brooklyn, N. Y.
Application February 17, 1945, Serial No. 578,386
9 Claims. (Cl. 312—71)



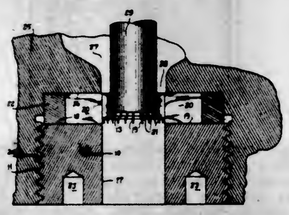
1. A storing and feeding apparatus comprising a frame, a carrier adapted to be moved vertically within said frame and to support a load of stacked articles with the uppermost article of the stack at a predetermined level, carrier supporting means, a plurality of spring tensioning members connected to said carrier supporting means and frame, and elongated vertically extending counterbalance elements connected to said carrier supporting means, and confined by said spring tensioning members to a vertical lengthwise path of travel, each spring tensioning member being calibrated to balance a certain weight, and said plurality of spring tensioning members and counterbalance elements collectively counterbalancing said carrier and a predetermined load of stacked uniform articles so that the uppermost articles in said stack will be maintained at a predetermined level.

2,461,639
COMBINED SOCKET AND SPANNER GRIP WRENCH FOR SHOE CALKS
Joseph G. Grigalunas, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a corporation of Connecticut
Application November 17, 1945, Serial No. 629,247
1 Claim. (Cl. 81—90)

A hand-wrench for shoe calks of both the lug grip and spanner grip types, made from a single piece of sheet metal and provided with a flattened head having a slot therein, the rear portion of said slot being of keyhole shape and extending lengthwise of the head and the walls of the forward portion of the slot extending outwardly and forwardly from the forward end of said keyhole

shaped portion to form forwardly projecting arms, the ends of said arms being provided with forwardly protruding lugs, and a shank having its inner end portion arranged substantially at right angles to said head and its remaining portion inclined upwardly and rearwardly from said inner end portion, said keyhole shaped portion of the slot being adapted to engage shoe calks of the type having a lug grip, and said projecting lugs being adapted to engage shoe calks of the type having a spanner grip.

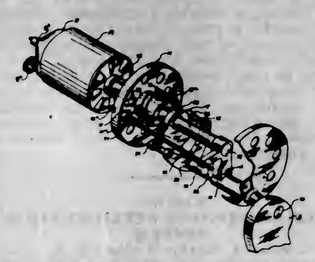
2,461,640
METHOD OF PRODUCING DIES FOR EXTRUDING EXTERNALLY FINNED TUBES
August W. Hallberg, Waterbury, Conn., assignor to Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation
Application November 29, 1946, Serial No. 713,160
2 Claims. (Cl. 76—107)



1. The method of producing dies for extruding externally-finned tubes, which method includes the steps of providing a die-body, forming a longitudinal extruding-passage axially therethrough, forming a clearance-passage in said die-body for the fins of the tube to be extruded by boring a concentric counterbore in the lower end of said extruding-passage, forming a plurality of blade-receiving grooves in said die-body by cutting a plurality of transverse grooves across the upper end thereof to intersect both the inner sides of said extruding-passage and the inner sides of said clearance-passage, said transverse grooves lying in planes which are coextensive with and intersect the longitudinal axis of said die-body, mounting plate-like blades in each of said transverse grooves, inserting a plug-gauge into said counterbore into engagement with the lower ends of said plate-like blades to locate the inner edges of said blades radially outwardly with respect to the inner surface of said extruding-passage and substantially flush with the inner surface of said clearance-passage and then clamping a ring around the upper end of said die-body to provide seats for the outer edges of said plate-like blades.

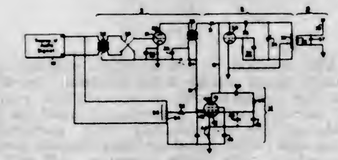
2,461,641
MEANS FOR CONVERTING ROTARY TO INTERMITTENT OSCILLATING MOTION
Thomas Harris, East Cleveland, and Edward C. Swilik, Cleveland, Ohio, assignors, by direct and mesne assignments, to The Apex Electrical Manufacturing Co., Cleveland, Ohio, a corporation of Ohio
Application March 26, 1947, Serial No. 737,212
9 Claims. (Cl. 74—89)

1. An intermittent oscillating mechanism comprising reversible driving and driven members, a clutch associated with said members, support means for said mechanism movable in alternate directions about an axis spaced from that of said members, means associated with said driven member for effecting said motion when the clutch engages, and a release member for disengaging



the clutch after a predetermined angular motion of said support in either direction.

2,461,642
FREQUENCY-STABILIZED WAVE-SIGNAL APPARATUS
Albert E. Hayes, Jr., West Hartford, Conn., assignor to Haseltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application July 5, 1946, Serial No. 681,453
5 Claims. (Cl. 179—171.5)

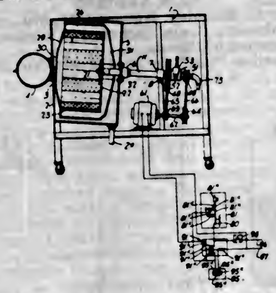


1. A frequency-stabilized wave-signal apparatus comprising, a generator of wave signals of predetermined carrier frequency, means effective to vary the amplitude of the wave signals generated by said generator in accordance with a modulating signal to produce an amplitude-modulated wave signal but tending to cause undesired deviation of the frequency of the wave signals generated by said generator, means coupled to said generator and effective to modify said carrier frequency, and means for utilizing said modulating signal to control said last-named means substantially to diminish said undesired deviation of said carrier frequency.

2,461,643
DYNAMIC BALANCER
George T. Hemmeter, Berkeley, Calif.
Application March 20, 1944, Serial No. 527,318
27 Claims. (Cl. 74—573)

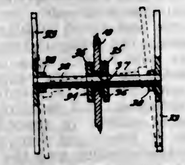
1. A dynamically self-balancing unit comprising: a frame; a rotary shaft resiliently mounted on said frame for balanced rotation about a fixed axis but free for resiliently restricted radial displacement with respect thereto; resilient means for constraining said shaft to rotate on said fixed axis; a body fixed to said shaft for rotation therewith and provided with fluid receptacles disposed in spaced relation about its axis; a source of fluid under pressure associated with said frame; and valve means supported by said frame and responsive to any substantial radial displacement of said

shaft for establishing communication selectively between said source of fluid and at least one of the



receptacles on that side of the shaft opposite the direction of its displacement.

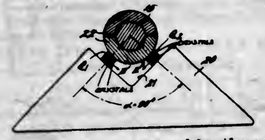
2,461,644
TOY
Earl C. Hillhouse, Tulsa, Okla.
Application August 14, 1946, Serial No. 690,515
4 Claims. (Cl. 46—130)



1. In a toy, an upright body member provided with a zigzag slot extending from an upper portion to a lower portion thereof; and a movable member adapted to descend by gravity with respect to the body member, comprising, a shaft extending transversely thru and revoluble in said slot, an annular flange on said shaft on each side of said slot, said flanges being spaced apart a distance slightly greater than the thickness of said body member, and an acrobatic figure on each end portion of said shaft member, the said elements of the movable member being constructed and arranged to permit relative adjustment of the figures toward and from the plane of the body member whereby they may be arranged substantially in balanced relation to cause the movable member to descend rapidly with the axis of the shaft substantially horizontal, and to permit of relative adjustment of the figures toward and from the plane of the body member whereby they may be arranged in unbalanced relation to cause the movable member to descend slowly with the peripheries of the flanges rubbing against the upright member and the axis of the shaft extending diagonally with respect to the plane of the body member.

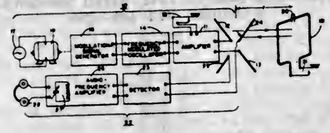
2,461,645
BALANCING MACHINE
Heinz E. Kallmann, Boston, Mass., assignor to Gyro-Balance Corporation, Greenwich, Conn., a corporation of Delaware
Application December 22, 1943, Serial No. 515,304
6 Claims. (Cl. 73—66)

1. In a blancing machine for a rotary member, axially spaced bearings for said member, means for rotating said member in said bearings, a plurality of pressure sensitive elements disposed at each bearing and angularly displaced with respect to each other around the axis of rotation of said member, said pressure sensitive elements being so constructed and arranged as to sustain substantially the entire weight of said member and be subjected to substantially the total alternating pressure effects of any forces due to unbalance of the member, means for detecting



the pressure impulses sustained by the respective elements at one bearing point and for producing signals corresponding to said impulses, means to modify individually the phase and amplitude of such signals, means for applying a correction to each of said signals proportional to the pressure impulses sustained by one of the pressure sensitive elements at the other bearing point, and means for combining the signals and rendering an indication of the amplitude and phase of the unbalance forces which they represent.

2,461,646
CARRIER-WAVE COMMUNICATION SYSTEM
Harold M. Lewis, Allenhurst, N. J., assignor, by mesne assignments, to Haseltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application October 8, 1941, Serial No. 414,050
19 Claims. (Cl. 250—6)

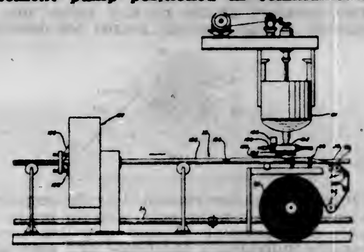


1. A carrier-wave communication system comprising, a transmitting station including means for generating and directly radiating a modulated carrier wave, carrier-wave radiating means remotely situated from said station and adapted to be solely energized by said carrier wave and thereby to reradiate carrier-wave energy directly radiated thereto from said station, means for modulating said reradiated carrier wave with a desired signal to be transmitted, means for receiving said reradiated carrier wave and dependent upon the modulation of said radiated carrier wave for deriving from said received carrier wave the desired modulation-signal components thereof, and means coupled to said last-mentioned means for utilizing said desired modulation-signal components.

2,461,647
APPARATUS FOR APPLYING PLASTIC MATERIAL TO CABLES
Leroy W. Lovett and Sloan S. Sherrill, Baltimore, and August Stiegler, Towson, Md., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application May 31, 1946, Serial No. 673,580
3 Claims. (Cl. 91—43)

1. An apparatus for pouring molten plastic material onto a cable, which comprises means for

advancing a cable along a predetermined path, a heated conduit leading toward the cable, a shaft extending longitudinally in the conduit, a helical band fastened to the shaft and fitting loosely in the conduit, means for turning the shaft whereby the helical band urges the material along the conduit toward the cable, a heated constant displacement pump positioned in communication

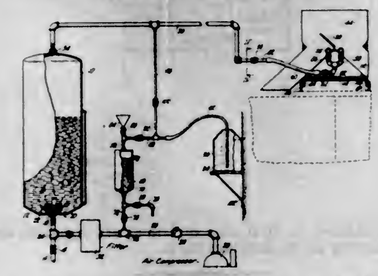


with the discharge end of the conduit, means for driving the constant displacement pump from the shaft, means for discharging the material in a freely flowing stream upon the cable at a predetermined point in the path thereof, and means for driving the cable-advancing means and the shaft-driving means in synchronization so that a uniform quantity of the material is applied to the cable per unit of length thereof.

2,461,648
FASTENING
Donald Keith Macleod, Wooster, Ohio, assignor to United Steel Fabricators, Inc., Wooster, Ohio, a corporation of Ohio
Application July 23, 1945, Serial No. 606,511
2 Claims. (Cl. 189—36)

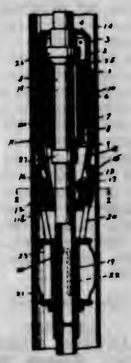
1. In a fastening of the character described, a pair of superposed sheet metal plates in face-to-face engagement of which the inner plate has an opening therein and the outer plate extends in continuous relation across said opening, a hollow sheet metal clip having a tapered opening therein and also having a greater dimension longitudinally of said tapered opening than it does transversely of the tapered opening, said clip being attached to said outer plate and projecting inwardly through the opening of said inner plate, and a tapered resilient retaining pin extending through and wedgingly engaged in the tapered opening of said clip and having its ends bearing on said inner plate on opposite sides of the opening thereof, said pin being formed of sheet metal and being transversely curved and being also longitudinally bowed in a direction away from said plates, the tapers of said clip and pin having substantially the same slope such that the wedging engagement therebetween is of large area and extends for substantially the full length of the clip.

2,461,649
AUTOMATIC GRAIN FUMIGANT APPLICATION SYSTEM
Timothy C. Manning, Kansas City, Mo., assignor to Uhlmann Grain Company, Chicago, Ill., a corporation of Illinois
Application March 24, 1947, Serial No. 736,672
4 Claims. (Cl. 21—108)



1. In a grain fumigating system of the kind described, a source of compressed, vaporous fumigant; a series of open top bins; a mobile hopper for receiving grain to be fumigated, said hopper having at least one outlet spout and being mounted for movement above said bins with spout selectively registrable with said open top of the bins; at least one perforated tubular member in the hopper within the path of travel of grain passing through said hopper to a selected bin; a conduit extending through the hopper and connecting with said member; a manifold for receiving said fumigant, said manifold having a number of valved outlets in spaced alignment with said series of bins; and removable means for connecting said conduit and the outlet corresponding with the bin being filled with grain from the conduit.

2,461,650
WELL PACKER
Dunn C. Marler, Lake Charles, La.
Application August 14, 1944, Serial No. 549,425
1 Claim. (Cl. 166—12)



A packer adapted to form a seal between an outer pipe and an inner pipe in a well and comprising a tubular mandrel, an inner pipe section working through, and spaced from, the mandrel, a safety cap on the upper end of the mandrel having an inwardly extended annular flange and

having perforations, a stop on the lower end of the mandrel closely surrounding the inner pipe and having a duct therethrough, spaced enlargements on said inner pipe section spaced beneath said flange and stop, respectively, an expansible packer element around the mandrel, an expander slidably mounted on the mandrel below the packer element, an inner flange on the expander engageable with the stop on the mandrel, jaws slidably mounted on the expander and expansible into packer supporting engagement with the outer pipe upon downward movement of the expander relative thereto and retractable from the outer pipe upon upward movement of the expander relative thereto, the upper enlargement on the inner pipe being engageable with the upper end of the mandrel, upon downward movement of the inner pipe and being shaped to close the passageway through the mandrel and being effective to force the mandrel downwardly to apply a compressive force to the packer element to expand the same into contact with the outer pipe when the jaws engage the outer pipe in packer supporting engagement, the lower enlargement being engageable with said stop to lift the expander and retract the jaws upon upward movement of the inner pipe.

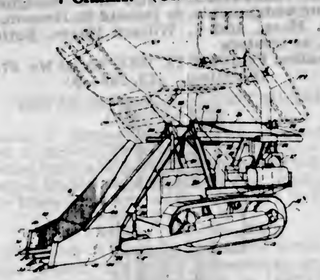
2,461,651
METHOD OF TREATING SEA ANIMAL PRODUCTS
Erling Mathiesen, Stavanger, Norway, assignor to Hermetikkindustriens Laboratorium, Stavanger, Norway
No Drawing. Application January 7, 1946, Serial No. 639,700
In Norway January 19, 1945
1 Claim. (Cl. 99—188)

The method of accelerating the natural seasoning of canned fish comprising adding to the fish prior to canning a small quantity of a reducing agent, sealing the fish into cans and thermally sterilizing the fish in the cans after sealing.

2,461,652
KNOCKDOWN CASTER
James W. Montgomery, Sr., Duluth, Minn.
Application July 29, 1946, Serial No. 687,003
2 Claims. (Cl. 16—31)

1. As a new article of manufacture, a knockdown caster comprising two like parts, each part comprising a single piece of sheet metal bent at right angles to form a pair of legs, each of said parts having a hole through each of the legs thereof; a pintle having a threaded end and a shoulder adjacent thereto; a nut; said parts being assembled with one leg of one of said parts overlapping the corresponding leg of the other of said parts and the other legs of said parts extending in spaced parallel relation to each other, said pintle extending through the holes in said overlapping legs with said shoulder engaging one of said legs, and said nut being installed on the threaded end of said pintle to hold said parts in assembled relation; a wheel; and an axle fixed within said wheel; said wheel being carried intermediate of said spaced parallel legs with said axle extending within opposed ones of the holes in said last mentioned legs whereby the last mentioned holes and axle form the rotatable connection for said wheel to said parts.

2,461,653
VEHICLE MOUNTED SHOVEL
Russell J. Nadherny, Chicago, Ill., assignor to Athey Products Corporation, Chicago, Ill., a corporation of Illinois
Application June 13, 1946, Serial No. 676,451
7 Claims. (Cl. 214—131)



1. A shovel for use on an overhead type of loader such that material is scooped in at one end, carried, in an intermediate position and dumped from the opposite end and comprising, in combination, a bottom plate having substantially planar end portions disposed in obtuse angular relationship and connected by a smoothly curved intermediate portion, substantially flat side plates secured to opposite side edges of the bottom plate and extending rearwardly from one end of the bottom plate to the curved intermediate portion thereof, said side plates having integral portions extending rearwardly beyond the curved intermediate portion to provide thrust brackets through which driving force is applied to the shovel, means secured to the end of the bottom plate to provide a forward cutting edge, side cutting plates secured to the ends of the side plates adjacent the forward cutting edge, said side cutting plates being disposed in obtuse angular relationship with respect to the planes of the side plates and projecting inwardly of the shovel so as to tend to relieve pressure of material scooped into the forward end, and additional side plates secured to opposite sides of the bottom plate, said additional side plates adjoining the first mentioned side plates and extending to the rearward end of the bottom plate to provide a chute for dumping material from the shovel.

2,461,654
HIGH-SPEED BELT
Ernest Nassimbene, Denver, Colo., assignor to Gates Rubber Company, Denver, Colo., a corporation of Colorado
Application July 31, 1944, Serial No. 547,414
1 Claim. (Cl. 74—232)

A highly flexible thin flat belt consisting of a single layer of helically wound, spaced tension

ing engagement therebetween is of large area and extends for substantially the full length of the clip.

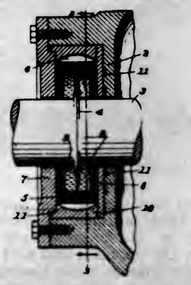
working through, and spaced from, the mandrel, a safety cap on the upper end of the mandrel having an inwardly extended annular flange and

said legs, and said nut being installed on the threaded end of said pintle to hold said parts in assembled relation; a wheel; and an axle fixed

A highly flexible thin flat belt consisting of a single layer of helically wound, spaced tension

members, and a thin agglutinant covering of vulcanizable rubber-like material for at least one side of the tension layer, the covering having portions thereof extending into the spaces between the tension members to provide an elastic spacer and attaching means, the covering material having incorporated therein linter fibers extending transversely of the belt in planes parallel with the tension layer, the linters providing means for resisting forces tending to split the belt longitudinally.

2,461,655
SEAL
Warren Noble, Garden City, N. Y., assignor, by mesne assignments, to Donald R. Hanson, Melrose, Mass., and C. Willard Hayes, Bethesda, Md., as trustees
Application February 19, 1945, Serial No. 578,604
16 Claims. (Cl. 286—9)



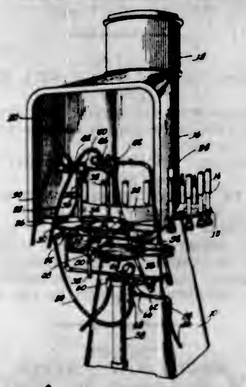
1. A seal for concentric stationary and rotatable members, the latter of which is adapted at times to be held substantially stationary, comprising means carried by the rotatable member defining an annular chamber, open at its inner side facing and surrounding the stationary member and having a wall portion displaceable under pressure changes to vary the volumetric capacity of the chamber, said open, inner side being marginally defined by displaceable sealing means urged into sealing contact with the stationary member when the rotatable member is stationary, an annular flange on the stationary member projecting into the chamber through said open side between said sealing means, and a body of liquid permanently substantially filling said chamber, held therein during rotation of the rotatable member by centrifugal force and constituting a substantially frictionless liquid seal between the chamber and the flange with said sealing means out of contact with the stationary member, and held in the chamber by said sealing means when the rotatable member is substantially stationary.

2,461,656
FLUSHING DEVICE
Glenn A. Norman, Des Moines, Iowa
Application September 9, 1946, Serial No. 695,699
1 Claim. (Cl. 285—90)

A coupling member to conduct a fluid under pressure from one conduit to a second conduit comprising a flexible hose, means on one end of the flexible hose to join the coupling member to the first conduit supplying fluid under pressure, a fitting having a projecting male portion connected to the other end of the flexible hose, a rubber adaptor member having an opening therethrough to be received by the projecting male portion of the fitting, said rubber adaptor being of substantial height with one end portion being wider than the other end portion and the sidewall of the adaptor being conical, the wider end portion of the adaptor being dished to seal with a flat surface surrounding

an opening leading to a second conduit, said conical side wall adapted to seal with an opening leading to a second conduit and said rubber adaptor being reversible on the fitting.

2,461,657
AUTOMATIC SPRAY COATING APPARATUS
Jens A. Paasche, Chicago, Ill.
Application February 26, 1945, Serial No. 579,742
7 Claims. (Cl. 91—45)

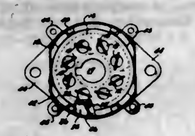


1. An automatic spray coating apparatus comprising a hood and an exhaust stack connected thereto, a plurality of spaced apart article supports arranged to pass through said hood, means for moving said spaced apart article supports through said hood, an air-brush mounted on a movable support member, means for moving said support member successively in one direction in synchronism with the movement of each succeeding article support, said later means including a shaft having at one end a lever adapted to be engaged by successive article supports, a cam follower mounted on the other end of the shaft, and a fixed cam surface for determining the travel of said airbrush support member, and means for restoring said air-brush support to its original position.

2,461,658
ELECTRIC CIRCUIT UNIT
Rolland R. Roup, Milwaukee, Wis., assignor to Globe-Union Inc., Milwaukee, Wis., a corporation of Delaware
Application April 19, 1946, Serial No. 663,373
7 Claims. (Cl. 250—16)

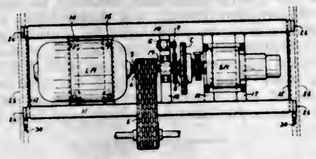
1. In a unitary sub-assembly for electrical devices, a tube socket having a circular aperture therethrough and a notch communicating with the aperture and extending from one end of the

socket and an electric circuit component mounted in the notch, the notch side walls being formed with ledges supporting the component on a chord of the aperture side wall and being



formed with projections adjacent the end of the socket for engagement with the component to prevent movement thereof from the notch in one direction.

2,461,659
MOTOR DRIVE
William H. Rouse, Greenfield, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application June 12, 1947, Serial No. 754,113
7 Claims. (Cl. 171—252)



3. The combination with a motor drive comprising a relatively large motor, a shaft connected thereto and having a bearing spaced from said motor, a relatively small motor and a clutch between the latter motor and said shaft, of a supporting structure comprising a pair of parallel girders and cross bars carried by said girders to support separately and in axial alignment said motors and said shaft bearing, said girders extending longitudinally of such drive assembly and being in spaced relation to receive therebetween parts of said assembly, thereby to provide a unit which in height closely approximates the height of said large motor per se.

2,461,660
PACKAGE
Leroy L. Salfisberg, South Orange, N. J., assignor to Ivers-Lee Company, Newark, N. J., a corporation of Delaware
Application February 2, 1945, Serial No. 575,755
2 Claims. (Cl. 206—46)

2. A package consisting of a strip of flexible material folded longitudinally in at least three plies to form a substantially flat article carrying tube, said tube being provided at spaced intervals across its entire width with tube deforming crimpings extending through its walls to securely hold spaced portions of said walls in effective tube closing and sealing contact and to impart relative rigidity to said tube closing portions, the walls of said tube between said tube closing portions being separated to form article-containing compartments, one of the plies of said material that has a free edge being disposed with its free edge between two plies of material throughout the length of the tube coincidentally with one of the folds at opposite longitudinal edges of the tube and the ply that has the other free edge being positioned with its free edge exteriorly and in overlapping relationship with two of said plies coincidentally with the fold at the other longitudinal edge of said tube throughout the length of the tube, all of said plies being sealed together along said opposite longitudinal folded edge portions of the tube and forming a continuous stiffened edge flange extending throughout the length of each of said longitudinal edge portions of the tube for imparting rigidity to the package throughout said longitudinal edge portions, protecting said free edges of the plies, reenforcing the folds at the longitudinal edges of said compartments and preventing entrance of air into the tube.

2,461,661
PREPARATION OF ALKALI METAL COMPOUNDS
Hermann I. Schlesinger, Chicago, Ill., and Herbert C. Brown, Detroit, Mich., assignors to the United States of America as represented by the United States Atomic Energy Commission
No Drawing. Application January 9, 1945, Serial No. 572,090
11 Claims. (Cl. 23—204)

8. A process of preparing an alkali metal borohydride which comprises introducing an alkali metal alkoxyborohydride into a reactor, substantially completely removing air from the reactor, and introducing diborane into the reactor and into contact with the alkali metal alkoxyborohydride, the temperature of the alkali metal alkoxyborohydride and diborane in the reactor being maintained between —50° C. and 50° C.

11. Sodium borohydride, a white solid having the composition corresponding to the formula $NaBH_4$.

2,461,662
PREPARATION OF ALKALI METAL COMPOUNDS
Hermann I. Schlesinger, Chicago, Ill., and Herbert C. Brown, Detroit, Mich., assignors to the United States of America as represented by the United States Atomic Energy Commission
No Drawing. Application January 9, 1945, Serial No. 572,091
9 Claims. (Cl. 23—204)

8. A process of preparing an alkali metal borohydride which comprises introducing an alkali metal alkoxide into a reactor substantially completely removing a substantial amount of air from the reactor, and introducing diborane into the reactor and into contact with the alkali metal alkoxide, the temperature of the alkali metal alkoxide and diborane in the reactor being maintained between —80° C. and 50° C.

2,461,663
PREPARATION OF ALKALI METAL BOROHYDRIDES
Hermann I. Schlesinger, Chicago, Ill., and Herbert C. Brown, Detroit, Mich., assignors to the United States of America as represented by the United States Atomic Energy Commission
No Drawing. Application January 11, 1945, Serial No. 572,436
10 Claims. (Cl. 23—14)

8. A process of preparing an alkali metal borohydride which comprises introducing an alkali metal tetraalkoxyborate into a reactor, removing a substantial amount of air from the reactor, and introducing diborane into the reactor

ible hose, a rubber adaptor member having an opening therethrough to be received by the projecting male portion of the fitting, said rubber adaptor being of substantial height with one end

1. In a unitary sub-assembly for electrical devices, a tube socket having a circular aperture therethrough and a notch communicating with the aperture and extending from one end of the

that has a free edge being disposed with its free edge between two plies of material throughout the length of the tube coincidentally with one

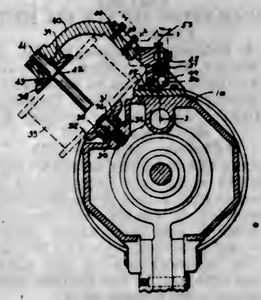
metal tetraalkoxyborate into a reactor, removing a substantial amount of air from the reactor, and introducing diborane into the reactor

and into contact with the alkali metal tetraalkoxyborate, the temperature of the alkali metal tetraalkoxyborate and diborane in the reactor being maintained between —80° C. and 50° C.

2,461,664
VAPOR GENERATION AND PUFFING WITH AUDIBLE EFFECTS IN TOYS
William R. Smith, Philadelphia, Pa., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application August 30, 1941, Serial No. 409,656
53 Claims. (Cl. 46—118)

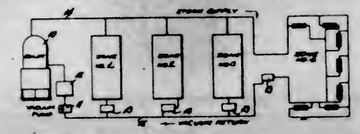
1. In a hollow toy having a vapor outlet for the emission of fumes from said toy, a replenishable substance convertible by heat into fume-laden vapor, means to generate said heat, means for storing said fume-laden vapor simultaneously with the generation thereof, and means to liberate at least portions of the stored vapor from said toy at particular times through said outlet.

2,461,665
REEL SUPPORT
William R. Spiller and Leo D. Barley, Dayton, Ohio, assignors, by mesne assignments, to Acme Steel Company, Chicago, Ill., a corporation of Illinois
Original application May 31, 1943, Serial No. 489,116, now Patent No. 2,398,053, dated April 9, 1946. Divided and this application May 4, 1945, Serial No. 591,898
10 Claims. (Cl. 242—134)



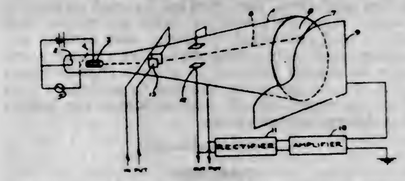
1. In a wire stitching machine the combination of a reel support comprising a clamp member for one side of the reel, means supported in fixed relation with respect to said machine for rotatably mounting said member for rotation with the reel as the wire is unwound therefrom, a second clamp member mounted on said machine independently of said first clamp member for engaging the opposite side of said reel, means pivotally mounted on said machine having a predetermined operative position for adjustably mounting said second clamp member in engaging relation with said opposite side of the reel, and means for releasably retaining said pivotally mounted means in said operative position and providing for quick release thereof to effect removal and replacement of said reel.

2,461,666
VACUUM REGULATOR
Timothy J. Sullivan, Butte, Mont., assignor to Sullivan Valve and Engineering Company, Butte, Mont., a corporation of Montana
Application December 9, 1944, Serial No. 567,451
8 Claims. (Cl. 237—9)



1. A vacuum regulator system for steam heating plants of the type having a common steam supply for several separate units located in the several spaces to be heated, and a common vacuum return for said units; said regulator system comprising a plurality of vacuum regulators, one of said regulators being attached between the vacuum return line and each unit; each of said regulators comprising a chambered housing, means for connecting said housing to said unit, means for connecting said housing to said vacuum return line, means for controlling the degree of vacuum in said housing, means responsive to temperature changes of the atmosphere inside said housing for adjusting said first named means and means responsive to temperature changes of the atmosphere outside of said enclosed spaces for also adjusting said first named means.

2,461,667
ELECTRICAL SYSTEM
David E. Sunstein, Cynwyd, Pa., assignor to Philco Corporation, a corporation of Pennsylvania
Application October 3, 1946, Serial No. 700,959
23 Claims. (Cl. 332—13)



1. A non-linear circuit arrangement comprising a cathode ray tube having a source for generating an electron beam, a screen mounted within a transparent dielectric, a conducting mask in electrical proximity to the screen of said cathode ray tube and in capacitative coupling with said beam, said mask having a predetermined construction in accordance with the desired non-linear operation and circuit connections from said mask to said cathode ray tube.

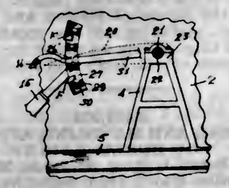
2,461,668
FILM HOLDER FOR PHOTOGRAPHIC ENLARGERS
William D. Thompson, San Diego, Calif.
Application October 24, 1946, Serial No. 705,443
3 Claims. (Cl. 88—24)

1. A film holder for enlarging machines comprising: a horizontally extending frame member provided with a medially positioned apparatus opening; a semi-cylindrical film receiver formed on each extremity of said frame member; a lid closing each receiver and allowing access thereto for placing a roll of film therein; means for rotat-

ing the rolls of film in said receivers, said film extending from one receiver to the other receiver above said frame member; a cover plate removably positioned above said frame member and provided with a framing opening; a first absorbent wiping pad supported from said frame mem-

ber in contact with the bottom surface of said film; a second absorbent wiping pad carried by said cover plate in contact with the upper surface of said film; a fluid cleaner reservoir in said cover plate; and conduits communicating between said reservoir and said pads to supply cleaning fluid to the latter.

2,461,669
VARIABLE INCIDENCE WING CONTROL FOR AIRCRAFT
Max B. Wiley, Wichita, Kans.
Application July 11, 1944, Serial No. 544,350
3 Claims. (Cl. 244—48)



1. In airplane construction, a fuselage, a wing body for each side of the fuselage, extending therefrom in straight alignment from each other, a tubular element rotatably carried by the fuselage, said tubular element having an end portion extending a spaced distance into the leading edge of one wing body, means to secure said end portion within said wing body, a rod rotatably positioned in said tubular element and extending outward therefrom at each end thereof, one end portion of said rod extending a spaced distance into the leading edge of the other wing body and means to secure last said end portion therein, means to restrict longitudinal movement of said rod as engaged in the tubular element, a spar element for the trailing edge of each wing body, said spar elements each having an end portion extending through and into the fuselage toward each other, means carried by the end portions of the spar elements to restrict longitudinal movement of the spar elements, said means permitting vertically movement thereof independently, and an actuator secured to each spar element to rock the wing bodies.

2,461,670
AUTOMATIC SEAR-RELEASING MECHANISM FOR FIREARMS
David M. Williams, New Haven, Conn., assignor to Olin Industries, Inc., New Haven, Conn., a corporation of Delaware
Application July 21, 1945, Serial No. 606,320
6 Claims. (Cl. 89—140)

1. An automatic firearm including in combination: a receiver; a breech-bolt movable in the said receiver; an action-slide movable lengthwise of the firearm-structure and operatively connected to the said breech-bolt for moving the same in the said receiver, the said action-slide having a lost-motion connection with the breech-bolt and provided with a forwardly-facing latching-abutment; a firing-member for effecting the discharge of the firearm; a sear for releasably holding the said firing-member in a cocked position; a timing-member mounted for reciprocation lengthwise of the firearm-structure and carrying a latching-portion yieldable in a direction transverse of the firearm-structure, the said latching-portion having a rearwardly-facing latching-abutment releasably engageable with the forwardly-facing latching-abutment of the said ac-

tion-slide; spring-means urging the said timing-member rearwardly into a retired position; the said timing-member being constructed and arranged to retire the said sear when the latching abutment of the said timing-member is disengaged from the latching-abutment of said action-slide and the timing-member retires under the urge of the said spring-means; and releasing-means constructed and arranged to automatically move the transversely-yielding latching-portion of the said timing-member to disengage its latching-abutment from the latching-abutment of the said action-slide when the latter has moved the said breech-bolt substantially into its breech-closing position.

2,461,671
DETACHABLE CLEAT FOR SHOES
Jack R. Wright, Los Angeles, Calif.
Application November 12, 1946, Serial No. 709,362
3 Claims. (Cl. 36—7.7)

1. A detachable cleat for a shoe having a projecting sole, said cleat comprising a wire member adapted to lie against said sole, and having a plurality of arms adapted to extend to the edge of the sole, the outer ends of the arms extending first upwardly and then inwardly to engage the edge of the sole and secure the cleat to the sole, said plurality of arms including a pair of rearwardly extending arms one of which is adapted to engage the inner edge of the sole and the other of which is longer than said one arm and is adapted to engage the outer edge of the sole, and a brace extending from the outer end of said one arm to an intermediate point on said other arm.

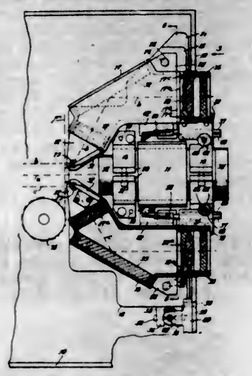
2,461,672
MOTOR PROPELLED TOY VEHICLE
Alojsy Adamczyk, New York, N. Y.
Application December 11, 1946, Serial No. 715,559
3 Claims. (Cl. 46—211)

1. In a self propelled toy, having a motor and frame with a pair of rear and front wheels in

reel, and means for releasably retaining said pivotally mounted means in said operative position and providing for quick release thereof to effect removal and replacement of said reel.

which at least one of the rear wheels is motor driven and the other rear wheel idle, a spring influenced eccentric member slideably and rotatively supported on said frame intermediate its ends, and adapted normally to be out of contact with the travel surface, but to contact the latter when the front part of said toy drops off an edge of said travel surface, means for bringing said member into operative engagement with the motor, whereby said member will receive a rotary motion and due to its eccentricity, cause the lifting of the front part of the vehicle above the level of the said travel surface, and simultaneously cause the toy to change its direction of travel.

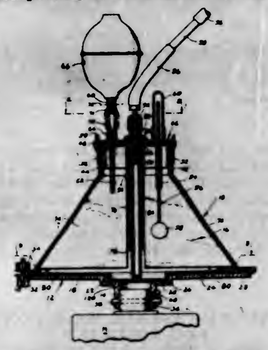
2,461,673
MULTIPLE LENS LIGHT CONTROL FOR PROJECTORS
Rudolph J. Anschicks, Charles Widell, and John R. Mantsh, Chicago, Ill., assignors to Prismacolor, Inc., Chicago, Ill., a corporation of Illinois
Application October 3, 1947, Serial No. 777,710
15 Claims. (Cl. 88—1)



1. In light control for projectors, the combination of a main supporting block having a bore therethrough, a cylindrical middle lens housing extending through said bore, a supporting plate carried by said lens housing, outer lens housings pivotally mounted on said plate, one at each side of the middle lens housing and swingable toward and from said middle lens housing, lenses in said middle lens housing, angularly disposed lenses in said outer lens housings, a plate carried by each outer lens housing and having a reflecting surface, each plate being disposed at an angle to the optical axis of one of the lenses in each outer lens housing, a second plate in each outer lens housing having a reflecting surface and disposed at an angle to the optical axes of both lenses in the outer lens housings, and means to swing said outer lens housings toward and away from the middle lens housing.

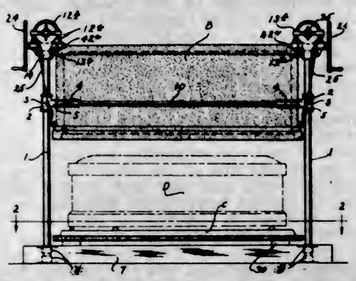
2,461,674
CENTRIFUGE APPARATUS FOR OBTAINING BLOOD PLASMA
William Aronson, New York, N. Y.
Application July 25, 1944, Serial No. 546,548
7 Claims. (Cl. 233—28)

1. Apparatus for separating the plasma and red cells of blood from each other, comprising a centrifuge-vessel having an inlet for receiving the blood from the donor, said vessel being rotatable about a vertical axis and having a bottom inclined downwardly from the periphery thereof toward the axis of rotation whereby the blood and plasma flow toward the central part of said bottom and stratify in separate layers on said bottom after the centrifuging operation, and outlet means comprising a tube movably mounted in



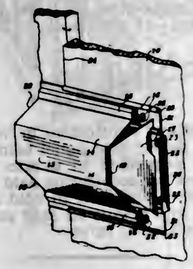
said vessel axially thereof to position the tube inlet at different distances from the bottom of said vessel to place said tube inlet in communication with the layers of plasma and blood cells, respectively, stratified by the rotation of said vessel, said tube having an outlet for the passage of said plasma or cells from said vessel.

2,461,675
LOWERING AND HANDLING APPARATUS FOR BURIAL VAULTS
Christy L. Berg, St. Louis, Mo.
Application May 2, 1945, Serial No. 591,493
2 Claims. (Cl. 254—136)



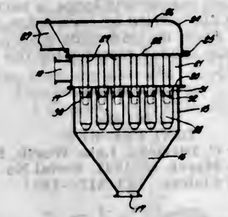
1. In an apparatus of the kind described for mounting over an open grave, the same including an oblong supporting frame with corner posts and gear housings upon the upper ends of the posts at one side of the frame and roller shafts disposed transversely at the ends of the frame and horizontally journaled at one end through the said gear housings and rotatably supported at their opposite ends at the upper ends of the posts at the opposite side of the frame, and there being worm gears upon the ends of the roller shafts within the gear housings, and including drive shafts with worms thereon journaled through the gear housings transversely below the said worm gears with the worms in mesh with the gears, and there being operating hand wheels upon the outwardly extended ends of the drive shafts, braking mechanisms at the ends of the roller shafts as extended through the gear housings, the same comprising brake wheels threadedly mounted upon the reduced and threaded ends of the roller shafts, and frictional braking elements interposed between the brake wheels and the adjacent sides of the gear housings, whereby the turning up of the brake wheels or releasing same will result in pressing the intermediate brake elements against the sides of the gear housings for slowing the movement of the roller shafts, or releasing the brake wheels will speed the movement of said shafts.

2,461,676
LOCK PROTECTOR
Nicholas M. Budak, Waterloo, Iowa
Application January 25, 1946, Serial No. 643,381
4 Claims. (Cl. 70—416)



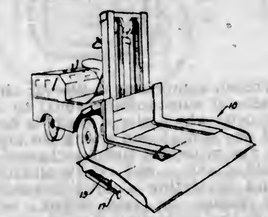
1. A lock protector for covering and enclosing a lock on a door, comprising a shield, one end of said shield having a swingable closure member thereon, means slidably securing said shield to the door, and stop means on the door for retaining said swingable closure member in closed position, said stop means also retaining said shield against removal in one direction.

2,461,677
APPARATUS FOR SEPARATING SUSPENDED PARTICLES FROM GASES
Joseph L. Burdock, Old Greenwich, and Philip F. Best, Riverside, Conn., and Charles B. McBride, Port Chester, N. Y., assignors to The Aerotec Corporation, White Plains, N. Y., a corporation of New York
Application May 8, 1947, Serial No. 746,746
4 Claims. (Cl. 183—81)



1. Apparatus for separating suspended particles from gases which comprises an open ended dust bin having a peripheral inner ledge spaced from said open end, a partition plate removably supported on said ledge, said partition plate having spaced openings, centrifugal tubes in said openings and extending into and opening into said dust bin, said dust bin having an inlet above said ledge, a closure plate removably supported on the open end of said bin having openings co-axial with those of said partition plate and off-take pipes one for each centrifugal tube mounted in said closure plate and projecting axially into its respective centrifugal tube to form an annular passage therein, each off-take pipe having radially extending deflecting vanes to fit into and span the upper part of said annular passage at an angle to the length of said annular passage to impart a circulatory motion to gases passing downwardly through said annular passage, and a cover on the open end of said bin to form a chamber above said closure plate, said cover having an outlet.

2,461,678
LOADING RAMP
Carl O. Christensen, Walnut Creek, Calif., assignor to Roll-Rite Corporation, Oakland, Calif., a corporation of California
Application October 14, 1946, Serial No. 703,180
6 Claims. (Cl. 14—72)



1. A loading ramp, comprising a bridge member having two side portions, a fixed abutment end and a movable abutment end, an integral flange secured to each side portion extending above said bridge member substantially the length thereof and being provided with a downward extension projecting below said bridge member providing a fixed abutment member adjacent said fixed abutment end, a shaft-receiving member secured to and outwardly of each said flange, said shaft receiving member terminating a substantial distance short of said movable abutment end, a shaft slidably received within said shaft receiving member and provided with ratchet rack teeth along its upper surface, said teeth being adapted to engage a pivoted pawl to permit movement of said shaft toward but to prevent movement thereof away from said movable abutment end, and a pawl having a weighted head and a foot treadle and pivotally supported above said rack to prevent retraction of said shaft.

2,461,679
METHOD OF REACTING A PIPERYLENE WITH A HALO SUBSTITUTED MALEIC ANHYDRIDE
Albert M. Clifford, Stow, and Clyde E. Glelm, Akron, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application September 4, 1944, Serial No. 552,680
1 Claim. (Cl. 260—78.5)

The rubbery polymeric material prepared by reacting 55 parts of piperylene with 80 parts of a compound of the group consisting of monochloromaleic anhydride and dichloromaleic anhydride dissolved in an aromatic hydrocarbon solvent at a temperature between 0° and up to 10° C. until the reaction is complete and recovering the polymeric material.

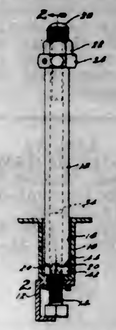
trifuge-vessel having an inlet for receiving the blood from the donor, said vessel being rotatable about a vertical axis and having a bottom inclined

upon the outwardly extended ends of the drive shafts, braking mechanisms at the ends of the

said ledge, a closure plate removably supported

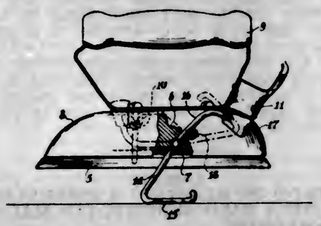
the polymeric material.

2,461,680
WRENCH WITH THREADED NUT HOLDING MEMBER
Patrick T. Cousino, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application July 16, 1945, Serial No. 605,250
2 Claims. (Cl. 81—90)



1. A wrench comprising a tubular shank having a diameter substantially equal to the width of a nut with which the wrench is to be used, means at one end of said shank for engagement with the nut to permit turning thereof by turning of said shank, a rod axially slidable in said shank and projecting slightly beyond the nut engaging means on said shank, interrupted threads on the projecting end of said rod, said rod end having a longitudinal split therein to provide resilient segments carrying the threads, means at the opposite end of said shank for turning said rod, and stop means between said shank and rod for limiting the axial movement of said rod relative to said shank.

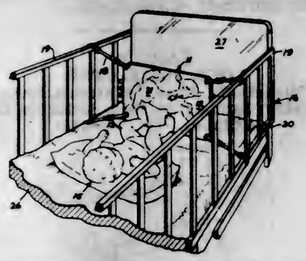
2,461,681
SUPPORT FOR ELECTRIC SADIRONS
Joseph A. Cragan, Kingston, N. Y.
Application September 13, 1945, Serial No. 616,105
9 Claims. (Cl. 38—79)



8. An electric iron having a body, a supporting device comprising a transverse shaft pivoted in the body and having a leg on each side thereof terminating in a foot for supporting the iron horizontally when not in use, the axis of the pivot of said shaft being in rear of the center of gravity of the iron and each foot extending forward of the center of gravity of the iron when the supporting device is in supporting position, said shaft having an arm on at least one side of the body, said device being freely movable from a supporting to a retracted position and from a retracted position to a supporting position, and a stop on the iron in the paths of movement of the arm for

holding the device in a supporting position and in a retracted position, and means for thermally insulating said legs.

2,461,682
EXERCISER AND AMUSEMENT DEVICE FOR INFANTS
Edmond de Ferrari, San Francisco, Calif.
Application November 6, 1944, Serial No. 562,178
1 Claim. (Cl. 272—57)



An exerciser and amusement device for infants comprising a panel; said panel being adapted to be vertically suspended in a crib or play-pen, resilient means for connecting said panel to the sides of a crib or play-pen to hold said panel in said position, and means on said panel inducing an infant to move the same.

2,461,683
TABLE AND CHAIR COMBINATION
Walter C. Dierickx, Lake Worth, Fla.
Application March 15, 1947, Serial No. 735,037
1 Claim. (Cl. 155—123)

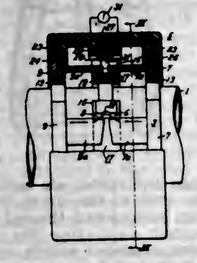
A table and chair combination comprising a detachable circular table top, a plurality of chairs equidistantly spaced around the table, said chairs each having arms, one arm of each chair having its upper front corner cut away for forming a horizontal table supporting ledge, a vertically arranged dowel pin carried by each ledge, said table top provided upon its underside with a plurality of equidistantly spaced recesses for the reception of said dowels.

2,461,684
DINETTE SET
Walter C. Dierickx, Lake Worth, Fla.
Application March 15, 1947, Serial No. 735,038
5 Claims. (Cl. 312—164)

1. A combination table and desk comprising a table top formed by two semi-circular sections

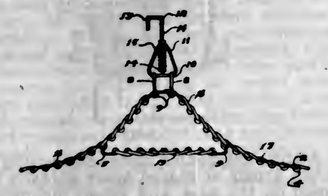
hinged together along their straight edges, supporting legs fixed upon one table section, two of said legs spaced apart to provide a knee hole opening, panel members hinged to the spaced apart legs to form a simulated desk front and a plurality of chairs having solid transversely curved backs adapted to be arranged beneath the table with the vertical edges of their backs abutting and flush with the edge of the semi-circular table sections to form a semi-circular rear wall for the desk.

2,461,685
TORQUE AND POWER MEASURING DEVICE FOR SHAFTS
Frank W. Godsey, Jr., Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 30, 1945, Serial No. 591,045
27 Claims. (Cl. 73—136)



1. A shaft power measuring device comprising, in combination, a single stationary electromagnetic unit including an electrical coil, a magnetic circuit of magnetizable material including said stationary electromagnetic unit, means for producing in said magnetic circuit a magnetic flux, said magnetic flux when changing producing voltage in said electrical coil means in an amount corresponding to changes in value of said magnetic flux, means forming a part of said magnetic circuit and responsive to the speed of rotation of the shaft and the circumferential deflection of said shaft for changing the value of said magnetic flux, and means for measuring a voltage in said electrical coil whereby the power output of said shaft is indicated.

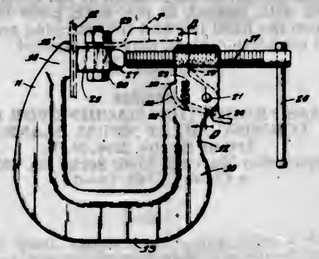
2,461,686
GARMENT HANGER
John Hiebert, Brownvale, Alberta, Canada
Application August 7, 1946, Serial No. 689,059
In Canada July 23, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires July 23, 1965
3 Claims. (Cl. 223—89)



1. In a garment hanger, a body portion over which the garment is to placed, said body portion comprising a series of connected links, each of said links consisting of a single piece of material

bent to provide a center portion and opposing converging legs, said legs terminating in hooks, said links being connected with the hooks of each link engaging the center portion of the next but one link in the series.

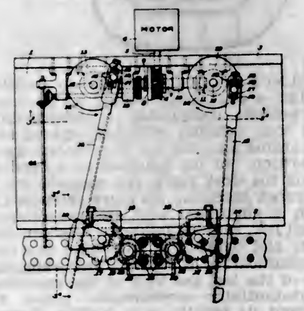
2,461,687
WELDER'S CLAMP
Fred P. Hopfeld, Elmwood Park, Ill., assignor to Grand Specialties Company, Chicago, Ill., a corporation of Illinois
Application July 19, 1946, Serial No. 684,974
1 Claim. (Cl. 173—273)



A welder's clamp for operatively holding and grounding a work piece during an electric welding operation comprising a substantially U-shaped body member including spaced substantially parallel legs and an interconnecting transverse portion, one leg constituting a fixed jaw for engaging the work piece, the opposite leg having a feed screw receiving aperture extending therethrough in alignment with and perpendicular to the fixed jaw, said leg having a substantially rectangular slot depending from said aperture and in communication therewith and extending inwardly of the leg, the wall of the aperture having substantially semicircular screw threads throughout its length on a portion thereof and the remaining portion of the aperture walls being smooth and a portion thereof being open and communicating with the slot, a threaded feed screw received within the aperture, said screw being of less diameter than said aperture, an operating handle on the outer end of said feed screw for rotating the same and for moving the screw toward and away from the fixed jaw, a latch member pivotally mounted within the slot and including an operating extension projecting outwardly of the slot exteriorly of the said leg and toward the operating handle, the other end of said latch member having serrations thereon in the nature of threads for engagement with the threads on the said feed screw, a bore within said latch member in alignment with the said leg, a spring received within the bore and having its outer end bearing against the base of the wall of the said slot for normally forcing said serrated portions of said latch member into engagement with the threads of the feed screw, so that when the latch member is pivoted upon actuation of the operating extension thereon, the serrations on the latch member are disengaged from the threads on the feed screw and rapid non-rotative longitudinal movement of the feed screw toward and away from the fixed jaw may be obtained, and when the serrations on the latch member are in engagement with the threads of the feed screw the same may be rotatably fed and retracted toward and away from the fixed jaw by means of the operating handle, a ball member carried by the inner end of said feed screw, a combined work piece clamping and electrical connecting block having

a flat work piece engaging surface at one end and a ball receiving extension socket at the other end, the ball carried by the inner end of the feed screw being rotatably secured in the extension socket, said block also having an aperture extending therethrough from side to side transversely of the longitudinal axis of the feed screw, a terminal bolt disposed within said aperture and extending outwardly thereof to which a ground conductor may be connected, the ball and socket connection being such that universal 360 degree rotation of said combined clamping and electrical connection block about the axis of said feed screw for the adjustment of the position of the ground conductor with respect to the work piece disposed between the fixed jaw and the clamping and electrical connection block may be obtained.

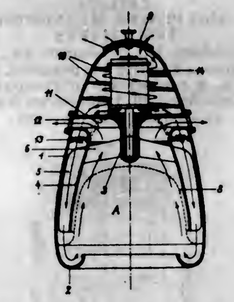
2,461,688
MASS PRODUCTION MACHINE FOR DIE-FORMING SHEET METAL BLANKS
Arthur Illsche, Rye, N. Y.
Application March 1, 1946, Serial No. 651,130
8 Claims. (Cl. 74—70)



1. In a mass production machine, a plurality of rotatable spindles cooperating in pairs and assembled for group operation, each spindle being provided with a pinion by which it is driven, gearing for each group of spindles including a reciprocating rack bar and a gear driven thereby engaging the pinions of the spindles of the group with which it is associated to simultaneously rotate the spindles, the direction of rotation alternating with the back and forth movement of the rack bar, the aforesaid gearing being adapted to rotate the spindles of each pair in opposite directions and at different speeds, and screw feeding means responsive to rotation of the spindles for advancing the spindles of each pair towards each other and being automatically reversed to retract the spindles after each operation.

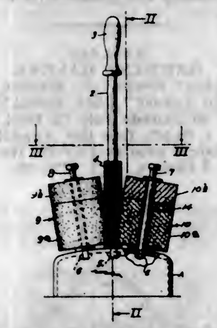
2,461,689
HAIR DRIER
Alois Květoň, Brunn, Czechoslovakia
Application September 10, 1946, Serial No. 695,928
In Czechoslovakia September 20, 1945
3 Claims. (Cl. 34—99)

1. In a hair dryer in combination a dryer helmet having an open bottom end; a hair drying chamber within said dryer helmet accessible through said open bottom end thereof into which the upper head portion of the person using the dryer helmet fits; air inlet means in the wall of said dryer helmet spaced from said bottom end thereof; at least one air inlet conduit leading from said air inlet means to said open bottom end of said dryer helmet and from there into said hair drying chamber; an electric motor arranged within said air conduit; heating means arranged also in said air inlet conduit between said motor and said open bottom end of said dryer helmet; first fan means driven by said electric motor arranged also within said air inlet conduit adapted to suck in cold air through said air inlet means and force said cold air past said electric motor cooling the same and thereafter past said heating means whereby said sucked in air is heated, and finally along said open bottom end of said dryer helmet into said hair drying



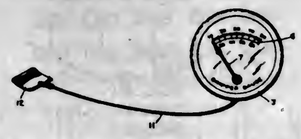
chamber within the same; air outlet means arranged in the wall of the dryer helmet spaced from said open bottom end thereof; at least one air outlet conduit connecting the upper end of said hair drying chamber within said dryer helmet with said air outlet means; and second fan means arranged within said hair drying chamber in said dryer helmet and driven also by said electric motor so as to force vapor saturated air from said hair drying chamber through said air outlet conduit and said air outlet means into the space surrounding the said dryer helmet without recirculating the same.

2,461,690
KNIFE SHARPENER
Kim Kee Leong, San Francisco, Calif.
Application October 28, 1946, Serial No. 706,195
6 Claims. (Cl. 51—214)



1. A knife sharpening device comprising a base member, a pair of spaced apart abrasive wheels disposed on the base, and means mounting said wheels for rotation and vertical movement with respect to said base in response to longitudinal movement of a knife held in contact with the wheels.

2,461,691
GRIPPER GAUGE
Robert G. Lynn, Passaic, N. J.
Application March 6, 1946, Serial No. 652,417
2 Claims. (Cl. 73—141)



1. In a gauge having a housing, a circular scale, a carrying plate attached to the housing, a pointer rotatably carried by said plate and disposed to sweep the scale, an arm depending from the pointer, a spring connected to the arm and to the plate to yieldably bias the pointer in one direction, said housing provided with an opening suitably spaced from said arm, a cord passing through said opening and attached to said arm so that the tension thereon moves the pointer in the other direction, the edges of said opening providing a flexing point for said cord whereby the direction of pull of the cord on the arm is always the same, a pretensioning spring connected to said pointer and to said carrying plate to maintain said pointer at a substantially fixed point near the lower end of said scale when the cord is exerting no force thereon, said cord extending outside of the housing, and a tab attached to the cord outside of the housing whereby when the tab is inserted between engaging contact members and the gauge is moved from the members the tension in the cord will oppose the spring force and rotate the pointer to indicate on the scale the pressure between the engaging members.

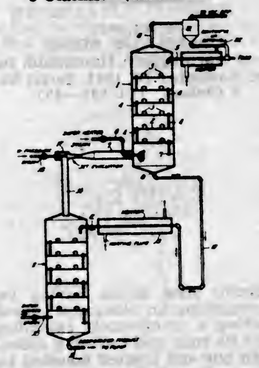
2,461,692
SAFETY CUTOUT FOR AUTOMOTIVE ENGINES
Joseph J. Malir, Jr., Denver, Colo.
Application April 22, 1946, Serial No. 663,902
2 Claims. (Cl. 200—81.5)

1. A device for cutting off the electrical supply to an automotive engine upon failure of the oil pressure to said engine comprising: a cup-like housing; a hollow threaded nipple projecting from the closed end of said housing and adapted to be passed through a supporting structure; a nut on said nipple clamping said housing to said structure; an open ended pressure cylinder, the open ends of said housing and said cylinder being secured together in axial alignment; a cylinder head separating said cylinder from said housing; means for introducing oil under pressure through the closed end of said cylinder; a piston in said cylinder; a piston rod extending from said piston through said cylinder head and throughout the length of said housing; a first spring positioned between said piston and said cylinder head resisting inward movement of said piston; contact plates extending inwardly from opposite sides of said housing; a first contact disc insulated from and slidably mounted on said rod and adapted to close a circuit between said plates; a second spring compressed between said disc and said cylinder head and urging said disc outward toward said plates; a collar formed on said rod and normally preventing outward movement of said disc until pressure in said cylinder has moved said rod outward to remove said collar from the path of said disc.

2,461,693
WRIST WATCH STRAP
Francis Richard McAloon, Waterbury, Conn., assignor to The United States Time Corporation, Middlebury, Conn., a corporation of Connecticut
Application January 29, 1947, Serial No. 725,050
7 Claims. (Cl. 24—265)

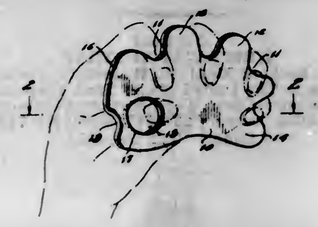
1. A wrist watch strap comprising a flexible member having a pair of outwardly extending pins adjacent one end thereof and having a longitudinally extending slot in the end thereof between said outwardly extending pins.

2,461,694
DEODORIZATION OF OILS
Keator McCubbin and Charles E. Monical, Decatur, Ill., assignors to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware
Application October 26, 1946, Serial No. 705,836
3 Claims. (Cl. 202—46)



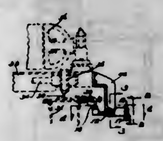
1. In a continuous distillatory process for deodorizing fatty material, wherein the fatty material is contacted with a deodorizing gas in zones of successively diminishing pressure, the improvement which comprises conveying the spent deodorizing gas from a zone of lower pressure to a zone of higher pressure at a temperature at least as high as the temperature of the gas leaving the zone of lower pressure and bringing the conveyed gas into contact with the fatty material in the zone of higher pressure, whereby the capacity of the conveyed gas for deodorizing fatty material at higher pressures is utilized.

2,461,695
MANICURING ACCESSORY
Walter J. McMahon, New York, N. Y., assignor of one-half to Joseph Glick, New York, N. Y.
Application September 20, 1947, Serial No. 775,332
1 Claim. (Cl. 132—83.5)



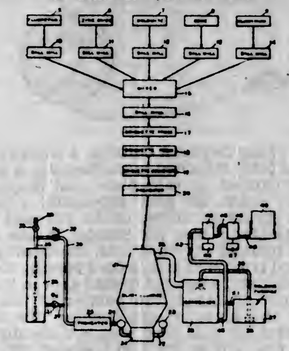
A manicuring accessory including a body of generally flat formation provided with an opening adjacent the edge thereof and with a series of arcuate indentations in the edge portion thereof, said indentations being spaced apart substantially equal distances and located on the opposite side thereof from said aperture for receiving the forepart of the thumb in said aperture and the forepart of the fingers in said indentations respectively to thereby dispose the ends of the thumb and fingers in overlying relation with the forward surface of the body for holding the thumb and fingers in set position for treating the same and said body having an enlarged peripheral edge portion extending continuously around the periphery of said opening and around the edge of the body and through the arcuate indentations to thereby provide a widened bearing surface for engagement by the thumb and fingers and serving to prevent bending or distortion of the body.

2,461,696
COLLECTOR SHOE
Alfred Morningstar, Hammond, Ind.
Application November 16, 1944, Serial No. 563,774
5 Claims. (Cl. 191—49)



1. A collector shoe device having two main members comprising an elongated collector shoe member having a transversely extending recess intermediate its ends and having a collector shoe integral with one end thereof adapted to engage a conductor rail, and a counterweight member having one end portion recessed to form two arms with transversely aligned passages therein for the reception of a pin when the device is operatively connected and an undercut flat topped recess, said two main members adapted to be normally held in their proper relative position by linking the counterweight member to supporting means by a pin extending through said passages, and placing the collector shoe member at its recess over the pin with the end opposite said shoe extending under and into the flat-topped recess of said counterweight member.

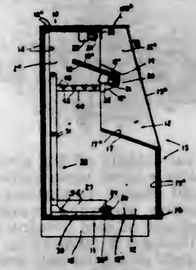
2,461,697
RECOVERY OF ZINC FROM ITS ORES
Augustin L. J. Queneau, Morristown, N. J.
Application September 23, 1947, Serial No. 775,632
21 Claims. (Cl. 75—67)



1. The method of reducing zinc-containing materials which comprises smelting a mixture of the zinc-containing material with carbon, aluminum and a flux, and delivering to the smelting zone a blast consisting of oxygen and nitrogen free from moisture and carbon dioxide.

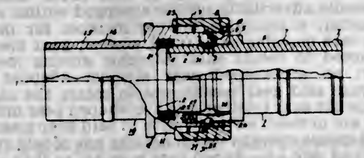
21. The method of reducing zinc-containing materials which comprises smelting a mixture of the zinc-containing material with a material having a high heat of oxide formation exceeding the heat of reduction of zinc oxide, carbon and a flux in the presence of a blast consisting of oxygen and nitrogen free from moisture and carbon dioxide.

2,461,698
SHOWCASE WITH DISPLAY RACKS THEREIN
Ferdinand A. Saunders, Nedrow, N. Y.
Application July 14, 1945, Serial No. 605,091
11 Claims. (Cl. 312—128)



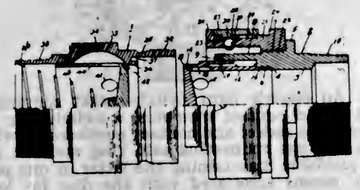
8. A necktie display and storage apparatus comprising, in combination, a row of independent and self-sustaining necktie holding stands, each adapted to hold a supply of neckties for sale, and a combined showcase and sales counter enclosing said row of stands within the rear thereof for individual removal of the stands through the rear of the case, said row of necktie holding stands extending from end to end of the case, and said case having therein two sample necktie display shelves visible from the front of the case and extending from end to end of the case with said shelves arranged relatively to said stands to expose therebetween from the front of the case at least one tie held by each of said stands.

2,461,699
COUPLING
Albert T. Scheiwer, Erie, Pa.
Application May 21, 1945, Serial No. 594,928
4 Claims. (Cl. 285—169)



1. A coupling comprising a male member having a connecting portion with a peripheral groove; and a female member comprising an inner sleeve, camming members carried by said inner sleeve, an outer movable sleeve for forcing said camming members into engagement with the groove in said connecting portion of said male member to secure said male and female members together, longitudinally movable pins in said inner sleeve having camming portions, and camming members adapted to be forced outwardly by the camming portion of said pins when said movable sleeve is moved to an unlocking position.

2,461,700
SEALED COUPLING
Albert T. Scheiwer, Erie, Pa.
Application July 17, 1946, Serial No. 684,359
7 Claims. (Cl. 284—19)



1. A coupling comprising a female member having an outwardly extending sleeve, an apertured cylindrical member attached to and movable with said sleeve, a spring urged sleeve telescopically disposed on said cylindrical member adapted to cover the apertures therein and an outer member forming an annular groove and having ball retaining apertures, balls in said apertures and means for locking said balls; and a male member having an inner grooved shoulder and a connecting portion with a peripheral groove, said peripheral groove adapted to be engaged by the ball members in said female member for connecting said male and female members together and said grooved shoulder adapted to be sealingly engaged by the outwardly extending sleeve of said female member, a spring urged apertured cylindrical groove member adapted to sealingly engage the shoulder in said male member and adapted to be moved longitudinally by said fixed cylindrical member of said female member when said male and female member are connected together whereby fluid may flow through said male and female members.

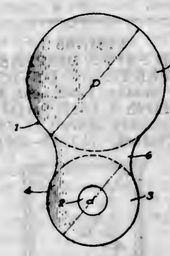
2,461,701
CONVERSION OF ALPHA AMINO ACIDS TO ALPHA HYDROXY ACIDS
Paul R. Shildneck, Decatur, Ill., assignor to A. E. Staley Manufacturing Company, a corporation of Delaware
No Drawing. Application May 4, 1945, Serial No. 592,083
7 Claims. (Cl. 260—521)

1. In the conversion of an alpha amino acid selected from the group consisting of leucine, phenylalanine and glutamic acid to the corresponding alpha hydroxy acid by reacting a solution of the former with nitrous acid, the improvement which comprises conducting the reaction at a temperature above about 70° C., and adding the nitrous acid to the amino acid solution at such a rate that practically all of the nitrous acid is consumed as rapidly as it is added.

2,461,702
COMPOSITION FOR FLUOROSCOPIC OBSERVATION AND ROENTGENOGRAPHY
Elmer H. Slaybaugh, Parsons, Kans.
No Drawing. Application March 4, 1947, Serial No. 732,372
1 Claim. (Cl. 167—95)

A composition for use in the fluoroscopic observation and roentgenography of the esophagus, rugae of the intestinal tract, and gastroenteric mucosa, comprising a homogeneous mucilaginous mixture of finely powdered barium sulphate 360.00 grams, and pectin paste formed of pectin NF VII 18.00 grams, glycerine 18.00 cc., benzoic acid .75 gram, and physiological salt solution of sufficient quantity to make 360.00 cc. of said paste, said mixture being a viscous liquid in which the pectin and the barium sulphate are evenly dispersed and maintained in suspension.

2,461,703
RECEPTACLE CLOSURE
Abraham N. Spanel, Princeton, N. J.
Application May 10, 1945, Serial No. 593,056
7 Claims. (Cl. 215—41)



7. As an article of manufacture, a sheet-like closure for receptacles comprising a readily stretchable and foldable portion adapted to provide a cap for a receptacle, said portion having an imperforate area corresponding to the top of said cap and a pliant surrounding portion corresponding to the skirt of said cap, and an adjoining elastic portion provided with an opening offset relative to said area and of substantially smaller perimeter than the perimeter of said area to provide an elastic ring portion for securing said cap portion on said receptacle.

cess over the pin with the end opposite said shoe extending under and into the flat-topped recess of said counterweight member.

case at least one tie held by each of said stands.

2,461,704

ADHESIVE AND COATING COMPOSITION

Fred B. Speyer, Salem, Mass., assignor to Shellmar Products Corporation, Mount Vernon, Ohio, a corporation of Delaware

No Drawing. Application November 23, 1945, Serial No. 630,561
1 Claim. (Cl. 260—736)

A pressure sensitive greaseproof adhesive type laminant composition of matter of the following formulation:

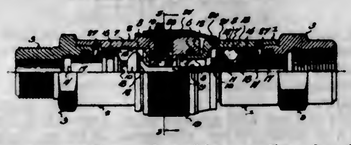
	Parts
Polymerized linseed oil	about 5.0
Chlorinated rubber (125 cps.)	about 1.0
Micro crystalline wax	about .5
Ethyl acetate	about 5.0
Toluene	about 1.0

2,461,705

SELF-SEALING RELEASABLE COUPLING

Don F. Stranberg, Libertyville, Ill., assignor to Charles L. Conroy, Waukegan, Ill., and Walter Fritsch, Libertyville, Ill.

Application October 1, 1947, Serial No. 777,229
14 Claims. (Cl. 284—19)



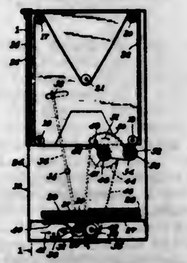
1. A self-sealing releasable coupling for fluid pressure lines comprising, a pair of separable coupling members, means for releasably holding said members in coupled relation, a pressure seated valve carried by each of said coupling members for sealing said members when separated, means for unseating said valves upon connection of said coupling members, and means associated with each of said valves and affected by a predetermined proportionate force of the line pressure to oppose the seating force of said pressure, the force of said opposing pressure being less than said seating pressure to allow unseating of the valve by manual force without the aid of tools.

2,461,706

COMBINED PAPER DISPENSER AND ADVERTISING DEVICE

Alexander Szalka, Budapest, Hungary

Application March 5, 1947, Serial No. 732,556
In Hungary March 12, 1946
5 Claims. (Cl. 40—28)



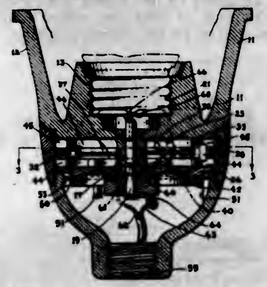
1. Combined paper dispenser and advertising device comprising in combination a housing adapted to contain near its bottom a stack of superimposed interengaging folded sheets of paper; a dispensing opening in the wall of said housing through which said sheets of paper are adapted to continuously pass; two rollers arranged near said dispensing opening and adapted to engage said paper sheets while passing through said dispensing opening, said rollers thus being rotated by passage of said paper sheets; movable advertising means arranged within said housing; a rotatable driving member for moving said movable advertising means; gear means adapted to rotate said rotatable driving member; an arc-shaped gear member adapted to engage said gear means and to rotate the same while the gear teeth of said arc-shaped gear member are in mesh with the teeth of said gear means; and means operatively connecting one of said rollers and said arc-shaped gear member so that said arc-shaped gear member is rotated whenever said rollers are rotated by passage of said paper sheets through said dispensing opening in the wall of said housing.

2,461,707

SWITCH

Alexander Szerlip and Stanley Szerlip, Brooklyn, N. Y.

Application August 29, 1946, Serial No. 693,740
12 Claims. (Cl. 200—51.14)



1. An electric light switch socket comprising socket and contact members, a switch disc between said socket and contact members, a switch ring, springs connecting said ring and the disc for yieldably maintaining the latter in one position, means associated with the disc for locking the same at said one position, means on said ring for retracting the locking means when the ring is rotated to tension one of said springs to cause the unlocked disc to snap to another locking position, circuit making and breaking strips engaging opposite sides of said disc, the latter being shaped to provide openings for engagement of said circuit strips with each other at alternate locking positions of said disc, means for securing said socket and contact members together including a pin, said pin providing a pintle upon which said switch disc rotates, a contact ring in the socket for engagement by a light bulb, means for attaching the contact ring to one of said circuit strips, a contact spring arm mounted on said pin for engagement with a light bulb, the pin, the contact ring and the ring attaching means constituting circuit forming members, a cap for one end of the switch socket, and means for detachably securing said cap to the contact member including a snap ring, an annular groove and intersecting vertical slots in said contact member and posts in the cap for engaging said slots and having a groove in each post for register with said annular groove for yieldably imprisoning the snap ring therein.

connected together whereby fluid may flow through said male and female members.

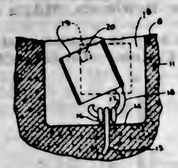
said cap portion on said receptacle.

2,461,708

FIRE AND BURGLAR PROOF SAFE

William Thein, Bremerton, Wash.

Application September 11, 1946, Serial No. 696,302
2 Claims. (Cl. 109—59)



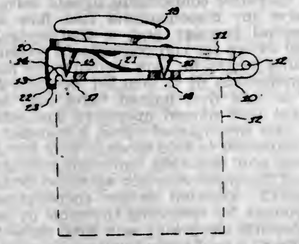
2. A fire and burglar proof safe, comprising, a body formed with relatively thick walls of material for resisting heat and burglar's tools having a chamber centrally disposed therein for preserving valuables, and the chamber having an opening from its top for a passageway, a cap of like material for closing such passageway, having a pair of eyelets projected laterally from one side thereof, the wall adjacent to the passageway having a well therein for a padlock and being connected with the passageway by a lateral slot for the pair of eyelets aforesaid, an eyelet extended vertically above the bottom of the well for alignment with the eyelets from the cap when the cap is seated in the passageway for engagement by the hasp of a padlock.

2,461,709

CAN PERFORATOR

Claude E. Venne, Tomahawk, Wis.

Application August 18, 1944, Serial No. 549,993
4 Claims. (Cl. 30—16)



3. A can perforator comprising a base member adapted to rest on the top of a can, an arm extending above said base member for up-and-down movement and hingedly secured to said base member, and a pair of spaced downwardly projecting piercing members carried by said arm and adapted to puncture the top wall of the can, said piercing members being at different distances from the hinge axis of the arm, and said arm having a manual pressure knob thereon between the piercing members.

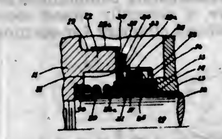
2,461,710

DIAPHRAGM-TYPE SEAL

Vance E. Vorhees, Lincolnwood, Ill., assignor to Crane Packing Company, Chicago, Ill., a corporation of Illinois

Application November 30, 1945, Serial No. 631,853
7 Claims. (Cl. 286—11)

1. In a fluid seal for relatively rotatable structures, a retainer having axially spaced cylindrical portions, one portion being adapted for press fit with respect to one of the structures, a sealing washer within the other portion, a sealing diaphragm having radially outer and inner end regions, the outer end region being compressed against the retainer and the inner end region contacting the washer, an axially slidable rotary driving connection between the washer and said other portion, an inward radial projection on the said other portion extending into the path of



movement of the washer to limit the axial movement thereof in one direction, a radially outwardly extending shoulder at one end of said other portion of the retainer for locating the retainer relative to said one structure, and resilient means acting against the said one structure and compressing the inner end of the diaphragm against the washer.

2,461,711

COMPACT

Albert Wewetzer, Elgin, Ill., assignor to Illinois Watch Case Co., Elgin, Ill., a corporation of Illinois

Application March 24, 1945, Serial No. 584,542
4 Claims. (Cl. 220—31)

1. In a compact, a recessed base having a rear wall with a concave groove extending lengthwise along its inner face and top, a cover formed along its rear with a downwardly curved portion fitting into the concave groove of the base rear wall, an overhanging lip at the top of the groove, an outwardly extending rib at the bottom of the curved portion of the cover, and means fixed in the base recess engaging the under side of the cover curved portion to establish a hinged connection therewith whereby the cover is free to swing from a position flush with the base top through 90° or more, the cover rib and groove lip being substantially interengaged when the cover is in closed positioned.

2,461,712

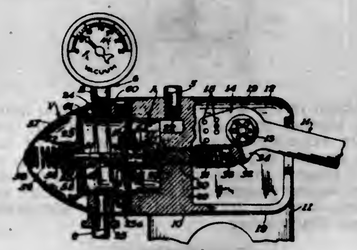
TRAILER HAND CONTROL FOR POWER BRAKES

Frederick R. Allin, Euclid, and Frederic D. Wyss, Cleveland Heights, Ohio, assignors to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio

Application November 18, 1947, Serial No. 786,776
8 Claims. (Cl. 303—54)

1. For use in a fluid pressure operated brake system comprising fluid pressure brake actuating means and two different sources of pressure, an independent manually operated valve for connec-

tion between the source of lower pressure and the brake actuating means, said manual control valve including a first chamber for connection to said lower pressure source, a second chamber for connection to said brake actuating means, there being a regulating diaphragm between said chambers, a normally open first valved port in said diaphragm for establishing communication between said chambers, a normally closed second valved port in said second chamber for opening said sec-



ond chamber to the higher pressure source, and operator means associated with said diaphragm positionable for closing said first valved port and opening the second one, said operator means having a diaphragm operating part resiliently coupled to a manually operated part so that when said manually operated part is positioned to close said first valved port, fluid pressure in the second chamber may move said diaphragm toward the position wherein said first valved port is open by deforming the resilient coupling between said operator parts.

2,461,713
INNERSOLE AND METHOD OF MAKING THE SAME

Fred L. Ayers, Watertown, Mass., assignor of twenty-two one-hundredths to Charles G. Keferstein, New York, N. Y.

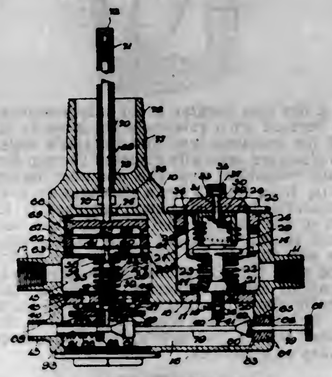
Application April 27, 1943, Serial No. 484,748
2 Claims. (Cl. 36—71)

2. An innersole comprising a thin sole-shaped blank having a reinforcing fabric layer cemented to one face and inwardly channeled about its margin, the lip formed by said channel and including the margin of said layer being turned inwardly, a reinforcing strip cemented to the top face of the feather exposed by the turning inwardly of said lip and to said lip and of a thickness at said feather sufficient to bring its outer face substantially opposite to the top face of said reinforcing layer inwardly of said lip, the feather being cut away at the shank on the inside edge of said innersole, and a cookie having an edge portion overlying and secured to the inwardly turned lip at said cut away portion in position to be secured to said innersole by the inseam securing means.

2,461,714
SAFETY CONTROL FOR GASEOUS FUEL BURNERS

Paul L. Betz, Baltimore, Md., assignor to Consolidated Gas Electric Light and Power Company of Baltimore, Baltimore, Md., a corporation of Maryland

Application May 14, 1946, Serial No. 669,473
8 Claims. (Cl. 236—21)

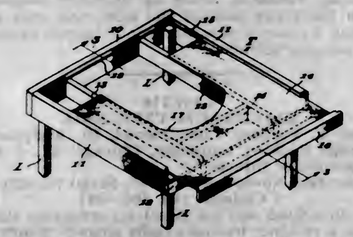


1. In a safety control for burners of gaseous fuels of the type including a fuel passage for a main burner, a second fuel passage for supplying fuel to said first named passage and to a pilot burner passage, a valve for controlling fuel flow through said first named passage, a thermostat having operative connections to said valve, a second valve for discontinuing fuel flow through said second passage and a thermoelectrically actuated device for controlling said second valve, a resetting means for said second valve including the combination of a member operatively connected to said first named valve and separate from said first named operative connecting for closing said first named valve, a member operatively connected to said second valve for opening the same and restoring controlling relationship with said thermoelectrically actuated device, and a manually operated device cooperating with said members for operating the same in sequence and enforcing closure of said first valve if open before opening said second valve.

2,461,715
CHILD'S TABLE

Andrew G. Biggerstaff, Rumson, N. J.

Application November 26, 1947, Serial No. 788,247
3 Claims. (Cl. 311—1)



1. A child's table comprising a rectangular top frame including opposite side bars, a rear bar and a front bar, said side and rear bars being

provided with alined grooves in a plane intermediate the top and lower edges of the bars, and a single table top including a relatively thin panel slidably disposed in the grooves in the side bars and the rear end of the panel adapted to be received in the groove in the rear bar in the closed position thereof, the front bar being disposed below the plane of said grooves, and the front end of the panel being provided with a header bar adapted to rest on said front bar in the closed position of the panel, and releasable locking means between the front and header bars.

2,461,716
ADJUSTABLE DRILL GUIDE AND PILOT

Leland F. Blatt, Detroit, Mich.

Application March 31, 1947, Serial No. 738,355
1 Claim. (Cl. 77—55)

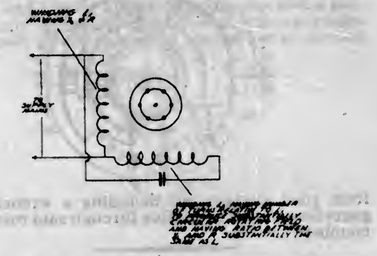
In a drill guide, the combination with a drilling tool and a bit driven by such tool, of an attachment comprising an elongated tubular guide member in which the bit is rotatable, such member having a work-engaging extremity, a support for said guide member elongated axially of said tool and having a rear end portion fixed on a non-rotating portion of said tool and having a tubular front end portion in which said guide member is slidable, a spring reacting between the support and tubular guide member to urge the guide member toward the point of the bit, a stop element exteriorly carried by said guide member, and a companion stop element carried by said support adjustable to and from the stop element on the guide member to selectively limit the effective stroke of the bit, a key set into said support, said guide member being longitudinally slotted to receive a portion of said key, whereby the guide member is restrained from rotation, said key being covered by and retained in its use position by said adjustable stop element.

2,461,717
CONDENSER MOTOR

Willem Frederik Boelsums, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee

Application May 13, 1946, Serial No. 669,225
In the Netherlands July 21, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires July 21, 1961
5 Claims. (Cl. 318—220)

1. A condenser motor, comprising a field winding having a condenserless branch and a condenser branch, said condenserless branch comprising a first wound coil having a given number of turns and having a reactive impedance value different from the ohmic impedance value thereof, said impedance values being in a given ratio, said condenser branch comprising a second

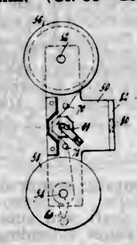


wound coil having a number of turns different from said first coil and producing with said first coil a substantially circular rotating field, said second coil having reactive and ohmic impedance values in the same ratio as the said given ratio.

2,461,718
FILM VIEWER

Anthony J. Bruno, New York, N. Y.

Application May 14, 1946, Serial No. 669,633
1 Claim. (Cl. 88—16.8)



A film viewer comprising a vertical frame, spindles on said frame for rotatably supporting film reels near the top and bottom of said frame, a transparent prism rotatably supported by said frame between the reel-supporting means, film-feeding means mounted at one end of said prism having a film-engaging tooth at each angle of the prism, and film-guiding means adjacent to said prism, said film guiding means including two pins mounted on said frame above and below said prism and parallel with the axis thereof, and a shield on said frame having a vertical panel with an aperture horizontally aligned with the prism and adjoining panels inclined forward from the upper and lower edges respectively of the vertical panel for substantially uniform spacing from the periphery of the prism, said panels having horizontal ribs projecting therefrom toward the prism tending to prevent a film on said prism from becoming disengaged from said feeding teeth.

2,461,719
ROAD ENGAGING MEANS FOR AUTOMOBILES

Aloysius J. Cawley, Pittston, Pa.

Application October 25, 1944, Serial No. 560,280
2 Claims. (Cl. 301—47)

1. A road engaging apparatus consisting of a rotatable member, and auxiliary road engaging

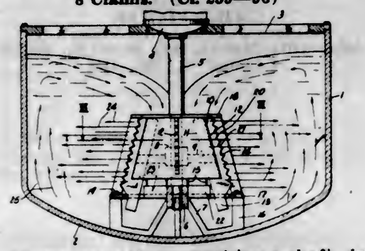
portion overlying and located to the rear of said cut away portion turned up at said cut away portion in position to be secured to said innersole by the inseam securing means.

1. A child's table comprising a rectangular top frame including opposite side bars, a rear bar and a front bar, said side and rear bars being

means, means for bringing said auxiliary road engaging means into road engagement and means for releasing said auxiliary road engaging means

from road engagement including a wrench engageable element accessible through said rotatable member.

2,461,720
MIXING APPARATUS
Richard L. Cawood and Bryant W. Richardson, East Liverpool, Ohio, assignors to The Patterson Foundry & Machine Co., East Liverpool, Ohio, a corporation of Ohio
Application July 29, 1944, Serial No. 547,234
8 Claims. (Cl. 259—96)



1. Mixing apparatus comprising a shaft, driving means therefor, a frustro-conical impeller carried by the shaft and substantially coaxial therewith, and vanes extending elementally on the exterior of the frustro-conical impeller and projecting beyond the large end of the frustro-conical impeller, and a plurality of stationary vanes spaced outwardly from and extending in substantially the same direction as the vanes of the exterior of the impeller.

2,461,721
EGG INSPECTION TABLE FOR MOVING INDIVIDUALLY SEPARATED EGGS ACROSS A LIGHT SOURCE
John R. Clark, Denver, Colo., assignor of fifty per cent to Cecil D. Hingley and Ernest A. Hingley
Application July 29, 1946, Serial No. 686,931
2 Claims. (Cl. 88—14.6)

1. In an egg inspection table of the type having a light box and a traveling series of grooves, rollers adapted to support the eggs individually between the grooves of adjacent rollers and over said light box, means for confining light rays to each individual row of eggs, comprising: circular, light-shielding discs mounted on each roller, the discs being positioned between the grooves of the roller and the discs on adjacent rollers overlapping each other to form continuously extending, spaced apart, traveling light shields throughout the entire length of the series of rollers.

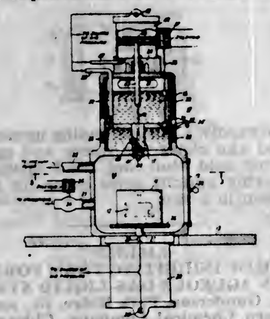
2,461,722
HANGER DEVICE FOR AUTOMOBILE WINDOWS
Curtis C. Coons, North Canton, Ohio
Application August 9, 1946, Serial No. 689,631
4 Claims. (Cl. 224—29)

1. A garment hanging device for supporting garments from the frame of an automobile window, comprising a support comprising vertical upper and lower telescoping slidable members, the upper end of the upper member having a projection to enter the top sash slot of the window frame to interlock the upper end of the device therewith, the lower member having a sill base plate at its lower end to rest on the sill of a window opening and formed with a downward flange to enter the lower sash slot at such opening for interlocking the lower end of the device therewith, a connecting member connecting said upper and lower members for holding the same in adjusted positions to maintain the projection and flange parts interlocked with the window frame, and a garment hanger arm carried by the support and projecting laterally therefrom at a point adjacent the projection on the upper vertical member.

2,461,723
APPARATUS FOR MOLDING WAX
John V. Cowan, Williston Park, N. Y., assignor of one-half to Ysak Pessell, Brooklyn, N. Y.
Application May 7, 1945, Serial No. 592,309
2 Claims. (Cl. 18—30)

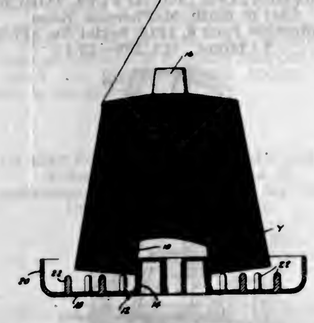
1. A machine for injecting molten material into a die having an opening at the upper portion thereof, comprising a vertically movable platen for supporting said die, a vacuum chamber for enclosing said die and platen, means for evacuating and venting said chamber, a container for molten material positioned above said vacuum chamber, said container being divided into upper and lower compartments connected by a valved passage, heating means for maintaining the material in said two compartments in a molten condition, a second valved passage between said upper compartment and said vacuum chamber means for raising the platen in said vacuum chamber until the opening in the top of said die is closely adjacent said second passage and for maintaining the platen in said position, a third valved passage between said lower compartment and said second passage, pressure means, adapted to be operated when the valve in said first passage

is closed and the valves in said second and third passages are open, for forcing molten material under a first pressure which is greater than atmospheric pressure into the die in said vacuum chamber, a piston in said second passage, and



means for driving said piston downwardly in said passage at a pressure much greater than said first pressure to force additional molten material in said die to compensate for the shrinkage of the pattern formed therein due to cooling.

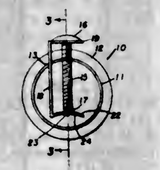
2,461,724
YARN PROTECTOR
Roy H. Davidson, Chicago, Ill., assignor to Ben Cohn, Chicago, Ill., and himself
Application November 27, 1946, Serial No. 712,564
2 Claims. (Cl. 242—130)



1. A yarn protector consisting of a support having a hub projecting upwardly therefrom supporting a yarn spindle, a flat base on said support and a plurality of pin members on said base arranged around said hub, said pin members ending below the bottom edge of a spool of yarn mounted upon said spindle.

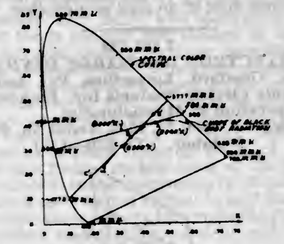
2,461,725
CABLE CLAMP
Harvey A. Einhart, Clyde, Ohio, assignor of thirty-three and one-third per cent to Myron Boyer and thirty-three and one-third per cent to Alexander Ray, both of Clyde, Ohio
Application February 14, 1947, Serial No. 728,531
3 Claims. (Cl. 285—6.5)

3. In association with a conduit box formed with a cable receiving aperture, a cable clamp comprising an open-ended sleeve receivable in said aperture and provided with an open, longitudinally extending slot, an out-turned flange formed at one end of said sleeve, a headed clamping screw extending through the wall of said sleeve and having a pointed extremity, and a substantially U-shaped strip operatively associated with said screw, said strip having a web portion



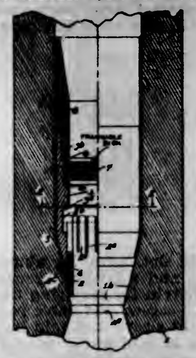
slidable in said slot, a top leg abutting the head of said screw, and a bottom arcuate leg having an opening therein for receiving the pointed extremity of said screw, said cable passing between the wall of said sleeve and said bottom leg, and the tightening of said screw simultaneously urging said bottom leg against the cable and expanding said sleeve in said aperture.

2,461,726
FLUORESCENT PRODUCTS AND METHODS OF PREPARATION THEREOF
Bennett S. Ellefson, Emporium, Pa., assignor to Sylvania Electric Products Inc., Emporium, Pa., a corporation of Massachusetts
Application December 8, 1942, Serial No. 468,202
8 Claims. (Cl. 252—301.6)



1. The method of producing a fluorescent white mixture with substantially uniform reproducibility of fluorescent white color in accordance with a trichromatic coefficient chart of the type illustrated in the accompanying drawing on which is plotted the curve of black body radiation between 2848° K. and 6500° K., which comprises selecting two fluorescent phosphors of substantially complementary fluorescent colors, the respective trichromatic coefficient points of which on said chart define a straight line which is substantially tangent to the said black body curve at any point between 2848° K. and 6500° K., the limits of the complementary dominant wavelengths at the red end of the spectrum being between 577.7 mmμ and 586 mmμ and the limits of the said complementary dominant wave-lengths at the blue end of the spectrum being between 477.8 mmμ and 490 mmμ and mixing said two phosphors to produce a resultant fluorescent color having trichromatic coefficients corresponding to said point of tangency.

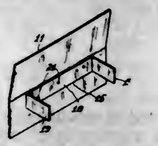
2,461,727
MEANS AND METHOD FOR DETECTING LEAKS IN DRILL STEMS
Robert I. Gardner, San Diego, Calif.
Application January 20, 1945, Serial No. 573,765
5 Claims. (Cl. 137—77)



1. In a device to detect a leak in a drill stem, a hollow member which can be lowered into said stem, a constriction in said stem to limit the downward movement of said member, means to seal said member to said stem, and a sealing unit of predetermined strength to close said hollow member.

3. A method of testing for a leak in a drill stem including sealing the lower end of said stem with a frangible member of lesser strength than the drill stem, noting any fall in pressure of drilling fluid supplied while the lower end is sealed, then rupturing the seal by increasing the pressure of the drilling fluid if no leak is indicated.

2,461,728
ELECTRON DISCHARGE DEVICE
Ross K. Gessford, Emporium, Pa., assignor to Sylvania Electric Products Inc., Emporium, Pa., a corporation of Massachusetts
Application June 25, 1945, Serial No. 601,398
9 Claims. (Cl. 250—159)



1. An electron discharge device including a plate member, a support, a first U-shaped clamp member, a second U-shaped clamp member, means for attaching said first clamp member to said plate and said second clamp member to said support, said U-shaped members being relatively telescopically arranged and attached together for positioning and supporting said plate member with respect to said support.

2,461,729
BUBBLE CAP MOUNTING
Hans C. Glitsch, Dallas, Tex., assignor, by mesne assignments, to Glitsch Engineering Company, a partnership
Application December 15, 1945, Serial No. 635,293
6 Claims. (Cl. 261—114)

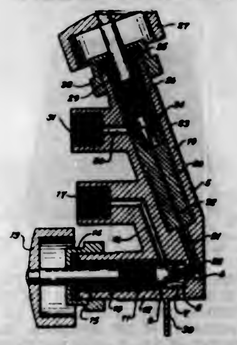
1. A bubble cap mounting for insertion downwardly in a bubble tray riser including, a spider having outwardly movable divergent upright wings, an element attached to the wings for confining them in divergent relation, a head confined between the inner edge portions of the spider wings and movable upwardly to displace said

wings outwardly, a stud extending upwardly from said head and above the spider and cap means for moving said stud and head upwardly, the wings having upright outer edges for frictional engagement in a riser.

2,461,730
METHOD OF INHIBITING FOAM FORMATION IN AN AQUEOUS GAS-LIQUID SYSTEM
Lewis O. Gunderson, Park Ridge, Ill., assignor to Dearborn Chemical Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application September 12, 1942, Serial No. 458,142
4 Claims. (Cl. 252—321)

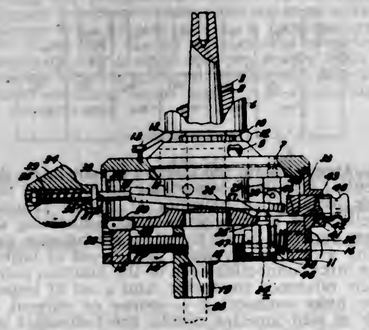
1. The method of inhibiting foam formation in an aqueous gas-liquid system which comprises incorporating therewith a predominantly hydrophobic surface-active organic substance comprising the condensation product of a higher fatty acid and an aliphatic polyamine, said condensation product being further condensed with a higher fatty acid.

2,461,731
PREHEATING LIQUID FUEL TORCH
Carl R. Guth, McPherson, Kans.
Application June 6, 1945, Serial No. 597,792
3 Claims. (Cl. 158—27.4)



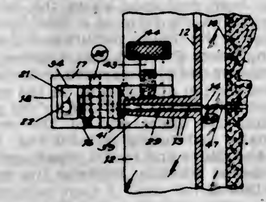
1. A liquid fuel torch comprising a nozzle having a discharge port, an air chamber in the nozzle behind the discharge port, passage means in the nozzle communicating with the chamber and adapted for connection to a source of air under pressure, a valve controlling communication between the chamber and the discharge port, a tubular extension on the nozzle, a plug positioned in the extension having a reduced extension projecting into the discharge port in advance of the air chamber, said plug and reduced extension having a fuel passage therein, and means for feeding fuel to the fuel passage under manual control.

2,461,732
MACHINE TOOL WORKING HEAD
Fred G. Hansen, Toledo, Ohio
Application April 29, 1946, Serial No. 665,818
2 Claims. (Cl. 77—58)



1. A working head accessory for a machine tool having a sleeve, a rotatable spindle in the sleeve provided with a seat, and an opposing work table adjustable toward and from the spindle and sleeve; the combination of a spindle element extension in the seat, a lateral bearing for the extension, a housing for the bearing comprising a first section adjustably fixed with relation to the sleeve and a complemental relatively rotatable second section fixed relative to the extension, said housing providing a chamber between the sections, a ring in the chamber extending transversely to the axis-extended of the spindle and pivoted to one of the housing sections, a tilt adjustment device for the ring as to the housing in which pivoted, a tool holder having a nut, a feed screw for the nut rotatably mounted in the other housing section from that mounting the ring, and an adjustable coupling between the ring and screw for progressing the holder radially relative to the spindle axis.

2,461,733
CLAMP FOR CEMENT FORM PANELS
Arthur J. Harder, Chicago, Ill.
Application April 4, 1947, Serial No. 739,309
10 Claims. (Cl. 25—131)



10. In the art of setting up form walls for receiving therebetween a cement mixture which on setting forms a concrete wall, a plurality of ties for maintaining a pair of form walls in a spaced, bound relation, a plurality of panels, which, when arranged in an edge to edge relation defining one of said form walls, a base member, means associated therewith for temporarily supporting the same upon one of said panels, means carried by said base member for temporarily laterally engaging the tie and holding the same in contact with a vertical edge of said one panel, as the adjacent panel is brought to said one panel in an edge to edge relation said newly set panel rendering said last named means inoperative, the tie being then laterally supported by the two panels, means carried by said base member for rigidly engaging the end of the tie through the recess formed by the edges of the two adjacent panels resulting from the interposition of the tie therebetween, and means for rigidly engaging said base member with the two set panels for binding the tie thereto and for mutually interlocking the two set panels.

2,461,734
FLAME HARDENING APPARATUS
Albert L. Hartley and Adolph H. Davis, Cincinnati, Ohio, assignors to The R. K. LeBlond Machine Tool Co., Cincinnati, Ohio, a corporation of Delaware
Original application June 19, 1945, Serial No. 600,354. Divided and this application December 8, 1945, Serial No. 633,731
1 Claim. (Cl. 266—4)

In a flame hardening burner, for progressively flame hardening the gear tooth surfaces of the intertooth space between a pair of teeth of a gear, a burner body having a portion conforming to the shape of said intertooth space of the gear to be hardened, and heating, quenching, and cooling means in said portion including a series of flame jet openings in said portion, a series of quenching jet openings in said portion, a baffle formed integral with said portion at an interspaced position between said flame and quenching jets, a series of tooth cooling jets located in the body portion of said burner in rows parallel to the direction of progressive movement of gear tooth and burner including jet openings for projecting coolant normal to said direction of progressive movement so as to direct a cooling liquid to the outside faces of the pair of gear teeth being hardened at a point opposite point of engagement of the flames on the faces of the teeth in the intertooth space, passageways in said body for conducting a source of fuel to said flame jets, and further passageways for conducting a source of quenching and cooling liquid to said quenching and cooling jet openings.

2,461,735
PROCESS OF TREATING INTERPOLYMERS OF STYRENE, ALLYLIC FUMARATE, AND ALLYLIC ALCOHOL
Charles A. Heiberger, Nitro, W. Va., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application December 10, 1946, Serial No. 715,345
7 Claims. (Cl. 260—78.5)

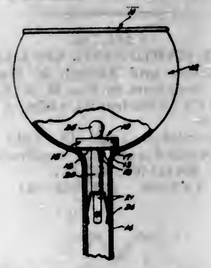
1. A process of improving preformed acetone-soluble interpolymers of a styrene, an allylic fumarate, and an allylic alcohol which normally exhibit lachrymatory effects after storage, which comprises heating a mixture of the interpolymer and an inert liquid solvent of the same at a temperature in the range of from 70 to 125° C. for from 1 to 24 hours so that the allylic alcohol is effectively liberated from the interpolymer, and concurrently removing from the zone

1. A bubble cap mounting for insertion downwardly in a bubble tray riser including, a spider and means for feeding fuel to the fuel passage under manual control.

same in contact with a vertical edge of said one mer, and concurrently removing from the zone

of heat treatment liberated allylic alcohol, the operations being continued until the residual thermally-modified soluble interpolymer shows on standing for 7 days at 70° C. the presence of not more than 0.4% weight of "free" allylic alcohol.

2,461,736
COFFEE FILTER
John E. Hooper, Burbank, Calif.
Application March 25, 1946, Serial No. 656,954
3 Claims. (Cl. 210—162)

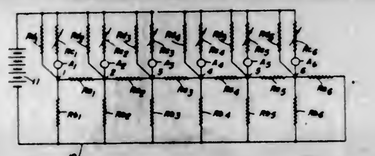


1. A coffee filter for reception in a receptacle including a bowl having a bottom neck with a symmetrically curved side wall and a hollow stem depending therefrom, comprising a body having an annular downwardly facing surface engageable with said curved side wall of the neck in circular line contact and containing small circularly spaced filter recesses intersecting said line of contact, said surface being curved upwardly at each side of said line of contact, and means receivable within said stem for holding the body against upward displacement.

2,461,737
EMERGENCY TIRE CHAIN
Hal P. Huffman, Rockford, and Ralph B. Snively, Winnebago, Ill.
Application March 24, 1947, Serial No. 736,818
6 Claims. (Cl. 152—233)

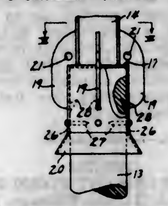
5. The combination of a length of chain terminating in a member at one end, an element projecting from said member and swiveled thereon to turn about an axis substantially normal to the member, a lever fulcrumed on the projecting end of said element to swing against and away from said member, a tension link detachably connected at one end to the other end of said chain and connected at its other end to said lever at a point intermediate the ends of the lever and offset laterally of the lever from said axis whereby the free end of the lever is swung laterally under the tension applied to said chain, and means on said member receiving the lever when the latter is swung laterally and acting to hold the free lever end against said member.

2,461,738
DEVICE FOR SOLVING EQUATIONS
Walter C. Johnson, Princeton, N. J.
Application June 10, 1946, Serial No. 675,799
12 Claims. (Cl. 235—61)



1. Apparatus for the solution of non-linear differential equations comprising an electrical network including a plurality of spaced junction points, a set of impedance links connecting adjacent junction points together, a conductor providing a reference voltage level, a set of impedance links connecting each of the junction points to the reference conductor, and a set of impedance links connecting a source of current to each of said junction points, the individual impedance links of at least one of said sets of links being independently adjustable, means for ascertaining the potentials of the junction points with reference to the reference conductor, and means for ascertaining the current flow in at least the independently adjustable set of impedance links.

2,461,739
PILE SPLICE
Knox Kershaw and Royce Kershaw, Montgomery, Ala.
Application June 11, 1946, Serial No. 675,967
6 Claims. (Cl. 61—53)



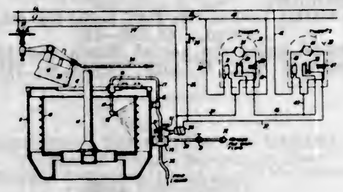
1. In a repair means for a marine structure including a superstructure and wooden piling which has been destroyed above the mud line, a repair section in the form of a steel beam interposed between the superstructure and the existing wood piling below the mud line, a splice comprising a circular metal plate secured to the lower end of the steel section and resting on the upper end of the wood pile, a sleeve secured to the plate and surrounding the upper end of the wood pile, longitudinally extending reinforcing members joined to the sleeve and to the repair section, and securing means coacting between the splice and the wood piling.

2,461,740
PROCESS OF MAKING ORGANIC ACIDS FROM CARBONACEOUS MATERIAL
Myron Kiebler, Pittsburgh, Pa., assignor to Carnegie Institute of Technology, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application October 2, 1947, Serial No. 777,579
7 Claims. (Cl. 260—515)

1. The process of making organic acids from carbonaceous material selected from the group

consisting of coal, coke, carbon blacks and pitch, which comprises preoxidizing it by reacting it with an oxidizing agent which can be reoxidized by reaction with air at atmospheric pressure, dissolving the preoxidized material in an aqueous alkaline solution, treating the aqueous alkaline solution with oxygen gas at a temperature of 200° C. to 300° C. and at a partial pressure of oxygen of 100 to 1000 lbs. per square inch, recovering organic acids, reoxidizing the first mentioned oxidizing agent with air and recycling it in the process.

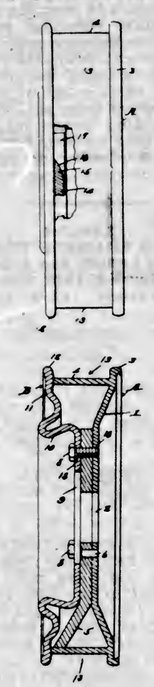
2,461,741
AUTOMATICALLY CONTROLLED SPRAYER FOR CENTRIFUGALS
Ernest G. Koehli, Scarsdale, N. Y., and Charles A. Olcott, West Milford, N. J.
Application February 1, 1945, Serial No. 575,594
6 Claims. (Cl. 210—67)



1. The combination with a centrifugal machine having a basket adapted to be cyclically rotated, of means for effecting the washing of the basket contents, said means comprising a spray member inside the basket, a source of washing fluid outside said basket, a pipe connection between said source and said spray member to supply water to the latter, a portion of said pipe connection being at a lower level than said spray member, a three-port valve in said lower portion of the pipe connection and a downwardly extending drain pipe completely outside said basket and having its upper portion connected to one of the ports of said valve, the other two ports of said valve being connected respectively to said source and to said spray member, said valve being of the type having only two positions and the valve being arranged so that in one of these two positions washing fluid from said source is applied to said spray member and the passage to said drain pipe is closed and in the other of which the spray member is connected to said drain pipe and the passage from said source to said spray member is closed.

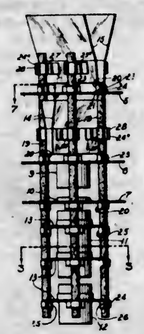
2,461,742
WHEEL
Edward Kostka, La Porte, Ind., assignor of one-half to Adam Kasperek, La Porte, Ind.
Application June 7, 1946, Serial No. 675,061
1 Claim. (Cl. 301—63)

1. A wheel including a disc-like main member, an opposed disc-like removable member, marginal flanges on the members, a laterally extended rim on the main member, radial braces fixed at one end to the main member, the braces being extended angularly into engagement at their other ends with the rim, substantially wedge-shaped lugs on the inner surface of the rim, keepers on the inner surface of the removable member, the keepers having tongues spaced from said inner surface and extended substantially parallel to the peripheral edge of said member, whereby to permit wedging of the lugs between the tongues and the inner surface of the removable member, and



means detachably connecting the main and removable members.

2,461,743
ELECTRODE SECURING MEANS
Walter L. Krahl, Emporium, Pa., assignor to Sylvania Electric Products, Inc., a corporation of Massachusetts
Application June 7, 1946, Serial No. 674,959
11 Claims. (Cl. 250—162)



1. Means for rigidly securing two frame members to each other in accurate predetermined re-

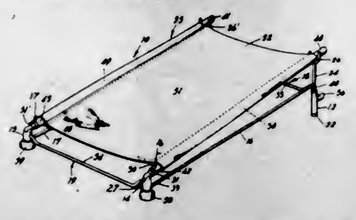
tension applied to said chain, and means on said member receiving the lever when the latter is swung laterally and acting to hold the free lever end against said member.

Serial No. 777,579
7 Claims. (Cl. 260—515)

1. The process of making organic acids from carbonaceous material selected from the group

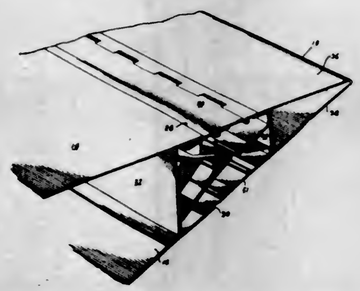
lation, one of said members being of sheet material and including a flat portion and the other a supporting post, said securing means comprising complementary clamping members formed with opposing channels the walls of which are in gripping engagement with said post, one of said clamping members being integral with the flat portion of said sheet member, with its channel extending angularly from said flat portion and providing a locating means for said post, and said other clamping member being attachable to said first named member on opposite sides of said post and providing an anchoring means for the post.

2,461,744
CHILD'S SHAMPOO SUPPORT
Reggie Lee Lafield, San Antonio, Tex.
Application March 2, 1946, Serial No. 651,571
10 Claims. (Cl. 4—185)



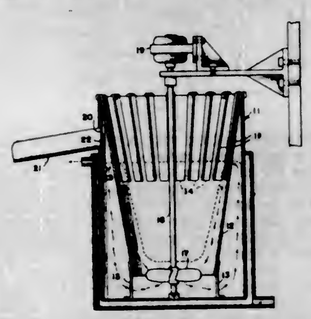
1. The described device comprising a frame having telescopic head legs, rigid foot legs, side rails connecting the head and foot legs, said rails being hinged to the foot legs and rigidly connected to the head legs, said first legs terminating at the upper ends in U-bearings, a support, the upper ends of which are carried by said bearings, hinged bearings on the foot legs for connection with the lower end of the support, said latter bearings being rounds adapted to be projected into side rails of the support, and said support including a sheet with side tubes through which the rails are threaded.

2,461,745
HINGE STRUCTURE FOR AIRCRAFT SURFACES
John M. Lang, Bridgeport, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application December 28, 1944, Serial No. 570,139
8 Claims. (Cl. 244—130)



1. In combination, a main airfoil portion having a trailing edge, a bracket extended rearwardly from said main portion beyond said trailing edge, an angularly adjustable auxiliary portion having a pivotal connection to said bracket, said connection providing a chordwise gap between said portions at the top and bottom surfaces thereof, a gap closure means pivoted to the top and bottom surfaces of said auxiliary portion at the leading edge thereof and extending forwardly therefrom into said main airfoil portion, and means carried by said bracket and pivotally connected to said closure means for maintaining the forward edges of the latter in gap closing relation with respect to the top and bottom surfaces of said main airfoil portion throughout the range of angular adjustment of said auxiliary portion.

2,461,746
AERATOR
Elbert C. Lathrop and Samuel I. Aronovsky, Peoria, Ill., assignors to the United States of America as represented by the Secretary of Agriculture
Application January 15, 1946, Serial No. 641,357
1 Claim. (Cl. 259—43)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

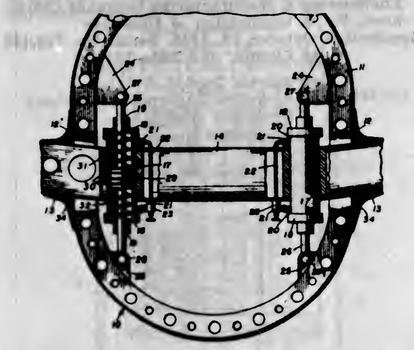


Aerator apparatus comprising a vessel, a circular partition coaxially disposed in said vessel, means for supporting said partition in said vessel above the bottom thereof, the lower section of said partition being imperforate and the upper section comprising a plurality of weirs, said weirs being separated from each other by vertical strips, said strips being narrow relative to the width of the weirs, said vessel having an overflow aperture near the top, a gate adjacent said aperture, and means for securing said gate in different positions relative to said aperture, and means for agitating an impelling flow of fluid material downward at the bottom of said partition.

2,461,747
AIRCRAFT WING MOUNTING
Alfred H. Leonard, San Diego, Calif., and Joseph H. Blandford, Twin Falls, Idaho
Application May 26, 1947, Serial No. 750,546
4 Claims. (Cl. 244—38)

1. Winged aircraft which includes a fuselage, a wing spar mounted in the fuselage for movement parallel with the vertical axis of the fuselage, a wing carried by each end of the wing spar and extending laterally from the fuselage, a cylinder fixed adjacent each end of the wing spar, a plunger rod movable through each cylinder, each plunger rod being fixed at opposite ends to the

adjacent side of the fuselage, and means surrounding each plunger rod yieldingly to support



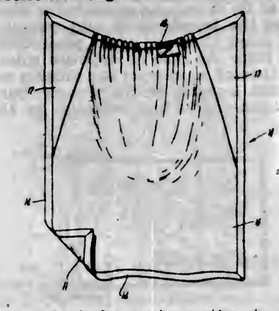
the wing spar substantially midway between opposite ends of the plunger rods.

2,461,748
CHRISTMAS TREE STAND OR HOLDER
William H. Looker, Burlington, Iowa
Application February 1, 1945, Serial No. 575,695
1 Claim. (Cl. 248—48)

A novelty in a Christmas tree holding stand formed of a single blank, having score lines defining a centrally disposed square base section of variable size, each of said score lines being continued as a cut from one end thereof for dividing the blank into four equal sections, each cut being so made as to provide a tab extending outwardly from the edge of the section, and each section having a slot parallel to and rearwardly of the tab, the construction being such that when the sections are folded along the score lines with the tab of one section inserted in the slot of an adjacent section, a tree support having a square opening at the top, with support all the way from top to bottom of the stand for the tree and four outwardly extending legs is provided.

2,461,749
INFANT'S BED COVERING
Fredrika Mallette, Piedmont, Calif.
Application September 11, 1946, Serial No. 696,278
2 Claims. (Cl. 5—334)

1. As an article of manufacture, an infant's bed covering comprising a main fabric section of rectangular form having one end edge gathered into a plurality of folds to form a yielding canopy extending longitudinally toward but short of the opposite end edge to overlie and loosely embrace an infant, and triangular wing sections joined to the opposite side edges of the main section at the



gathered end of the main section to make the sides of the bed cover substantially parallel.

2,461,750
PREPARATION OF PHOSPHATIDES
Ralph A. Marmor and Wendell W. Moyer, Decatur, Ill., assignors to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware
No Drawing. Application June 17, 1947, Serial No. 755,255
7 Claims. (Cl. 260—403)

1. The process of manufacturing phosphatides, which comprises extracting oleaginous vegetable material from a raw material with a solvent selected from the group consisting of hexane, trichloroethylene, benzene and ethanol to provide an extract of glyceride oils, phosphatides, and solvent, subjecting said extract to the action of a decolorizing agent, evaporating solvent from the extract to provide a mutual solution of said glyceride oils and phosphatides, and agitating said solution with an aqueous medium, whereby crude phosphatides are separated from the bulk of the glyceride oils.

2,461,751
PREPARATION OF PHOSPHATIDES
Ralph A. Marmor and Wendell W. Moyer, Decatur, Ill., assignors to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware
No Drawing. Application June 17, 1947, Serial No. 755,257
8 Claims. (Cl. 260—403)

1. The process of recovering phosphatides from oleaginous material which comprises extracting the oleaginous material with a solvent selected from the group consisting of hexane, trichloroethylene, benzene and ethanol to provide an extract containing glyceride oils, phosphatides, and solvent, decolorizing the extract, evaporating solvent from the decolorized extract at a temperature not exceeding about 50° C. to provide a mutual solution of the remaining glyceride oils and phosphatides, agitating said solution with an aqueous medium to coagulate the phosphatides, and separating the coagulated phosphatides from the bulk of the glyceride oils.

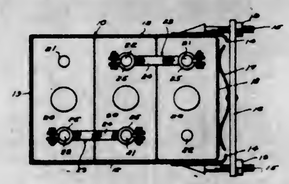
2,461,752
STORAGE BATTERY HOLDER
Clifford H. McConnell, Fort Peck, Mont.
Application March 19, 1946, Serial No. 655,496
1 Claim. (Cl. 136—171)

A storage or secondary battery comprising an open-ended case of non-conducting material, a

1. In combination, a main airfoil portion having a trailing edge, a bracket extended rear-

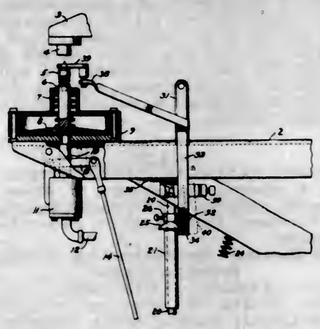
fixed adjacent each end of the wing spar, a plunger rod movable through each cylinder, each plunger rod being fixed at opposite ends to the

group of separate and separable cells in said case, each cell having a positive and a negative terminal at its upper end, detachable connectors connecting the terminals of said cells in series, a pair of screw threaded studs projecting longitudinally from the case on opposite sides of the open end thereof, a pressure bar slidably mounted on the studs, a spring on the pressure bar, a follower of non-conducting material in the case



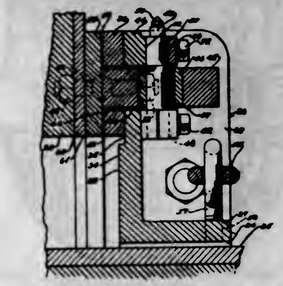
adapted to be engaged by the spring yieldingly to bear on the end of the cell adjacent the open end of the case and clamp the cells in the case, means threaded on the studs to regulate the pressure of the spring against the follower, and inturned flanges on the end edges of the side walls of the case at the open end thereof to retain the follower in the case when the pressure of the spring thereon is relieved.

2,461,753
SAFETY CONTROL FOR PRESSES
Norman S. McEwen, Fort Lauderdale, Fla.
Application September 1, 1944, Serial No. 552,359
4 Claims. (Cl. 192—129)



1. In a safety control for machines which include two opposed dies for operating upon an interposed piece of material, one of said dies being movable toward and away from the other die, and a member for actuating the movable die, the combination of control means for initiating movement of said member, said means comprising a sleeve slidable upon a fixed support, one end of said sleeve provided with an operating extension and the other end provided with one of a pair of companion latching members for normally holding said means in inoperative position; and pivoted release means for rendering said control means operable, said release means comprising one arm forming the other of the latching members and adapted to cooperatively engage and disengage with its companion member, and another arm having a portion positioned to be actuated by a piece of material only when the material is correctly interposed between said dies.

2,461,754
SEALING RING FOR ROTARY KILNS
Fred A. Mertz, Allentown, Pa., assignor to Traylor Engineering & Manufacturing Company, Allentown, Pa., a corporation of Delaware
Application October 29, 1946, Serial No. 706,439
18 Claims. (Cl. 285—16)



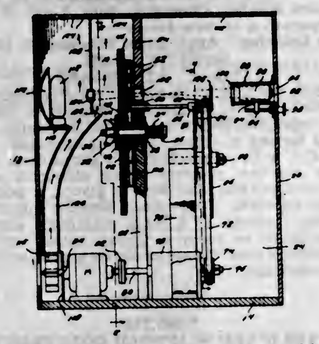
1. A sealing connection for the discharge end of an elongated cylindrical rotary kiln of the type normally subjected to longitudinal expansion and contraction under the influence of temperature changes, and an adjacent normally stationary firing hood, said connection comprising an outwardly projecting ring encircling the kiln adjacent said end thereof, a similar ring carried by the hood, encircling the kiln and having a surface facing the first ring, one of said rings being movable axially with respect to the kiln to compensate for expansion and contraction thereof, and the other ring being relatively fixed, and a plurality of rollers carried by one of the rings, making rolling contact with the other, said rollers being journalled on axes disposed radially with respect to the kiln and being adjustable relative to the first ring to vary the clearance between the two.

2,461,755
FISH LURE
Myron C. Miller, Seattle, Wash.
Application August 9, 1944, Serial No. 548,673
3 Claims. (Cl. 43—40)

1. A trolling device for fishermen, comprising: a head stall formed of a single casting of transparent material and having a rearwardly open cavity for the reception of the head of a baiting minnow, said head stall including a scoop-like forwardly facing laterally concave water impingement surface whose median crosses the longitudinal axis of the head stall at an angle other than at right angles, said head stall being cut away behind and below said water impingement surface to form a prominent lip, a link embedded in said head stall and having at each end an eye, one of said eyes protruding from the water impingement surface above the center thereof in its median to receive a trolling line, the other of said eyes protruding from said head stall

behind said lip and beneath the longitudinal axis of the head stall, resilient means embedded in said head stall to engage a minnow and hold it in said cavity, and fish hooks associated with said eye behind the lip.

2,461,756
DISK PICTURE PROJECTOR
Ralph S. Moore, Visalia, Calif.
Application March 16, 1945, Serial No. 583,015
2 Claims. (Cl. 88—27)

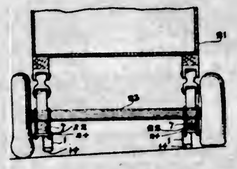


1. In a picture disc projector, the combination which comprises a projector housing having an intermediate partition, said partition having an opening and a light projecting aperture therein, a carriage slidably mounted in said partition opening for vertical movement therein, a picture disc having a series of pictures arranged arcuately on the face thereof, a transparent master disc for supporting said picture disc in face adjacency therewith, means for mounting said picture and master discs for unitary rotation on said carriage, said master disc having secured thereto an axially projecting arcuate flange conforming to the curvature of said arcuately arranged series of pictures and having a series of equally spaced apertures formed therein, a sprocket rotatably supported on said housing and having the teeth thereof arranged for coaction with said flange apertures, said sprocket being disposed beneath said flange in supporting relation therefor and arranged in predetermined spaced relation with respect to said light projecting aperture sufficient to position said series of pictures in registry therewith and to elevate said carriage in said partition variably in accordance with the curvature of the flange upon unitary rotation of said picture and master discs as the sprocket rotates, a light source associated with said light projecting aperture, a condenser lens positioned between said light source and said picture disc, an objective lens system mounted in said housing in alignment with said light source, condenser lens, and light projecting aperture, a shutter element rotatably supported on the housing between said objective lens system and said light projecting aperture and arranged to prevent passage of light from said light source through said objective lens during a fractional portion of one complete revolution of the shutter, means for rotating the shutter at a predetermined speed, and intermittent driving connections between said shutter rotating means and said sprocket for causing predetermined intermittent rotary motion of the sprocket effective to advance said series of pictures successively into registry with said light projecting aperture during successive fractional movements of the shutter respectively.

2,461,757
INTERNAL-COMBUSTION ENGINE
Mortimer H. Moores, Honolulu, Territory of Hawaii
Application February 27, 1946, Serial No. 650,622
2 Claims. (Cl. 123—16)

2. In an internal combustion engine of the character disclosed, the combination of means forming cylindrical combustion and compression chambers and a passageway extending therebetween, a rotary cylindrical valve interposed within said passageway and having a diametrical slot adapted to provide communication between said chambers when the slot is aligned with the passageway and adapted to block the passageway when the slot is mis-aligned therewith, said combustion and compression chambers having fuel exhaust and intake ports respectively, means forming a bypass between said intake port and said passageway intermediate the compression chamber and said rotary valve, throttle valve means interposed in said bypass adapted to control the flow of compressed fuel therethrough, compression and power rotors eccentrically disposed within said compression and combustion chambers and having a plurality of diametrically movable blades adapted to move along the side walls of the chambers as the rotors are rotated, and interconnected driving connections between said rotary valve and said rotors for providing a predetermined angular time spaced relation therebetween.

2,461,758
TIRE-PROTECTING SKID
Reginald Moss, North Miami, Fla., assignor of one-half to Ray Ferwerda, Cleveland, Ohio
Application May 31, 1946, Serial No. 673,541
4 Claims. (Cl. 280—150)



2. An automobile trailer provided with a body, a pair of springs connected with said body, an axle supported adjacent each of its ends on said springs and carrying wheels and tires outwardly thereof, of a tire-protecting body member below each of said springs and consisting of side, top, and bottom walls, rollers mounted in each of said body members adjacent the opposite ends thereof and projecting substantially in alignment with said bottom wall, and providing a curved under-surface positioned beneath each spring below its point of connection with the axle, and means for firmly securing said body member to said spring on each side of said trailer in closely spaced relation to said tire and in predetermined spaced relation to the road surface.

bers and adapted to cooperatively engage and disengage with its companion member, and another arm having a portion positioned to be actuated by a piece of material only when the material is correctly interposed between said dies.

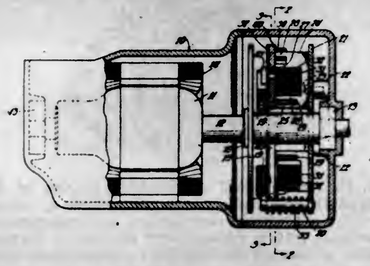
an eye, one of said eyes protruding from the water impingement surface above the center thereof in its median to receive a trolling line, the other of said eyes protruding from said head stall

2,461,759

ALTERNATING CURRENT BRAKE MOTOR

James Holly Nelson and Hoyt Servis, Racine, Wis., assignors to The Dumore Company, Racine, Wis., a corporation of Wisconsin

Application February 28, 1945, Serial No. 579,768
4 Claims. (Cl. 188—171)



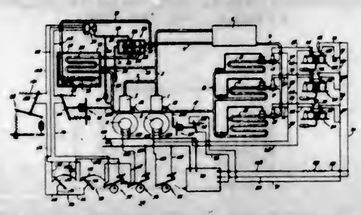
1. In an alternating current brake motor, the combination of an armature shaft, a disk secured thereto and rotating therewith, a non-rotatable braking element disposed adjacent said disk, means to urge said braking element into braking contact with said rotating disk, a toroidal electromagnetic alternating current winding surrounding said armature shaft and having a plurality of pairs of pole pieces associated therewith each pole piece of each pair being slotted, shading means disposed in said slots, and a separate armature in the form of a plate for each pair of pole pieces, said separate armatures being secured to said braking element in a manner such as to permit a slight adjustment in the position of each as each seeks its attracted position.

2,461,760

MULTIPLE REFRIGERATION SYSTEM WITH CONTROLS THEREFOR

Alwin B. Newton, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application April 1, 1944, Serial No. 529,137
19 Claims. (Cl. 62—4)



1. In a refrigerating system, in combination, an evaporator for treating a medium, a thermostatic expansion valve connected in flow controlling relation therewith, means for supplying said expansion valve with refrigerant under relatively high pressure, means for removing refrigerant from said evaporator under relatively low pressure, the minimum temperature of said evaporator depending on the value of said low pressure, by-pass means for connecting said means for supplying refrigerant to said means removing refrigerant, said by-pass means including a valve for controlling the flow through same, the refrigerant flowing through said by-pass affecting the value of said low pressure, and means for regulating the valve in said by-pass in response to the psychrometric condition of said medium in such manner that the value of said low pressure may be varied in a manner to maintain said psychrometric condition constant.

2,461,761

METHOD OF MAKING CELLULAR RESIN MATERIAL

Louis E. Nye, Elkhart, Ind., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application February 2, 1945, Serial No. 575,925
6 Claims. (Cl. 260—45.4)

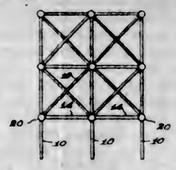
1. The method of making a rigid cellular resin material which comprises forming a mixture of a copolymerizable mix of a monoenic compound having a single terminal ethylenic group $CH_2{=}C<$ with an unsaturated alkyd resin which is the reaction product of an ethylenic-alpha-beta dicarboxylic acid with a glycol, a polymerization catalyst, a chemical blowing agent, and a metal stearate as a foam stabilizer, whipping the mixture to form a foamy mass, and then heat-curing said foamy mass to a cellular hardened condition.

2,461,762

SCAFFOLD AND SCAFFOLD CONSTRUCTION ELEMENT

John R. O'Donnell, Brooklyn, N. Y.

Application February 14, 1946, Serial No. 647,614
11 Claims. (Cl. 304—2)



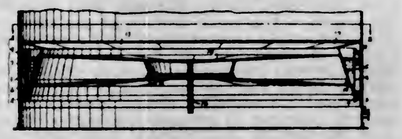
1. A scaffold comprising columns, laterals and clamps, said columns being constituted by pipes all of the same diameter, the lower part of the column being of greater strength than the upper part and being constituted by a plurality of said pipes which are parallel and adjacent, clamps fastening the plural column pipe together, a lateral fastened between two of the parallel adjacent column pipes fastened by the clamp which also fastens together the column pipes and another lateral fastened at each end to the same clamps of opposite columns which fasten the other lateral and two parallel adjacent pipes of a column.

2,461,763

TANK ROOF

Paul Offenhauser, Houston, Tex.

Application February 12, 1946, Serial No. 647,105
2 Claims. (Cl. 220—26)



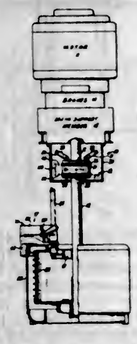
1. A tank roof comprising, an annular trough within, and spaced from, the tank walls, the inner wall of the trough converging inwardly and upwardly, an external annular flange on the lower end of the trough, shoes spaced apart around the trough and in contact with and slidable along, the tank walls, an annular seal around the trough and between it and said shoes and supported on said flange, links flexibly connecting the shoes to the trough, buoyant roof sections assembled within the trough and fitted together and whose outer ends converge upwardly and fit, throughout the area of said outer ends, closely against the inner walls of the trough.

2,461,764

CONTROL MEANS FOR CENTRIFUGALS

Charles A. Olcott, West Milford, N. J.

Application August 25, 1944, Serial No. 551,185
5 Claims. (Cl. 210—70)



1. A sugar centrifugal machine comprising a rotatable spindle, a basket for sugar to be dried carried by said spindle, means for rotating the basket at high speed to dry the sugar, means for rotating said basket at low speed during the unloading operation, a scraper for plowing the dried sugar out of said basket, manually-operated means for moving the scraper to its operating position within the basket and for retracting it to a non-operating position outside the basket, means for locking the scraper in said non-operating position, and safety mechanism interlocking the movement of said rotating means and the movement of said scraper comprising (1) means connected to said high speed driving means and adapted to be operated by the scraper in its movement into the basket for disengaging the high speed driving means and (2) means connected to said low speed driving means and to said locking means to release said locking means when the low speed driving means is energized.

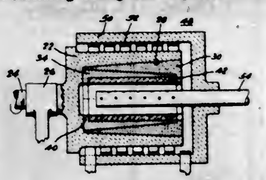
2,461,765

METHOD OF MAKING COMPOSITE BEARINGS

Richard G. Olt, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application July 10, 1943, Serial No. 494,194
5 Claims. (Cl. 29—149.5)

4. In the method of forming composite metal articles having a layer of metal powder bonded to a cylindrical steel support the steps comprising; providing a cylindrical steel support, centrifugally distributing a charge of metal powder into a substantially uniform layer in said support by axially rotating the support while introducing metal powder thereto, and then heating said layer and support while the layer is being held in place through rotation of said support by centrifugal force, said heating being accomplished under suitable conditions of time, temperature and atmosphere to cause the metal powder layer to sinter together into a porous metal layer and simultaneously to cause the porous metal layer to bond metallurgically to said support.

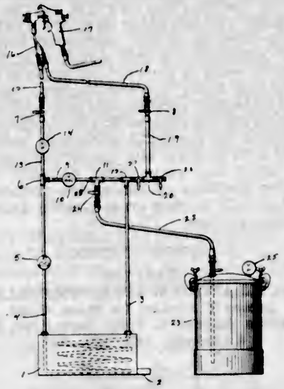


2,461,766

APPARATUS FOR HEATING AND CIRCULATING SPRAY MATERIAL

Donald J. Peeps, Toledo, Ohio, assignor to The De Vilbiss Company, Toledo, Ohio, a corporation of Ohio.

Application June 6, 1945, Serial No. 597,808
2 Claims. (Cl. 222—146)

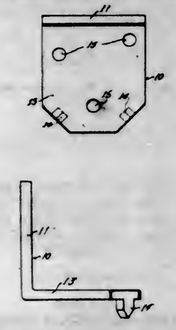


1. In an apparatus for maintaining a continuous flow of heated material available for application by a spray gun, a conduit circuit through which the material passes, a pump in the circuit for forcing material therethrough, a spray gun connection in the circuit from which material reaches the spray gun, a pressure reducing valve in the circuit between the discharge side of the pump and the spray gun connection, a by-pass conduit from the circuit at a point between the pump and the pressure reducing valve across to a point in the circuit between the spray gun connection and the inlet side of the pump, a pressure relief valve in the by-pass conduit to prevent any flow therethrough under a certain pre-determined pressure, a material replenishing inlet communicating with the circuit on the outlet side of the pressure relief valve and valve means in the circuit between the spray gun connection and the material replenishing inlet for directing the material through a draining outlet in order to remove material from the circuit.

controlling the flow through same, the refrigerant flowing through said by-pass affecting the value of said low pressure, and means for regulating

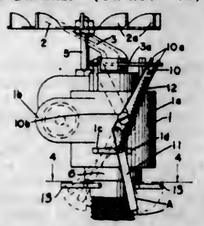
1. A tank roof comprising, an annular trough within, and spaced from, the tank walls, the in-

2,461,767
CARLOAD BRACING SPUR CLEAT
William T. Peyton, Dallas, Tex.
Application November 22, 1948, Serial No. 61,347
1 Claim. (Cl. 105—369)



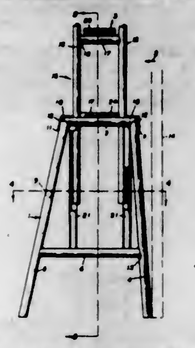
As a new article of manufacture, a carload bracing spur cleat comprising a relatively thick metallic plate body having a thickness of not less than $\frac{1}{8}$ of an inch, and bent entirely across the plate at an angle forming two legs, one leg forming a load engaging portion and the other leg forming a substantially rectangular floor anchoring portion, the two free corner portions of the latter portion being bent downwardly substantially normal to the anchoring portion and forming sharpened prongs adapted to penetrate the floor or walls of the car, the angle of the bend of the prongs being thereby disposed obliquely to the load engaging portion, and said load engaging and anchoring portions of the body having openings therein for receiving anchoring means auxiliary to said prongs, the upper portions of the prongs being cut away after bending, whereby the major portions of the entire prongs will be of substantially square cross-section and of constant shape and size.

2,461,768
OSCILLATING WATER SPRINKLER
James T. Porter, La Mesa, Calif.
Application August 7, 1945, Serial No. 609,397
4 Claims. (Cl. 299—68)



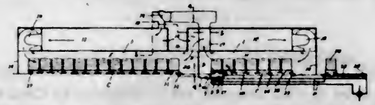
3. A water sprinkler having a revoluble housing and a revolubly mounted nozzle on said housing, an arm on said nozzle, a pair of nozzle trip levers on said housing associated with said arm, a waterwheel adapted to be rotated alternately in two directions by water flowing from said nozzle, a gear train between said waterwheel and said housing, and stops adapted to trip said trip levers and said arm when said housing is rotated in either direction, said pair of trip levers being pivotally connected together and secured on a single pivot on said housing and having a spring stretched in intermediate relation between the levers of said pair to provide over-center snap lever action.

2,461,769
TRESTLE
John L. Posun and Le Roy Houghton, Johnstown, Pa., assignors of one-third to Howard C. Faust, Johnstown, Pa.
Application March 3, 1947, Serial No. 732,004
1 Claim. (Cl. 304—5)



In a trestle of the class described, a pair of opposed base frames diverging downwardly relatively, and each including a top bar and a pair of legs diverging downwardly from the top bar, a pair of cross bars connecting said frames together at the top corners thereof in spaced apart relation, cross rounds connecting the legs of the opposed frames adjacent the bottoms thereof, a horizontal bar extending between said cross rounds, a pair of angle bars upstanding from said horizontal bar with channel sides facing, a ladder section with rungs and slidably fitted in said angle bars to be slid into a position of rest on said horizontal bar and to be vertically adjusted off said horizontal bar, said ladder section slidably fitting between the pair of cross bars, and a trough-like keeper bar swingable on one top bar under rungs of said ladder section into bridging relation to said top bars to hold said section in adjusted position off said horizontal bar.

2,461,770
DEHYDRATOR
Romolo L. Puccinelli, Turlock, Calif.
Application August 3, 1943, Serial No. 497,153
3 Claims. (Cl. 214—23)



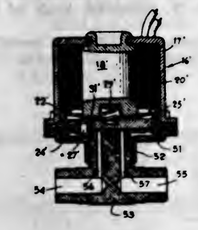
1. In combination with a tunnel and a train of cars disposed in said tunnel; a rod, means to advance and retract said rod, a fixed dog on the rod adapted to normally engage the front car of the train of cars when the rod is in retracted position; a pair of spaced stops on said rod, a second dog floating between the stops and adapted to normally engage the rear car of such train of cars when the rod is in retracted position, the advancement of the rod first causing the fixed dog

to move such front car a predetermined distance while the second dog floats on the arm, continued movement of the arm causing one stop to engage the second dog and cause it to move the balance of the train a predetermined distance, retraction of the rod carrying both the dogs back to normal starting position.

2,461,771
ROTARY DUMP
Erskine Ramsay, Birmingham, Ala.
Original application October 30, 1944, Serial No. 560,930. Divided and this application September 8, 1945, Serial No. 615,185
2 Claims. (Cl. 214—52)

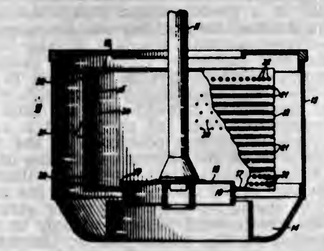
1. In a mine haulage system including an endless cable, and drive means for the cable, an upwardly inclined tipple, a rotary dump included in the tipple through which the endless cable passes, mine cars having outwardly curved sides, V-shaped frictionally engaging grabs on the cars disposed to engage the cable, roller bearings mounted in the sides of the dump to engage the cars as they are hauled through the dump and of a length corresponding to the height of the sides of the cars and inwardly curved between their ends to fit against the sides of the cars and hold them as they are rotated.

2,461,772
FLUID CONTROL VALVE
William A. Ray, Los Angeles, Calif., assignor to General Controls Co., a corporation
Application November 20, 1944, Serial No. 564,188
3 Claims. (Cl. 137—139)



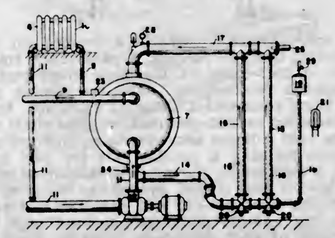
1. In a fluid control valve: a cup-shaped casing; a member having a cylindrical portion mounted so as to extend through an opening in the end wall of said casing in a direction generally at right-angles thereto, and at its outer end a pair of laterally-extending portions forming an inlet and an outlet connection for the valve, said member having a pair of passages extending longitudinally of said cylindrical portion to the inner end thereof and communicating individually with said connections; a closure cooperably with said inner end of the member to control fluid flow through said passages; and motor means sealingly covering the open end of said casing for moving said closure in opposite directions generally along the axis of said cylindrical portion of the member; said passages serving as the sole means for conveying fluid through the valve.

2,461,773
BALANCING CENTRIFUGAL MACHINE
Thomas H. Reid, Brooklyn, N. Y.
Application June 11, 1945, Serial No. 598,811
1 Claim. (Cl. 210—76)



A basket for a sugar centrifugal which is normally slightly out of balance comprising a bottom member, an upper head member and a cylindrical wall therebetween, said wall having a central portion with a plurality of grooved rings therearound and upper and lower portions adjacent the head member and bottom member, respectively, which are free of grooves, said grooved rings and said upper and lower portions each having a plurality of apertures arranged in at least one row around the circumference of the wall from which apertures the liquid from the sugar-bearing material carried by the basket during the centrifuging process is ejected during said process, the metal surrounding the outer end only of certain ones of the said apertures in at least one of said portions which are free of grooves being removed to such an extent that the said basket is balanced, said certain ones being on the side of said basket which would be the heavy side when it is rotating were it not for the said removal of metal.

2,461,774
HOT WATER HEATING SYSTEM
Leroy R. Robertson, Richmond, Va.
Application May 26, 1947, Serial No. 750,521
4 Claims. (Cl. 219—39)



1. A heating system comprising in combination a heat exchanger having tubing aligned therein, a heating fluid surrounding said tubes for transferring its heat to the interior of said tubes, electrical heating elements for heating said fluid, piping connected to said heat exchanger for supporting electrical heating elements and circulating the heating fluid from the exchanger to the heating elements and back to the exchanger, riser piping connected to one end of the exchanger tubing and running to heating radiators then returning to the opposite end of the exchanger tubing for carrying the heated radiator water to the radiators, an expansion tank and

and said arm when said housing is rotated in either direction, said pair of trip levers being pivotally connected together and secured on a

mally engage the rear car of such train of cars when the rod is in retracted position, the advancement of the rod first causing the fixed dog

ing as the sole means for conveying fluid through the valve.

changer tubing for carrying the heated radiator water to the radiators, an expansion tank and

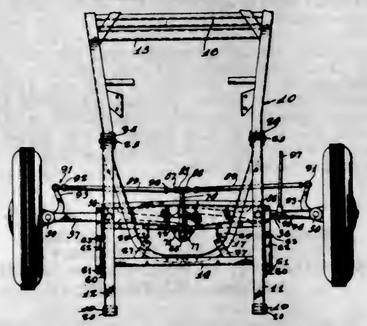
bleeder attached to said heat exchanger, a circulator pump positioned in said return line, and a room thermostat for making demands on a magnetic switch for closing the electrical circuit and energizing the heaters and heating the heating fluid to a predetermined temperature, an aquastat mounted on the riser line for operating the circulator to force the hot radiator water from the heat exchanger through the radiators and return, another aquastat mounted in the return line used as a high limit control to override the thermostat demand until the fluid has cooled sufficiently until the thermostat is satisfied a pressuretrol also positioned in the riser piping to override the thermostat in case of the failure of the aquastat limit control, the thermostat, aquastat in the return piping and the pressuretrol in the upper main pipe being wired in series, the pressuretrol being used only in case the aquastat in the return line or thermostat should fail to operate properly, thereby protecting the system from any undue pressure.

2,461,775

VEHICLE SPRING SUSPENDED HALF-AXLE FOR SUPPORTING STEERABLE WHEELS

Delmar G. Roos, Toledo, Ohio, assignor to Willys-Overland Motors, Inc., Toledo, Ohio, a corporation of Delaware

Application September 18, 1944, Serial No. 554,643
1 Claim. (Cl. 280—96.2)



In an automotive vehicle a frame; an axle supporting member forming a part of the frame; a pair of half-axles having their inner ends in overlapping relationship; said overlapping portions being formed with aligned openings; bushings disposed in said openings; a pivot shaft carried by said support and extending through said bushings forming a pivotal axis for said half-axles; a leaf spring assembly arranged adjacent each side of said frame; means for securing the leaf spring assemblies to said half-axles; a wheel supporting spindle pivotally mounted upon the outer end of each half-axle; a road wheel rotatably supported upon each spindle; an arm journaled on said frame adjacent the pivot shaft, and tie rods connecting each wheel supporting spindle to said arm.

2,461,776

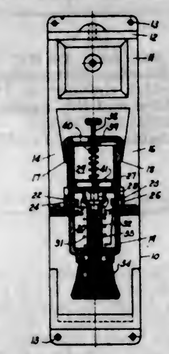
SHAVING BRUSH HEATING MEANS

Peyton Rowan, Anniston, Ala.

Application September 4, 1945, Serial No. 614,170
2 Claims. (Cl. 219—23)

1. The combination with a fountain brush having a hollow handle with an electric heating element therein and having contact members for

the element extending through the sides of the handle, together with a bracket for removably supporting the brush by its handle and having contact members disposed to engage the contact members on the handle of, a source of E. M. F., a switch carried by the bracket for connecting the source of E. M. F. and the contact members,



a second heating element carried by the bracket and in circuit with the switch and the contact members, a spring carried by the bracket for biasing the switch toward open position, a latch for holding the switch closed, and means movable responsive to heat generated by the second heating element for disengaging the latch.

2,461,777

CATTLE MARKER WITH MEANS TO LIMIT THE SWINGING MOVEMENT OF THE MARKER PLATE

William F. Schacht, Huntington, Ind.; William J. Schacht, executor of said William F. Schacht, deceased, assignor to William F. Schacht, II, and Robert W. Schacht, both of Huntington, Ind.

Application September 27, 1944, Serial No. 556,014
2 Claims. (Cl. 40—3)

1. A chain marker for livestock comprising a chain adapted to encircle the neck or spaced horns of the livestock, an indicia plate suspended by a double hook from said chain, and means on the plate at opposite sides of the hook for limiting the swinging movement of the plate on the chain in the lateral and vertical directions, said limiting means comprising a shank of substantial length and width extending from the upper edge of the plate and having a perforation; said double hook having one eye engaging a link of the chain and its other eye engaging the perforation in said shank; and a pair of tongues extending from said shank and bent to form eyes offset forwardly of the plane of the plate and disposed at opposite sides of the perforation and closely adjacent to said other eye of the double hook.

2,461,778

CASTER

William F. Schacht, Huntington, Ind.; William J. Schacht, executor of said William F. Schacht, deceased, assignor to William F. Schacht, II, and Robert W. Schacht, both of Huntington, Ind.

Application May 7, 1947, Serial No. 746,482
8 Claims. (Cl. 16—20)

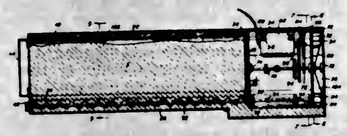
1. In a caster for furniture or the like; a swivel plate; a roller journaled on said plate; said plate having a circular opening on its vertical axis; a stud having its lower end extending through the said opening and having an enlarged head engaging the underside of the plate; said stud having a head on its upper end; a base plate on said stud adapted to be secured to an article of furniture and engaging the said head at the upper end of the stud; a cup-shaped member having a central opening receiving said stud and having its base seating upon the swivel plate; and an inverted cup-shaped member of larger diameter than the first mentioned cup-shaped member having a central opening receiving said stud and having its base engaging the underside of the base plate and having its side walls surrounding the side walls of the first mentioned cup-shaped member.

2,461,779

ROAD SANDER

Elmer J. Schall, Germania, Pa.

Application April 12, 1948, Serial No. 20,572
3 Claims. (Cl. 291—23)



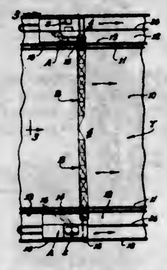
1. In a motor vehicle having a chassis, rear wheels, and an air exhaust conduit; a sander comprising an elongated housing secured to said chassis having an upper compartment, a rear compartment and a lower compartment, said lower compartment having an upper wall including an elongated opening, a sand reservoir slidably and rotatably positioned in said upper compartment, said reservoir including a wall having an opening registrable with said first-mentioned opening, a screw conveyor rotatably journaled in said lower compartment, means in said rear compartment for driving said conveyor, nozzles secured to the chassis in front of the rear wheels, sand delivering conduits interconnecting said nozzles with the rear of said lower compartment, and means for drawing warm air through said upper and lower compartments.

2,461,780

STARTING GATE

Edward M. Smith, Charles E. Whittaker, and John S. Goodwin, Whittier, Calif., assignors to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California

Application August 12, 1946, Serial No. 689,910
17 Claims. (Cl. 119—15.5)



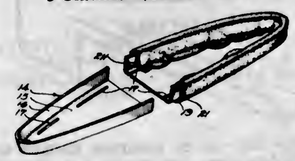
1. A race track having a course along which the race is run, a carriage operative lengthwise of the course at the margin thereof, motor means operatively associated with said carriage for propelling the same, a horizontally disposed gate carried by the carriage on a vertical pivot and operable from a closed position transverse of the course to an open position entirely clear of the course, locking means carried by said carriage and releasably connected with said gate to retain the same in such closed position, means operatively associated with said locking means to release the same, and means carried by said carriage and operatively connected with said gate to open the gate while the carriage is in operation by swinging the gate in the direction that the carriage is operating.

2,461,781

MANICURIST BUFFER

Anne Sorrell, Hollywood, Calif., assignor of one-half to Margot Keller, Beverly Hills, Calif.

Application March 17, 1947, Serial No. 735,090
5 Claims. (Cl. 132—76.5)



3. An improved buffer comprising a thin walled and cavitated body shell containing a series of slots extending through the shell, a pad on the bottom of said shell and attached thereto, a buffer covering extending about said pad and insertable in doubled condition within said slots to retain the covering on the body, and a handle head attached to the body.

2,461,782

SAW SETTING MACHINE

Conrad Stadick, Searles, Minn.

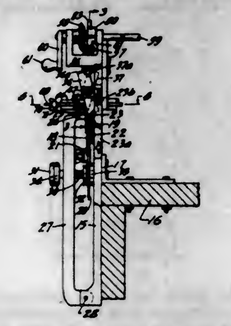
Application May 8, 1946, Serial No. 668,280
6 Claims. (Cl. 76—61)

1. A saw setting machine comprising, means for supporting a saw to permit movement of its teeth along a determined path, anvil members disposed at opposite sides of said path, a shaft

2 Claims. (Cl. 219—23)

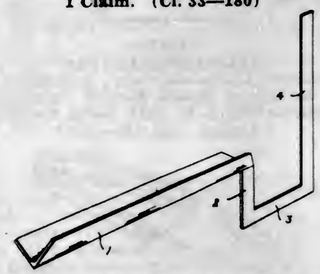
1. The combination with a fountain brush having a hollow handle with an electric heating element therein and having contact members for

having its axis disposed in a plane common to the teeth of a saw carried by said supporting means and in outwardly spaced relation to the teeth, a pair of hammers pivotally mounted on said shaft and formed and disposed to coact with said anvil members respectively in setting the saw teeth, means for spacing said hammers variously



along said shaft to set variously spaced saw teeth, a rigid arm projecting from each of said hammers, a cam positioned between said arms for actuating them and to alternately retract said hammers from the saw teeth and then release them, resilient means for actuating said hammers to strike the saw teeth when released by said cam and means for actuating said cam.

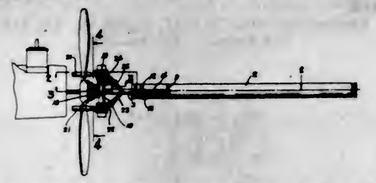
2,461,783
GAUGE FOR COLLOCATING PIPE SECTIONS
Charles John Stark, Duluth, Minn.
Application February 16, 1948, Serial No. 8,499
1 Claim. (Cl. 33—180)



A device for use in squaring flanges as they are applied to pipes comprising a V-shaped body portion adapted to engage the outer wall of said pipe, a gauging blade spaced from said body portion and disposed at a right angle thereto, and a substantially L-shaped extension fixed to one end of said body portion and at the other end to one end of said blade to hold said blade in said spaced relation with portions thereof extending beyond said body portion on opposite sides thereof, said body portion, blade, and extension being unitary.

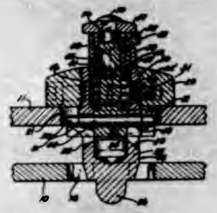
2,461,784
ENGINE STARTING DEVICE
Clifford E. Streed, Minneapolis, Minn.
Application April 18, 1945, Serial No. 588,937
10 Claims. (Cl. 185—37)

1. In a starter for miniature airplane engines, a drive shaft having means at one end for aligning it with an engine crank shaft and a propeller secured thereto, an element mounted for relative pivotal movement on the drive shaft about an axis disposed transversely thereto, means for preventing pivotal movement of said element in one direction whereby when the starter is opera-



tively applied to the engine crank shaft or the hub of the propeller and the drive shaft is operated, said element will engage and rotate the propeller to start the engine, said element being swingable in the opposite direction to permit unrestricted rotary movement of the propeller when the engine starts.

2,461,785
QUICK RELEASE MECHANISM FOR PARACHUTE HARNESSES
Frank J. Sullivan, Oshkosh, Wis.
Application July 22, 1944, Serial No. 546,155
5 Claims. (Cl. 24—73)



1. A parachute harness clasp, comprising a plate having attached thereto one strap of a body-engaging parachute harness, a complementary plate having attached thereto another strap of a body-engaging parachute harness, a headed key revolubly engaging both of the plates and securing the same together when in a turned position of adjustment, there being a slot in one of the plates through which the headed portion of the key may pass for separation of the plates when the key is in another turned position of adjustment and the other plate being formed with stop slots, a control member telescopically engaged with the key and yieldingly, axially movably associated therewith, and a pin carried transversely by the control member and engageable in the stop slots of said other plate for preventing turning movement of the key except upon a predetermined axial movement of the control member to disengage said pin from said stop slots.

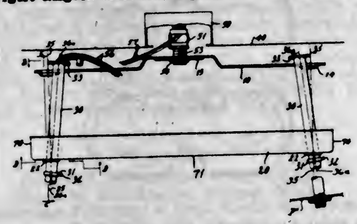
2,461,786
FLUORESCENT LIGHTING FIXTURE
Joseph Terr, Cleveland, Ohio, assignor to Holden-line Company, Cleveland, Ohio, a corporation of Ohio
Application October 16, 1946, Serial No. 703,692
3 Claims. (Cl. 248—343)

1. An improved mounting means for lighting fixtures of the suspension type, comprising generally rectangular elongated flat strap means having a centrally apertured inversely shaped

nozzles with the rear of said lower compartment, and means for drawing warm air through said upper and lower compartments.

for supporting a saw to permit movement of its teeth along a determined path, anvil members disposed at opposite sides of said path, a shaft

cup portion, said strap being provided with a pair of recessed seating wells, one at either end thereof, an opening at either end of said strap adapted to be keyed with one of said wells and disposed at right angles thereto, a pair of tubular suspen-

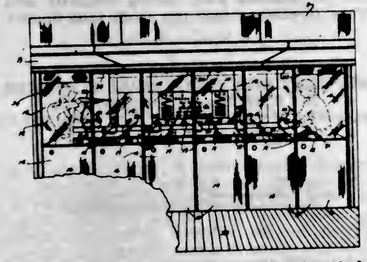


sion members, an end of each adapted to be telescoped through one of said opposite end openings and to be rotated into alignment with said associated well, wherefore the suspension member may be supported by said strap means.

2,461,787
JEWELRY BOX
Samuel Trachtenberg, Cleveland, Ohio
Application October 26, 1945, Serial No. 624,731
1 Claim. (Cl. 206—44)

A display and souvenir box for rings and the like comprising in combination a base member, a housing secured thereto and a ring holding and indicia carrying platform removably connected with said housing and base member, the central upper part of said housing being substantially V-shaped and the forward half of said housing being formed of a pair of doors having front, top and side surfaces, said platform having at the rear thereof an upstanding indicia carrier, the central part of the upper surface of said carrier fitting within the said central upper part of said housing.

2,461,788
SHOOTING GALLERY
Walter A. Tratsch, Chicago, Ill., assignor to Clarence E. Threedy, Chicago, Ill., trustee
Application February 7, 1945, Serial No. 576,625
2 Claims. (Cl. 273—95)

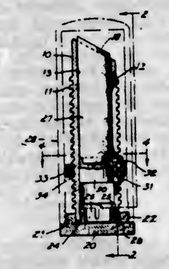


1. A shooting gallery comprising a booth having an open side and a door in the wall opposite said open side, an electric circuit having a source of electric energy, a switch in said circuit normally closed when the door of the booth is closed, an aiming device in each of said booths comprising an electrically controlled member, and a coin-controlled device in each of said booths for connecting the electrically controlled member with said source of electric energy when said switch is closed by said door.

2,461,789
HAIR-TREATING COMB
Mario G. Usai, East Paterson, N. J.
Application October 4, 1946, Serial No. 701,107
7 Claims. (Cl. 132—12)

1. A comb comprising an elongated back, a row of aligned teeth projecting from the back with their points substantially in the same plane, the comb having a cylindrical bore extending longitudinally thereof and located wholly therewithin and predominantly within the back, the bore intersecting the spaces between the teeth over a minor portion of its cross-sectional area, an elongated cylindrical member positioned coaxially within the bore, the surface of the cylindrical member having a non-color dispensing cylindrical zone of substantial width located parallel to the axis of the cylindrical member and extending throughout substantially the length of the row of teeth, the cylindrical member having in its surface an elongated color dispensing segmental portion of a substantial width and lying parallel to the axis of the cylindrical member, such color dispensing segmental portion extending throughout substantially the length of the row of teeth, and means to rotate the cylindrical member about its axis.

2,461,790
LIPSTICK HOLDER AND LIPSTICK
Albert E. Vaughn, Orange, N. J.
Application January 14, 1946, Serial No. 641,062
8 Claims. (Cl. 132—79.3)



1. A cosmetic dispenser, including: a lipstick receptacle having an ovately-shaped bore throughout its length for receiving a lipstick of similar cross section and having an obliquely beveled end, the vertex of the bevel being arranged

Application April 18, 1945, Serial No. 588,937
10 Claims. (Cl. 185—37)

1. In a starter for miniature airplane engines, a drive shaft having means at one end for align-

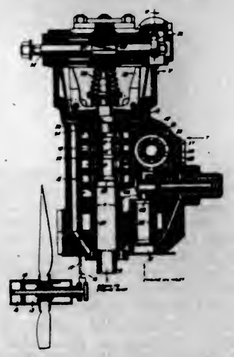
1. An improved mounting means for lighting fixtures of the suspension type, comprising generally rectangular elongated flat strap means having a centrally apertured inversely shaped

1. A shooting gallery comprising a booth having an open side and a door in the wall opposite

throughout its length for receiving a lipstick of similar cross section and having an obliquely beveled end, the vertex of the bevel being arranged

adjacent that portion of the ovate bore of greatest area; and means for feeding said lipstick outwardly beyond said beveled end of the receptacle to adapt it to assume the slope of said beveled end when applied to use.

2,461,791
VARIABLE PITCH AIRSCREW
Robert Henry Warde, Hatfield, England, assignor to The De Havilland Aircraft Company Limited, Hatfield, England
Application August 2, 1943, Serial No. 497,082
In Great Britain May 8, 1942
15 Claims. (Cl. 170—160.2)

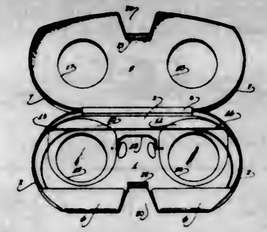


1. In combination with a hydro-controllable variable-pitch propeller having a pitch-changing ram operable through a normal range of pitch-increase and decrease, but within that range being operable under the influence of a low-pressure source only in the pitch-decreasing sense, and by a higher-pressure source only in the pitch-increasing sense, and being further operable through a feathering and unfeathering range of said propeller, beyond such normal range of pitch-change, under the influence of a still higher-pressure source, a low-pressure fluid source and a higher-pressure fluid source appropriate to such operations, respectively, a casing having ports connected, one to one end of the ram, another to the opposite end of the ram, and a third to drain, and for connection to said respective pressure sources, valve means cooperating with said ports, governor means operatively connected to said valve means to effect movement thereof in one direction upon lowered speed to deliver low-pressure fluid to the pitch-decreasing end of the ram while connecting the opposite end of the ram to drain, and conversely, in the opposite direction, to deliver higher-pressure fluid to the pitch-increasing end of the ram for operation of the ram in pitch-increasing sense, while connecting the latter's opposite end to drain, upon increased speed.

2,461,792
EYEGLASS CASE WITH SIGHT OPENINGS
Thomas E. Weaver, Chicago, Ill.
Application November 29, 1946, Serial No. 712,791
5 Claims. (Cl. 88—41)

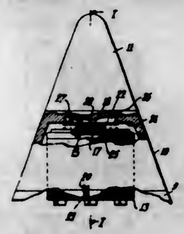
1. An eyeglass case comprising a back portion forming a receptacle for a pair of eyeglasses having a bottom and a cover for closing the recep-

tacle, said cover and receptacle bottom being each of opaque material and having openings afford-



ing a view through the case in the areas occupied by the lenses of said eyeglasses.

2,461,793
RELEASING MECHANISM FOR TIME FUSES
Richard H. Whitehead, New Haven, Conn., assignor, by mesne assignments, to the United States of America
Application July 11, 1939, Serial No. 283,725
3 Claims. (Cl. 102—83)



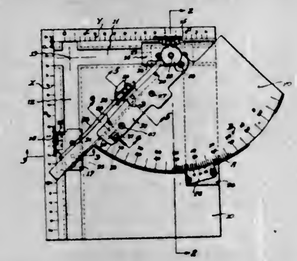
1. In a time fuse comprising a time train within a rotatable nose, a pin extending downwardly from said nose, a timing disc, and a lug extending upwardly from said timing disc and having fingers defining a slot into which said pin extends to lock together said rotatable nose and said timing disc, a releasing mechanism comprising in combination a substantially flat spring element spaced apart from said timing disc, one end of said spring element being secured to said nose, weights attached to the other end of said spring element adjacent to said fingers, a recess in said nose having a downwardly inclined upper surface, and a ball in said recess adapted to be moved in the recess in response to rotational forces to depress said spring element and to thereby disengage said pin from said fingers.

2,461,794
SUPPORT FOR ELECTRICAL FIXTURES
Jay E. Williams, Dubuque, Iowa
Application October 2, 1945, Serial No. 619,793
3 Claims. (Cl. 248—57)

1. A positioning means for fixture supporting bars comprising an elongated tube having stud

engaging and penetrating teeth on one end and a threaded bearing formed in its opposite end, an elongated threaded stud engaging bar adjustably received in the tube and actuated by the threaded bearing in said tube said bar having a stud engaging and penetrating tooth at its outer end, a one-piece combination sleeve and externally threaded hollow hickey adjustably received on said tube, and a locking bolt disposed in said hollow hickey extending through said sleeve for engaging said tube for locking the hickey in the desired adjusted position.

2,461,795
COMPOUND ANGLE COMPUTER
Floyd M. Williamson, Detroit, Mich.
Application February 1, 1945, Serial No. 575,619
8 Claims. (Cl. 33—94)



8. A computing device comprising a rigid base member having formed therein two intersecting ways extending perpendicular to each other, graduations on said base member adjacent said ways, two slides non-rotatably slidable in the respective ways, indicating means on the slides cooperating with the graduations on the base member, a hypotenuse member formed of two parts slidable longitudinally of each other, each of said parts having an end pivotally connected to one of said slides, means for preventing sliding movement of said parts relative to each other, a protractor carried by one of said parts, and indicating means fixed to one of said slides and cooperating with said protractor to indicate the angles between the protractor and the ways.

2,461,796
CHEESE SLICER
Carl L. Wilquin, Chicago, Ill.
Application November 1, 1946, Serial No. 707,170
7 Claims. (Cl. 30—116)

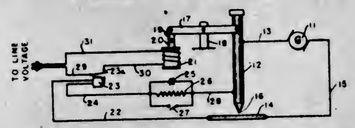
1. In a slicer device, a web handle member having forwardly-extending end flanges, the body of said handle having a curved portion extending between and to the rear of said flanges, a notched adjustment member carried by the rear side of said handle member, and a wire loop extending about and between said flanges and engaged by said notched member.

2,461,797
REACTION PROPELLED DEVICE FOR OPERATION THROUGH WATER
Fritz Zwicky, Pasadena, Calif., assignor to Aerojet Engineering Corporation, Azusa, Calif., a corporation of Delaware
Application October 23, 1944, Serial No. 559,951
12 Claims. (Cl. 60—35.5)

2. A reaction propelled device for propulsion through water comprising an elongated passageway having an inlet opening and an exhaust nozzle through which water flows, a propellant injector opening into said passageway, comprising a plurality of water and propellant injectors and a centrally located surface tension depressant injector having a plurality of outlets and running lengthwise of the passageway.

4. The method of propelling through water a device having a duct open at both ends to permit the passage of water through it from the surrounding medium, which comprises admitting water from the surrounding medium into the duct at one end and introducing within the duct a water reactive propellant to react with the water at a region within said duct, injecting into the water at the downstream side of the reaction region a surface tension depressor and discharging water and gases at higher velocity through said exhaust opening.

2,461,798
AUTOMATIC ARC STARTER
Nelson E. Anderson, Scotch Plains, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application August 6, 1947, Serial No. 766,603
8 Claims. (Cl. 314—66)



1. Arc welding apparatus comprising a welding electrode, a movable electrode holder having a tendency to move toward a workpiece until the electrode touches the same, energizable arc-starting means for moving said holder away from the workpiece and supporting the holder in welding position, a welding circuit connected to the electrode and the workpiece, a source of energy for said arc-starting means independent of the electrical condition of the welding circuit, and means responsive to a change in the voltage between the electrode and the workpiece from the open circuit value to a value less than the open circuit value for connecting said source to said arc-starting means.

2,461,799
METHOD OF DETECTING AND MEASURING RADIANT ENERGY FOR LOCATING SUBTERRANEAN PETROLEUM DEPOSITS
Walter Armstrong, Washington, D. C.
Application August 3, 1944, Serial No. 547,940
6 Claims. (Cl. 250—83.6)

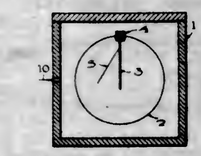
1. A method of detecting radiant energy for the presence of subterranean petroleum deposits that

Application November 29, 1946, Serial No. 712,791
5 Claims. (Cl. 88—41)

1. An eyeglass case comprising a back portion forming a receptacle for a pair of eyeglasses having a bottom and a cover for closing the recep-

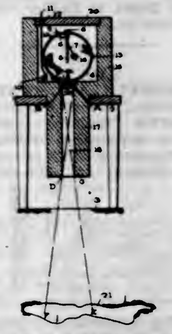
1. A positioning means for fixture supporting bars comprising an elongated tube having stud

comprises surrounding an ionization chamber with a shield against earthly ionizing radiation, charging negatively electrostatically the inner surface of said chamber, subjecting said shielded ionization chamber to the radiant energy emanating from subterranean petroleum deposits, deter-



mining the rate of change of charge on the inner surface of the ionization chamber and comparing that rate of change of charge with the rate of change of a negative electrostatic charge on the inner surface of the chamber when not subjected to the radiant energy emanating from subterranean petroleum deposits.

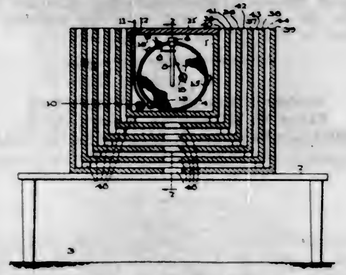
2,461,800
APPARATUS FOR DETECTING AND MEASURING RADIANT ENERGY FOR LOCATING SUBTERRANEAN PETROLEUM DEPOSITS
Walter Armstrong, Washington, D. C.
Application March 6, 1945, Serial No. 581,280
4 Claims. (Cl. 250—83.6)



1. Apparatus for detecting radiant energy emanating from subterranean petroleum deposits encountered in a geophysical exploration, comprising an ionization chamber, shielding substantially impervious to earthly ionizing radiation incident upon said shielding surrounding the ionization chamber, and means for measuring the change in the ionization chamber charge during the operation of the apparatus.

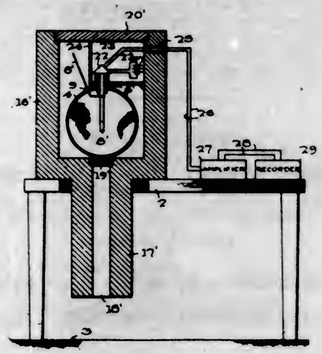
2,461,801
APPARATUS AND METHOD FOR DETECTING AND MEASURING RADIANT ENERGY FOR LOCATING SUBTERRANEAN PETROLEUM DEPOSITS
Walter Armstrong, Washington, D. C.
Original application March 6, 1945, Serial No. 581,280. Divided and this application May 26, 1947, Serial No. 750,602
9 Claims. (Cl. 250—83.6)

1. Apparatus for detecting radiant energy emanating from subterranean petroleum deposits encountered in geophysical explorations for locating subterranean petroleum deposits, comprising an ionization chamber; an inclosing shield substantially impervious to earthly ionizing radiation incident upon said inclosing shield surrounding said chamber; two types of additional shields in alternation around the sides and bottom of said chamber, one of said types of shields being a gaseous shield for the disintegration of a portion of the radiant energy emanating from



subterranean deposits of petroleum incident upon said shield and the other of said types of shields being a metallic shield for shielding the ionization chamber against earthly ionizing radiation and the radiant energy emanating from subterranean petroleum deposits except for a portion of said metallic shield between the ionization chamber and the earth's surface; and means for measuring the change in the ionization chamber charge during the operation of the apparatus.

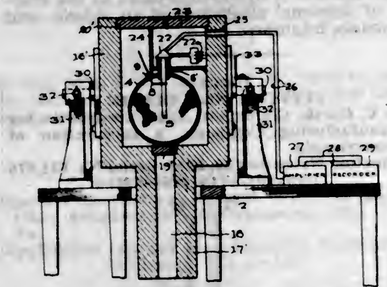
2,461,802
APPARATUS AND METHOD FOR DETECTING AND MEASURING RADIANT ENERGY FOR LOCATING SUBTERRANEAN PETROLEUM DEPOSITS
Walter Armstrong, Washington, D. C.
Original application March 6, 1945, Serial No. 581,280. Divided and this application September 20, 1945, Serial No. 617,588
6 Claims. (Cl. 250—83.6)



1. Apparatus for detecting radiant energy emanating from subterranean petroleum deposits encountered in geophysical explorations for locating subterranean petroleum deposits, comprising an ionization chamber, shielding surrounding the ionization chamber for shielding said chamber against earthly radiant energy except for a portion of said shielding between the ionization

chamber and the earth's surface with the excepted portion of the surrounding shielding substantially impervious to earthly ionizing radiation incident upon said portion, and electronic means for measuring the change in the ionization chamber charge during the operation of the apparatus.

2,461,803
APPARATUS AND METHOD FOR DETECTING AND MEASURING RADIANT ENERGY FOR LOCATING SUBTERRANEAN PETROLEUM DEPOSITS
Walter Armstrong, Washington, D. C.
Original application March 6, 1945, Serial No. 581,280. Divided and this application September 20, 1945, Serial No. 617,589
6 Claims. (Cl. 250—83.6)

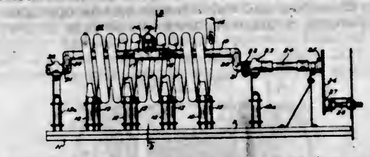


1. A method for detecting radiant energy emanating from subterranean petroleum deposits that comprises surrounding an ionization chamber with shielding against earthly radiant energy except for a portion of said shielding between the chamber and the earth's surface which excepted portion of the surrounding shielding shields the ionization chamber from earthly ionizing radiation, moving said ionization chamber and surrounding shielding to direct said excepted portion of the shielding at any desired angle in relation to the earth's surface, charging negatively electrostatically the inner surface of said chamber, subjecting said shielded chamber to the radiant energy emanating from subterranean petroleum deposits, determining electronically the rate of dissipation of the charge on the inner surface of said chamber, comparing that rate of dissipation with the rate of dissipation of a similar negative electrostatic charge on the inner surface of said chamber when shielded against radiant energy emanating from subterranean petroleum deposits, the presence of petroleum deposit emanations encountered from a limited area of the earth's substrata being detected thereby.

2,461,804
VARIABLE INDUCTANCE DEVICE
Wilfrid L. Atwood, Newton Lower Falls, Mass., assignor to The Girdler Corporation, Louisville, Ky., a corporation of Delaware
Application September 18, 1945, Serial No. 617,029
3 Claims. (Cl. 171—242)

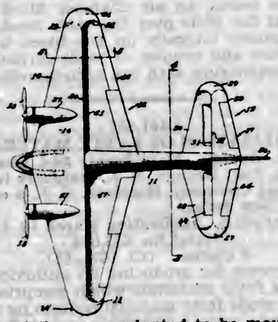
1. A variable inductance device comprising a conductor wound in the form of a helix, a second conductor, means adjacent the ends of said coiled conductor for pivotally supporting said second conductor for rotation about the axis of said helix, said second conductor including arms extending from said axis toward said helix and a straight section extending parallel to the axis,

and adjacent the turns, of said helix, a bearing member freely rotatable and slidably supported on said straight section and having a circular array of resilient contact members bearing upon and surrounding said straight section to provide circumferentially thereof a low-resistance electrical connection, means forming a slidable elec-



trical connection between said bearing member and a turn of said helix, and rollers supported from said bearing member and disposed on opposite sides of said electrical connection for guiding and propelling said bearing member along said straight section upon rotation of said second conductor.

2,461,805
AIRPLANE WING ARRANGEMENT
Parrish Barker, Temple City, Calif.
Application October 6, 1944, Serial No. 557,415
7 Claims. (Cl. 244—45)

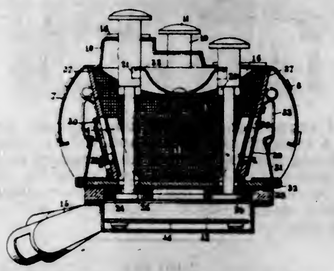


1. In airfoil means adapted to be mounted on and extend laterally of the fuselage of an airplane: a continuous dual wing at each side of the fuselage, each wing comprising an upper airfoil section having a rearwardly and outwardly extending leading edge and a straight trailing edge; a lower airfoil section having its leading edge substantially under the trailing edge of the upper airfoil section and its trailing edge extending outwardly and forwardly from the fuselage; said upper airfoil section having a tip portion extending downwardly and rearwardly to the tip portion of the lower airfoil section and said lower airfoil section having a tip portion extending upwardly and forwardly to the tip portion of the upper airfoil section, said tip portions being joined at their edges forming an air pocket therebetween.

2,461,806
CHROMATIC HARMONICON
André Borel, Paris, France
Application February 21, 1946, Serial No. 648,226
In France December 17, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 17, 1963
2 Claims. (Cl. 84—377)

1. A chromatic mouth organ of the reed type comprising a substantially trapezoidal elongated

block provided with three series of parallel perforations and with a corresponding number of grooves along one of the sides and the lower part of said block and communicating with the corresponding perforations, valves including stems guided in said perforations, control keys for said stems on the ends thereof projecting in a given direction and valve heads at the opposite ends of stems, a plate secured to the face of the



block corresponding to the location of the valve heads and provided with perforations registering with the block perforations, resilient cushions inserted between the outside of the plate and the valve heads, an air chamber fitted on the outside of the plate over the valve heads, sound plates applied laterally on the block to either side thereof and couples of reeds carried thereby and registering with the corresponding slots.

2,461,807
STABILIZATION OF FATTY MATERIALS
Loran O. Burton, Maplewood, and Charles E. Dryden, East Orange, N. J., assignors to Nopco Chemical Company, Harrison, N. J., a corporation of New Jersey
No Drawing. Application March 16, 1946, Serial No. 655,008
8 Claims. (Cl. 167—81)

1. A process for producing an antioxidant for stabilizing fatty materials which comprises contacting a crude fatty material containing natural antioxidants with a solvent selected from the group consisting of methanol and ethanol, separating a solution containing a highly active antioxidant extract from the remainder of the fatty material, recovering the antioxidant extract from the solvent solution thereof and contacting said extract with ammonia to increase its antioxidant activity.

2,461,808
PRODUCTION OF ANTIOXIDANTS FOR FATTY MATERIALS
Loran O. Burton, Maplewood, and Charles E. Dryden, East Orange, N. J., assignors to Nopco Chemical Company, Harrison, N. J., a corporation of New Jersey
No Drawing. Application March 16, 1946, Serial No. 655,009
8 Claims. (Cl. 167—81)

1. A process for producing an antioxidant for stabilizing fatty materials which comprises contacting a crude fatty material containing natural antioxidants with a solvent selected from the group consisting of isopropanol, n-propanol, acetone, diacetone alcohol, ethyl acetate, methyl acetate and methyl ethyl ketone, said solvents containing at least 10% of water, separating a solution containing a highly active antioxidant extract from the remainder of the fatty material, recovering the antioxidant extract from the solvent solution thereof and contacting said extract with ammonia to increase its antioxidant activity.

2,461,809
ZINC ELECTROPLATING
Allan E. Chester, Highland Park, and Frederick F. Reininger, Waukegan, Ill., assignors to Poor & Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application April 24, 1944, Serial No. 532,533
14 Claims. (Cl. 204—55)

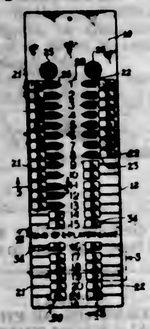
11. The method of depositing zinc which comprises electrodepositing zinc from an aqueous alkaline cyanide-zinc plating bath containing a sufficient amount of dissolved product of the reaction of piperonyl aldehyde and an aldonic acid to enhance brightness.

2,461,810
SUPPORTING COLUMN
John C. Curtis, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application November 30, 1945, Serial No. 631,876
11 Claims. (Cl. 248—354)

1. In a supporting column, cooperating column elements having relative axial movement when subjected to the action of fluid under pressure, and means associated with one of said elements for imparting impact blows thereto firmly to set the column in place.

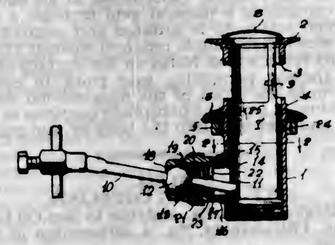
2,461,811
SCOREBOARD
Paul Cusano, Union City, N. J.
Application October 17, 1947, Serial No. 780,441
2 Claims. (Cl. 235—122)

1. A score board, substantially U-shaped in transverse section, and having a front plate and rearwardly extending flanges at the longitudinal edges of the front plate, said front plate having centrally disposed thereon a vertical series of indicia to indicate the score, said front plate having a vertical series of slots extending laterally and outwardly from each side of said central series of indicia, each of said slots extending through the side edge and flange at the side portion of the plate in which the slot is formed, a slide member slidably mounted in each slot and having a web extending through the slot and a flange on the web in back of the slot, and means for closing the outer ends of said slots



at each side of the center of the plate to hold the slide members in the slots after they have been positioned therein.

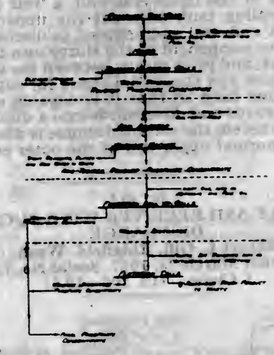
2,461,812
POP-UP WASTE VALVE
Marvin F. De Grave and Joseph Caliadine, Salem, Ohio, assignors to Eljer Company, Ford City, Pa.
Application January 28, 1946, Serial No. 643,898
13 Claims. (Cl. 4—193)



1. In a waste valve mechanism, a tubular valve casing, a valve stem working in the casing, said casing having an exteriorly screw threaded portion and provided with an opening located between the screw threaded portion and the outlet of the casing, said opening having an outwardly directed circular flange, a retaining nut for engaging the screw threaded portion of the casing and provided in its bore with a notch opening through opposite faces of the nut and through which notch the flange may pass when the nut is being assembled with the casing preparatory to engagement with the threaded portion of the casing, and valve stem operating means carried by the flange and having a lever extending through the opening in the casing and into operative association with the valve stem.

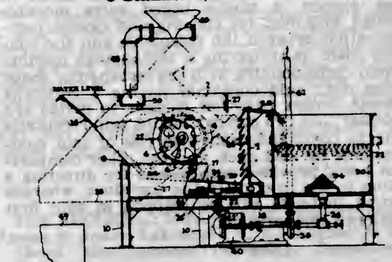
2,461,813
CONCENTRATION OF PHOSPHATE MINERALS
James B. Duke, Lakeland, Fla., assignor to Minerals Separation North American Corporation, New York, N. Y., a corporation of Maryland
Application November 14, 1945, Serial No. 628,565
7 Claims. (Cl. 209—166)

1. A method of concentrating phosphate minerals from their ores, which comprises subjecting the ore in an aqueous pulp to a concentrating operation with negative-ion reagents to separate a rougher floating concentrate of the phosphate values mixed with siliceous gangue, conditioning an aqueous pulp of that rougher phosphate concentrate with a mineral acid and then dewatering said pulp thereby eliminating a large part of said mineral acid and also the agents used in the production of that rougher phosphate concentrate, adding an inert oil to an aqueous pulp of that acid-treated rougher phosphate concentrate and subjecting said pulp to a concentrating operation



resulting in the removal and saving of a high-grade floating concentrate of a part of the phosphate values, subjecting the residue of that operation in an aqueous pulp to a concentrating operation with added positive-ion reagents to remove and discard a floated material largely composed of siliceous gangue, and combining the residue from that operation with the previously mentioned high-grade phosphate concentrate, thereby producing a final high-grade phosphate concentrate containing a high proportion of the phosphate in the ore.

2,461,814
SLUDGE HANDLING AND DISPOSAL SYSTEM
Ernest F. Fisher, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a corporation of Illinois
Application January 22, 1945, Serial No. 573,925
3 Claims. (Cl. 210—52)

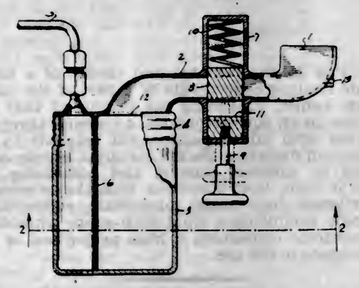


1. A sludge handling and disposal system comprising a supporting structure, an open top clear water tank mounted fixedly on the supporting structure and provided with drain means, means over the supporting structure and at one side of the clear water tank for discharging slurry downwards, a separate settling tank at said one side

solution containing a highly active antioxidant extract from the remainder of the fatty material.

of the clear water tank, positioned normally under the discharging means so as to receive slurry therefrom, embodying an inner end wall adjacent the clear water tank, an outer end wall, and a bottom between the two end walls, and having the bottom and the outer end wall thereof inclined upwards and outwards so that the sludge component of the slurry in the tank gravitates towards the inner end wall, sludge baffling means disposed in the settling tank inwards of the inner end wall, a drain-equipped sump disposed in the settling tank between the baffling means and the lower end of the inner end wall, a weir disposed in the settling tank adjacent the upper end of said inner end wall and adapted to discharge the clear water component of the slurry into the clear water tank, and pivot means between the supporting structure and the settling tank for supporting said settling tank so that it is capable of being tilted outwards and downwards into a discharging position wherein the collected sludge is discharged over the normal upper end of the outer end wall.

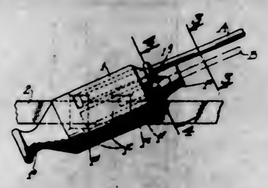
2,461,815
VEHICLE ASH RECEIVER WITH SUCTION DISCHARGE
Robert L. Gill, Ridgfield, Wash.
Application March 28, 1947, Serial No. 737,781
1 Claim.. (Cl. 206—19.5)



A receiver for burning material comprising a container mounted to one side of a dashboard of a vehicle, a receptacle disposed on the opposite side of said dashboard, said container and receptacle adapted for open communication with each other by means of a duct interconnecting them, said duct being of rectangular shape in cross section, a spring urged valve movable through said duct for opening and closing communication between the receptacle and the container, said valve having a rectangular opening therein corresponding with the rectangular shape of the duct, said container having a vertically disposed screen partition therein to divide the container into two compartments, said receptacle being in communication with one of said compartments by said duct, and the other compartment being provided with means for directing a suction to the interior of the container, whereby burning material will be trapped in said first mentioned compartment.

2,461,816
KNITTING NEEDLE HOLDER
Anna A. Y. Giovanini, Los Angeles, Calif.
Application May 22, 1946, Serial No. 671,561
9 Claims. (Cl. 66—117)

1. In a knitting needle holder, a belt, and a cylindrical holding element having at its back side eye portions through which said belt may be

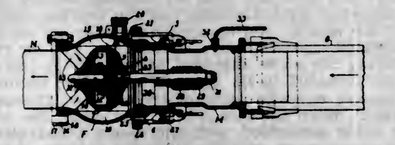


threaded, said element having a relatively deep knitting-needle receiving hole in one end.

2,461,817
CONCENTRATION OF PHOSPHATE MINERALS FROM THEIR ORES
Ernest W. Greene and James B. Duke, Lakeland, Fla., assignors to Minerals Separation North American Corporation, New York, N. Y., a corporation of Maryland
No Drawing. Application December 8, 1945, Serial No. 632,862
2 Claims. (Cl. 209—166)

1. The method of substantially eliminating from a rougher concentrate of a phosphate ore the effect of the negative-ion agents used in the production of said concentrate, which comprises passing said rougher concentrate in an aqueous pulp containing a mineral acid through a tank in which said pulp is agitated and aerated and from which said pulp is removed without removing any froth which forms on the surface of the pulp thereby permitting said froth to remain there until the effect of the negative-ion agents is eliminated from the phosphate particles in said froth and they sink into the body of said pulp.

2,461,818
SELF-SEALING COUPLING
Fred Hague, Devon, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
Application August 7, 1946, Serial No. 688,819
5 Claims. (Cl. 284—19)

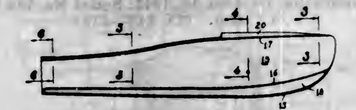


1. A hose coupling including an inlet section and an outlet section, each of said sections having a valve seat and an axially movable valve member therein, each of said valve members comprising a head and stem, a spider bearing transversely positioned in each section, the stems of said valves slidably supported by the hubs of said spider bearings, thereby preserving the valve alignment, springs disposed about said valve stems in abutting contact with the spider bearings to maintain said valves normally seated until fluid pressure is applied to the valve member in the inlet section, and means for detachably coupling said sections together and positioning said valve members in abutting relation.

1. A method of concentrating phosphate minerals from their ores, which comprises subject-

wards, a separate settling tank at said one side

2,461,819
BOAT HULL
Marcus A. Hall, Bethany, Conn., assignor, by mesne assignments, to Churchward & Company, Incorporated, West Haven, Conn., a corporation of Connecticut
Application September 14, 1944, Serial No. 554,025
7 Claims. (Cl. 9—6)



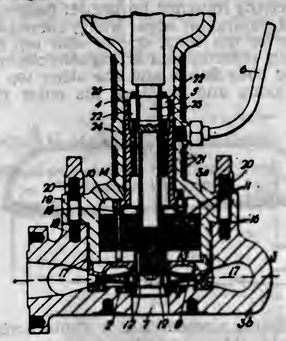
1. In a boat hull, a rail-like sheer member which is substantially U-shaped in cross section, with the intermediate part of the U disposed exteriorly of the hull and its flanges extending inwardly, a deck plate applied exteriorly to the upper part of the U, and a side plate welded exteriorly to the lower part of the U, the lower flange of the U having a depending lip, a part of said side plate being welded to said lip so that in that region of the sheer member the latter has a laterally projecting position, another part of the side plate being welded directly to the body of the sheer member so that the side plate is substantially flush with the sheer member.

2,461,820
CONVERSION OF ETHYLENE
Stanford J. Hetzel, Cheltenham, and Robert M. Kennedy, Drexel Hill, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application December 28, 1945, Serial No. 637,787
5 Claims. (Cl. 260—683.15)

1. A process for the conversion of a mixture of ethylene and a substantial proportion of ethane to higher boiling materials by subjecting such mixture to an elevated temperature in the presence of a catalyst consisting by weight of not less than 70% silica gel, not more than 30% of a metal selected from the group consisting of nickel and cobalt and a substantially smaller but appreciable quantity of alumina.

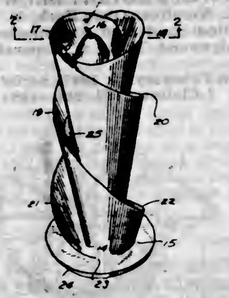
2,461,821
CENTRIFUGAL PUMP
Giles Philip Eliot Howard and Alexander Ivanoff, Luton, England
Application August 2, 1946, Serial No. 687,823
In Great Britain July 11, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires July 11, 1965
2 Claims. (Cl. 103—103)

1. A centrifugal pump comprising a pump impeller, a pump shaft on which said pump impeller is mounted, said pump shaft extending rearwardly from said pump impeller, a pump casing for said pump impeller having a fluid inlet and outlet, said pump casing being provided with a back cavity at the rear of said pump impeller, through which back cavity said shaft passes in contact with the fluid in said back cavity, said back cavity being in free communication with the fluid inlet aforesaid, means for reducing the rate of heat flow through said back cavity, comprising a plurality of spaced stationary baffles located in said back cavity in planes transverse to the axis of said shaft, each of said baffles having a hole through it, through which said shaft passes with a relatively small clearance between said shaft and said baffles, and stationary means surrounding said shaft and sealing the spaces between said baffles at the region of the edges of their holes, said stationary means



defining a fluid cut-off between said baffles and said shaft, and preventing the generation of motion in the fluid between said baffles by the rotation of said shaft.

2,461,822
CANDLE
Mary C. Hussey, Mount Vernon, N. Y.
Application October 18, 1945, Serial No. 623,047
3 Claims. (Cl. 67—22)



3. A decorative wax candle comprising a body, a wick in the body, and helically disposed convolutions enveloping the body and forming deep downwardly inclined channels between the convolutions and the body, the upper edges of the convolutions extending upwardly around the top of the body and forming a pool for collecting the wax and directing it into the downwardly inclined channels.

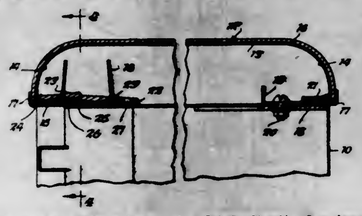
2,461,823
TOP SECURING MEANS FOR FURNITURE
James R. Jones, Lakewood, N. Y., assignor to Art Metal Construction Company, Jamestown, N. Y.
Application August 29, 1946, Serial No. 693,745
3 Claims. (Cl. 311—108)

1. An article of furniture comprising a body, a top resting upon the upper face of said body, said body having on its top face a flange extending along one edge thereof with its outer edge spaced from said top face to form a channel open-

1. In a knitting needle holder, a belt, and a cylindrical holding element having at its back

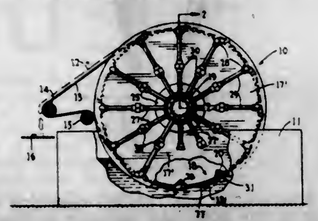
coupling said sections together and positioning said valve members in abutting relation.

ing horizontally and outwardly towards said one edge, and also having on its top face an upstanding element along and spaced inwardly from that edge of the top which is opposite said one edge, said top having inturned horizontal flanges along its opposite marginal edges which correspond to said edges of the body, one of said top flanges horizontally entering and fitting said channel beneath said body flange and the other top flange disposed along and abutting the outer face of



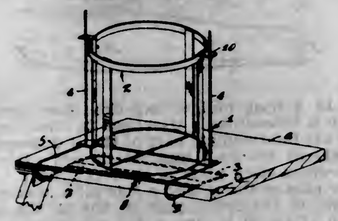
said upstanding element which limits horizontal movement of said top in a direction to remove said one top flange from said channel, a wedge key slidingly coupled to said body and passing over a bearing on the upper face of said other top flange to confine it against the top of said body, said key having a notch therein, and a spring tongue projecting from said body into said notch in the direction in which the key moves into flange-engaging position, for preventing retraction of said key.

2,461,824
CONTINUOUS ROTARY DRUM FILTER
Thomas R. Komline, Glen Rock, N. J., assignor to Komline-Sanderson Engineering Corporation, Ridgewood, N. J., a corporation of New Jersey
Application February 10, 1947, Serial No. 727,589
4 Claims. (Cl. 210—199)



4. In a drum for a continuous rotary vacuum filter of the type wherewith the permeable medium is trained about the exterior surface of the drum, in combination, a pair of spaced drum heads and a barrel portion situated between the drum heads in axial alignment therewith, said barrel portion being an imperforate, substantially cylindrical shell, the external surface of which is divided by spaced, longitudinally arranged compartment sealing strips to provide a series of compartmental divisions, each compartmental division of said shell providing a convex peripheral portion for supporting the permeable medium having a drainage channel disposed longitudinally of the drum axis adjacent said convex portion over which the medium bridges whereby effluent passing through a filter medium may travel circumferentially of the drum under the medium resting on the drum surface to the drainage channel and thence axially of the drum in the drainage channel, said drum heads being each provided with axial rotation supporting trunnions and one of said drum heads being provided with a series of effluent apertures in registration with said drainage channels.

2,461,825
BUCKET HOLDER
Ted Kowalski, Toledo, Ohio
Application October 18, 1947, Serial No. 780,731
1 Claim. (Cl. 248—311)



A device of the class described comprising a bracket for attaching to a stepladder step or the like, and a bucket-holder carried by said bracket, said bracket comprising a single piece of stiff wire forming spaced parallel uprights, a horizontally disposed board receiving and clamping loop at the lower end of each upright and a cross connecting portion between the lower members of the loops at the free ends thereof, and a separate cross brace rigidly connecting the lower members of said loops in spaced relation to said first cross portion, and said bucket holder having an open top and being of cylindrical form and having ears projecting radially from opposite sides thereof and in engagement with respective uprights to retain the bucket-holder to the bracket.

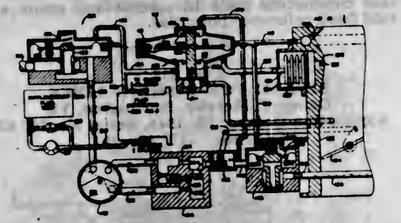
2,461,826
GOLF SWING TRAINER
Louis Martin Krauffer, Glencoe, Ill.
Application October 9, 1946, Serial No. 702,153
4 Claims. (Cl. 273—35)

1. A golf swing trainer comprising a captive ball attached to a suitable cord; means for releasably holding said ball on the top of a tee; a mouth grip adapted to be held between the teeth of a player; and means for attaching said cord to said mouth grip.

2,461,827
COMBINATION PUMP AND VALVE MECHANISM
Leighton Lee, II, Rocky Hill, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Original application March 28, 1945, Serial No. 584,267. Divided and this application October 11, 1946, Serial No. 702,722
6 Claims. (Cl. 103—11)

1. Fluid flow control apparatus comprising a pump having a rotor, a valve, a stem for said

valve aligned with said rotor, a port cooperating with said valve so as to have its area varied by reciprocation of said valve, means connecting said stem to said rotor for concurrent rotation



therewith but permitting reciprocation of said stem and valve relative to said rotor, means for conveying fluid discharged by said pump to said valve, and means for reciprocating said valve to vary the flow of fluid therethrough.

2,461,828
EXTENSION JOINT
George Freeman Lonsaline, Olney, Ill., assignor of one-half to Lawrence E. Ostrom, Olney, Ill.
Application May 13, 1946, Serial No. 669,223
1 Claim. (Cl. 285—2)

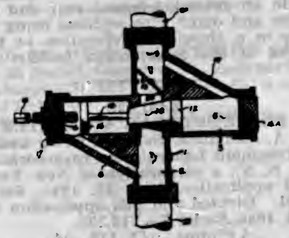
An extension joint of the class described comprising a primary section having an elongated smooth central straight bore extending from end to end, said primary section having externally threaded opposite ends enlarged relative to the central bore, a pipe section slidably fitting in one end of said primary section, a second pipe section slidably fitting in the opposite end of said primary section, a packing ring carried within each externally threaded end and sealing the respective pipe sections in the ends of the primary section, a coupling threaded upon each externally threaded end of the primary section, and a gripping thimble fitting in each coupling and engaging the packing rings for compressing the packing rings and firmly gripping the pipe sections to lock the pipe sections against movement relative to the primary section.

2,461,829
GLUTEN CONTAINING COMPOSITIONS
Leslie Lowen, Wyandotte, Mich., assignor, by mesne assignments, of 9448/10570 to Chemprotin Products, Trenton, Mich., a limited partnership of Michigan, 561/10570 to Lamio Kermendt, New York, N. Y., and 561/10570 to B. Clark Boschuber, Grosse Ile, Mich.
No Drawing. Application November 9, 1944, Serial No. 562,747
4 Claims. (Cl. 106—136)

1. A process for making gluten plastics and comprising heating to 50° C. and mixing 100 parts by weight of dry undenatured gluten, 200 parts by weight glycerine, 5 parts by weight conc. hydrochloric acid and 1 part by weight ortho-cresol for one hour to form an initial mixture; mixing said mixture with 300 parts by weight of wet gluten containing 33% dry gluten to form a homogeneous mass; and aging said mass at a temperature of 50° C.

4. Medicinal capsule material consisting essentially of 50 parts by weight hydrolized gluten, 10 parts by weight mineral oil; 50 parts by weight gelatine; and glycerine and water.

2,461,830
ANTISIPHON VALVE
Thomas C. Mahon, Burnaby, British Columbia, Canada
Application February 28, 1945, Serial No. 580,123
2 Claims. (Cl. 137—153)



2. An anti-syphon valve comprising a body having a vertical and a horizontal bore and being adapted for connection in a riser of a water supply line, a plunger slidably mounted in the horizontal bore adapted to move to close off the water flow between the upper and lower portion of said bore, a passageway communicating between the upper part of the vertical bore and one end of the valve and a passageway communicating between the lower part of the vertical bore and the opposite end of the valve, and means interposed between the plunger and the upper part of the vertical bore for automatically restricting the effective cross sectional area of the upper part of the bore which lies between the entrance to the first named passageway and the plunger as a drop in pressure occurs in the lower part of said vertical bore and for directing a down flow through the first named passageway to move the plunger to close the valve.

2,461,831
PRINT-HANDLING DEVICE
Louis Phillip Martinek, Cleveland, Ohio
Application August 30, 1945, Serial No. 613,564
4 Claims. (Cl. 95—100)

1. A print-handling device comprising a wire formation consisting of two wires, each of which is bent to form a forward symmetrical paddle part of spaced wire sections, said wire sections of one wire lying exteriorly of and

resting on the drum surface to the drainage channel and thence axially of the drum in the drainage channel, said drum heads being each provided

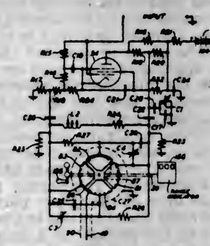
1. Fluid flow control apparatus comprising a pump having a rotor, a valve, a stem for said

for one hour to form an initial mixture; mixing

sections of one wire lying exteriorly of and

spaced from the wire sections of the other wire, all of said wire sections forming a skeletonized paddle, the inner wire sections being continued rearwardly to form a handle part and then bent downwardly and upwardly to form a trigger-like finger grip and thence continued forwardly in substantially parallel relation with and slightly above said handle part to form a spring-like finger, which finger terminates in a print-gripping tong adjacent the rear end of the skeletonized paddle, the ends of said inner wire sections being secured together in said tong area, the outer wire sections also being continued rearwardly to form a handle part adjacent the handle part of the inner wire sections, the handle part of the outer wire sections terminating in an extended looped rear end thereof, the inner and outer wire sections being secured together in a chisel-like formation at the forward end of the skeletonized paddle.

2,461,832
PHASE SHIFTING APPARATUS
Larned A. Meacham, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original application June 22, 1943, Serial No. 491,791. Divided and this application December 14, 1946, Serial No. 716,293
5 Claims. (Cl. 178—44)



5. In combination, a space current device having an anode, a cathode and a control electrode, a first circuit connecting said anode and said cathode comprising in series a source of space current, a first resistance means and a second resistance means, a second circuit connecting said control electrode and said cathode comprising said first resistance means, means for impressing an oscillatory wave upon said second circuit, a plurality of current paths connected in parallel between two terminals, each path comprising two impedances in series, means for deriving from said first circuit two alternating potentials which are equal in magnitude and opposite in phase with respect to a fixed reference potential, means for impressing said derived potentials upon said terminals, respectively, of said parallel paths, a phase shifting device comprising four sector conducting plates substantially in one plane, an opposed conducting plate substantially in a second plane parallel to the first plane and a dielectric rotor substantially in a third plane parallel to and between the first and second planes, means for rotating said rotor in said third plane about an axis substantially perpendicular to said planes, means for connecting said two terminals to two opposed sector plates, respectively, of said phase shifting device, means for connecting the junction of the two impedances of one of said paths to a third of said sector plates, means for connecting the junction of the two impedances of another of said paths to the fourth of said sector plates, and means for utilizing the difference of the potential of said conducting plate in said second plane and said fixed reference potential.

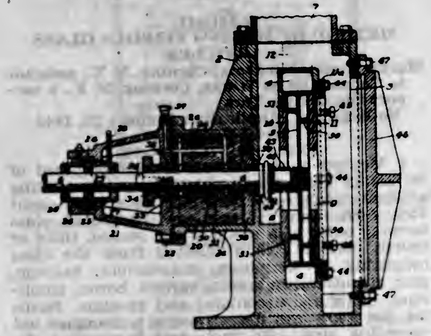
2,461,833
SINKER FOR FISHING LINES
Dewey P. Mercier, Burlington, Vt.
Application October 25, 1946, Serial No. 705,658
4 Claims. (Cl. 43—28)

1. A fishing line sinker comprising a pair of halved body sections, each of said sections being provided with a semi-circular longitudinal extending groove and a semi-circular transverse groove extending at an approximate right angle with respect to the longitudinal groove and intersecting the latter, a semi-circular projection extending from each end of each of said sections, said pair of sections being arranged with respect to each other so that the longitudinal and transverse grooves and the projections of the one section are complemental to the longitudinal and transverse grooves and the projections of the other section to form a barrel having a coaxal aperture and a transverse aperture intersecting said coaxal aperture at an approximate right angle to the axis of the barrel with coaxal projections extending from the ends of said barrel, a flexible and conical end member designed to fit on each of said coaxal projections and provided with a longitudinal aperture in coaxal alignment with the coaxal aperture of said barrel, and radially disposed and spaced studs mounted in said barrel and positioned in its coaxal aperture at right angles to said transverse aperture, said transverse aperture in said barrel having enlargements surrounding said studs and being provided with round recesses to receive said studs.

2,461,834
COAXIAL CONDUCTOR
Louis H. Morin, Bronx, N. Y.
Application February 26, 1944, Serial No. 524,122
1 Claim. (Cl. 174—29)

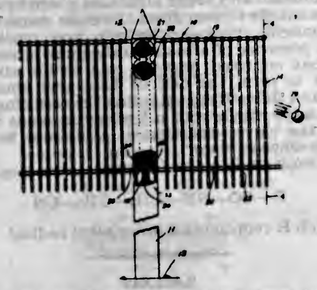
In coaxial cable, an electric conductor, a helix member of insulating material arranged upon and extending longitudinally of said conductor, said member having a ribbon portion in contact with the conductor and an annular flange spaced from said portion and forming a wide helical surface portion substantially paralleling the longitudinal axis of the conductor, and a web extending radially and perpendicularly to said ribbon portion and integral with said ribbon portion and flange, the width of the ribbon portion being greater than the thickness of the web but less than the width of the flange.

2,461,835
DOUBLE-ACTING CENTRIFUGAL PUMP
Daniel Murphy, New Castle, Pa.
Application April 18, 1944, Serial No. 531,546
7 Claims. (Cl. 103—104)



4. A double-acting rotary pump including an impeller chamber having an inlet and an outlet, an impeller in said chamber, said impeller having vanes on each of its opposite sides, an impeller shaft extending into said chamber and having an end rotatably supporting said impeller, an inlet chest in said pump extending on opposite sides of said impeller chamber, each of the opposite side walls of said impeller chamber comprising a wearing plate cooperating with the vanes to form the outer surfaces of the fluid impelling passages between the vanes on the corresponding side of said impeller, said inlet to the impeller chamber comprising an opening in each of said wearing plates establishing communication between said inlet chest and the central region of said impeller chamber, and means for securing said impeller shaft in fixed axial position while providing for intentional axial adjustment of the shaft.

2,461,836
FOUL BALL INDICATOR
Allen K. Nelson, Washington, D. C.
Application October 18, 1946, Serial No. 704,221
2 Claims. (Cl. 177—384)

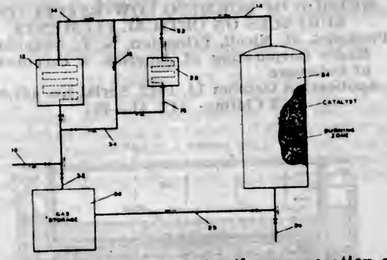


1. A fair and foul ball indicator for a baseball field, comprising a post adapted to be positioned to extend vertically from the outfield terminus of a foul line, a pair of elongated stationary contacts carried by each post and extending laterally therefrom in opposite directions, a pair of elongated supports carried by each post and extending laterally therefrom in opposite directions, said supports being substantially parallel to said contacts and being vertically spaced and forwardly offset therefrom, one support and contact extending over fair territory and one support and contact extending over foul territory, at least one depending movable contact swingably carried by each support, said movable contacts normally depending vertically in forwardly-spaced relation to their related stationary contacts, said movable contacts being each adapted upon being struck by a batted ball to be moved into contact with its related stationary contact, and separate signal means operatively associated with each pair of movable and stationary contacts, one of said signal means being actuated upon contact of a movable contact with a stationary contact.

2,461,837
METHOD OF HANDLING STERILE LIQUIDS
Maurice M. Nesset, Glenview, Ill., assignor to Baxter Laboratories, Inc., Glenview, Ill., a corporation of Delaware
Application September 22, 1943, Serial No. 503,405
5 Claims. (Cl. 128—272)

1. A method of handling blood, comprising heating a water solution of an anticoagulant within a container having an opening to sterilize the solution and cause water vapor to be withdrawn through the opening, sealing said opening, evacuating said container, and introducing blood into the evacuated container while the same is sealed against the ingress of air.

2,461,838
SOLID BED CATALYST REGENERATION PROCESS
Frederick C. Neuhart, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application June 21, 1943, Serial No. 491,709
2 Claims. (Cl. 252—242)

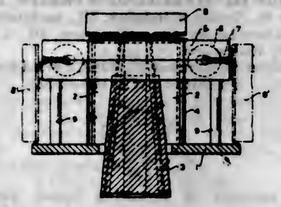


1. An improved process for the regeneration of a mass of solid catalytic material deactivated by deposition thereon of carbonaceous material during a hydrocarbon conversion, which comprises removing a major portion of said carbonaceous material by combustion in an active regeneration step at a temperature of 800° F. in the presence of an inert gas containing about 2 per cent oxygen during which a relatively narrow burning zone of active combustion progressively moves from one end of said catalyst mass to the other, immediately thereafter raising the temperature of said catalyst mass from said 800° F. to about 1100° F. and continuing the passage of said oxygen-con-

two terminals to two opposed sector plates, respectively, of said phase shifting device, means for connecting the junction of the two impedances of one of said paths to a third of said flange, the width of the ribbon portion being greater than the thickness of the web but less than the width of the flange.

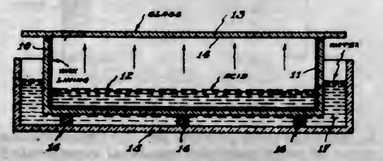
taining gas through said catalyst mass in a conditioning step for a period between 5 and 40 minutes at a temperature between 1100 to 1145° F. and about 5 atmospheres pressure to complete said regeneration of said catalyst.

2,461,839
DEVICE FOR RESTORING TO SHAPE THE WALLS OF DEFORMED SHEET-METAL BOXES AND THEIR LIDS
Theodoor Reinier Neutelings, Bergen-op-Zoom, Netherlands
Application April 7, 1939, Serial No. 266,596
In Belgium April 12, 1938
Sections 3 and 16, Public Law 690, August 8, 1946
Patent expires April 12, 1958
6 Claims. (Cl. 153—32)



1. A device for reshaping sheet-metal boxes and the lids pertaining thereto comprising expansible core means the outer periphery of which is nearly equal to the peripheral shape of the box or lid to be reshaped and said core means being adapted to support said box or lid, and further comprising a supporting frame surrounding the core means and carrying rolls arranged to engage and to exert a pressure on the side walls of the box or lid mounted on the core means, the supporting frame with the rolls and the core means being slidably arranged with relation to each other.

2,461,840
METHOD OF FORMING LOW-REFLECTING SURFACES ON OPTICAL ELEMENTS
Frederick H. Nicoll, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 14, 1942, Serial No. 461,958
5 Claims. (Cl. 41—42)



1. The method of treating glass to reduce the reflection of a component of light therefrom which comprises the steps of exposing a surface of said glass to the action of vapor arising from a dilute aqueous solution of hydrofluoric acid, maintaining the temperature of said solution lower than that of said surface to prevent condensation, whereby to reduce the density of a layer of said glass immediately adjacent said surface, and continuing said exposure until said layer has an effective optical thickness of the order of an odd integral number of quarter-wavelengths of said component of light and an index of refraction of the order of the square root of the index of refraction of said glass.

2,461,841
METHOD OF MAKING FIBROUS GLASS ARTICLES
Martin Emery Nordberg, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application January 26, 1944, Serial No. 519,231
10 Claims. (Cl. 49—79)

2. Method of making an article composed of refractory glass fibres which comprises melting a silicate glass containing not more than about 75% SiO_2, and at least one additional glass forming oxide of a metal of the second, third or fourth periodic group selected from the class consisting of beryllium, magnesium, calcium, zinc, strontium, cadmium, barium, boron, aluminum, titanium, zirconium, and thorium, forming the glass into fibres having a diameter not exceeding about .001 inch, and fabricating the fibres into an interlaced arrangement to form a fabric, leaching the fabric with an aqueous solvent having a pH not greater than 7 to extract non-siliceous constituents and leave a porous highly siliceous residue, and baking the leached fabric at a temperature sufficient to revitrify the porous fibres but insufficient to cause sintering thereof.

2,461,842
CONDENSATION OF NITRILES WITH AMIDES AND THE PRODUCTION OF BETA-ALANINE
John F. Olin, Grosse Ile, Mich., assignor to Sharples Chemicals Inc., a corporation of Delaware
No Drawing. Application February 26, 1943, Serial No. 477,267
6 Claims. (Cl. 260—465.5)

5. In the manufacture of a beta-amino aliphatic acid, the process comprising contacting an amide having the formula

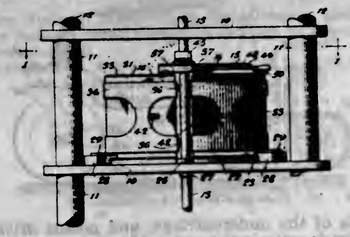
in which R is chosen from the class consisting of hydrogen, and lower alkyl and phenyl radicals, with a nitrile chosen from the class consisting of acrylonitrile, methacrylonitrile and crotonitrile in the presence of a basic catalyst until condensation has occurred between said amide and said nitrile to form the desired beta-acyl amido nitrile, and thereafter contacting the resulting beta-acyl amido nitrile with a hydrolytic agent chosen from the class consisting of acids and bases in the presence of water.

6. Compounds of the formula:

in which R represents a lower alkyl radical.

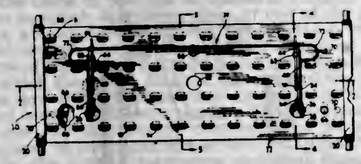
2,461,843
POTENTIOMETER
Willard J. Opocensky, Glendale, Calif., assignor to Librascope, Incorporated, Burbank, Calif., a corporation of California
Application March 11, 1946, Serial No. 653,540
17 Claims. (Cl. 201—56)

1. A potentiometer including a coil-supporting block with a central shaft-receiving bore therein, said block having a slot cut therein and extending from the bore to the periphery of the block



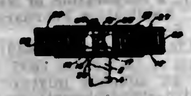
whereby the block may be slipped on to the shaft to center it with respect to the central bore.

2,461,844
STICK HOLDER
Lee D. Overland, Brooklyn, N. Y.
Application March 5, 1945, Serial No. 581,158
1 Claim. (Cl. 294—87)



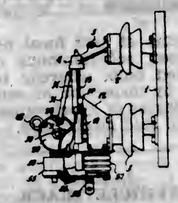
A stick holder comprising a pair of plane gripping members, means to mutually detachably attach said members in spaced parallel relationship, a third plane gripping member slidable between said pair of gripping members in a direction parallel to the planes thereof, a handle, a coupling member disposed above said top gripping member and having a portion extending through a slot in said top member and detachably engaged with said third member, coadjusting means on the coupling member and top gripping member only to captively mount said coupling member for slidable movement on said top gripping member, means to mount said handle on said top gripping member for movement relative thereto, and means to interconnect said handle and said coupling member so that movement of said handle will move said third gripping member relative to said pair of gripping members to grip a stick.

2,461,845
CUFF LINK OR CUFF BUTTON
Carl I. Osterberg, Providence, R. I., assignor to Arthur J. Schwartz, New York, N. Y.
Application April 30, 1946, Serial No. 22,185
11 Claims. (Cl. 24—97)



1. A cuff-link or button having a shank, a pivot-pin on the shank formed with flat faces on its sides, a rockable head pivoted on the pin, and a locking element slidably mounted on the head and formed with a slot engageable with the flat sides of the pivot-pin to prevent the head from rocking, said locking element having a substantially circular opening communicating with its slot and adapted to be carried into register with said pivot-pin by sliding said element to permit the head to be rocked.

2,461,846
AUTOMATIC SWITCH CONSTRUCTION
William O. Schultz, South Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application September 4, 1943, Serial No. 501,227
2 Claims. (Cl. 200—146)



1. A switch construction adapted to open under load comprising a stationary insulating tube, a stationary contact, a main movable contact and an auxiliary movable contact adapted to engage and disengage said stationary contact, said auxiliary movable contact consisting of a plunger within said tube, said main movable contact consisting of a sleeve-like member guided by said tube and located exteriorly of said tube, spring means for drawing said plunger into said tube away from said stationary contact, latch means normally preventing motion of said plunger, mechanism for moving said main contact into and out of engagement with said stationary contact, and tripping means for tripping said latch means on movement of said main movable contact to open position.

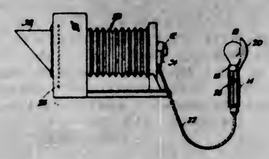
2,461,847
PROCESS FOR THE PREPARATION OF dl-THREONINE
Anthony C. Shablea, Rahway, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application May 10, 1946, Serial No. 668,770
11 Claims. (Cl. 260—534)

1. In the process for the separation of dl-threonine and dl-allothreonine, the step which comprises reacting a mixture of dl-threonine and dl-allothreonine with a lower alkyl monohydric alcohol solution of a substance selected from the group consisting of sodium and sodium hydroxide.

2,461,849
METHOD OF TESTING CAMERA SYNCHRONIZERS
Harry Davis Simons, Kearney, N. J.
Original application November 20, 1944, Serial No. 564,226. Divided and this application May 11, 1945, Serial No. 593,254
12 Claims. (Cl. 250—71)

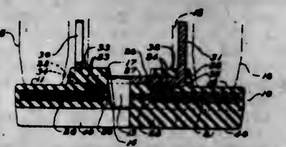
1. In a method of determining the degree of synchronization between the shutter of a camera and a photoflash-producing mechanism operatively associated therewith, said mechanism synchronizing the ignition of a photoflash bulb with the opening of the shutter, the steps which comprise placing said bulb in front of said camera, focusing the image of said bulb on the focal

plane of said camera, actuating said mechanism to ignite the flash bulb and substantially simultaneously to open the shutter, directing the light from the flash bulb through the open shutter onto said focal plane, and substantially instan-



taneously forming at said focal plane a slowly decaying, focused, self-luminous image of the flash illuminated bulb, whereby to enable the determination, by inspection of said last named image, of the degree of synchronization between said shutter and said mechanism.

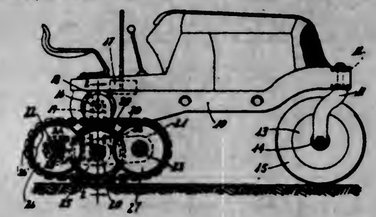
2,461,849
VEHICLE TRACK
Charles O. Slemmons, South Bend, Ind., and Robert W. Smith, Copley, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application May 15, 1946, Serial No. 669,872
9 Claims. (Cl. 305—10)



1. A track for a self-laying track type vehicle, said track comprising a flexible band of rubber-like material having marginal runner portions for supporting bogie wheels from the ground directly through said portions, an apertured sprocket-engaging portion between said runner portions, and flexible tension members embedded in said band at said sprocket-engaging portion between said apertured portion and said runner portion and extending longitudinally of the track in parallel relation to each other, said sprocket-engaging portion including cross-bars embedded in said band and terminating laterally of the band at said tension members short of said marginal runner portions to leave said runner portions substantially unstiffened by said cross bars thereby facilitating load support by said runner portions independently of said cross bars.

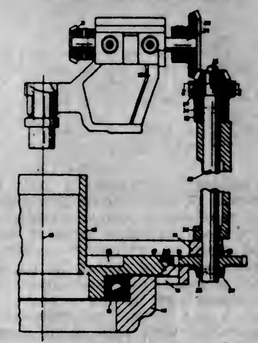
2,461,850
TRACTOR VEHICLE
Charles O. Slemmons, South Bend, Ind., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application May 31, 1946, Serial No. 673,547
8 Claims. (Cl. 305—8)

1. A tractor vehicle having a pair of undercarriages, each undercarriage comprising front, rear and intermediate bogie wheels, the intermediate bogie wheel being mounted for free-running with the lowermost point of its perimeter lower than the lowermost points of the front and rear bogie wheels for sustaining the entire weight of the undercarriage on a flat surface through said intermediate bogie wheel, said undercarriage being pivotally mounted on said vehicle for movement about the axis of said intermediate bogie wheel, a flexible track trained about all said bogie



wheels of the undercarriage, and means driving said track entirely through said rear bogie wheels.

2,461,851
CIRCULAR KNITTING MACHINE
Frederick Staples, Leicester, England, assignor to Alfred Bray & Sons Limited, Leicester, England
Application March 20, 1947, Serial No. 735,901
In Great Britain April 18, 1946
1 Claim. (Cl. 66—23)



In a circular knitting machine, a rotating cylinder, a ring of coaxial teeth fast with said cylinder, a vertical shaft, a gear fast with the lower end of said vertical shaft and in mesh with said teeth, a sleeve fast with the upper end of said vertical shaft, a bevel gear having a hub extending into said sleeve, said hub being cut-away to leave a radial projection, and screw-threaded means adjustably carried by said sleeve to coact with opposite faces of said projection whereby to dispose said bevel gear with a required angularity with reference to said vertical shaft.

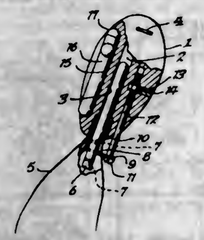
2,461,852
STABILIZATION OF DDT
Gustav A. Stein, Plainfield, and Max Tishler, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application February 22, 1945, Serial No. 579,206
11 Claims. (Cl. 260—649)

1. The process of stabilizing DDT which comprises heating an aqueous mixture containing molten α,α - di(p-chlorophenyl)-β,β,β-trichloroethane and less than about 0.5%, based on the weight of the DDT, of a weakly basic compound at a temperature of approximately 105° C., thereby evaporating the water and forming a substantially homogeneous liquid mixture of the other components, and cooling to solidify said mixture.

2,461,853
CYLINDER LINER FOR OPPOSED PISTON ENGINES
Hans Steiner, Winterthur, Switzerland, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland
Application August 9, 1945, Serial No. 609,858
In Switzerland September 26, 1944
8 Claims. (Cl. 123—173)

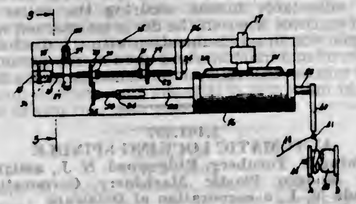
6. A cylinder liner for opposed piston internal combustion engines having a strengthened middle part surrounding the combustion chamber, two rows of passages in the wall of said middle part for the circulation of a cooling medium, each of said passages having two distinct parts intersecting each other, the axis of every such part lying in a regular cone whose axis coincides with that of the cylinder, the vertices of intersection of the parts of one row of passages lying in the zone in which the piston rings of one of the pistons are situated when that piston is at inner dead center, the vertices of intersection of the parts of the other row of passages lying in a zone in which the piston rings of the other of the pistons are situated when that piston is at inner dead center, and corresponding parts of passages in one row intersecting corresponding parts of passages in the other row at vertices in substantially the middle transverse sectional plane of the cylinder.

2,461,854
NECKTIE
Alfred F. Taborski, Buffalo, N. Y.
Application August 14, 1946, Serial No. 690,427
3 Claims. (Cl. 2—153)



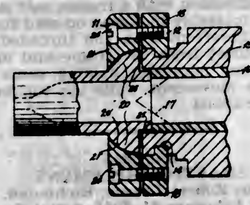
1. A preformed necktie comprising a knot portion having therein a recess opening downwardly through its lower end, an anchorage element removably disposed in said recess and depending therefrom, a drape secured over and to the lower end of said element and extending into said recess, said element having in its depending end a transverse passage, a pin removably received in said passage and having a loop on its outer end, a screw having its shank threaded and passing through said loop and parallel to said element, said knot portion having an elongated passage along which said shank of said screw extends, a nut in said knot portion across said elongated passage and into which said screw is threaded, the head of said screw abutting against said loop to draw said element into said recess and hold it there.

2,461,855
TRAVERSE FEED CONTROL MEANS
Henning T. Tornberg, Ridgewood, N. J., assignor to Modern Plastic Machinery Corporation, Lodi, N. J., a corporation of Delaware
Application August 30, 1947, Serial No. 771,476
4 Claims. (Cl. 242—158)



1. In a traverse feed control means of the character described, the combination of a double acting cylinder having a piston, means carried on the piston for guiding a thread, a valve means for the control of the passage of operating medium to the cylinder, a solenoid for operating the valve means, a frame, a bar axially slidably mounted on the frame, a spring button contact switch mounted on the frame and positioned to be contacted by the bar whereby the switch is placed in closed condition, in a certain position of the bar, means mounted on the frame, adjustably frictionally contacting said bar whereby the ease of movement of said bar is alterable, a first and second members carried on the bar and moveable therealong, means carried on the bar to lock said members respectively on the bar at predetermined spaced positions thereon, a third member carried on the piston in a position between and adapted upon movement of the piston within the cylinder, to intercept said members on the bar respectively and an electrical circuit including said switch and solenoid.

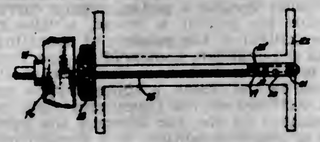
2,461,856
DIE MOUNT FOR PLASTIC EXTRUDERS
Henning T. Tornberg, Ridgewood, N. J., assignor to Modern Plastic Machinery Corporation, Lodi, N. J., a corporation of Delaware
Application August 30, 1947, Serial No. 771,477
5 Claims. (Cl. 18—12)



1. In combination with a plastic extrusion machine or the like, a die having an inlet end and a discharge end and a plurality of outwardly laterally extending lugs in a predetermined spaced relation around the body of the die at the inlet end thereof; each of said lugs presenting a surface sloping outwardly respectively, away from the discharge end of said die, a separate collar on said die having such a flared bore; the surface of said bore in the collar being in contact with said sloping surfaces of the lugs and provided with a plurality of channels extending through the face of the collar positioned furthest from the inlet end of the die; said channels being

spaced and of such dimension and number as to permit passage of the lugs therethrough respectively simultaneously when the die is turned within the bore of the collar so that the lugs are aligned with said channels respectively; the inlet end of said die being positioned in communication with the discharge outlet of such machine and adjustable means securing the collar on such machine wherein the die is maintained with its inlet end in communication with the discharge outlet of said machine, and upon manipulation of said means, the collar is loosened from its hold on the die.

2,461,857
AUTOMATIC LOCKING SPINDLE
Henning T. Tornberg, Ridgewood, N. J., assignor to Modern Plastic Machinery Corporation, Lodi, N. J., a corporation of Delaware
Application August 30, 1947, Serial No. 771,478
1 Claim. (Cl. 242—46.2)



In a spindle to hold a tubular member thereon, a shank having a reduced exteriorly threaded portion and a nut eccentrically mounted on said threaded portion and in threaded engagement therewith, whereby when the nut is positioned at least a certain distance from the other portion of the shank, a tubular member of predetermined dimensions is receivable on the shank and nut and in frictional contact with the latter, and when the tubular member is so mounted, then upon some axial rotary movement of such tubular member in one direction with respect to the shank, the nut will be moved along said threaded portion towards the other portion of the shank and lock said member on the shank, and thereupon some axial rotary movement of such member in the opposite direction with respect to the shank, the nut will be moved away from such other portion of the shank and unlock said member from the shank whereby such member is freed for removal from off the shank and nut, in combination with a frame; said shank being axially rotatably mounted on said frame and extending therefrom with the threaded portion thereof furthest from the frame and means on the shank for manually holding same against axial rotary movement while the tubular member is on the shank.

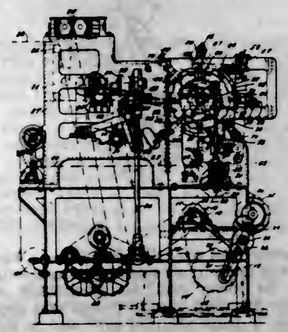
2,461,858
SHAVING IMPLEMENT
Augustus Robert Towers, Richmond, Va.
Application February 21, 1945, Serial No. 578,968
16 Claims. (Cl. 30—43)

3. In a shaving implement, a shaving head, a rotary cutter mounted in said shaving head, said head including a comb plate overlying said cutter, and a cover guard of stretchable material enveloping the shaving head and having a plurality of openings exposing the shaving portions of the comb plate, said cover guard being of smaller size than the shaving head and exerting an over-all constrictive force against said shaving head whereby the comb plate is caused to be pressed at all cutting points against the rotatable cutter.

2,461,859
TRANSMISSION BELT JOINT
Anthony J. Vassalli, Newark, N. J.
Application November 12, 1947, Serial No. 785,283
1 Claim. (Cl. 24—38)

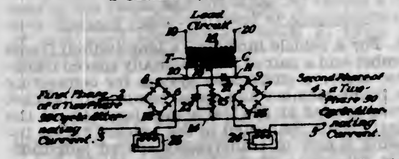
An endless flexible leather transmission belt, said belt comprising a band having complementary male and female ends interlocked with each other, said male and being roughly a triangular body with a plurality of spaced dovetail tabs extending outwardly from the sides thereof, with the space between adjacent tabs being dove-tail openings, the altitude of said triangular body being approximately coincidental with the longitudinal center line of said band, the angle between said longitudinal center and each side of said triangular body being approximately 12°30', the width of the throat of each tab being approximately equal to the average thickness of said band, the outermost limit of the tabs on each side of said triangular body being roughly in a line approximately parallel to that side of the triangular body adjacent thereto.

2,461,860
APPARATUS FOR MAKING PILE FABRICS
Victor A. Victor, Brooklyn, N. Y.
Application September 16, 1944, Serial No. 554,405
14 Claims. (Cl. 154—1.1)



14. An apparatus for making pile fabrics which comprises means to intermittently feed a backing having a cementitious coating thereon to a pile-depositing station, means to intermittently feed a pile-forming material to a severing station, a knife to sever the leading edge portion of said pile-forming material, a rotor provided with a plurality of grippers, and means to intermittently rotate said rotor to dispose a gripper in position to grip the leading edge portion of said pile material prior to severance thereof and after severance to dispose said gripper at the pile-depositing station in a substantially vertical position with the lower ends of the pile elements spaced from and at right angles to the point on the coating at which said lower ends are to be embedded, said rotor having cam-controlled means to advance said gripper in a direction toward the pile material at the severing station, to move the gripper downwardly at the pile-depositing station whereby the pile elements are embedded in the coating, and to retract said gripper after the pile elements have been embedded in the coating.

2,461,861
APPARATUS FOR FREQUENCY MULTIPLICATION OF ALTERNATING ELECTRIC CURRENTS
Alec Hervey Bennett Walker, London, England, assignor, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application May 2, 1945, Serial No. 591,525
In Great Britain July 11, 1944
1 Claim. (Cl. 172—281)



In combination, a two-phase source of alternating current of a given frequency, a first and a second full wave rectifier, said first rectifier having its input terminals connected to a first phase of said source, said second rectifier having its input terminals connected to a second phase of said source, a choke coil having one outside terminal connected to the positive output terminal of said first rectifier and its other outside terminal connected to the positive output terminal of said second rectifier, means including a resistor to connect a mid terminal of said coil to the negative output terminals of said rectifiers, and a load circuit coupled to said choke coil to receive alternating current of double said given frequency due to the voltages made to appear at the output terminals of said coil.

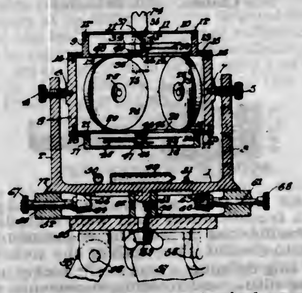
2,461,862
SEWING MACHINE
Albert H. Weis, deceased, late of South Nyack, N. Y., by Barbara Weis, South Nyack, N. Y., executrix, assignor to Wilcox & Gibbs Sewing Machine Company, New York, N. Y., a corporation of New York
Application October 2, 1945, Serial No. 619,762
2 Claims. (Cl. 112—214)

1. In a puller feed for a sewing machine, a base having an opening therein; an overhanging arm spaced from the base; upper and lower feed rollers having ribs extending across the surface thereof, the lower roller having circumferential grooves therearound and being mounted on the base to project through the opening and the upper roller being carried by the arm and movable into cooperative relation with the lower roller with the ribs of said rollers in meshed relation to grip material therebetween; means for driving said rollers to pull said material; and a plate having a portion extending into the grooves between the rollers for engaging the material and stripping the material from the lower roller and a curved portion extending rearwardly from the rollers and upwardly above the base for deflecting the material beyond the edge of said opening whereby said material is prevented from being drawn into said base through the opening.

2,461,863
COUPLING
Stanley H. Zeeb, Jackson, Mich., assignor, by mesne assignments, to Aeroquip Corporation, Jackson, Mich., a corporation of Michigan
Application December 6, 1945, Serial No. 633,189
7 Claims. (Cl. 285—122)

1. A coupling of the character described, comprising two body portions, a male connector on one of said body portions, said male connector having a spiral groove therein terminating at its end away from the outer end of the connector in a circumferentially extending groove, a female connector on the other of said body portions, said female connector being in the form of a rotatably mounted nut, a spiral thread simulating wire disposed in said nut, and means anchoring the leading end of said wire to said nut, whereby said female connector may be screwed on said male connector.

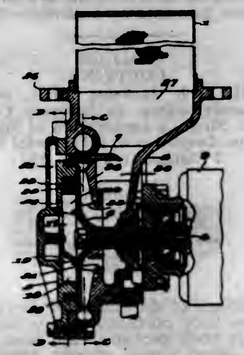
2,461,864
INSTRUMENT FOR GEOPHYSICAL EXPLORATION
Theodore Zuschlag, West Englewood, N. J., assignor to Hans T. F. Lundberg, Toronto, Ontario, Canada
Application December 13, 1945, Serial No. 634,780
12 Claims. (Cl. 175—183)



1. An instrument for geophysical prospecting comprising, a pair of magnetic compass needles of substantially the same pole strength, mountings for supporting the needles to operate in spaced planes with their axes of rotation in substantial alignment, means for simultaneous rotary adjustment of the mountings in opposite di-

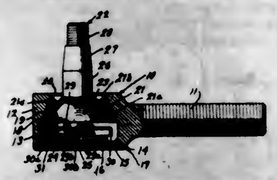
rections, and means for simultaneous rotary adjustment of the needles in the same direction in a plane at right angles to the planes of the first named adjustment.

2,461,865
PUMP
Harold E. Adams, South Norwalk, Conn., assignor to Nash Engineering Company, South Norwalk, Conn., a corporation of Connecticut
Application July 6, 1943, Serial No. 493,662
21 Claims. (Cl. 103—113)



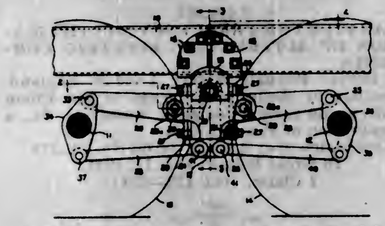
1. In a centrifugal liquid pump, intermediate gas collecting and separating chambers placed between the liquid passages of the impeller and rotating with said impeller, said rotating chambers having openings near their central extremities connecting to stationary suction chambers for the purpose of withdrawing gas from said rotating chambers by gas pumping means, and having their radially outer sections walled to limit discharge of liquid from said chambers radially outwardly into the main discharge passage of said pump.

2,461,866
JOINT
Marshall Homer Alldredge, Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application December 6, 1944, Serial No. 566,913
4 Claims. (Cl. 287—90)



1. A tie rod joint comprising a metal socket having a frusto-conical inner wall, a plastic material bearing ring in wedging engagement with said frusto-conical inner wall of the socket, said bearing ring defining a seat in the socket accommodating tilting and rotating movements, a stud having a head in said seat in tiltable and rotatable relationship therewith, said head having a rounded button end thereon, a molded plastic wear plate having a depression receiving said projection of the stud, and a spring urged metal retainer in said socket having a depression receiving the projection of the wear plate, said spring-urged retainer acting through said wear plate on said stud for maintaining the stud in good bearing relation with the plastic seat.

2,461,867
VEHICLE AXLE SUSPENSION
Frank W. Avila, Columbia City, Ind., assignor to International Harvester Company, a corporation of New Jersey
Application August 30, 1947, Serial No. 771,436
4 Claims. (Cl. 280—104.5)

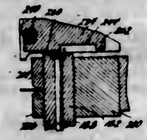


1. For a vehicle including a longitudinal frame member and a pair of longitudinally spaced transverse axles: a suspension system for connecting the frame member and axles, comprising bracket means carried by the frame member between the axles; means connected to the bracket means including a pair of transversely spaced longitudinally extending plates having a block of rubber or the like therebetween; a first arm pivoted at one end on a transverse axis to the plates and extending toward and connected at its other end to one axle; a second arm pivoted at one end on a transverse axis spaced longitudinally from the pivot of the first arm; said pivoted connections of the arms to the plates to include means for holding the plates together with the block therebetween; and means respectively on the arms and engaging the block of rubber or the like for compressing said block upon pivoting of the arms upwardly by the axles.

2,461,868
DOUGH MOLDING MACHINE ATTACHMENT
Roland W. Baird, Dallas, Tex.
Application December 12, 1944, Serial No. 567,819
2 Claims. (Cl. 107—9)

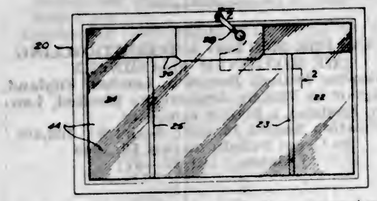
1. A dough moulding machine including, a revolving drum, a pressure board curved longitudinally and underlying the drum in spaced relation thereto, a continuous fabric lining secured to the upper side of the pressure board and extending from end to end of said board, said lining being of uniform thickness transversely and longitudinally except at its discharge end to provide a continuous unbroken surface, and V-shaped upstanding ribs mounted on the continuous unbroken surface of the lining in regular spaced order, the outer end of each leg of each rib terminating in close proximity to the longitudinal edge of the lining.

2,461,869
STAPLING MACHINE
James Balton, Baltimore, Md.
Application October 17, 1947, Serial No. 780,311
6 Claims. (Cl. 140—11)



1. In a stapling machine for wires, a table, a bifurcated anvil in reciprocating relation to said table and an ironing member connected to said anvil and disposed between the bifurcations, said ironing member having a pair of legs spaced from each other and providing with said bifurcations the walls of a cavity overlying said table, one of said legs of the ironing member having a face spaced from the faces of the bifurcations of said anvil a distance substantially equal to the thickness of the staple and the other leg having a face at a distance from the faces of the bifurcations of said anvil substantially equal to twice the thickness of the staple.

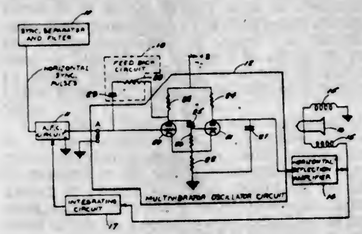
2,461,870
WINDOW SHADE CONSTRUCTION
Clarence G. Barrows, Hamden, Conn., assignor to The Safety Car Heating and Lighting Company, Inc., a corporation of Delaware
Application July 13, 1944, Serial No. 544,721
12 Claims. (Cl. 160—90)



1. In shade apparatus of the character described, the combination including a pair of shades, means mounting said shades for movement toward one another, and means for moving the leading edge of each shade toward that of the other shade; each shade being divided roughly into two equal portions along a line normal to its path of movement, and one of said portions being formed of an opaque material and the other being formed of a second material through which light rays can pass.

2,461,871
RELAXATION OSCILLATOR CAPACITANCE MULTIVIBRATOR
Harland A. Bass, Mount Healthy, Ohio, assignor to Avco Manufacturing Corporation, Cincinnati, Ohio, a corporation of Delaware
Application August 1, 1947, Serial No. 765,362
2 Claims. (Cl. 250—36)

1. In an indirectly synchronized sweep-signal generating system for a television receiver, the combination of a source of unidirectional automatic frequency control voltage, a multivibrator comprising a pair of electron tubes of which one has a control grid-cathode input circuit, coupled to said source, and an anode circuit, and an inverse feedback network intercoupling said anode and said input circuit for providing an effective shunting capacitance across said input circuit, said capacitance being employed as a filter to



steady the value of said automatic frequency control voltage, whereby to stabilize the output frequency of the generating system.

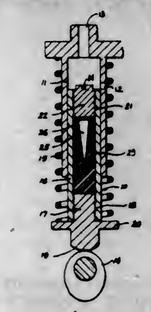
2,461,872
FINGER COT
Elmer W. Beatty, Danville, Ill., assignor of one-half to Irwin W. Millard, Danville, Ill.
Application March 18, 1947, Serial No. 735,417
2 Claims. (Cl. 2—21)

2. A finger cot comprising, in combination, an elongate strip of soft leather and a shorter strip of resilient fabric arranged in superimposed relation with the outer end portion of the leather strip projecting beyond the fabric strip, the outer end portion of said leather strip being doubled back upon itself in overlapping relation with the upper portion of the fabric strip, said strips and the overlapping part of the doubled back portion of the leather strip being stitched together along their side edge portions to form a finger-receiving tube open at its lower end, the doubled back portion of the leather strip being of sufficient length that the region of fold lies substantially outward of the upper end of said fabric strip and the side margins of the leather strip being free of each other in the region of fold.

2,461,873
EXPANSIBLE PLUNGER
Louis Beeh, Long Meadow, Mass., assignor to Bulova Watch Company, Inc., New York, N. Y., a corporation of New York
Application April 11, 1946, Serial No. 661,281
10 Claims. (Cl. 309—4)

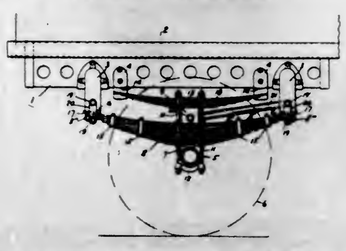
6. A plunger or piston comprising a body including a foot portion adapted for co-operation with a reciprocating drive and a thin-walled tubular portion in co-axial continuation with said foot portion, a filler within said tubular portion, said filler being of a material which when subjected to pressure in other directions, a screw

member in engagement with a threading of said body, said screw member closing said tubular



member at its top and being adapted to exercise adjustable pressure on said filler.

2,461,874
VEHICLE SPRING
Charles Bohlen, Jr., Jenkintown, Pa.
Application March 13, 1944, Serial No. 526,166
7 Claims. (Cl. 267—56)

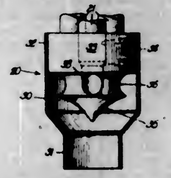


1. In combination a spring formed of a plurality of superimposed leaves, the leaf adjacent to the top leaf being bent downwardly upon itself to form a curved spring element and an eye, a spring hanger affording a slipper bearing for the top leaf of the spring and a spring shackle connected to the spring hanger and to said eye, with said curved spring element under tension.

2,461,875
FROTH FLOTATION OF IRON ORES
Robert Ben Booth, Springdale, and Earl Conrad Herkenhoff, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application February 14, 1944, Serial No. 522,268
10 Claims. (Cl. 209—166)

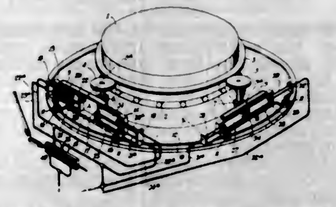
1. A method of beneficiating oxidized iron ores by froth flotation which comprises conditioning the ore at high solids with a collector and an inorganic acid substance, the anion of which is a constituent of an acid having a dissociation constant of at least 10^{-7}, the amount of the acid substance being sufficient so that on dilution to froth flotation density without neutralization the pulp will have a pH between 1.5 and 5.5, the effective collecting constituent of the collector being a sulfonated residue from the refining of glyceride oils and fatty acids, the amount of collector being sufficient to permit effective flotation, diluting the conditioned pulp to froth flotation density and subjecting it to froth flotation to produce a concentrate relatively rich in iron and a tailing relatively poor in iron.

2,461,876
LIQUID DISTRIBUTOR FOR REFRIGERATING SYSTEMS
John R. Boyle, Chicago, Ill., assignor to Betz Corporation, Hammond, Ind., a corporation of Indiana
Application June 28, 1946, Serial No. 680,028
1 Claim. (Cl. 62—127)



In a liquid distributor for supplying parallel evaporator coils of a refrigerating system, a housing having an inlet opening in its lower end and a plurality of outlet openings in its upper end, a projection on said housing having a downwardly pointing conical deflecting surface against which the refrigerant entering said inlet opening impinges, and said projection forming with said housing an annual distributing passageway above said conical deflecting surface connecting said plurality of outlet openings.

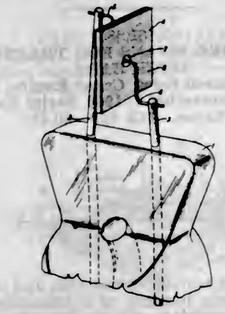
2,461,877
MEANS FOR MOVING AND CONTROLLING THE MOTION OF MACHINERY
Christopher Francis Brereton, London, England, assignor to Vickers-Armstrongs Limited, London, England, a British company
Application August 13, 1947, Serial No. 768,405
In Great Britain August 19, 1946
5 Claims. (Cl. 60—97)



3. Hydraulic power apparatus for imparting movements to a mass feeding mechanism or other driven device, alternately in opposite directions or intermittently in a desired direction comprising a rotary driven element and two hydraulic engines connected to said driven element and adapted to be operated alternately so that one imparts rotation to the rotary element in one direction and the other engine in the counter-direction, the connection from each engine to the rotary element comprising a slidable driver operatively connected to the rotary element and having an abutment adapted to receive the driving load from the appropriate hydraulic engine, each hydraulic engine comprising a pair of opposed rams adapted in one stage to simultaneously engage the said abutment and a normally fixed stop also interposed between the opposed

ends of the rams, the pair of rams appropriate to one machine having a greater capacity and power output than the pair of rams appropriate to the other machine and having combined with them a pair of auxiliary rams having a lesser capacity and power output than the latter mentioned pair of rams, the maximum capacity rams being adapted to be alternately connected to the source of supply of hydraulic pressure fluid and to exhaust, whilst all of the remaining rams are adapted to be permanently connected to the said source, the arrangement being such that when the abutment of the slidable driver and associated stop on one machine are both engaged by the opposed ends of the rams on opposite sides thereof, the corresponding abutment and stop of the other machine are spaced apart with a corresponding spacing of the opposed rams of such machine and the associated stop engaged by one ram and the associated abutment engaged by the other ram of such machine, the said pair of auxiliary rams serving to maintain engagement between their associated maximum capacity rams and the associated stop and abutment and yieldingly opposing displacement of such abutment away from the stop when both of the maximum capacity rams are connected to exhaust and the pair of rams appropriate to the other machine perform the driving operation.

2,461,878
METALLIZING COMPOSITION
Carl J. Christensen and Merle D. Rigterink, Summit, and Arnold W. Treptow, Plainfield, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 1, 1944, Serial No. 561,392
11 Claims. (Cl. 171—327)

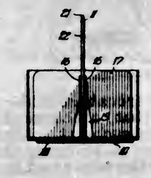


1. A metallizing composition essentially comprising by weight: 46 parts of finely divided silver; 4 parts of a glass flux consisting essentially of constituents which, expressed as PbO, B_2O_3, SiO_2 and PbF_2, are present in the proportions by weight of 82.5 per cent of PbO, 11.4 per cent of B_2O_3, 1.1 per cent of SiO_2, and 5.0 per cent of PbF_2; 3.85 parts of polymethylmethacrylate; and an organic solvent in which said polymethylmethacrylate is dissolved.

7. The method of fastening electric leads to a quartz crystal comprising forming on the surface of said crystal a layer containing a finely divided metal and a finely divided glass flux and heating said layer to a temperature above the melting point of said glass flux for a time sufficient to fuse said flux and cause it to bind the metal particles together and to the surface of said body and soldering said electric leads to the resulting metallized surface, said glass flux comprising by weight about 50 to 90 per cent of PbO, about 5 to about 25 per cent of B_2O_3, and the indicated proportion of a substance chosen from the group consisting of about 1 to about 20 per cent of SiO_2, from about 5 to about 25 per cent of Bi_2O_3, from about 1 to about 10 per cent of PbF_2, and from about 1 to about 5 per cent of TiO_2.

9. A metallizing composition comprising a finely divided noble metal-containing substance, a finely divided glass which melts below about 500° C. present in an amount constituting about 3 to about 10 per cent of the weight of the metal in said metal-containing substance, an organic polymer which is heat-depolymerizable without decomposition present in an amount constituting about 2 to about 25 per cent of the weight of said noble metal-containing substance and said glass, said organic polymer being an alkyl ester of methacrylic acid, and an organic solvent for said polymer in which said polymer is dissolved.

2,461,879
CONTAINER
Walton B. Crane and William B. Crane, Jr., Los Angeles, Calif., assignors to Alpak, Los Angeles, Calif., a copartnership
Application October 29, 1947, Serial No. 782,920
9 Claims. (Cl. 224—48)

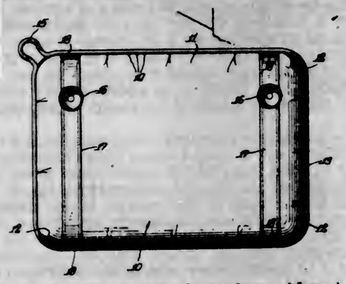


1. In combination with a bottle holding container wherein bottle receiving cells are defined by vertically arranged interlocking longitudinal and transverse partition means, and wherein a central portion of a longitudinal partition is formed by juxtaposed integral end sections extending upwardly from longitudinal bottom flap-forming members of the container, a separable frame structure comprising a relatively rigid bent wire member having an inverted U-shaped upstanding bail forming portion which is positioned between the upstanding juxtaposed sections of the longitudinal partition with the bight thereof forming a handle in spaced relation above the top edge of the partition and with the legs thereof depending to the outside of the bottom of the container and said handle member having integral bottom support forming portions extending laterally of the bottom ends of the legs and providing substantial support beneath the bottom of the bottle receiving cells.

2,461,880
CUSHION OR BACK REST
Frank J. Curran, Downers Grove, Ill., assignor to Curran Cushion and Textile Company, a corporation of Illinois
Application October 18, 1946, Serial No. 704,126
2 Claims. (Cl. 155—174)

2. A resilient back rest comprising a casing of water resisting material, cushioning material mounted in said casing, vertically extending and horizontally spaced apart straps secured to said

rest, and suction cups secured adjacent the upper ends of said straps and on the rear side of said



back rest for detachably fastening said rest to a support.

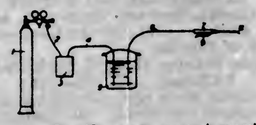
2,461,831
SHOULDER PAD
Al Diamond, New York, N. Y.
Application September 10, 1946, Serial No. 695,988
6 Claims. (Cl. 2—268)

1. A pre-shaped arcuate shoulder pad comprising a folded over bat, a thermoplastic member between the folds of such bat, a crinoline piece on said folded bat and a covering sheet of textile material enclosing the whole and having its edges secured together.

2,461,882
FURFURYL ALCOHOL RESIN AND PROCESS OF MAKING THE SAME
Edward R. Dillehay, Glen Ellyn, and Robert D. Schuetz, Chicago, Ill., assignors to The Richardson Company, Lockland, Ohio, a corporation of Ohio
No Drawing. Application March 24, 1945, Serial No. 584,726
7 Claims. (Cl. 260—92.6)

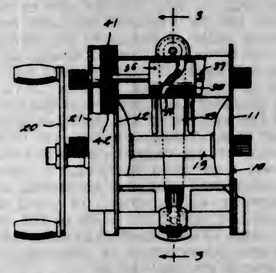
6. A resinous material which is the result of the polymerization of furfuryl alcohol under heat with sulphur as the catalytic agent, and under neutral conditions in the presence of water.

2,461,883
APPARATUS FOR THE PERMANENT WAVING OF HAIR
Otto Elsässer and Carl Ronzi, Zurich, Switzerland
Application November 25, 1946, Serial No. 712,200
In Switzerland August 10, 1946
3 Claims. (Cl. 132—33)



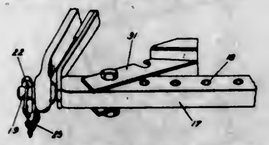
1. Apparatus for the permanent waving of the hair comprising: a perforated tubular curler closed at one end; a source of compressed gas; an ozone generator; a container for a fixing solution; and a spraying device; combined substantially as described and for the purpose set forth.

2,461,884
LEVEL WIND FOR FISHING REELS
Louis S. Elsinger, Tampa, Fla.; J. E. Gillen trustee in bankruptcy of said Louis S. Elsinger
Application January 3, 1946, Serial No. 638,848
3 Claims. (Cl. 242—84.4)



1. In a fishing reel comprising a pair of side members and a winding spool rotatably mounted between said side members, a level winding means comprising a pair of spaced apart parallel bars, means slidably supporting said bars between said end members longitudinally of said spool on the forward side thereof, a rock lever underlying said spool, a rotatable grooved cam carried by said reel opposite said spool from said bars, and means operatively connecting said rock lever to said cam and said bars for sliding said bars upon rotation of said cam.

2,461,885
LATCHING MEANS FOR TRACTOR HITCH BARS
Joseph Russell Estes, Cedar Rapids, Iowa
Application September 7, 1946, Serial No. 695,463
3 Claims. (Cl. 280—33.44)

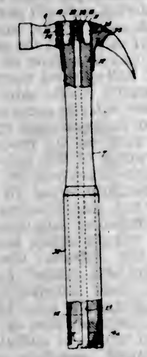


1. A latching means for use with and for selectively preventing rotation of a rotatable tractor hitch bar, comprising an arm pivotally engaged to the hitch bar, and having yoke means on the free end thereof for selective swingable engagement or disengagement with a portion of the hitch bar supporting structure.

2,461,886
TOOL HANDLE
Damas C. Filiatreault, Jr., Chicago, Ill.
Application January 4, 1946, Serial No. 639,003
2 Claims. (Cl. 306—38)

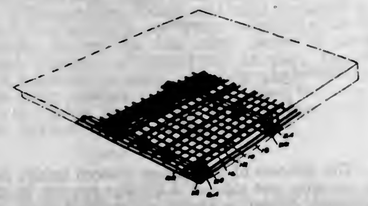
1. A tool handle comprising a wooden handle having an end for engagement in the socket of a tool head, said end having a cavity therein and slots radiating from said cavity and extending at right angles to each other, a cap secured upon the grip end of the handle and having a recess therein, a rod threaded at one end and having a

head upon the other end engaging the outer face of the recess in said cap, and a wedge having an internally threaded tapered tubular portion and wedge-like ribs extending at right angles to each other and radiating from said tubular portion, two of the ribs being of the same length as the tubular portion and the other two of the ribs



having substantially parallel side edges and being of greater length than the tubular portion and each tapering to a sharp edge beyond the tubular portion whereby when the wedge is driven into the handle the longer sharp ribs bite into the handle and the ribs do not split the handle, said ribs being of a size to spread the end of the handle against the walls of the socket.

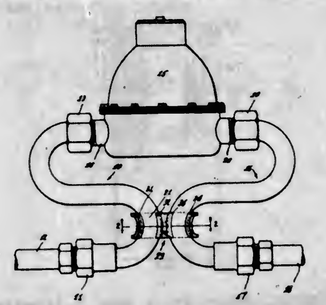
2,461,887
FABRICATED PALLET
Ralph A. Fletcher, Westford, Mass.
Application November 9, 1946, Serial No. 709,067
10 Claims. (Cl. 248—120)



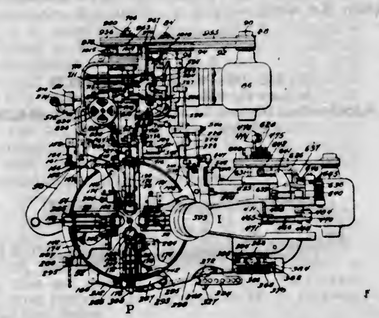
1. An improved pallet construction comprising a deck, means for supporting the deck in elevated position, said supporting means including skeletonized column members, each of said column members consisting of a pair of spaced-apart U-shaped elements secured together by laterally extending tie rods.

2,461,888
METER SETTER
Wilbur E. Ford, Wabash, Ind., assignor to The Ford Meter Box Company, Inc., Wabash, Ind., a corporation of Indiana
Application January 27, 1945, Serial No. 574,901
2 Claims. (Cl. 285—3)

1. A meter setter comprising a pair of identical S-shaped conduits allochirally arranged and with the lower bights of said tubes arranged substantially in juxtaposition, and a holder associated with both of said bights and comprising a fitting formed with two oppositely curved channels, each of said channels being adapted to receive a portion of one of said bights, each of said channels further comprising a bottom portion of semi-cylindrical cross section upon a diameter slightly greater than the outside diameter of its associated conduit portion, and a mouth portion formed by parallel walls projecting beyond the edges of said semi-cylindrical portion, and a layer of solder or the like interposed between the wall of each channel and its associated conduit portion, and formed to provide fillets extending from near the termini of said parallel walls into contact with said conduit portion.

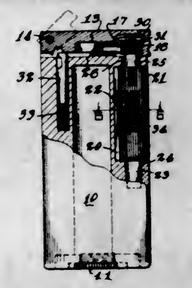


2,461,889
MACHINE AND METHOD FOR MANUFACTURE OF SHOES
Joseph Fossa, Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application July 19, 1944, Serial No. 545,590
160 Claims. (Cl. 12—51)



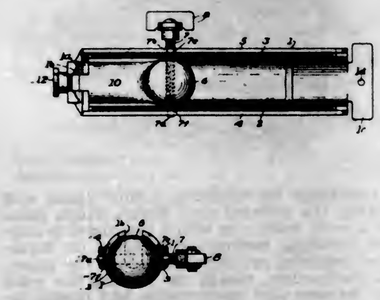
8. Apparatus for eyeleting a shoe upper and for lacing the eyeleted shoe upper, which comprises a work holder on which the upper is supported, eyeleting mechanism adapted for forming lace receiving eyelet holes through the upper, lacing mechanism, means for feeding the work holder between said mechanisms, and means associated with each of said eyeleting and lacing mechanisms for controlling the work holder in predetermined relation during the respective eyeleting and lacing operations on the supported upper.

2,461,890
CIGARETTE LIGHTER
Cecil M. Fox, Toledo, Ohio, assignor, by mesne assignments, to Emanuel Berg, New York, N. Y.
Application November 7, 1945, Serial No. 627,185
1 Claim. (Cl. 67—7.1)



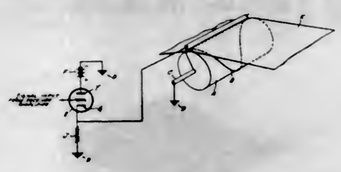
A lighter comprising a case, a laterally extending recess therewithin, a cylindrical member disposed within said recess and having rotary and limited translatory movement therewithin inwardly of the recess and outwardly thereof, a pin assembly including an abrading wheel projecting upwardly of the said cylindrical member and rotatable and movable therewith, a wick on said case, a flint, means to urge the flint outwardly against said abrading wheel, a cover member for the case and wick pivotally secured at one end thereof to the case, means to urge the other and free end of the cover upwardly of the case to uncap the wick, and interengaging means between the pin and the cover when the pin is under the influence of the flint-urging means to lock the cover on the case, compound rotary and straight line movement of the cylinder inwardly of the recess releasing the said other end of the cover to uncap the wick and spark the flint to ignite the wick.

2,461,891
TUBE DISPENSING DEVICE
Henry G. Giles, Pittsburgh, Pa.
Application March 14, 1946, Serial No. 654,280
1 Claim. (Cl. 222—101)



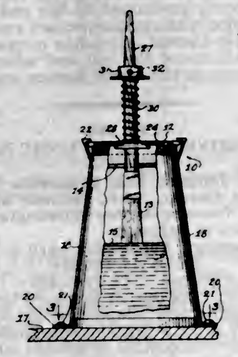
A device for dispensing the pasty contents of a collapsible-walled tubular container, comprising a hollow cylindrical housing member having a pair of integrally formed racks whose teeth are disposed longitudinally and at diametrically opposite portions of said housing member, and having a pair of integrally formed tracks confronting said racks in spaced parallel relationship but being offset laterally with respect thereto, a ball-shaped operating member having a shaft extending centrally therethrough in fixed relationship and having pinion portions that mesh with said racks and having smooth portions that are adapted to roll on said tracks, and a handle secured to the end of said shaft for manually rotating the shaft so that by virtue of the rack-and-pinion drive said ball-shaped operating member will roll longitudinally inside said housing member so as to squeeze out the contents of said container sandwiched between said operating member and housing and set up reaction forces on said tracks, the radius of the ball-shaped member plus the double thickness of the container wall being substantially equal to the radius of said housing member, said housing member having an opening disposed longitudinally on one side thereof that is sufficiently large as to allow introduction of the tubular container therethrough when said ball-shaped member is in a retracted position, said housing having a neck portion at one end thereof into which a correspondingly shaped neck portion of the container will snugly fit and which is sufficiently large so that the ball-shaped member can be rolled therein to squeeze out the entire contents of the container, said neck portion having a longitudinal slot through which the neck portion of said tubular container may be slid when introducing the container through said longitudinal opening.

2,461,892
ELECTROLYTIC RECORDING
Harold G. Greig, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application August 16, 1946, Serial No. 690,867
16 Claims. (Cl. 204—2)



1. The process of producing colored image records on only one side of a fibrous carrier by the electrolytic facsimile recording method, said records having an improved stability to light and storage, which comprises subjecting to the action of an electrolytic facsimile recording current a travelling fibrous carrier impregnated with an alkaline solution containing as its essential components a source of diazonium ions, an azo dye coupling component in a sufficient quantity to react with the diazonium ions when formed to produce an azo dye, a water soluble inorganic salt as the electrolyte in an amount to insure the passage of the electrolytic recording current and a small amount of an aliphatic nitrogenous compound soluble in aqueous alkaline solutions selected from the class consisting of alkylamines containing from 3 to 6 carbon atoms, alkylene polyamines, alkylolamines and the salts of such amines, said aliphatic nitrogenous compound operating to increase the stability of the records to light and storage.

2,461,893
READILY RELEASABLE LIQUID CONTAINER AND CAP SEALING MEANS
Pasquale Guagliano, Mill Valley, Calif.
Application April 24, 1946, Serial No. 664,678
1 Claim. (Cl. 220—40)



In a liquid container having a cover cap, means for readily releasably securing said cover cap in sealed relation to said container including a sealing washer peripherally secured within said cover cap arranged to cooperate with the container top edge, said cover cap having a depending cylindrical flange arranged to extend downwardly outwardly about the container top edge, the outer surface of said depending flange being knurled to provide a readily graspable surface, a plurality of regularly cammed flanges extending outwardly from the said depending knurled flange of said cap and correspondingly spaced cooperating hooked fingers extending outwardly and upwardly from a point on the outer surface of the container located a distance below the container top edge at least equal to the depth of the cap depending flange and then inwardly to a point intermediate the outer surface of said depending flange and the outer edges of said cammed flanges, whereby the knurled flange may be manually grasped to rotate the cover cap to and from sealing cooperation with the container top edge to securely seal the cap to or release it from the container top edge.

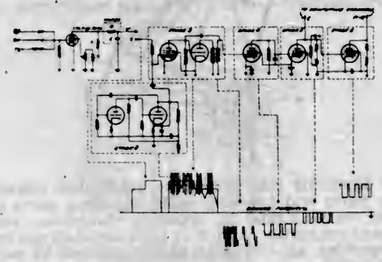
2,461,894
CONDENSATION PRODUCTS OF TRI-(BETA-AMINOETHYL)-AMINE AND BETA-DIKETONES OR HYDROXY METHYLENE KETONES
Lyle A. Hamilton, Pitman, and Charles J. Pedersen, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 4, 1947, Serial No. 752,562
5 Claims. (Cl. 260—566)

1. A compound of the formula

$$\left(\begin{array}{c} H-O-\underset{\displaystyle X}{C}=\underset{\displaystyle Y}{C}-\underset{\displaystyle Z}{C}=N-\underset{\displaystyle R}{CH}-\underset{\displaystyle R'}{CH}- \end{array}\right)_3 N$$

wherein each of R and R' represents a member of the group consisting of hydrogen and methyl radicals, each of X and Y represents a member of the group consisting of hydrogen and hydrocarbon radicals and Z represents a hydrocarbon group.

2,461,895
MULTIPLYING APPARATUS
Arthur C. Hardy, Wellesley, Mass., and Edward C. Dench, West Hartford, Conn., assignors to Interchemical Corporation, New York, N. Y., a corporation of Ohio
Original application July 8, 1944, Serial No. 543,990. Divided and this application December 3, 1946, Serial No. 713,658
10 Claims. (Cl. 235—61)



1. Computing apparatus for obtaining the product of a number of factors, comprising means for generating a number of series of rectangular waves at irrationally relates frequencies and making the effective lengths of the impulses in each series correspond to one of the factors to be multiplied, and means for measuring the percentage of time during which impulses occur simultaneously in all said series.

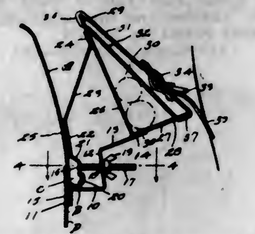
2,461,896
PREPARATION OF CRYSTAL VIOLET
Guy Scott Herrick, Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 20, 1945, Serial No. 606,284
11 Claims. (Cl. 260—391)

1. A process for preparing an anhydrous triarylmethane dye having a uniform slow rate of solubility in alcoholic solvents, which comprises crystallizing a dehydrated dye material selected from the group consisting of crystal violet and mixtures of crystal violet with the zinc chloride double salt thereof, from a solvent selected from the group consisting of nitroparaffins having not more than ten carbon atoms, nitrobenzene and its homologues having not more than ten carbon atoms, and mixtures thereof, the selected solvent being liquid at room temperature.

2,461,897
FISH POLE BRACKET FOR AUTOMOBILES
Jerold W. Hopkins, La Crosse, Wis., assignor of sixty-five per cent to R. C. Cheney, La Crosse, Wis., and twenty-five per cent to W. C. Cheney, Lake City, Minn.
Application March 8, 1946, Serial No. 653,000
4 Claims. (Cl. 224—42.45)

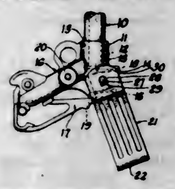
2. In combination with an automobile having a drip mold, a flexible metal strap extending horizontally adjacent to one side of the automobile and having a right angular terminal abutting said side, and also formed with a right angular bearing portion projecting in a direction counter to said right angular terminal in spaced relation opposite to said drip mold, a second flexible metal strap having a part also abutting the mentioned side of the automobile, and also formed with an integral offset portion

projecting beyond the foregoing part to engage within the drip mold frictionally, a screw bolt having one end rigidly connected to the offset portion and another end adjustably projecting through said bearing portion, a wing nut threaded on said screw bolt jambing said bearing portion



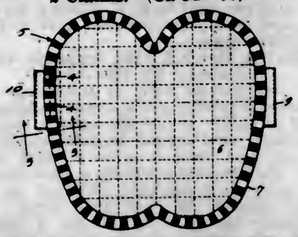
for thrusting clampingly the automobile engaging parts and the drip mold engaging parts of said metal straps in opposing directions, and means conjointly carried by both metal straps for supporting an article to be transported by said automobile.

2,461,898
FUSE GUARD FOR CUTOUTS
David C. Hubbard, Centralia, Mo., assignor to A. B. Chance Company, Centralia, Mo., a corporation of Missouri
Application December 19, 1947, Serial No. 792,804
16 Claims. (Cl. 200—127)



14. The combination of a fuse tube unit for a fused cut-out, said unit having a tube open at its lower end for receiving the fuse and leader and having a contact fixture at its lower end provided with a diagonally extending blast chute, with a fuse guard comprising a substantially V-shaped metal member having bearing apertures adjacent its ends, and laterally projecting trunnions carried by the contact fixture for engagement in said apertures.

2,461,899
SADDLE BLANKET FOR HORSES
Neva H. Humphrey, Olathe, Colo.
Application May 1, 1946, Serial No. 666,486
2 Claims. (Cl. 54—66)



1. In a saddle blanket, a substantially flat pad shaped to substantially conform to the outline of a saddle and being of sufficient size to protrude beyond the edges of a saddle, beneath which the pad is adapted to be disposed, and a roll of substantially circular cross section secured to the outer side of said pad and around the edge thereof, said roll being adapted to be disposed around the edge of the saddle for retaining the saddle correctly positioned on the pad, said pad being provided with complementary extensions at opposite sides thereof, extending outwardly from beneath portions of the roll and adapted to be disposed beneath the saddle aprons and cinches.

2,461,900
LOW SHRINKING CELLULOSIC REPAIR PUTTY
Charles W. Johnson, East Brunswick Township, Middlesex County, N. J., assignor to E. I. du Pont de Nemours & Co., Wilmington, Del., a corporation of Delaware
No Drawing. Application April 6, 1944, Serial No. 529,814
7 Claims. (Cl. 106—193)

1. A plastic composition prepared by blending without heating and adapted to harden on exposure to air at 70° F. without substantial shrinkage upon the evaporation of solvent which comprises a water-insoluble tough film-forming synthetic organic polymeric binder, a volatile solvent for the binder and a finely divided inert form of cellulose material characterized by an oil absorption of between 50 and 150 uniformly dispersed in the said binder in a proportion between 2.5 and 5.3 parts by weight of inert cellulose material to 1 part of the said organic polymeric binder, the said volatile solvent being present in amount from 29.2% to 50% of the total composition.

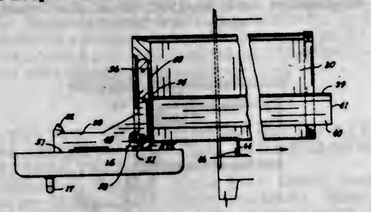
2,461,901
SULFURIZED PHENOLIC TANNING AGENTS AND THEIR MANUFACTURE
Valentin Kartaschoff, Basel, Switzerland, assignor to Sandoz Ltd., Fribourg, Switzerland, a Swiss firm
No Drawing. Application September 6, 1944, Serial No. 552,928. In Switzerland September 30, 1943
4 Claims. (Cl. 260—48)

1. A process for the manufacture of a tanning agent which comprises heating a high-molecular non-dyeing sulphurized phenol with molecular oxygen at a temperature of 120–155° C. and at a pressure of 5 to 15 atmospheres in an aqueous alkaline solution containing free sodium hydroxide until the taking up of the oxygen has ceased.

2,461,902
DETACHABLE OVEN DOOR
Gustav Klein, Melrose Park, Pa., assignor to Caloric Gas Stove Works, Philadelphia, Pa.
Application January 10, 1946, Serial No. 640,341
2 Claims. (Cl. 126—194)

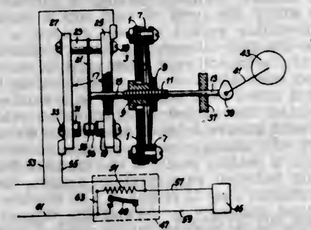
1. In a cooking stove, a first wall structure defining an oven compartment having top and bottom walls, side walls and a rear wall and provided with a front access opening, a second wall structure defining a drawer having a bottom wall and side walls, said drawer being of a size to fit within said compartment, a door for closing the front opening of said compartment and means for detachably hingedly securing said door to the front end of said drawer, said means end of the drawer and latch members carried by the inner side of the door, said latch members including keeper members carried by the front

being engageable with, and disengageable from said keeper members without removing any of said keeper members or said latch members and



without moving any of said keeper members or said latch members relative to said drawer or said door respectively.

2,461,903
THERMOSTATIC CONTROL
Edward F. Kurtz, Attleboro, Mass., assignor to Metals and Controls Corporation, Attleboro, Mass., a corporation of Massachusetts
Application June 16, 1945, Serial No. 599,808
18 Claims. (Cl. 175—320)



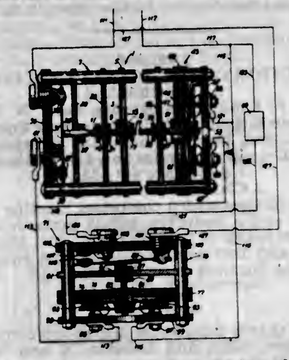
1. A thermostatic control comprising a stationary contact, a movable contact, an inherently snap-acting temperature responsive device, inherently snap-acting from one position to another on temperature change, located to bring the movable contact against the stationary contact when said device is in one of said positions and to open said contacts when said device snaps to said other position, and mechanical periodically effective means for causing said device to go from said other position to said first position.

2. A thermostatic control comprising a stationary contact, a movable contact, a dished thermostatic disc located to bring the movable contact against the stationary contact when said disc is in one position of curvature, means for mechanically urging said disc periodically toward said one position to close said contacts, and a time delay means operable in response to sustained closure of said contacts for an interval greater than that wherein the contacts are closed by said mechanical means.

2,461,904
THERMOSTATIC CONTROL
Victor G. Vaughan, Attleboro, Mass., assignor to Metals & Controls Corporation, Attleboro, Mass., a corporation of Massachusetts
Application March 21, 1946, Serial No. 655,979
22 Claims. (Cl. 175—320)

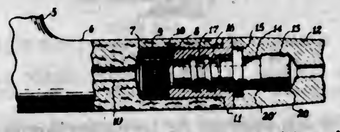
1. A thermostatic control comprising contacts in a circuit, a temperature-responsive device adapted to move to one position to close said contacts upon temperature change in one direction and to move to a second position to open said contacts upon temperature change in the other direction, and a thermal motor adapted periodically to urge said device to said first position.

11. A thermostatic control comprising normally open contacts adapted to make and break a circuit, an inherently snap-acting temperature-responsive device adapted to snap to one position on temperature change in one direction to close said contacts and to snap to a second position on temperature change in the other direction to permit said contacts to open, a thermal motor



for periodically applying an external force to said device upon cooling to urge said device to said first position and for periodically releasing said force upon heating to permit said device to snap to said second position, and a time-delay means responsive to closure of said contacts, said thermal motor having predetermined heating and cooling periods, said time-delay means having a time-delay period greater than the heating period of said motor and a reset period less than the cooling period of the motor.

2,461,905
SMOKER'S PIPE
David P. Lavietes, Boone, N. C.
Application January 25, 1946, Serial No. 643,297
5 Claims. (Cl. 131—225)



3. A smoking pipe having a bowl with a shank provided with a smoke passage and a mouthpiece provided with a smoke passage, and means for detachably connecting the mouthpiece to the shank, comprising a first tubular metallic connector member fixed to the shank and a second tubular metallic connector member having a smooth-surfaced portion frictionally embedded in the mouthpiece and having a flange at the end of the mouthpiece, one face of the flange being flush with an end face of the mouthpiece, and a neck of reduced diameter between said flange and said smooth-surfaced portion, said mouthpiece having a portion surrounding said neck between said smooth-surfaced portion and said flange but of larger diameter than said neck for preventing withdrawal of said second connector member from said mouthpiece, one of said connector members having an internal helical screw

resistant the space between the bore and the re- dimethyl - cyclopentanopolyhydrophenanthrene

thread and the other connector member having an external screw threaded extension fitted to said internal screw thread, said flange abutting against said first connector member when the screw threads of said members are connected, the friction between the connected parts being such that the mouthpiece can be connected to the shank of the bowl by turning the mouthpiece in one direction and can be overturned when the flange is seated against the first connector member and the mouthpiece can be unscrewed by turning the mouthpiece in the opposite direction.

2,461,906
PRODUCTION OF HALOGENATED ALCOHOLS AND FORMALS
Thomas E. Londergan, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 2, 1946, Serial No. 681,133
5 Claims. (Cl. 260—615)

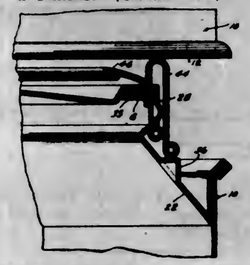
1. The process which comprises reacting formaldehyde and a hydrogen halide taken from the group consisting of hydrogen chloride, hydrogen bromide and hydrogen iodide with a substance having the formula

in which Q is a member of the group consisting of hydrogen, alkyl and halogen, X and X' are members of the group consisting of hydrogen and halogen, and R is a member of the group consisting of hydrogen and alkyl, in the presence of at least 5% by weight of phosphoric acid and at least 5% by weight of a substance taken from the group consisting of zinc chloride and aluminum chloride.

2,461,907
BEARING SEAL
Charles D. Magnesen, Chicago, Ill., assignor to Modern Design Products Company, Chicago, Ill., a corporation of Illinois
Application March 16, 1948, Serial No. 15,240
2 Claims. (Cl. 286—11)

1. A seal assembly for preventing flow of fluid along the surface of a cylindrical shaft, comprising a cylindrically shaped housing adapted to loosely encircle said shaft, a ring-shaped bearing means fixedly secured in said housing at one end thereof and having a forwardly projecting annular portion extending therefrom and adapted to bear axially against an annular surface, a resilient disk-like member mounted in said housing behind said bearing member and having a rearwardly extending sleeve portion adapted to embrace the shaft, a collar surrounding said sleeve portion and clamping the same to said shaft, said collar having a polygonal periphery, an end washer having a central opening formed to telescopically fit over said collar in axially slidable driving connection therewith, said washer bearing against the outer margin of said disk-like member and having its outer periphery secured in said housing.

2,461,908
CONTAINER AND COVER
Charles D. Magnesen, Chicago, Ill.
Application April 30, 1947, Serial No. 745,073
2 Claims. (Cl. 220—97)



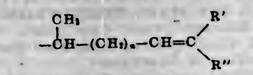
2. A container and closure for paint or similar substances, said container having a cylindrical top of a diameter smaller than the diameter of the container, a tapered throat in said top, a groove about the neck of said top spaced away from the open end thereof and a closure member adapted to fit over the open end of said top, said closure member having a circular groove into which the neck of said top is positioned, a compressible gasket in said groove, a plurality of downwardly depending fingers extending below the edge of said neck and terminating in curled over edges and a retainer ring having a beaded lower edge positioned over said cover and fastening the curled over edges of said fingers into said groove to seal said cover on said container, the closure member being so constructed that in a sealing position the same is flexed outwardly between said circular groove, and when the retainer ring is removed, the closure member is flexed inwardly to spread the fingers to permit the easy removal of the same and means associated with the neck of said container for preventing complete compressing of said gasket, said means comprising a plurality of shoulders having flat upper surfaces positioned around the neck of said container against which the lower edge of the retainer ring abuts to afford a descent limit to the beaded lower edge of the retainer ring whereby stacking of weight on said retainer rings may not excessively compress the sealing gasket in said groove.

2,461,909
BEVERAGE FAUCET AND ADJUSTABLE FLOW RESTRICTOR
Stanley J. McClure, Louisville, Ky.
Application March 15, 1944, Serial No. 526,545
7 Claims. (Cl. 225—1)

1. A beverage dispenser comprising a faucet including a barrel, a spout on the barrel, a seat in said barrel, a tubular shank mounted on the barrel, a tapered bore in said shank, a valve member in the barrel engageable with the first-named seat, a tapered restrictor member operable in the shank and cooperating with the tapered bore to restrict the space between the bore and the restrictor member, and common means on the barrel for simultaneously moving the valve member away from the seat and the tapered restrictor member toward the tapered bore, and for adjusting said tapered restrictor member toward or away from said tapered bore independently of said valve member.

2,461,910
PROCESS FOR THE DEGRADATION OF THE SIDE-CHAIN OF STEROIDS AND STEROIDS SUITABLE THEREFOR
Karl Miescher, Riehen, Hugo Frey, Olten, and Charles Meystre and Albert Wettstein, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Inc., Summit, N. J.
No Drawing. Application March 28, 1946, Serial No. 657,896. In Switzerland August 18, 1942
7 Claims. (Cl. 260—397.5)

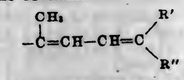
1. In a process for the degradation of the side-chain of a 10:13-dimethyl-cyclopentanopolyhydrophenanthrene, the steps of causing a 10:13-dimethyl - cyclopentanopolyhydrophenanthrene carrying in 17-position a substituent of the formula



wherein R' and R'' each represent a member selected from the group consisting of hydrogen and lower aliphatic and lower aromatic hydrocarbon radicals, and n is one of the integers 1 and 2, to react with a member of the group consisting of a carboxylic acid imide, amide and arylamide halogenated at the nitrogen while exposing the reactants to strong light.

2,461,911
PROCESS FOR THE DEGRADATION OF THE SIDE-CHAIN OF STEROIDS AND STEROIDS SUITABLE THEREFOR
Karl Miescher, Riehen, Hugo Frey, Olten, and Charles Meystre and Albert Wettstein, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Inc., Summit, N. J.
No Drawing. Application August 1, 1946, Serial No. 687,694
14 Claims. (Cl. 260—397.5)

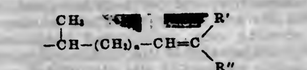
1. The 10,13 - dimethyl - cyclopentanopolyhydrophenanthrenes carrying in 17 position a substituent of the formula



wherein R' and R'' each stands for a member of the group consisting of hydrogen, lower alkyl and lower aryl radicals, and containing in 3 position a free hydroxyl group and in 5 position a halogen atom.

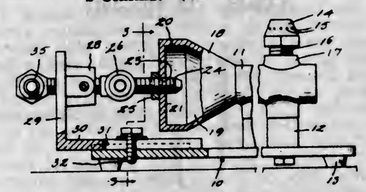
2,461,912
PROCESS FOR THE DEGRADATION OF THE SIDE-CHAIN OF A STEROID CONTAINING A NUCLEAR α,β-UNSATURATED KETO GROUP
Karl Miescher, Riehen, Hugo Frey, Olten, and Charles Meystre and Albert Wettstein, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Inc., Summit, N. J.
No Drawing. Application April 28, 1947, Serial No. 744,534. In Switzerland August 18, 1942
6 Claims. (Cl. 260—397.3)

1. In a process for the degradation of the side chain of a steroid, the step of causing a 10,13-dimethyl - cyclopentanopolyhydrophenanthrene containing an α,β-unsaturated keto group in the nucleus and in 17 position a substituent of the formula



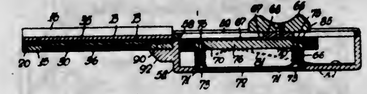
wherein R' and R'' each stands for a member of the group consisting of hydrogen, lower alkyl and lower aryl radicals and n is one of the integers 1 and 2, to react with a member of the group consisting of a carboxylic acid imide, amide and arylamide halogenated at the nitrogen while exposing the reactants to strong light.

2,461,913
GAS BURNER AND SUPPORT THEREFOR
Murlin L. Mosier, Sioux City, Iowa
Application October 24, 1947, Serial No. 781,844
2 Claims. (Cl. 158—99)



1. A burner for gaseous fuel comprising a base, a mixing tube fixed to and parallel with said base, a burner nozzle extending from said tube adjacent one end thereof, a flared inner end carried by said tube, an apertured inner end wall carried by said inner end, a pair of upstanding lengthwise extending guide ribs carried by said base, an L-shaped nozzle carrier having a horizontal plate slidably engaging between said ribs, said plate having an elongated slot, a securing bolt engaging through said slot and extending into said base for holding said plate in adjusted position, said carrier having a vertical plate on the outer end of said horizontal plate, and a fuel discharge nozzle fixedly carried by said vertical plate and loosely engaging through said inner end wall.

2,461,914
SAFETY RAZOR AND BLADE MAGAZINE THEREFOR
Edgar A. Nelson, New York, N. Y., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a corporation of Virginia
Application October 10, 1945, Serial No. 621,559
10 Claims. (Cl. 30—40)



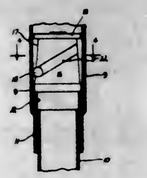
1. A blade holder comprising a saddle upon which the blade is to be located and a cap overlying said saddle to retain a blade thereon, means to immovably fix said cap to said saddle and space it therefrom to provide a blade receiving space that is open through both end walls of the holder, said saddle having a depression in its upper face which terminates short of both ends thereof, and a blade locating member seated in said depression having the end portions of its upper surface chamfered and means for yield-

across the motor armature, said reversing switch

2,461,923
APPARATUS FOR MEASURING HIGH

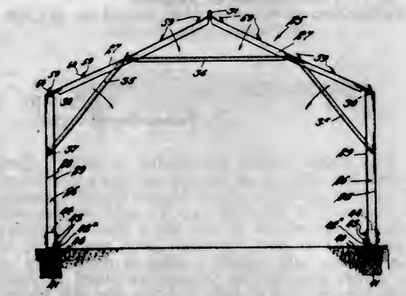
ingly elevating said member to a normal position wherein its upper surface is above the level of the top blade seating surface of the saddle and said chamfered end portions intersect the plane of said surface whereby a blade having a locating opening can be entered into said space through either end of the holder and moved along the saddle to engage the chamfered surface at one end of said locating member to hold it depressed until the blade is fully entered into the holder and the blade opening registered with the member which will be free to rise and engage in said blade opening to fixedly locate the blade in said space.

2,461,915
TRIPOD LEG
Herman Neuwirth, New York, N. Y., assignor to Testrite Instrument Co., Inc., New York, N. Y., a corporation of New York
Application March 8, 1946, Serial No. 652,895
1 Claim. (Cl. 248—191)



A tripod supporting leg comprising tubular telescoping sections, the one leg section having a truncated conical head at the end within the other leg section arranged with spiral grooves in the outer surface thereof, and balls movably engaging in said grooves between said conical head and the outer leg section adapted by the rotative movement of the telescoping leg sections relative to each other in one direction to be wedged between said grooves and the outer leg section and secure the leg sections together, and by the rotative movement of the leg sections in the opposite direction move said balls out of wedging position and release the leg sections.

2,461,916
DEMOUNTABLE BUILDING AND STRUCTURAL UNIT THEREFOR
Alejandro Goicoechea Omar, Madrid, Spain
Application March 27, 1945, Serial No. 585,035
In Spain August 14, 1944
3 Claims. (Cl. 20—2)



2. A foldable transverse frame unit for a demountable building comprising two channels having laterally-directed flanges forming uprights, and rafters, said rafters being pivoted together at their adjacent ends and at their outer ends to the channels and being foldable into housed relation with respect to the channels, the flanges of the channels being engaged in the folded position of parts.

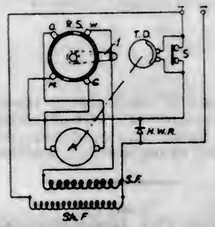
2,461,917
AROMATIC AMINES AND FUELS CONTAINING THE SAME
John W. Orelup, Short Hills, N. J.
No Drawing. Application April 15, 1944, Serial No. 531,289
7 Claims. (Cl. 260—578)

1. A high octane motor fuel containing substantial amounts of primary aromatic amines, and as an inhibitor against color deterioration, a small amount of a trialkyl amine selected from the group consisting of triamyl amine, trihexyl amine and triheptyl amine.

2,461,918
POLYAMINE RESINOUS COMPOSITION AND AN INK MADE THEREFROM
Frederick Edward Petke, Cincinnati, Ohio, assignor to Sterling Drug Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application August 14, 1945, Serial No. 610,879
16 Claims. (Cl. 106—30)

16. The method of stabilizing a printing ink composed essentially of a pigment mixed in a dispersion of an acidic resin in a drying oil, which consists in treating the ink with a polyamine capable of at least partially converting said acidic resin into a polyamine salt of said resin, whereby a polyamine salt of the acidic resin is formed therein.

2,461,919
DYNAMIC BRAKING ARRANGEMENT FOR DIRECT CURRENT MOTORS
Gordon Francis Wellington Powell, London, England, assignor to Molins Machine Company Limited, London, England
Application September 12, 1945, Serial No. 615,899
In Great Britain September 14, 1944
1 Claim. (Cl. 318—369)



A dynamic braking apparatus for a motor comprising a shunt field energized throughout the working period, positive and negative leads for supplying current to the armature of the motor, a switch in one of said leads to switch the current supply to the armature on and off, a reversing switch having input and output terminals, said leads being connected to the input terminals, the output terminals being connected across the motor armature, said reversing switch being arranged to reverse after said first switch has switched off the current supplied through the leads, and a half-wave rectifier shunted across the leads, the rectifier being connected to the lead having the first switch at a point on said lead between the first switch and the reversing switch, whereby applied voltage cannot cause current to pass through the rectifier at the one position of the reversing switch but the armature generated current can pass therethrough at the second position of the reversing switch and bring the short-circuited armature rapidly to a standstill.

2,461,920
POLYHYDRIC ALCOHOL MIXED ESTERS
Burt Carlton Pratt, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 25, 1944, Serial No. 519,647
6 Claims. (Cl. 260—76)

1. A mixed ester, capable of drying on baking at 100° C. in contact with an atmosphere containing molecular oxygen and in the presence of iron linoleate, consisting of the reaction product of glycerol with 7-mercaptoheptanoic acid and phthalic anhydride in the ratio of 20 parts of 7-mercaptoheptanoic acid and 18.4 parts of phthalic anhydride to 11.5 parts of glycerol.

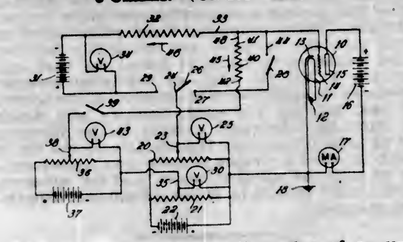
2,461,921
ANTISPASMODIC COMPOSITION
Harold M. Rabinowitz, Brooklyn, N. Y.
No Drawing. Application June 15, 1945, Serial No. 599,772
3 Claims. (Cl. 167—74.5)

1. The method of making an antispasmodic composition which comprises extracting fat from the urine of a liver-bearing animal by means of a solvent for the fat that is not soluble in the urine, evaporating the defatted urine at least nearly to dryness, dissolving the residue in an organic solvent mixture therefor, the solvent mixture containing a water soluble alcohol and a water insoluble organic liquid that is a solvent for urobilinogen, mixing water with the resulting solution, the result being two phases, one containing most of the water and alcohol and the other the said water insoluble liquid, separating the water and alcohol phase from the other without change of state, and then evaporating the water and alcohol phase and crystallizing therefrom a crystalline water soluble material of melting point about 123–4° C.

2,461,922
ANTIBIOTIC EXTRACTION FROM SOLIDS OF ACTINOMYCES GRISEUS CULTURE
Geoffrey W. Rake, Milltown, and Walter L. Koerber, Kingston, N. J., and Richard Donovick, New York, N. Y., assignors to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Application April 5, 1945, Serial No. 586,824
11 Claims. (Cl. 195—80)

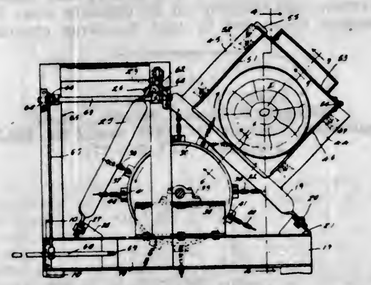
1. The method of producing an antibiotic substance comprising culturing *Actinomyces griseus* to produce streptomycin, subjecting the solids of the culture to extraction with an aqueous acid, and recovering the antibiotic substance in the extract.

2,461,923
APPARATUS FOR MEASURING HIGH RESISTANCE
Joseph Rasek, Llanerch, Pa., assignor, by mesne assignments, to Oliver W. Storey, Wheaton, Ill., as trustee, for the partnership of O. W. Storey & Associates, Chicago, Ill.
Application September 13, 1944, Serial No. 553,943
6 Claims. (Cl. 175—183)



1. Means for measuring the value of an unknown resistance comprising, in combination, a vacuum tube having a cathode, a plate, and a grid, a plate circuit for said tube including means for indicating the value of current therein, a plurality of grid circuits for said tube in parallel relationship to each other and being independently connectable into operative relationship, the first of said grid circuits comprising adjustable means for biasing said grid negatively a predetermined amount with respect to said cathode, means for inserting in said first grid circuit in series with said first grid biasing means a source of additional negative grid bias of known value and said resistance of unknown value, the second of said grid circuits comprising two adjustable grid biasing members and a resistance of known value connected in series, the polarity of said two grid biasing members being reversed with respect to each other, and means for measuring the voltage across the one of said grid biasing members having a polarity such as to increase the positive potential of said grid.

2,461,924
IMPACT TYPE LOG PEELER
Charles J. Robertson, Hattiesburg, Miss.
Application November 27, 1945, Serial No. 631,025
4 Claims. (Cl. 144—208)



1. A machine for removing the bark from rotating, horizontally positioned and axially advancing logs comprising a base, a plurality of spaced inverted V-shaped log supporting and log feeding members pivotally connected to said base and located at one side of a log being debarked, each inverted V-shaped member lying in a tilted

plane which is intersected by the longitudinal

roof portion, said casing having on its front side

from margins of the base with end portions of the side walls bearing against side edges of the

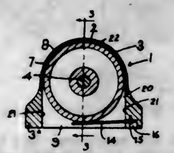
and lower rings to adjust their rotative position, a dial plate located inside said rings in substan-

plane which is intersected by the longitudinal axis of the log and which is tilted about an axis containing said pivotal connection and in the direction the log advances, one leg of each inverted V-shaped member being engageable with the periphery of said log to axially feed said log, means mounted on said legs to retain the log in contact therewith; a rotatable member mounted on said base and positioned beneath said inverted V-shaped members and within the angle formed thereby, flexible debarking members mounted on said rotatable member and swingable between said V-shaped members to pound the bark and thereby rotate the log; an elongated member mounted on said base and connecting the apexes of said inverted V-shaped members, and means to move said elongated member in the direction of its longitudinal axis, thereby to vary the tilt of each inverted V-shaped member and consequently to vary the speed at which said log advances while being rotated by impacts from said debarking members.

2,461,925
SELF-PRIMING CENTRIFUGAL PUMP
Herbert E. Rupp, Mansfield, Ohio, assignor to The Gorman-Rupp Company, Mansfield, Ohio, a corporation of Ohio
Application September 5, 1946, Serial No. 694,930
11 Claims. (Cl. 103—113)

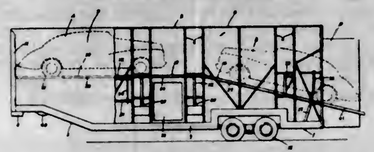
1. A self-priming centrifugal pump having an impeller chamber, an intake connected to said impeller chamber, a rotatable impeller mounted in said impeller chamber, a discharge chamber, a cut-off at one side of said impeller chamber and related to the orbit of said impeller, and an arcuate wall in said impeller chamber on the output side of said impeller and in the plane thereof, said wall being spaced from the orbit of said impeller and the adjacent end wall of said impeller chamber and forming on its opposite sides flow passages connected to said discharge chamber.

2,461,926
EDUCATIONAL DEVICE
Winfield P. Russell, Malden, Mass.
Application February 18, 1946, Serial No. 648,365
3 Claims. (Cl. 35—77)



1. An educational device comprising a casing having a flat bottom, a semi-cylindrical upper portion and closed ends, said casing being provided with an interior chamber having vertical sides and ends, and also having a semi-cylindrical roof portion, said casing having on its front side a reading slot extending from one end to the other of said chamber, a supporting shaft extending from one end of said chamber to the other and situated axially of the semi-cylindrical roof portion of the chamber, a plurality of rolls mounted on said shaft for rotative movement thereabout, said rolls being entirely enclosed within the chamber and each roll having on its periphery a plurality of indicia, any one of which can be brought into register with the reading slot by turning said roll on its axis, said casing having on its rear side a plurality of separate elongated finger openings, one for each roll, into each of which finger openings a person may insert his finger to turn the corresponding roll, thereby to bring any one of the indicia thereon into register with the reading slot.

2,461,927
AUTOMOBILE TRANSPORT VAN
Alvin J. Schaldach and Virgil A. Blackburn, Sacramento, Calif.
Application January 10, 1947, Serial No. 721,250
3 Claims. (Cl. 296—1)

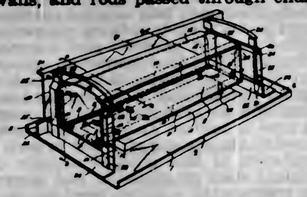


3. A vehicle transport van comprising an elongated wheel supported main frame having an upwardly offset portion adjacent its forward end, an enclosed body on said main frame, a lower vehicle deck and an upper vehicle deck disposed within the body, the lower deck comprising a runway section extending the full length of the main frame, including the front upwardly offset portion thereof, the length of such runway being such as to accommodate two vehicles end to end, the upper deck comprising a rear runway section, an intermediate runway section, a drop runway section, and a front runway section, the front runway section being disposed adjacent the front end of the body, and the drop runway section being disposed between the front runway section and the intermediate runway section and being of such a length that a vehicle with its wheels on the first part and intermediate runway sections, respectively, will substantially straddle the drop runway section, the latter being collapsible whereby to leave the space between the wheels of such vehicle clear, the relative heights of the upper and lower runways being such that the top of a vehicle on the lower deck with its front wheels on the upwardly offset portion thereof will project into such clear space.

2,461,928
EXTERIOR FORM FOR USE IN MOLDING BURIAL VAULTS AND THE LIKE
John S. Schopf, Spokane, Wash.
Application February 24, 1945, Serial No. 579,524
3 Claims. (Cl. 25—130)

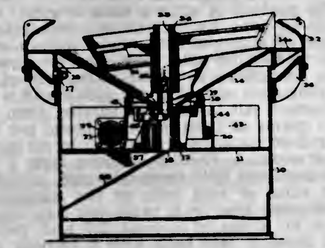
1. A mold of the character described including an outer form comprising a base and side walls and front and rear end walls resting thereon, the front end wall being formed with an opening for receiving an end of an inner form, said walls having outstanding flanges along their lower ends engaging upstanding abutments carried by the base and holding the walls spaced

from margins of the base with end portions of the side walls bearing against side edges of the end walls, and rods passed through ends of the



side walls and across outer surfaces of the end walls to releasably hold the walls in engagement with each other.

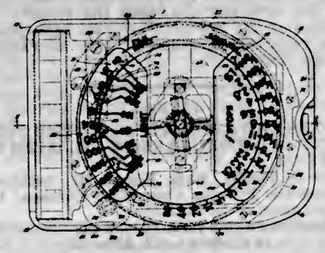
2,461,929
DOUGH ROUNDER
Charles B. Seem, Beacon, N. Y., assignor to Dutchess Tool Company, Inc., Beacon, N. Y., a corporation of New York
Application August 10, 1944, Serial No. 548,865
6 Claims. (Cl. 107—9)



3. In a dough rounding machine, a base, an inverted conical member rotatable on said base, a spiral trough member mounted in fixed position adjacent the inner surface of the cone and forming in conjunction with the cone a spiral trough for advancing successive lumps of dough upwardly and outwardly of said surface, said lumps being discharged from the inner surface of the cone at the upper, outer edge thereof and said cone having an opening located centrally thereof to which scraps of dough are directed by gravity from the inner surface of said cone, and an inclined chute within said base having its upper end in registry with the opening in the cone.

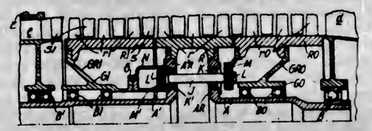
2,461,930
EXPOSURE METER HAVING COORDINATED METER POINTER AND CALCULATING DISK
Ray Simpson, River Forest, Ill., assignor to Simpson Electric Company, Chicago, Ill., a corporation of Illinois
Application April 26, 1946, Serial No. 665,069
6 Claims. (Cl. 88—23)

1. In an exposure meter, the combination of a molded insulating housing having rear walls, side walls and an end wall and open at its front side and at one end, said housing being formed with an annular recess bounded by a cylindrical surface and an adjacent plane surface at its open front side, a calculator assembly comprising an upper ring and a lower ring, the said rings being arranged one above the other for rotation in said recess, guide means carried by said housing for engaging the upper ring and holding the rings in said recess, driving means for rotating the upper and lower rings to adjust their rotative position, a dial plate located inside said rings in substantially the same plane, and having a central aperture, an electrical instrument movement located inside said central aperture and having a pointer passing through said aperture with its pointer end above said dial plate, said dial plate having a first portion of its face adjacent its periphery provided with scale divisions and with stop indicia, and having a second portion provided with scale divisions and light intensity indicia, the pointer



end being located to move above the latter indicia, a first portion of the face of the upper ring being provided with scale divisions and time unit indicia for registry with the said stop indicia scale divisons on the dial plate, and the second portion of the face of said upper ring being provided with scale divisions and film index indicia, for registry with the light intensity scale divisions on the dial plate, and cover means for said housing for enclosing said exposure meter and including transparent parts for exposing said pointer and the parts of said rings and dial which bear indicia.

2,461,931
MULTISTAGE COMPRESSOR
David MacLeish Smith, Stretford, Manchester, and Charles Graham Lloyd, Baguley, England, assignors to Metropolitan-Vickers Electrical Company Limited, London, England, a company of Great Britain
Application April 6, 1944, Serial No. 529,798
In Great Britain January 4, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires January 4, 1963
8 Claims. (Cl. 230—114)



1. A multi-stage compressor comprising two relatively rotatable elements, a plurality of rows of blades attached to one of said elements, including one row disposed intermediately of two end rows, a row of blades fixed to the other element to co-operate with said intermediately-disposed row of blades in providing an intermediate stage of compression, a row of blades having means for rotatably mounting them relatively to said other element to co-operate with one of said end rows of blades in providing a low-pressure stage of compression, and a row of blades having means for rotatably mounting them relatively to said other element to co-operate with

the other said end row of blades in providing

nation of said minor portion with said free oxygen

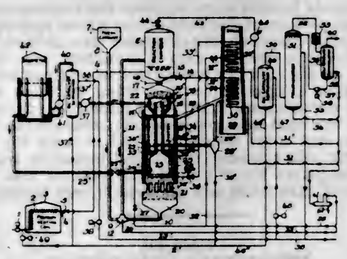
the other said end row of blades in providing a high-pressure stage of compression, and means including gearing having means fixed to the blades which are fixed to said other element for supporting said gearing for rotation on an axis eccentric to the axis of relative rotation of said elements, and gears connected respectively to said rotatably mounted blades of the low-pressure and high-pressure stages and meshing with said gearing whereby blades of the low-pressure and high-pressure stages are differentially interconnected blades of the intermediate-pressure stage for inversely changing the relative blade velocities of the low-pressure and high-pressure stages relatively to that of the intermediate-pressure stage.

2,461,932

PROCESS AND APPARATUS FOR THE TREATMENT OF HYDROCARBON OIL WITH CATALYSTS

Arthur D. Smith, Park Ridge, Ill., assignor to Adsorptive Process Company, Chicago, Ill., a corporation of Nevada

Application January 19, 1946, Serial No. 642,388
10 Claims. (Cl. 196—52)



1. A process for the catalytic conversion of hydrocarbons which comprises: introducing to a conversion zone a stream of fluid hydrocarbon preheated to a transforming temperature and a second stream of fluid hydrocarbon containing dispersed catalyst particles impregnated with metallic oxide, effecting upon commingle ment of said streams conversion of a portion of said fluid hydrocarbon into gasoline of high anti-knock value and another portion into carbon with concomitant adsorption of said carbon by said catalyst particles which thereby become spent, releasing converted and unconverted hydrocarbon vapor from said conversion zone to an oil-catalyst separation zone and freeing therein said vapor from entrained catalyst particles dispersed as an oil-catalyst slurry in a stream of wash hydrocarbon oil, conducting the washed vapor to a fractionation zone and discharging therefrom said gasoline of high anti-knock value as a vapor and recycle oil as a liquid, condensing the gasoline vapor to liquid gasoline and returning recycle oil to the oil-catalyst separation zone as said wash oil, commingling the oil-catalyst slurry with the first mentioned stream of fluid hydrocarbon; flowing said spent catalyst particles coated with adsorbed carbon from said conversion zone through a decarbonizing zone in contact with superheated steam commingled with a free oxygen-containing gas wherein such oxygen obtains in only sufficient quantity to combine with a predetermined minor portion of said adsorbed carbon, respectively effecting in said contact combination of said minor portion with said free oxygen and metathesis between the major portion of said adsorbed carbon and said steam, concurrently with decarbonization of said catalyst particles reducing said metallic oxide with co-production of decarbonized catalyst particles and a combustible gas comprising carbon monoxide, carbon dioxide and hydrogen; flowing decarbonized catalyst particles impregnated with reduced metallic oxide from said decarbonizing zone through an oxidizing zone in contact with a superheated free oxygen-containing gas and effecting in such contact reoxidation of said reduced metallic oxide to its original state of oxidation and dispersing the thus regenerated catalyst particles in said stream of fluid hydrocarbon with introduction thereof to said conversion zone in the manner aforesaid.

2,461,933

RHODIUM ALLOY COATINGS AND METHOD OF MAKING SAME

Paul T. Smith, Esmond, and Joseph A. Smith, Cranston, R. I.

No Drawing. Application December 24, 1947, Serial No. 793,756
7 Claims. (Cl. 29—194)

1. The method of alloy plating a metal article with an alloy having the characteristics of the metal of higher atomic weight therein, comprising, immersing said article in an aqueous solution containing a soluble metal salt of the group consisting of nickel and cobalt and a soluble rhodium salt in amounts varying from 3.55 to 13.72 grams of total dissolved metal per liter by weight of metal in proportions by weight of nickel or cobalt to rhodium varying from 8 to 1 to 33.3 to 1 and free inorganic acid, adjusting the pH value of said bath by the addition of free inorganic acid to a value not less than 1 and not in excess of around 1.7 and passing current through said bath with a cathode current density from about 40 to about 96 amperes per square foot and at a temperature from about 120° F. to about 150° F. to cause alloy plating of a metal alloy on said article with an alloy plate containing from 62–38 to 98.3–1.7% by weight of the respective metals.

2. An article having a tarnishable metal body, a wear resistant coating of tarnish resistant substantially white metal of at least one of the group consisting of nickel and cobalt over the body and an acid resistant, tarnish resistant, bright, hard, substantially white electrodeposited outer alloy coating consisting essentially of 95.4–98.3% by weight of metal of at least one of the group consisting of nickel and cobalt and 4.6–1.7% by weight of rhodium having characteristics of the metal of higher atomic weight, namely rhodium, therein.

2,461,934

BARRETTE

Nathan L. Solomon, Englewood, N. J.

Application April 18, 1945, Serial No. 588,914
12 Claims. (Cl. 132—48)

1. In a barrette, a support having an integral hook-shaped keeper on one surface and adjacent one end thereof, said support having a short channel at the other end thereof, the inner end

of the channel having a stop wall, the other outer end of the channel being open, an elongated clasp comprising a jaw, a claw integrally joining the jaw in an inwardly curved portion at one end of the jaw, said claw being force fitted within the walls of said channel in retaining the clasp against displacement from said support, and said jaw and keeper having cooperating means for retaining the jaw against displacement from said keeper.

2,461,935

INSULATED ELECTRICAL RESISTANCES

John Stockdale, Clent, and Donald Eric Rison, Acocks Green, Birmingham, England, assignors to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application July 19, 1944, Serial No. 545,742. In Great Britain August 14, 1943
6 Claims. (Cl. 201—76)

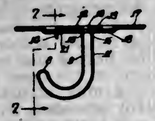
1. The method of coating electrical resistances with an insulating oxide layer which comprises depositing on a resistance material made of a nickel-chromium alloy a substantially unoxidised surface layer of nickel, subjecting said material with said deposited surface layer to a diffusion treatment by heating in a substantially non-oxidising atmosphere to obtain diffusion, and thereafter oxidising said deposited surface layer by heating in an oxidising atmosphere.

2,461,936

MOUNTING FOR HOOKS AND THE LIKE

Roy A. Stone, Rockford, Ill., assignor to National Lock Company, Rockford, Ill., a corporation of Delaware

Application June 6, 1945, Serial No. 597,803
4 Claims. (Cl. 248—220)



1. An article adapted to be mounted on a member having a pair of apertures of predetermined dimensions and spaced a predetermined distance apart, comprising, a resilient sheet metal strip formed to provide a utility body portion and a pair of resilient legs extending in substantially the same general direction, each of said legs, at places spaced substantially equal distances from its free end, having a pair of oppositely directed shoulders adapted to engage one surface of said member adjacent to opposite margins of one aperture, said shoulders extending from the side edges of the legs in substantially parallel relationship to one another, each of said legs from its shoulders to its free end providing an extension and being of a width, measured parallel to its shoulders, substantially equal to and not greater than the dimension of said aperture measured between said margins thereof, each leg extension being formed with a part extending away from the other leg substantially at a right angle and at a place spaced from its shoulders a distance substantially equal to the thickness of said member adjacent to said aperture thereby to lie closely adjacent to the other surface of said member, one of said leg extensions being formed with an angular part at its free end for disposal in the other aperture when its first said part lies closely adjacent to said other surface of said member.

619 O. G.—52

2,461,937

DEGASSING AND GRAIN REFINING OF MAGNESIUM

Kessy Strauss, Birmingham, England, assignor to Foundry Services Limited, Birmingham, England, a British company

No Drawing. Application January 7, 1947, Serial No. 720,687. In Great Britain January 9, 1946
1 Claim. (Cl. 75—67)

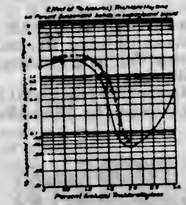
The process of treating magnesium and magnesium alloys in molten state for degassing and refining the same, which consists in introducing into the melt about 20% by weight of sodium silico fluoride as an addition to hexachloroethane forming the remainder of a composition in substantially solid, compressed tablet form, and allowing said sodium silico fluoride to give off silico fluoride gas within the melt while sodium fluoride forms a residue and constitutes a protective layer around hexachloroethane crystals until the latter have completely vaporized within said melt.

2,461,938

METHOD OF CLARIFYING MASH

Alfred J. Strohmaier, Louisville, Ky., and Clifton L. Lovell, West Lafayette, Ind., assignors to Joseph E. Seagram & Sons, Inc., Shively, Ky., a corporation of Indiana

Application November 16, 1944, Serial No. 563,784
15 Claims. (Cl. 210—42.5)



1. A method of clarifying a hydrolized grain mash solution wherein the apparent specific gravity of the mash solids is increased to facilitate the mechanical separation of the solids from the liquids, comprising: dispersing in the mash a halogenated hydrocarbon, having a specific gravity greater than water, to increase the apparent specific gravity of the solids under operating conditions in which the halogenated hydrocarbon remains in liquid form; and thereafter mechanically separating the liquids from the solids.

2,461,939

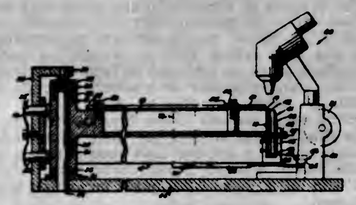
OPTICAL INSPECTION APPARATUS FOR USE IN INSPECTING POTENTIOMETER CARDS

John S. Stull, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application June 6, 1945, Serial No. 597,768
6 Claims. (Cl. 88—14)

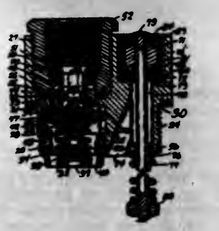
1. An inspection apparatus comprising a base, a movable member for supporting a potentiometer card thereon, means mounting said member on said base for movement in a predetermined path, a gage member on said card supporting member for positioning said card with the edge thereof in a predetermined position on said movable card supporting member and parallel to the path of movement of said card supporting member, holders for holding said card in position on said card supporting member, a stationary optical

inspection device mounted on said base adjacent the path of movement of said card supporting member for use in inspecting said card, a strand having one end thereof attached to said card supporting member, yieldable means carried by said card supporting member for receiving the other end of said strand in spaced relation to said one end to maintain said strand in taut condition on



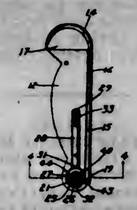
said card supporting member, and a capstan encircled in operative engagement by the intermediate portion of said strand, said capstan being rotatable for moving said strand to effect a movement of said card supporting member in said predetermined path to move successive portions of the edge of said card into the field of said optical device.

2,461,940
LIQUEFIED PETROLEUM GAS SYSTEM
Savin L. Sundstrom, Chicago, Ill., assignor to The Bastian-Blessing Company, Chicago, Ill., a corporation of Illinois
Application March 29, 1944, Serial No. 528,605
10 Claims. (Cl. 284—19)



1. A fitting for handling liquefied petroleum gas between a detachable connector nipple and a storage tank comprising a body having a passage therethrough divided into upper and lower compartments by a shoulder having an opening therein, a valve support received in the lower compartment, a valve member carried by the support, means resiliently urging said valve member towards said shoulder, said shoulder and valve member cooperating to form a valve, a valve disc carried by the valve and removable through said opening, a removable retainer element for the valve disc extending into the upper compartment, a connector element removably received in the upper compartment and having a valve seat cooperating with said valve disc to form a valve, and resilient means carried by the retainer element to establish a seal with said nipple before movement of the nipple opens the last mentioned valve, said resilient means being carried into sealing contact with said connector element as the nipple moves the valve to its open position.

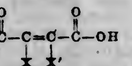
2,461,941
FOLDING GAFF
Robert W. Sutton, Milwaukie, Oreg.
Application April 15, 1946, Serial No. 662,268
1 Claim. (Cl. 43—5)



A folding gaff comprising a pair of similar, elongated, cooperating members forming a handle having an enlarged end, facing portions of each of said members being cut away to form a longitudinal groove in one edge of said handle extending the full length thereof and a recess in said enlarged end communicating with said groove, a stud securing said members together at one end opposite said enlarged end, the facing surface portions of said handle members having aligned cooperating recesses about said stud, a drum rotatably mounted on said stud and arranged within said last mentioned recesses in said members, a hook unit including a shank portion and a recurvate hook portion, the end of said shank portion being secured tangentially to said drum and being pivotally movable about said stud between open and closed positions, the end of said shank portion defining a stop for engaging said handle in the open position of said hook, said shank and hook portions of said hook unit being received in said groove and said recess in said enlarged end in the closed condition of said hook unit, facing surfaces of said handle members having aligned grooves adjacent said drum, a detent arranged within said aligned grooves, said drum having notches for engagement by said detent in the open and closed positions of said hook unit, actuating means secured to said detent extending from each of the opposite sides of said handle whereby said detent may be disengaged from said drum, and spring means arranged within said drum biasing said hook unit to open position.

2,461,942
VINYL CHLORIDE-ALKYL ESTER OF UNSATURATED DICARBOXYLIC ACID COPOLYMER SPONGE COMPOSITION
Walter T. L. Ten Broeck, Jr., Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application July 23, 1946, Serial No. 685,783
4 Claims. (Cl. 260—30.6)

1. A light weight, soft and elastic sponge composition comprised of a copolymer of 2% to 25% of an alkyl ester of an acid having the structural formula



in which X and X' are an atom of the group consisting of hydrogen and chlorine, and 75% to 98% of vinyl chloride, and containing 50% to 150% (based on the weight of the copolymer) of a liquid plasticizer which is a solvent for the copolymer, the sponge having gas filled cells dispersed therein.

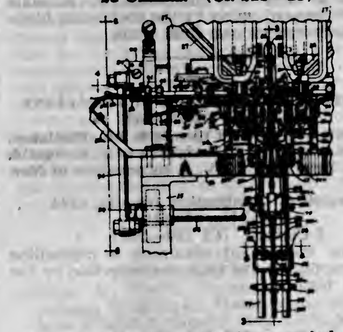
2,461,943
ALPHA,BETA-UNSATURATED GUANAMINES
Jack Theo Thurston, Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 30, 1941, Serial No. 409,123
13 Claims. (Cl. 260—249.5)

1. Substituted guanamines having the following general formula:

R—Vin—G

in which G is a guanamine radical with a free valence on the 2 carbon atom of the triazine ring, Vin is a vinyl group, and R is an aliphatic radical connected to one carbon atom of the vinyl group by carbon to carbon bond, the other carbon atom of the vinyl group being connected to the 2 carbon atom of the guanamine radical by carbon to carbon bond.

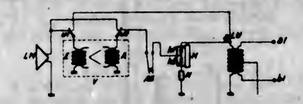
2,461,944
MACHINE FOR FORMING AND JOINING SNAP FASTENER TAPES
Jacob P. Treciokas, Oakville, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application October 23, 1945, Serial No. 624,065
23 Claims. (Cl. 218—18)



1. A machine for producing coupled snap fastener tapes, spaced fastener attaching devices each comprising an anvil and a plunger movable toward and from the anvil, means including tension devices for guiding a pair of tapes between said anvils and plungers, means for intermittently and collectively feeding the tapes to bring predetermined widely spaced sections of the tapes in alinement with said plungers for attachment of fasteners to said widely spaced sections of the tapes, the fastener of one tape being adapted for coupling engagement with the fastener of the other tape, means guiding the tapes into face to face relationship to each other, and means for coupling the fasteners of said tapes to unite the tapes face to face.

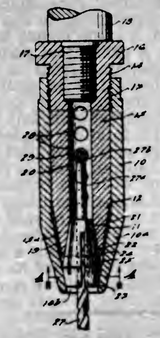
2,461,945
RECEIVER CONNECTION IN ELECTRO-ACOUSTIC DUPLEX SYSTEM
Otto Tschumi, Soleure, Switzerland, assignor to the firm Autophon Aktiengesellschaft, Soleure, Switzerland, a joint-stock company of Switzerland
Application January 20, 1945, Serial No. 573,691
In Switzerland November 3, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires November 3, 1963
2 Claims. (Cl. 179—1)

1. In an electro-acoustic circuit, the combination with a transducer, an amplifier having an input and an output, a telephone receiver having a winding, a transformer for coupling the transducer circuit to an outside line and switching means connecting the transducer alternately to the input of said amplifier for transmission and to the output for reception of a signal, of a balance circuit, means including said switching means connecting the input of the amplifier with said transformer when said switching means is in position for reception of a signal by the transducer, and means including said switching means connecting the output of said amplifier with the midpoint of the winding of said receiver when



said switching means is in position for transmission of a signal by the transducer, one end of said winding being connected with one terminal of one of the windings of said transformer and the other end being connected through said balance circuit with the other terminal of said transformer winding, the impedance of said balance circuit being substantially identical with the effective impedance of said transformer winding whereby output current from the amplifier is divided substantially equally between the two halves of the winding of the telephone receiver and flows in opposite directions through said halves.

2,461,946
TOOLHOLDER
Peter J. Ulick, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application May 17, 1945, Serial No. 594,356
4 Claims. (Cl. 279—56)



1. A holding device for a drill or other tool, comprising outer and inner tubular members having a threaded connection therebetween for relatively shifting the members endwise, the outer member projecting beyond the inner member, a contractible collet, said members having internal reversely tapered portions adapted to embrace and engage reversely formed externally tapered portions of the collet and operative simultaneously to contract the collet to grip the tool when said members are screwed together, said inner member having a longitudinal bore to receive the tool and a plurality of transverse holes intersecting the central longitudinal axis thereof, and a

4. The method of preparing a compound selected from the group which consists of 2-amino-

two normally open switches in the control circuit, means for closing one of the switches in the

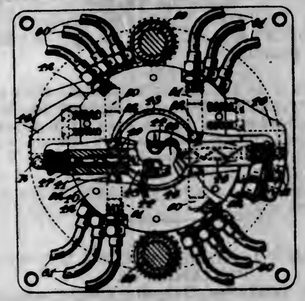
pin insertable into any one of said holes and recessed to receive the terminal end of the tool and held in position by the outer member against withdrawal.

2,461,947
UNDERCUTTING TOOL
Louis Weber, Jacksonville, Fla., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application September 27, 1945, Serial No. 618,954
5 Claims. (Cl. 77—58)

1. Means for undercutting a hole having a side wall area and an inverted cone-shaped bottom area comprising a flexible rotary shaft adapted for drive rotation with one end coupled to a rotatable driving device and the other end provided with a cutter having a cutting edge and a coaxial tapered point shaped to effect a nested position with the inverted cone-shaped bottom of the drill hole on completion of the undercutting cycle of operation, a guide means for said rotary shaft comprising a cylindrical body and a concentric collar depending from said body, said body and collar being formed with an eccentric bore adapted to accommodate said shaft, said bore being of a diameter sufficient to permit the flexing of the shaft to effect angled engagement of the cutting edge with the sidewall area during movement of the tapered point of the cutter into nested engagement with the bottom of the drill hole, the length of said cutter being substantially equal to the outer diameter of said collar whereby a portion of the cutter extends beyond the periphery of said collar during a portion of its cycle and during the balance of its cycle lies entirely within the cross sectional area defined by said collar.

2,461,948
HONING OR THE LIKE MACHINE
Frederick William Whitehead and William George Lovering, Bristol, England, assignors to The Bristol Aeroplane Company Limited, Bristol, England, a British company
Application September 25, 1945, Serial No. 618,482
In Great Britain October 9, 1944
4 Claims. (Cl. 51—157)

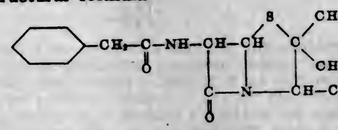
1. A honing or the like machine for blades having a curved surface upon which lie coincident lines as hereinbefore defined comprising a carrier for the blade, means to oscillate the carrier about an axis approximating to the centre of curvature of the blade, an abrading element to engage the blade along a coincident line only, a first and second support for the abrading element whereby the latter is pivotally mounted for movement towards and away from the blade about an axis parrallel with the axis of oscillation of the blade and about an axis normal to



said pivotal axis for tilting movements relatively to a coincident line on the blade and means for resiliently holding the abrading element against the blade so that it is independently movable about each support solely by the oscillating blade which determines its own final shape.

2,461,949
METHOD OF OBTAINING A CRYSTALLINE SODIUM PENICILLIN
Oskar Wintersteiner and Harold B. MacPhillamy, New Brunswick, N. J., assignors to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Application June 13, 1944, Serial No. 540,140
2 Claims. (Cl. 260—302)

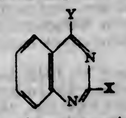
1. In the method of obtaining a crystalline sodium-pencillin of the type characterized by the structural formula



the step of crystallizing an amorphous, high-potency sodium-pencillin of such type from a water-containing primary lower-aliphatic alcohol of 3–6 carbon atoms.

2,461,950
2 OR 4-AMINO QUINAZOLINES
Frank J. Wolf, Westfield, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application January 18, 1946, Serial No. 642,129
7 Claims. (Cl. 260—250)

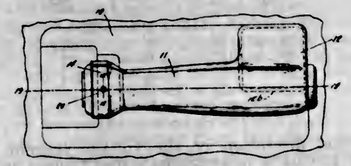
1. A compound having the formula:



where X and Y each represent a substituent selected from the group which consists of hydrogen and NH_2, the substituents being different.

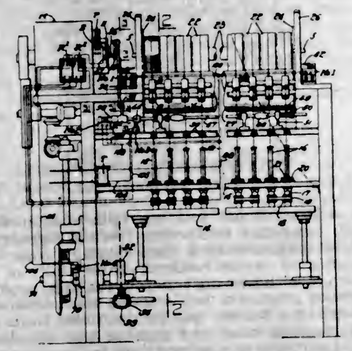
4. The method of preparing a compound selected from the group which consists of 2-aminoquinazoline and 4-aminoquinazoline, which comprises reacting a compound selected from the group which consists of 2-haloquinazoline and 4-haloquinazoline with alcoholic ammonia.

2,461,951
SEWING MACHINE
Norman Wennacott, Scarsdale, and Clarence R. Backlin, Floral Park North, N. Y., assignors to Willcox & Gibbs Sewing Machine Company, New York, N. Y., a corporation of New York
Application July 17, 1945, Serial No. 605,516
3 Claims. (Cl. 112—258)



1. A sewing machine frame for carrying sewing and feeding means, comprising a rectangular base for supporting work being sewn; a post projecting upwardly from the base within the outline of the latter; and an overhanging arm carried by the upper portion of the post with the longitudinal axis of the arm parallel to the base and lying in a vertical plane perpendicular to the line of feed and passing through the point of sewing and extending longitudinally of the base, said post extending upwardly and forwardly and having substantially all of the lower portion adjacent the base located behind said plane thereby eliminating the post as an obstacle ahead of the point of sewing for bringing in new work.

2,461,952
RING SPINNING FRAME
Arthur A. Worth, Penobscot, and Harold S. Adams, Skowhegan, Maine, assignors to American Woolen Company, New York, N. Y., a corporation of Massachusetts
Application November 19, 1946, Serial No. 710,806
7 Claims. (Cl. 57—79)



1. In a ring spinning frame which has a builder motion which traverses the ring rail and the spindle rail with respect to each other, the combination of a power circuit, an electrically operated switch in the power circuit, a control circuit, two normally open switches in the control circuit, means for closing one of the switches in the control circuit, and means timed with the traverse mechanism and acting after the closing of the other of the switches in the control circuit to complete the control circuit and open the switch in the power circuit thereby stopping the machine when a predetermined point in the traverse is reached.

2,461,953
COMPOUNDING COPOLYMERS OF BUTADIENE AND STYRENE
Ernest G. Bargmeyer, Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application April 20, 1944, Serial No. 531,989
5 Claims. (Cl. 260—79.5)

1. A method which comprises heating an uncured butadiene-1,3-styrene copolymer rubber mix with a fraction of the amount of sulfur required to provide an optimum cure and for a time, sufficient to slightly cure the copolymer rubber and then masticating the mix containing the copolymer combined with sulfur to a plastic condition suitable for the addition of further sulfur sufficient to provide an optimum cure to a soft vulcanized state, and thereafter adding such additional sulfur, and vulcanizing to a soft vulanized state.

2,461,954
MANUFACTURE OF BUTADIENE-STYRENE COPOLYMER CEMENTS
Ernest G. Bargmeyer, Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application April 20, 1944, Serial No. 531,990
5 Claims. (Cl. 260—29.1)

1. A method of preparing an improved adhesive cement from an uncured 1,3-butadiene-styrene copolymer rubber which comprises mixing the uncured copolymer rubber with a small fraction of the predetermined total amount of sulphur needed for curing the copolymer rubber of the final cement, but less than 0.5 part per 100 parts by weight of the copolymer, to a soft vulcanized state, said fraction being sufficient to give said copolymer a slight precure, and heating the mix sufficiently to slightly precure the copolymer, then mixing the slightly precured copolymer rubber with the remainder of the sulfur, and dissolving the mix in an organic solvent to produce the cement.

2,461,955
NO-DRAFT VENTILATING WINDOW FOR AUTOMOBILES
Stuart C. Barnes, Detroit, Mich.
Application May 30, 1945, Serial No. 596,750
4 Claims. (Cl. 296—44)

2. In an automobile body having a sharply inclined windshield pillar, a door or body portion having a correspondingly sharply rearwardly inclined complementary front post and an adjoining window opening, a three-panel closure for said opening comprising a forward stationary triangular glass panel having a substantially vertical rear edge closing the lower forward portion of the window opening, a swinging glass panel immediately to the rear of said stationary panel with substantially vertical rear and front lower edge portions and in the plane thereof when closed, said glass panel pivoted to swing in a substantially horizontal direction on a substantially

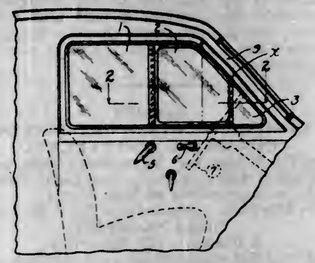
vertical axis, said panel having a section of sub-

pair of interconnected coils positioned, one on

catalyst particles therein, withdrawing spent ca-

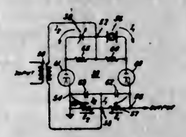
acting the product with an esterifying agent said
small amount of said oil-soluble metal salt being

vertical axis, said panel having a section of substantially greater area to the rear of the pivots than the section forward of the pivots, and a substantially vertically sliding panel to the rear



and in the plane of the swinging panel when the latter is closed and completing the closure of the window opening, said movable panels being adjustable to various positions in their movement to control the ventilation into the car.

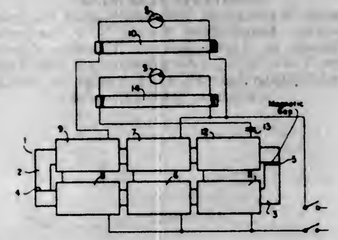
2,461,956
FREQUENCY RESPONSE CIRCUITS
Robert W. Beckwith, Syracuse, N. Y., assignor to General Electric Company, a corporation of New York
Application October 10, 1946, Serial No. 702,377
4 Claims. (Cl. 250—27)



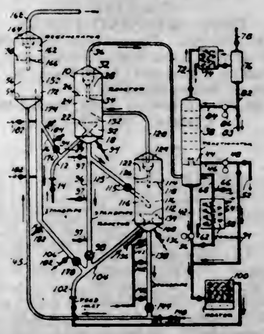
1. In apparatus for discriminating between waves of two different frequencies, the combination of a pair of input terminals to which said waves are supplied, a pair of parallel current paths between said terminals, each path including a rectifying device and a load impedance adapted to have unidirectional potentials developed thereon in response to said waves, each path also serially including a current controlling element, one element being a piezo-electric crystal exhibiting series resonance and parallel resonance near said two frequencies respectively and substantially pure capacity reactance above and below said frequencies, the other element being a capacity, output means responsive to the difference between potentials developed across said load impedances, said capacity being adjusted to impress minimum resultant output potential on said output means at frequencies for which said crystal exhibits substantially pure capacity reactance.

2,461,957
TRANSFORMER
Paul Berger, Chicago, Ill., assignor, by mesne assignments, of one-half to Hirsh Epstein and one-half to Louis R. Duman
Application January 26, 1946, Serial No. 643,663
8 Claims. (Cl. 323—44)

1. A transformer for operating a plurality of separately operable glow discharge tubes with leading and lagging currents respectively, said transformer comprising an elongated core having parallel side legs, a primary comprising a pair of interconnected coils positioned, one on each leg of said core, and a pair of secondaries, each secondary comprising a pair of interconnected coils positioned on the legs of the core, each of said secondaries being connected to the primary to form an auto-transformer, the spacing between the secondaries being sufficient to inhibit leakage flux of one secondary from affecting the other secondary to produce any substantial alteration of the voltage therein, the core having a non-magnetic gap therein in the circuit of the primary magnetizing flux that passes through both secondaries and adjacent only one of the pairs of interconnected secondaries, thereby forming a high magnetic reluctance passageway in the magnetic circuit of the leakage flux of only one of said pairs of interconnected secondary coils to prevent saturation of said magnetic circuit.



2,461,958
TREATING HYDROCARBON FLUIDS
Leonard S. Bonnell, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 14, 1944, Serial No. 568,128
4 Claims. (Cl. 196—52)

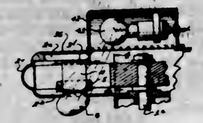


1. A process for treating hydrocarbon fluids which comprises contacting freshly regenerated catalyst particles in a first reaction zone with charging oil vapors consisting essentially of virgin stock, withdrawing vaporous reaction products overhead from said first reaction zone, separately withdrawing fouled catalyst particles from said first reaction zone and passing the withdrawn fouled particles to a second reaction zone wherein they are contacted with oil vapors of a higher coking nature than the charging oil, passing the total vaporous reaction products from said second reaction zone into said first reaction zone for further contact with the freshly regenerated catalyst particles therein, withdrawing spent catalyst particles from said second reaction zone, regenerating them and returning them to said first reaction zone.

2,461,959
CATALYTIC HYDROGENATION OF TRIISOBUTYLENE
Richard C. Brandon, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application June 15, 1946, Serial No. 677,093
1 Claim. (Cl. 260—683.6)

In a continuous process of producing high antiknock aviation fuel from a sulfur-contaminated triisobutylene, the improvement which comprises reacting the polymer with hydrogen at a temperature in the range of above about 200° F. but below about 600° F. during contact with a compact catalytic material of a hydrous alumina carrier having ultramicroscopic pores supporting 0.1 to 10% by weight of a finely-divided platinum group noble metal selected from the class consisting of platinum and palladium and continuously employing said catalyst for an extended period of time up to 100 hours or more without substantial loss of activity.

2,461,960
EGG CLEANING APPARATUS
Austin U. Bryant, Alameda, Calif.
Application July 13, 1945, Serial No. 604,766
9 Claims. (Cl. 51—109)

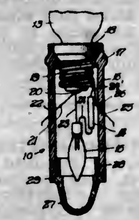


1. An egg cleaning apparatus, comprising a rotor mounted on a vertical axis and having radiating arms arranged in a plane substantially perpendicular to the axis of the rotation of the rotor, an abrasive means at the underside of the arms, an enclosure for the rotor, said enclosure having a window at the upper side, above the path of the abrasive means on the arms, and an opening at the underside below the window, an upright motor axially connected with said rotor, the housing of said motor forming the supporting pedestal for the apparatus, the enclosure being axially supported at the upper end of the motor housing.

2,461,961
LUBRICATING COMPOSITION
John F. Buckmann, Redondo Beach, and Loren L. Neff, Long Beach, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application December 29, 1945, Serial No. 638,464
14 Claims. (Cl. 252—32.7)

1. A lubricating composition consisting essentially of mineral lubricating oil and a small amount, sufficient to impart anti-corrosion properties to said oil, of an oil-soluble metal salt of an acidic reaction product obtained by reacting a lubricating oil fraction of petroleum with a compound of phosphorus of the class of phosphorus sulfides and phosphorus oxides at a temperature between about 200° F. and about 600° F. and reacting the product with an esterifying agent said small amount of said oil-soluble metal salt being sufficient to impart a phosphorus content of between about 0.01% and about 0.5% by weight.

2,461,962
TELLTALE LAMP SOCKET
Bernard E. Carlson, Chicago, Ill.
Application August 26, 1947, Serial No. 770,625
3 Claims. (Cl. 315—92)

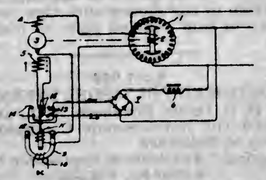


1. An indicator lamp socket assembly for series-connected lamp strings comprising a hollow tubular housing having a threaded, incandescent lamp socket fixedly connected to one end thereof, said socket including electrical terminals for a filament type lamp threaded therein, a resistance circuit including an electrically energizable visual indicating device disposed in the interior of said housing and electrically connected to said terminals, whereby to be in parallel with the filament of said lamp when the latter is operably mounted in said socket, said housing having a light transmissive area adjacent said indicating device for viewing the latter when energized, and a pair of leads extending through the side walls of said housing and electrically connected to said respective terminals.

2,461,963
RUBBER HYDROCHLORIDE FILM
La Verne E. Cheyney, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application October 23, 1945, Serial No. 624,086
2 Claims. (Cl. 260—735)

1. Rubber hydrochloride film plasticized with 15 parts dibutyl sebacate (based on the weight of the rubber hydrochloride) and 15 parts of methoxyethyl oleate.

2,461,964
REGULATOR CIRCUIT
Frederick E. Crever, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application May 11, 1946, Serial No. 669,204
6 Claims. (Cl. 322—24)



1. A regulating system for an electric generator having a field winding comprising, an exciter having a series field winding and connected to

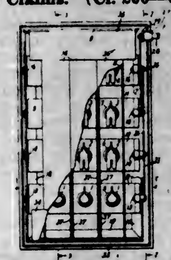
supply energizing current to said generator field

part of the rim and having square corner edges thereon, a second series of equally spaced lugs

2,461,971
ASPHALT WITH IMPROVED ADHESION PROPERTIES FOR AGGREGATES

supply energizing current to said generator field winding, a separately excited control field winding for said exciter, means responsive to a predetermined output voltage of said generator for supplying energizing unidirectional current to said control field winding to maintain said voltage output substantially constant, and relay means acting in response to the polarity of said series field winding to connect said control field winding so that the flux produced by said control field winding is maintained in opposition to the flux produced by said series field winding, said relay means ensuring opposition of the fluxes produced by said series field winding and by said control field winding for either polarity of the flux of said series field winding.

2,461,965
ELECTRIC SWITCH
William J. Cuthbertson, Pittsfield, and Le Roy S. Schell, Jr., Lenox, Mass., assignors to General Electric Company, a corporation of New York
Application July 23, 1945, Serial No. 606,490
6 Claims. (Cl. 200—6)

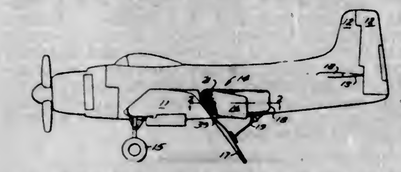


3. A multiple-pole multiple-contact interconnecting switch comprising four movable circuit controlling members having separate pivotal mounting axes in spaced alignment and each member having a contact thereon for engaging with a corresponding contact on each adjacent member, a link coupling two alternate members for simultaneous movement in the same direction, a link coupling the other two alternate members for simultaneous movement in the same direction, said members having the spacing between the axes thereof such that when one coupled pair of members is moved in one direction and the other coupled pair of members is moved in the opposite direction the contacts on the two intermediate members engage and when the movement of each pair is reversed the contact on each outside member engages the contact on the immediately adjacent intermediate member, and motion reversing mechanism interconnecting said coupled pairs of members and having an actuating element movable in one direction simultaneously to move said coupled pairs of members in opposite directions and movable in the reverse direction reversely to move each of said coupled pairs of members.

2,461,966
OXIDIZED POLYISOBUTYLENE
Garland H. B. Davis, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 16, 1944, Serial No. 554,542
3 Claims. (Cl. 260—94)

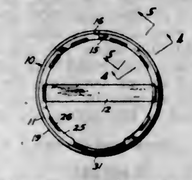
1. The process of oxidizing a polyisobutylene having a molecular weight within the range between 8,000 and 250,000, comprising the steps of treating the polyisobutylene with a mixture of more than 2 parts nitric acid, having a gravity of 1.4 and 1 part of sulphuric acid having a gravity of 1.7 at a temperature of approximately 240° F. for a substantial time interval to yield an oxidized polymer containing oxygen within the range of 1% to 28%, a nitrogen content less than 0.25%, having a molecular weight within the range between 4,500 and 225,000; the polymer being characterized by solubility both in hydrocarbon solvents and in ethers, alcohols and esters.

2,461,967
AERODYNAMIC RETARDER
Leo J. Devlin and Edward H. Heinemann, Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application December 26, 1945, Serial No. 637,235
9 Claims. (Cl. 244—113)



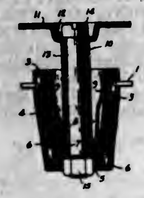
1. An airplane decelerator, comprising: at least one parasitic drag-intensifying airfoil rotatably mounted on each side of the fuselage; and means for protracting and retracting said airfoils in unison, the entering edge of each of said airfoils being located aft of the axis of rotation thereof a distance such as to define an aerodynamic gap between said edge and the forwardly adjacent and laterally adjacent surfaces of the fuselage; and means operable by the protraction of said airfoils for closing said gap.

2,461,968
SNAP-ON BOTTLE BASE
Philip A. Derham, Rosemont, Pa., assignor to Victor Metal Products Corporation, Brooklyn, N. Y., a corporation of New York
Application July 28, 1945, Serial No. 607,566
5 Claims. (Cl. 248—310)



1. A flexible one piece base for a bottle or the like having a lowermost bead thereon comprising a flexible annular rim, a flexible brace integrally connecting diametrically opposite parts of the rim and arranged with its lower surface substantially coplanar with the lower surface of the rim, the brace being laterally distortable out of its normal plane, the brace determining the maximum distance between said diametrically opposed parts while permitting the parts of the rim on one side of the brace to be twisted laterally out of the normal positions thereof in which the bead is overhung by the rim, that part of the rim on the other side of the brace being maintained by the brace against substantial change in size and shape, a series of equally spaced lugs projecting inwardly from the upper part of the rim and having square corner edges thereon, a second series of equally spaced lugs projecting inwardly from the lower part of the rim and having square corner edges thereon, each of the lugs of the second series being of greater height than the height of the upper lugs and being arranged between and below a pair of the upper lugs to form a recess therebetween for the reception of the bead, the rim on one side of the brace being severed to form free ends thereon at a point substantially midway between the ends of the brace.

2,461,969
VIBRATION ABSORBING SUPPORT
Howard M. Dodge, Wabash, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application March 23, 1945, Serial No. 584,410
4 Claims. (Cl. 248—358)



1. A cushioning support comprising a substantially frusto-conical downwardly tapering tubular body of rubber, an attaching plate having an opening to receive the large end of said body, a supporting disk secured within the lower end of said body, an upright load supporting post mounted on said disk centrally thereof and projecting through the upper end of said tubular rubber body, and leaf springs attached to said disk and bearing against the interior of the tubular member to resist tilting movements of said post and disk.

2,461,970
FINGER COT AND METHOD OF MAKING SAME
John C. Finegan, East Orange, N. J., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application December 19, 1945, Serial No. 635,897
7 Claims. (Cl. 2—21)

1. A finger protection device comprising a pair of superimposed members of flexible material, one of which is of a length sufficient to cover substantially the length of one side of a finger and the other being of a length extending substantially to the intermediate knuckle of the finger, said members being connected with each other adjacent the outer edges thereof to form a pocket-like portion with a portion of the first member extending outwardly of said pocket-like member and a strap-like member of resilient material having its ends secured to the side edges of said outwardly extending portion with said side edges curving inwardly and with the ends of said strap-like member lying inwardly of the securing means to provide a more positive gripping action with the finger.

2,461,971
ASPHALT WITH IMPROVED ADHESION PROPERTIES FOR AGGREGATES
Herbert G. M. Fischer, Westfield, N. J., assignor, by mesne assignments, to Standard Catalytic Company, a corporation of Delaware
No Drawing. Application September 27, 1941, Serial No. 412,598
8 Claims. (Cl. 106—269)

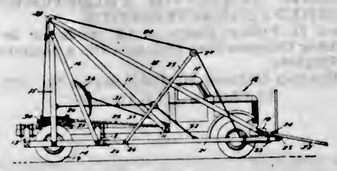
2. An improved bonding bituminous material which comprises an asphalt containing 0.1% to 0.4% of lauryl amine and 0.1% to 1.6% of oleic acid.

6. An improved bonding asphaltic material which comprises an asphaltic substance in combination with an aliphatic amine containing at least one lipophilic radical directly attached to a nitrogen atom and an organic acid containing at least 8 carbon atoms to the molecule.

2,461,972
MOTOR FUELS
Herbert G. M. Fischer, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application January 11, 1944, Serial No. 517,839
1 Claim. (Cl. 44—69)

A motor fuel consisting essentially of an alkylate gasoline base stock and a lead alkyl antiknock agent, normally characterized by substantial gum formation and lead precipitation on prolonged storage, said fuel containing about 0.1 pound of normal butyl para aminophenol per 1000 gallons of fuel, and about 0.1 pound of hydroquinone per 1000 gallons of fuel.

2,461,973
HAY STACKER DEVICE
Oran F. Fitch, Alturas, Calif.
Application June 27, 1946, Serial No. 679,817
1 Claim. (Cl. 214—131)



A stacker for motor truck having a chassis frame, front and rear wheels, and motor, comprising vertically inclined hangers on the chassis frame fore and aft of said rear wheels, horizontally disposed sills connected to the lower ends of the hangers on both sides of said chassis frame, uprights vertically hung from the said sills on both sides of said chassis frame, angularly inclined braces secured to said chassis frame fore and aft of said motor and to the upper end of said uprights, a rake head fore of the truck and swingable on the forward ends of said sills for vertical arcuate movement to and from the uprights means powered by the motor for moving the rake head in an upward sweeping action toward the uprights, cushioning means in the path of upward sweep of the rake head and having connection with the power means to regulate the same for the downward sweep of the head after being completely relieved of a load, a sweep arm having the rake head hinged thereto, and a hoisting cable included with the power means and connected to the hinged rake head.

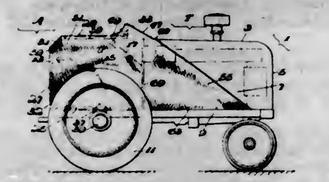
2,461,974

ble being such as to inflate the tubing while in

2,461,977
DETACHABLE SHOE HEEL ORNAMENT

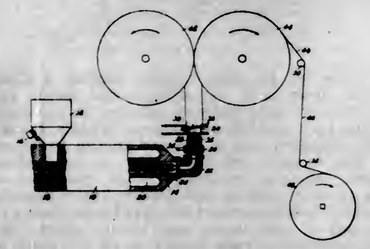
angularly about the spindle axis, a generally triangular shaped plate mounted on said spindle,

2,461,974
ENCLOSURE FOR TRACTORS
Lee Flora, Danville, Ill.
Application September 18, 1945, Serial No. 617,049
14 Claims. (Cl. 180—54)



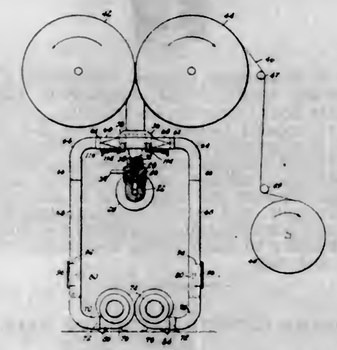
1. A housing attachment for a tractor having a forwardly arranged engine hood and a rearwardly arranged operator's seat, adapted to convey heat from the tractor engine for discharge about said seat comprising, a supporting frame structure integrally formed with a substantially horizontal U-shape section having the base portion thereof located above the line of the engine hood at a position forwardly of said seat and its legs extended rearwardly to both sides of said seat, downwardly projected extensions at the rear ends of said legs, means for attaching the lower ends of said extensions to opposite sides of said tractor, a flexible housing member having a pair of side sections and a cowl section attached to said supporting frame, and of a construction such that said side sections are arranged at opposite sides of said hood and said cowl section is inclined forwardly and downwardly between said side sections, and means for holding the lower sides of said side sections and the front ends of said side sections and cowl section against the tractor.

2,461,975
METHOD OF MAKING FLATTENED THERMOPLASTIC TUBING OF PREDETERMINED DESIRED CHARACTERISTICS
Edward D. Fuller, Chicago, Ill., assignor to The Visking Corporation, Chicago, Ill., a corporation of Virginia
Application October 20, 1945, Serial No. 623,470
18 Claims. (Cl. 18—57)



1. In a method of producing flattened tubing of predetermined desired characteristics, the steps which comprise continuously dry-extruding a molten thermoplastic in the form of a seamless tubing, continuously withdrawing the tubing from the point of extrusion, flattening the tubing at a point spaced from the point of extrusion, maintaining a substantially constant continuous isolated bubble of a gaseous medium in the section of the tubing extending between the point of extrusion and the point of flattening, the quantity of the gaseous medium constituting said bubble being such as to inflate the tubing while in the formative plastic state to a predetermined desired diameter at a point beyond the point of extrusion, said predetermined diameter being different from that of the tubing at the point of extrusion, and passing the tubing while in the plastic formative state through streams of a cooling gaseous medium in the vicinity of the point of extrusion and impinging circumferentially on said tubing to chill the tubing to an extent that when the tubing has been inflated by said bubble to the said predetermined diameter it will be in a set condition, the rate of withdrawing the tubing, the degree of inflation of the tubing and the degree of chilling the tubing all being correlated in accordance with predetermined desired physical characteristics of the tubing.

2,461,976
METHOD OF MAKING FLATTENED THERMOPLASTIC TUBING OF PREDETERMINED DESIRED CHARACTERISTICS
Bernard H. Schenk, Western Springs, Ill., assignor to The Visking Corporation, Chicago, Ill., a corporation of Virginia
Application October 20, 1945, Serial No. 623,472
8 Claims. (Cl. 18—57)

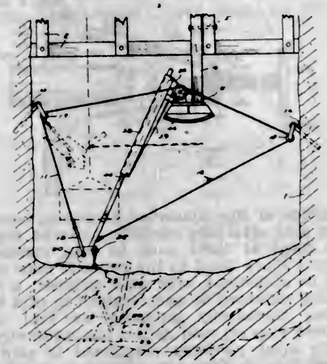


1. In a method of producing flattened tubing of predetermined desired characteristics, the steps which comprise continuously dry-extruding a molten thermoplastic in the form of a seamless tubing, continuously withdrawing the tubing from the point of extrusion, flattening the tubing at a point spaced from the point of extrusion, maintaining a substantially constant continuous isolated bubble of a gaseous medium in the section of the tubing extending between the point of extrusion and the point of flattening, the quantity of the gaseous medium constituting said bubble being such as to inflate the tubing while in the plastic formative state to a predetermined desired diameter at a point beyond the point of extrusion, said predetermined diameter being different from that of the tubing at the point of extrusion, and blowing onto the exterior surface of the tubing while in the plastic formative state a cooling medium consisting of atmospheric air laden with added moisture in such volume that said tubing will be set when the tubing has been inflated by said bubble to the desired predetermined diameter, the rate of withdrawing the tubing, the degree of inflation of the tubing and the degree of chilling of the tubing all being correlated in accordance with predetermined desired physical characteristics of the tubing.

2,461,977
DETACHABLE SHOE HEEL ORNAMENT
Thomas Gilmour, Brooklyn, N. Y.
Application July 13, 1946, Serial No. 683,391
5 Claims. (Cl. 41—10)

1. A heel ornament comprising, in combination, a body portion adapted to encompass the outside surface of a heel, a clip portion pivotally connected thereto, and a spring actuating said clip portion against said heel.

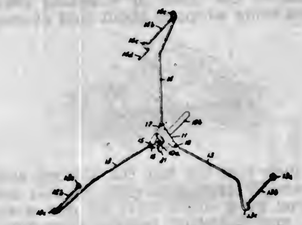
2,461,978
MECHANICAL MINE SHAFT SHOVEL
Arthur O. Hall, Wenatchee, Wash., assignor of fifty-one one-hundredths to Milan N. Beakovich, Midvale, Utah
Application February 23, 1946, Serial No. 649,575
2 Claims. (Cl. 214—141)



1. A power operated shaft shovel adapted to be supported in a mine shaft while excavating the same including a supporting base, a shaft journalled on said base, a pair of inner and a pair of outer horizontally aligned drums supported on said shaft, means for driving said drums, a two-part telescoping extensible boom, pulleys supported in the outer boom section at its opposite ends between the same and the inner boom section, boom reciprocating cables mounted over said pulleys being connected respectively with said inner boom section and with the inner pair of said aligned drums, a shovel on the lower end of said inner boom section, and cables connected between said shovel and the other pair of said aligned drums for controlling the movement and operation of said shovel.

2,461,979
FOLDABLE REEL
James C. Hancock, Roanoke, Va.
Application June 21, 1946, Serial No. 678,415
1 Claim. (Cl. 242—115)

In a reel of the class described, a spindle forming a hand member, three reel arms mounted on said spindle adjacent each other and adjustable angularly about the spindle axis, a generally triangular shaped plate mounted on said spindle, one of said arms being secured to said plate at one corner portion thereof and the other two arms being adapted to be received in recesses provided at the other corner portions of said plate to thereby locate said other two arms in spaced angular positions about the spindle axis, and means clamping said arms and plate to said spindle.



2,461,980
ELECTRIC CONTACT DEVICE
Elmer F. Hansen, Marblehead, Mass., assignor to General Electric Company, a corporation of New York
Application December 20, 1946, Serial No. 717,442
4 Claims. (Cl. 173—328)

1. An electric contact device comprising a pair of separable contact members each including a plurality of resilient electric conducting bristles mounted upon a base with the interstices between bristles at their free ends having an area of the same general order of magnitude as the cross-sectional area of said bristles, said bristles being arranged for sliding engagement and disengagement in mutual intermeshing and wedging relation, thereby to make self-retaining electric contact at a plurality of points and over a large total surface area.

2,461,981
PACKAGING
Joseph E. Hills, Chicago, Ill., assignor to Kraft Foods Company, Chicago, Ill., a corporation of Delaware
Application February 5, 1948, Serial No. 8,534
6 Claims. (Cl. 99—178)

1. In combination with a serving of cheese which is in the shape of a sector of a right circular cylinder, and which has a plane top surface, a plane bottom surface which is parallel to said

top surface, two plane radially extending side surfaces which diverge from an apex, and a

the bellows, said body having, aligned with the opening between the first and third chambers, an

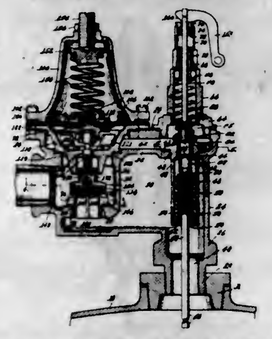
transmit force to the carriage thereby permitting relative lateral movement of said two guide

ring members having an inner bore sufficient to provide a clearance between it and the nearest adjacent part located within said bore, a flexible

top surface, two plane radially extending side surfaces which diverge from an apex, and a curved surface intersecting said top, said bottom, and said side surfaces to form a curved fifth side, a wrapper which is formed from a substantially sector-shaped flat sheet of wrapping material, said sheet being wrapped about said cheese in a

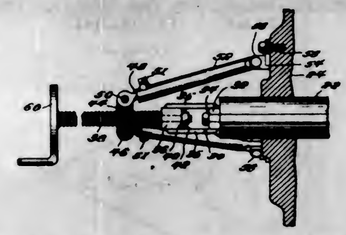
manner such that the top, the bottom, and one of the radially extending sides of said serving are covered by a single layer of said wrapping material, and the other radially extending side surface of said serving is covered by overlapping layers of said wrapping material, said wrapper having only one outside tab located on the curved surface of said serving.

2,461,982
CONTROL VALVE
Burchard E. Horne, Lawrence, Mass., assignor to Watts Regulator Company, Lawrence, Mass., a corporation of Massachusetts
Application June 26, 1945, Serial No. 601,563
4 Claims. (Cl. 236—80)



1. In a control of the kind described, a unit body having a ported portion for a single connection with a tank and a port for connection with a pipe and a chamber communicating with the ported portion and a second chamber communicating with the second port, having a valve opening between the first chamber and second chamber, and having a third chamber with a valve opening communicating with the first chamber and with an opening into the second chamber and a diaphragm receiving opening, a valve seat removably mounted in the opening between the third and first chambers, formed with a tubular extension projecting into the first chamber having an opening in its wall near the valve seat proper and an opening in its wall adjacent its end farthest from the valve seat proper, a removable closure in said last-named end of the tubular extension, a thermostatic bellows in said tubular extension seated on said closure and provided with a reduced tubular extension extending through the closure and the first-named ported portion of the body, a valve to cooperate with said seat, a guide extending from the valve through the valve seat, adapted to cooperate with the bellows, said body having, aligned with the opening between the first and third chambers, an opening large enough for the passage of the valve seat and valve and bellows, a spring cage removably mounted on the body in said last-described opening, a spring in said cage for biasing said valve toward closed position, means for varying the tension on said spring, a valve for controlling flow from the first to the second chamber sensitive to and opened by pressure in the first chamber, means for closing the opening between the second and third chambers having bleeder means for allowing limited flow from the third to the second chamber, and a diaphragm for closing said diaphragm receiving opening, operatively connected with the second valve and subject to pressure in the third chamber, said diaphragm being adapted to open said second valve upon predetermined pressure in said third chamber.

2,461,983
WHEEL SPACER FOR TRACTORS
Samuel D. Jarrett, Duncan, Okla.
Application April 23, 1946, Serial No. 664,199½
1 Claim. (Cl. 29—261)

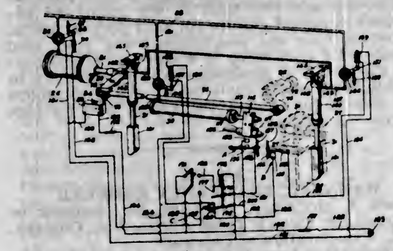


A device of the character described, comprising an axle attaching member, parallel opposed plates fixed at their ends to said member, a mounting block fixed to the opposite ends of the plates in alinement with said member, a screw rotatably mounted in and retained in said block, a collar threadably mounted on said screw, apertured ears on said collar, longitudinally adjustable arms pivotally connected to said collar, brackets on the ends of said arms adapted to be connected to a wheel mounted on said axle whereby movement of said screw will move the wheel backward and forward on said axle.

2,461,984
FLAW DETECTOR MOUNTING AND CONTROL
Charles G. Kaehms, Oakland, Calif., assignor, by mesne assignments, to Southern Pacific Company, a corporation of Delaware
Application May 15, 1945, Serial No. 593,858
18 Claims. (Cl. 175—183)

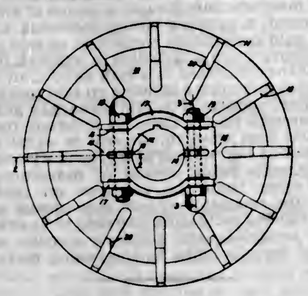
5. In a detector car, a carriage adapted to travel along a rail under the car, a forward guide means and a rearward guide means on said carriage for contact with the gauge side of the rail, means to raise and lower said carriage, a forward operating means and a rearward operating means connected with said carriage at longitudinally spaced points to move the carriage latterally toward and away from said rail and to press said two guide means against the rail, actuating means, means connecting said actuating means with said two operating means to apply force thereto, and yielding means effective between said actuating means and at least one of said spaced points on the carriage to yieldingly

transmit force to the carriage thereby permitting relative lateral movement of said two guide



means to keep both guide means in contact with the gauge side of the rail on a curve.

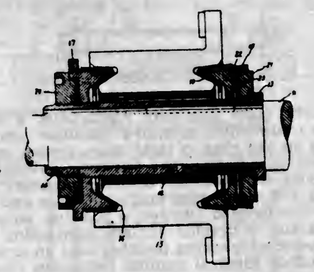
2,461,985
DYNAMOELECTRIC MACHINE
Irving Kalikow, Swampscott, Mass., assignor to General Electric Company, a corporation of New York
Application October 2, 1947, Serial No. 777,413
6 Claims. (Cl. 171—252)



1. In a dynamoelectric machine having a rotatable shaft, a plastic impeller rotatable with said shaft, said impeller comprising impeller blades and a hub, said hub provided with metallic pressure straps, means including bolts for transmitting pressure through said straps to fasten said hub to said shaft, relief grooves in the surfaces of said plastic hub each of said grooves being adjacent one of said straps and adjacent one of said bolts, and pressure supporting columns in said hub adjacent said grooves each of said columns extending between the inner surfaces of said pressure straps, whereby said hub may be tightened onto said shaft without imposing shearing forces on said plastic.

2,461,986
DYNAMOELECTRIC MACHINE
Irving Kalikow, West Lynn, Mass., assignor to General Electric Company, a corporation of New York
Application November 5, 1947, Serial No. 784,697
4 Claims. (Cl. 171—321)

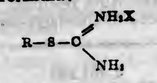
1. A dynamoelectric machine commutator assembly comprising a plurality of commutator bars, clamping ring members adapted to retain the ends of said bars, means for drawing together said clamping ring members, one of said clamping ring members having an inner bore sufficient to provide a clearance between it and the nearest adjacent part located within said bore, a flexible diaphragm adapted as by fitting within an inner periphery of said last mentioned clamping ring



member to center said member, and a resilient ring located axially within said drawing together means to yieldingly restrain said clamping ring members, said resilient ring having a clearance with an inner periphery of said last-mentioned clamping ring member.

2,461,987
ANTIPLUMMING AGENTS FOR PHOTOGRAPHIC EMULSIONS
Edward B. Knott and John Morgan, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application June 19, 1947, Serial No. 755,718. In Great Britain June 20, 1946
8 Claims. (Cl. 95—7)

1. A gelatino-silver halide emulsion containing as an anti-plumming agent a compound represented by the formula:



wherein R represents an alkyl group and X represents a halogen atom.

2,461,988
HYDROGEN PEROXIDE DISTILLATION AFTER REMOVAL OF ORGANIC PEROXIDES
Pieter Leendert Kooijman, Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application May 31, 1947, Serial No. 751,633. In the Netherlands August 5, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires August 5, 1961
8 Claims. (Cl. 202—52)

7. A process for the separation of hydrogen peroxide from an aqueous mixture containing hydrogen peroxide and organic peroxides which comprises heating the mixture at a temperature of between about 40° C. and about 120° C. until the organic peroxides are converted to organic acids and then distilling the mixture to separate hydrogen peroxide from the other constituents while maintaining the concentration of water in the mixture containing hydrogen peroxide and organic materials at a minimum of 40 per cent and at not more than about 80 per cent.

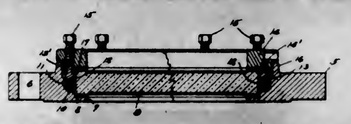
2,461,989
SIGHT GLASS ASSEMBLY

flow therethrough, said valve comprising a casing, a diaphragm separating the casing into high and

similar hydrocarbon components from other chemically similar hydrocarbon components, different from said first named chemically similar

thimble, a multiplying sleeve between the barrel and thimble, a threaded sleeve mounted on said spindle and having threads of a lead greater than

2,461,989
SIGHT GLASS ASSEMBLY
Gene Le Roy, South Charleston, W. Va.
Application February 28, 1946, Serial No. 650,998
1 Claim. (Cl. 220—82)

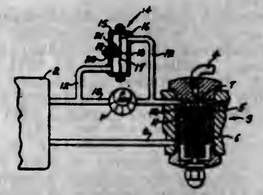


A sight glass assembly comprising a flange ring, an inwardly extended annular shoulder formed on the ring, a sight glass resting on the shoulder, said flange ring having a beveled surface above the shoulder, packing members fitted between the flange ring and sight glass and resting on the beveled surface, a packing adjusting ring having a beveled surface contacting with the uppermost packing member and an upwardly extending integral annular extension thereon, a retainer ring secured to the flange ring above the packing adjusting ring and having an annular groove in the bottom thereof into which the annular extension of the packing adjusting ring extends, and cap screws extending into the retainer ring and engaging the packing adjusting ring whereby the packing adjusting ring is forced against the packing members forcing them into close engagement with the flange ring and sight glass, providing an air-tight connection therebetween.

2,461,990
POLYMERS AND COPOLYMERS OF PROPIOLATES
Joy G. Lichty, Stow, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application June 7, 1947, Serial No. 753,281
3 Claims. (Cl. 260—84.5)

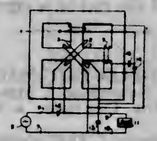
1. A polymer resulting resulting from the polymerization of beta-cyanoethyl-propiolate.

2,461,991
OIL BY-PASS STRUCTURE TO AVOID SMOKING OF OIL BURNERS
Joseph A. Logan, Hadley, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application January 25, 1946, Serial No. 643,221
2 Claims. (Cl. 158—36.3)



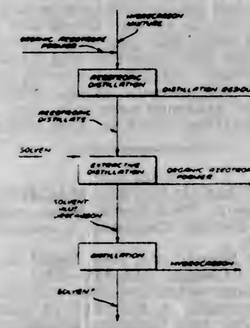
1. An automatic oil pressure atomizing burner including a motor driven fan and oil pump, a regulating valve for constant atomizing pressure, a nozzle having an atomizing outlet adjacent the air outlet from the fan; and in combination a by-pass conduit between the high pressure side of the regulating valve and the low pressure side of the pump, a valve in said conduit to restrict flow therethrough, said valve comprising a casing, a diaphragm separating the casing into high and low pressure sides and provided with a port for connecting said two sides of the pump, an adjustably mounted closure for said port, a spring, biased to hold the diaphragm away from said closure, said port being of a size adapted to permit the pump to gradually build up pressure in the high side of the valve casing which will move the diaphragm against the spring and its port against its closure.

2,461,992
MAGNETIC FREQUENCY REDUCER
Harold J. McCreary, Lombard, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application June 4, 1945, Serial No. 597,460
16 Claims. (Cl. 172—281)



1. A subfrequency generator comprising a saturable magnetic core means, a source of alternating current, a primary circuit including a winding on said core means connected to said source, a secondary circuit including a winding on said core means connected to a load circuit, an auxiliary circuit including a winding on said core means, condensers connected in said secondary and auxiliary circuits tuning them to different frequencies such that the sum thereof is equal to the frequency of said source, said secondary and auxiliary circuits being devoid of inductance elements other than the windings on said core means, the excitation of said core means by said source causing oscillating currents to be produced in said secondary and auxiliary circuits of frequencies corresponding to the tuning thereof.

2,461,993
HYDROCARBON SEPARATION BY AZEOTROPIC DISTILLATION
Art C. McKinnis, Los Angeles, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application August 23, 1943, Serial No. 499,726
6 Claims. (Cl. 202—42)



3. A process for the treatment of a complex hydrocarbon fraction to separate chemically similar hydrocarbon components from other chemically similar hydrocarbon components, different from said first named chemically similar hydrocarbon components contained in said complex hydrocarbon fraction, which components distill from said complex hydrocarbon fraction at approximately the same temperature, which comprises distilling said complex hydrocarbon fraction in the presence of a sufficient amount of an organic azeotrope former having a boiling point not more than about 50° F. below the average boiling point of said complex hydrocarbon fraction, to vaporize as an azeotrope chemically similar components together with said azeotrope former, thereby leaving chemically similar components in the residue, separately extractively distilling said azeotrope in the presence of a saturated hydrocarbon solvent having a preferential affinity for the hydrocarbon component of said azeotrope and having a boiling point at least 25° F. above the maximum boiling point of the hydrocarbon component of said azeotrope to produce as overhead the azeotrope former thereby leaving as distillation residue the hydrocarbon component of said azeotrope together with solvent and subsequently distilling said extractive distillation residue to vaporize the hydrocarbon component of said azeotrope thereby leaving said solvent as a distillation bottoms.

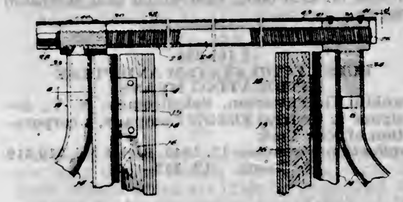
2,461,994
WIRE TERMINAL
Joseph F. Merkel, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application August 12, 1946, Serial No. 689,879
3 Claims. (Cl. 173—269)

1. A wire terminal comprising an eyelet having several ears formed upwardly about its periphery and having a center opening, and a tubular spacer of substantially non-yieldable material receivable within said upwardly formed ears and concentric with said opening in said eyelet, said spacer having a flange at its base bearing against the inner base surface of said eyelet, said flange being of a diameter only slightly less than the diameter of the opening formed within said ears, and said spacer extending upwardly from said inner base surface of said eyelet to an extent to space the ears of said eyelet from a nut securing said terminal to a terminal post when said ears are formed inwardly to secure a wire between said ears and the periphery of said spacer.

2,461,995
DIFFERENTIAL SCREW MICROMETER
Edward E. Modes, Chicago, Ill.
Application June 21, 1946, Serial No. 678,504
3 Claims. (Cl. 33—164)

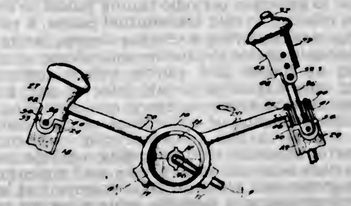
1. In a micrometer measuring instrument, a barrel, a spindle having small lead threads engaging complemental threads in the barrel, a thimble, a multiplying sleeve between the barrel and thimble, a threaded sleeve mounted on said spindle and having threads of a lead greater than that of the first mentioned threads, said greater lead threads engaging complemental threads in the multiplying sleeve, said threaded sleeve being releasably locked to both the thimble and the spindle.

2,461,996
ADJUSTABLE SPACER BAR
Raymond J. Moths, Fox Point, Wis.
Application April 3, 1946, Serial No. 659,353
3 Claims. (Cl. 25—131)



1. In an adjustable spacer bar of the character described, a screw having right hand and left hand threads thereon, a nut on one end of said screw having a projection thereon adapted to engage with a part of a concrete form, a nut on the opposite end of said screw having a projection thereon adapted to engage another part of the concrete form, a shield joining said nuts, means to secure the shield to one of said nuts, and means to secure the shield in sliding engagement to the opposite nut to permit longitudinal movement of said nuts on said screw.

2,461,997
HANDGRIP CONTROL
Theodore Obszarny, Chicago, Ill., and John J. Rowell, New York, N. Y., assignors to Guardian Electric Manufacturing Co., Chicago, Ill., a corporation of Illinois
Application December 20, 1944, Serial No. 569,086
5 Claims. (Cl. 74—486)



3. In an aircraft control wheel of the type comprising an integral metal spider provided with a coating of synthetic plastic material and including a hub provided with a cavity therein, a pair of oppositely disposed, downwardly and outwardly extending, hollow tubular support arms connected to the hub in open communication with the cavity, the outer portions of said arms continuing into upwardly extending terminal portions, and a pair of oppositely extending tie members, rigidly connected at corresponding ends to said hub and to the upper ends of the terminal portions of the arms; the improvement comprising a pair of hand grips for the terminal portions of the arms, said grips each including a main body portion formed as an integral part of

the terminal portion of one arm and the connection to the adjacent tie member, and an interchangeable head detachably connected to each

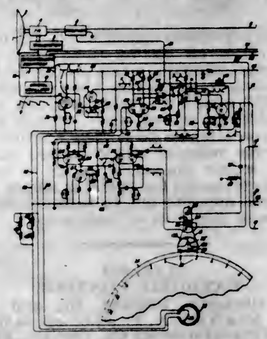
fractory trough section assemblies each comprising relatively-movable, complementary mould

elements, respectively, and meshing with said helical worm gears, respectively, and two pairs of cone bearing friction coupler elements, one

tion, an abutment carried by the stirrup for lost motion engagement with said spaced abutments, a switch member carried by the main portion of the handle; and electrical connections between

the terminal portion of one arm and the connection to the adjacent tie member, and an interchangeable head detachably connected to each main body portion, one of said heads being chambered, a movable device mounted in the chamber, together with an externally accessible operating member for said device carried by the head, each main body portion, in alignment with the tie rod connection thereto, being formed with a pair of spaced apart tongues adapted for engagement with cooperating grooves in the head when the parts are connected together and additional interlocking elements on the head and body portions comprising an extension on said head and a recess on said body, into which said extension projects.

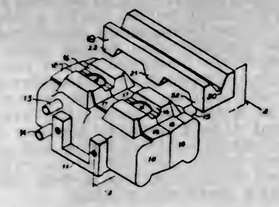
2,461,998
PULSE ECHO SYSTEM AND PULSE INDICATING MEANS
Franklin G. Patterson, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 17, 1943, Serial No. 510,619
14 Claims. (Cl. 343—13)



14. The combination of means to transmit recurrent pulses and to receive echoes thereof within the time intervals between successive pulses, means to generate periodic timing pulses in fixed phase relation to said transmitted pulses, a cathode ray device having a viewing screen, means to operate said device to produce indications on said screen of echoes and timing pulses occurring within only a fraction of said interval, said indications having space sequence corresponding to the time sequence of occurrence of said echoes and timing pulses, mechanically controlled means for adjusting the time position of said fraction within said interval, whereby said indications move across said screen with adjustment of said controlled means, a movable scale adjacent said screen, and means responsive to adjustment of said preceding means for moving said scale in unison with the movement of said indications across said screen.

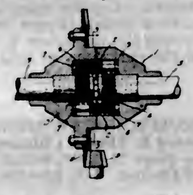
2,461,999
SEPARABLE MOLD AND REFRACTORY TROUGH ASSEMBLY
Pearson M. Payne, Denver, Colo., assignor to P. M. Payne & Company, Denver, Colo., a corporation of Colorado
Application April 16, 1945, Serial No. 588,424
2 Claims. (Cl. 22—134)

1. In a continuous casting machine having a plurality of end-abutted separable mould and refractory trough section assemblies each comprising relatively-movable, complementary mould elements formed with correspondingly-recessed, opposed faces interengageable on a vertical plane in registration of their recesses to form a mould-cavity-defining unit having a closed top surface, and a longitudinally-grooved refractory trough section longitudinally traversing the closed unit top surface, means for locating and retaining the trough section in flow communication through a short gate passage with the mould cavities of its associated unit, said means comprising opposed rabbets longitudinally of the upper meeting corners of said mould elements in intersecting relation with mould cavity recess upper portions cooperable to form an upwardly-



opening channel intersecting the unit top surface and the mould cavities, upwardly-opening lateral channels intersecting said mould unit top surface and said first channel, depending, integral, lateral and longitudinal ribs on said trough section engageable with the corresponding unit channels to dispose the trough section longitudinal rib in covering relation with the intersected mould cavities, concavities on the under surface of said longitudinal rib disposed to register with and complete the unit mould cavities, and gates opening through the trough section floor and longitudinal rib concavities for registration with the intersected mould cavity upper portions when the trough section ribs are engaged in and with the unit channels.

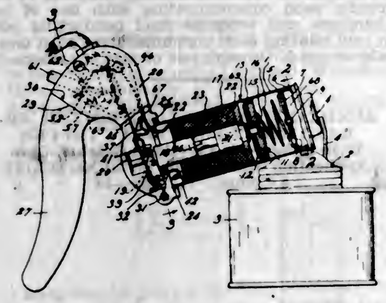
2,462,000
NONEQUALIZING-TORQUE DIFFERENTIAL TRANSMISSION
Ralph R. Randall, Freeport, Ill., assignor to Dualoc Syndicate, Rockford, Ill., a partnership
Application July 7, 1945, Serial No. 603,719
6 Claims. (Cl. 74—715)



1. A non-equalizing-torque differential gearing comprising a rotatable gear carrier, a pair of intermeshing helical worm gear elements, one right-hand and one left-hand, rotatably mounted on said gear carrier with their axes parallel to and eccentric with respect to the axis of said gear carrier, a pair of rotatable helical worm gears coaxial with said gear carrier, force transmitting means between said helical worm gear elements and said gears, respectively, comprising a second pair of helical worm gear elements rotatable with said first helical worm gear

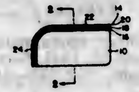
elements, respectively, and meshing with said helical worm gears, respectively, and two pairs of cone bearing friction coupler elements, one pair for each helical worm gear element and rotatable therewith, the cones of each pair facing in opposite directions whereby when the rotational resistance of the coaxially aligned gears is equalized, the end thrust on said helical worm gear elements is equalized and there is no end thrust on the cone bearing friction coupler elements and whereby when the rotational resistance of the coaxial gears is unequalized, an unequalized end thrust on the helical worm gear elements results and the cone bearing friction coupler elements are forced into coupling engagement, hindering counter rotation of the helical worm gear elements.

2,462,001
ELECTRICALLY OPERATED SPRAY OUTFIT
Edward D. Rapisarda, Agawam, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application February 4, 1946, Serial No. 645,390
1 Claim. (Cl. 299—88)



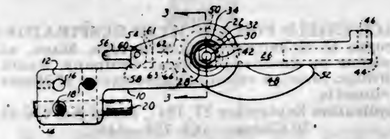
An atomizer of the type having a container and an eduction tube rising from the container, comprising a piston barrel having one end open and having a head at the other end provided with an aperture through which atomizing air is expelled, a valved piston slidably mounted in said barrel, a handle comprising a main portion and a cover portion, said portions having near one end semi-cylindrical parts embracing said barrel at its open end, means for clamping the handle portions together to grip the last-named end of the barrel, the inner and adjacent sides of said handle portions being recessed to provide between them a chamber communicating with the open end of said barrel, a solenoid fixed in said barrel between said open end and the piston, an armature movable within the solenoid and connected to the piston, a perforated head fixed in the barrel between the head of the barrel and the piston and spaced from the head of the barrel to form a pressure equalizing chamber, a flexible disk mounted on the side of the perforated head remote from the piston and covering the perforations in the last-named head to serve as a check valve, a pair of spaced abutments on said armature, a stirrup pivoted to the main portion of said handle, a toggle spring engaging the stirrup to hold it in either of two extreme positions, a contact member carried by the stirrup, a second contact member carried by the main handle portion to be engaged by the first contact member when the toggle is in retracted position, an abutment carried by the stirrup for lost motion engagement with said spaced abutments, a switch member carried by the main portion of the handle; and electrical connections between the switch member, said contacts and the solenoid; said stirrup, toggle spring, contact members, switch member, and all said abutments being located in said first mentioned chamber.

2,462,002
CUTTING TIP FOR CUTTING TOOLS
Harold J. Read, Pittsburgh, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application July 25, 1945, Serial No. 607,036
1 Claim. (Cl. 29—95)



A hard cutting tip adapted for attachment to the body of the cutting tool having those surfaces thereof which are intended to contact with surfaces of the tool holder coated with at least three metal layers each layer comprising a component of a multi-metal adhesive, an intermediate layer comprising zinc, said metal layers being capable of alloying in situ under the action of heat during the operation of affixing the cutting tip to the body of the cutting tool.

2,462,003
UNIVERSAL GAUGE HOLDER
Edward H. Rose, Santa Monica, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application March 27, 1944, Serial No. 528,285
15 Claims. (Cl. 248—125)



12. A gauge holder comprising: a supporting arm provided at one end with means for adjustably mounting said arm relatively to a part to be checked; a head formed at the end of said supporting arm opposite said end provided with means for mounting said arm, said head being slotted inwardly from its end face; a bushing pressed into and extending through a bore in said head from one side to the other and across the slot in said head; a pivot member mounted in said bushing; a pivoted arm having a yoke-shaped end straddling said head, an end of the pivot member passing through a bore in each leg of the yoke; means acting to retain said pivot member and yoke in operative relation whereby said legs may be securely clamped against the ends of said pivot member; a finger-like stop member having an enlarged end bore and journaled in said slot in the head of said supporting arm on the exterior surface of said bushing and having the free end thereof formed to provide a stop surface adapted to contact the pivoted arm toward the free end thereof; a cam mounted in a recess in said head; a cam-operating lever projecting from said head; a displaceable member adapted to be forced by said cam against the surface of the stop member journaled on said

bushing, said cam lever and displaceable mem-

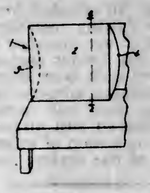
2,462,006
ROTARY JOINT

tam wherein the methyl groups are substituted upon the No. 2 and the No. 5 carbon atoms of

member and interposed between said seating portions, said unit comprising a series of cushioning

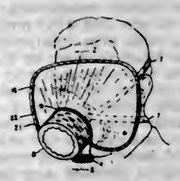
bushing, said cam lever and displaceable member constituting locking means to hold the stop member in adjusted position; indicating means mounted on the free end of said pivoted arm; and resilient means connected between an abutment on the supporting arm and an abutment mounted on the pivoted arm, the abutment on the pivoted arm being nearer the abutment on the head when the pivoted arm is in operative or inoperative position than while being moved to one position or the other so that said resilient means acts to move said pivoted arm to the operative position in which the arm contacts the stop, or to the inoperative position, when said arm is moved past dead center toward the one or the other of said positions.

2,462,004
CUSHION
Albert Rothery, Springfield, Mass.
Application August 18, 1945, Serial No. 611,330
2 Claims. (Cl. 155—182)



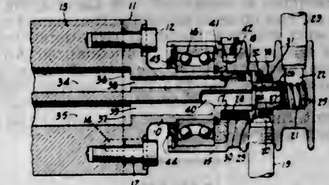
1. A cushion which comprises, a body of soft air foam rubber having a planar front surface, planar end surfaces at substantially right angles to said front surface and a rear surface extending convexly from the upper edge of the front surface to the lower edge of the front surface.

2,462,005
FACE SHIELD FOR USE WITH RESPIRATORS
George H. Schauweker, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application September 27, 1947, Serial No. 776,535
10 Claims. (Cl. 128—146)



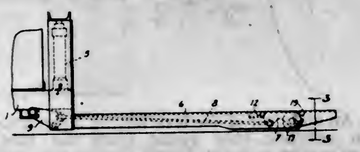
1. A face shield comprising a flat substantially rectangular transparent member having a central opening near the lower edge thereof, a binder covering a major portion of the periphery of said member, convergent straps formed integral with the lower edge of said member adjacent said opening and extending downwardly and convergently, the ends thereof being spaced to provide a passageway into said opening, and fastening means secured near the ends of said straps, the straps being adapted to be drawn into lapping relation to bring the fastening means into functioning position, to close the passageway into said opening, and to cause the transparent member to assume a cup-like shape.

2,462,006
ROTARY JOINT
Carl Schmitter, West Allis, and Steven M. Kies, Milwaukee, Wis., assignors to The Falk Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application June 25, 1945, Serial No. 601,490
4 Claims. (Cl. 285—10)



1. A fluid conducting rotary joint comprising a spindle, a housing in which said spindle is journalled, said housing having two chambers therein concentrically disposed with respect to said spindle, a sleeve slidably seated in one of said chambers and axially urged into sealing contact with said spindle to separate said chambers, separate fluid conducting channels in said spindle each communicating with one of said chambers, and separate fluid conducting ports in said housing each communicating with one of said channels through one of said chambers.

2,462,007
AUXILIARY SUPPORTING ROLLER ARRANGEMENT FOR PALLET TRUCKS
Irvin F. Schreck, Cleveland Heights, Ohio
Application May 3, 1946, Serial No. 667,131
5 Claims. (Cl. 280—44)



1. A lift truck having a vertically adjustable load carrying member, means for adjusting said member including a supporting leg pivoted to said member and serving as a lift lever, and main and auxiliary supporting rollers carried by said leg, said rollers being mounted side by side with their axes parallel and at different distances from the pivot of said leg, said main roller extending past the axis of the auxiliary roller and being engageable with the floor at all times and said auxiliary roller being so positioned with respect to the main roller that it moves toward and away from the floor during pivotal movements of the leg and is supported out of engagement with the floor but in close proximity to the floor in one extreme position of said leg.

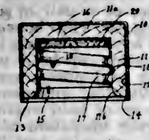
2,462,008
AMINO TRIMETHYL HEXANOIC ACIDS AND THEIR LACTAMS
Alva V. Snider, Richmond, and Rupert C. Morris, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 17, 1944, Serial No. 545,466
8 Claims. (Cl. 260—239)

1. A compound selected from the group consisting of a 6-aminotrimethylhexanoic acid lactam wherein the methyl groups are substituted upon the No. 3 and the No. 5 carbon atoms of the lactam, and its corresponding hydrolysis product, a 6-aminotrimethylhexanoic acid wherein the methyl groups are substituted upon the No. 3 and the No. 5 carbon atoms of the carbon chain.

2,462,009
AMINO TRIMETHYL HEXENOIC ACIDS AND THEIR LACTAMS
Rupert C. Morris, Berkeley, and Alva V. Snider, Richmond, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 18, 1944, Serial No. 545,550
8 Claims. (Cl. 260—239)

1. A compound selected from the group consisting of a 6-amino trimethyl hexenoic acid lactam having the methyl groups attached to the No. 3 and the No. 5 carbon atoms of the lactam, and its corresponding hydrolysis product, a 6-amino trimethyl hexenoic acid having the methyl groups attached to the No. 3 and the No. 5 carbon atoms of the carbon chain.

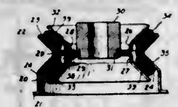
2,462,010
COMPOSITE BOTTLE CAP
Donald L. Spender, Naugatuck, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application March 8, 1947, Serial No. 732,676
4 Claims. (Cl. 215—43)



1. A composite closure cap for a container comprising an outside cupped shell of sheet material, a cup-shaped filler member of non-metallic and relatively thick material fitted into said shell, an insert cupped shell of sheet material axially fitted into said filler member and having a continuous rolled thread formed in its wall whereby it may be detachably secured to the threaded neck of a container, and one or more spring lugs sheared transversely of and sprung outwardly of the crest portion of said rolled thread, said one or more lugs having the free ends spaced outwardly from the normal exterior surface of said insert shell and directed downwardly so as to permit said insert shell to axially telescope into said filler member for assembly purposes, said one or more lugs also formed with opposed longitudinal edges that are adapted to embed into the material of the filler member to prevent rotary movement of said insert shell relative to said filler member in either direction.

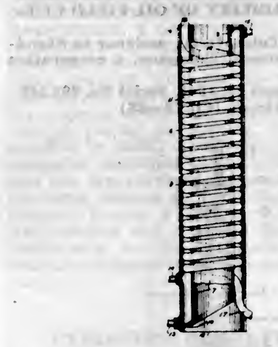
2,462,011
CUSHIONING SUPPORT
Leon F. Thiry, Montclair, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application June 2, 1945, Serial No. 597,334
19 Claims. (Cl. 248—10)

1. A support comprising two members having circumferential seating portions disposed one within the other, and an endless one piece elastic rubber cushioning unit surrounding the inner member and interposed between said seating portions, said unit comprising a series of cushioning blocks spaced apart by relatively thin intermediate portions integrally joined at their ends to said blocks.



15. An annular one piece elastic rubber cushioning unit comprising a series of spaced cushioning blocks spaced circumferentially and axially, and joining portions of relatively small radial thickness interposed between the blocks.

2,462,012
REFRIGERANT DEOILER
Ernest F. Viliter, Milwaukee, Wis., assignor to The Viliter Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin
Application November 15, 1943, Serial No. 510,330
2 Claims. (Cl. 62—115)



2. A refrigerant de-oiling unit comprising, outer and inner concentric cylindrical casings interconnected and sealed at their adjacent ends to form an intervening annular chamber extending throughout the full length of both casings, a helical cooling coil disposed coaxial of and within said chamber and being spaced slightly from the surfaces of said casings which are exposed to said chamber, valve means for simultaneously admitting refrigerant to the opposite ends of said coil and chamber, and valve means for effecting drainage of accumulated oil from the refrigerant admission end of said chamber.

2,462,013
STRIPPING OF EMULSION POLYMERIZATION LATICES
Wendell W. Waterman, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application November 7, 1942, Serial No. 464,863
9 Claims. (Cl. 202—46)

1. The process of stripping emulsion polymerization reaction mixtures of unreacted, slightly water-soluble, polymerizable materials which comprises subjecting the reaction mixture to steam distillation under reduced pressure and

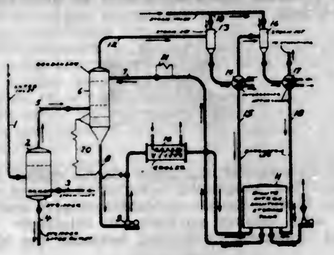
condensing the vapors evolved by direct contact

2,462,015
BOOSTER BRAKE MECHANISM

in said sheath, and compacted granular refractory material disposed in said sheath embedding said resistor means and serving to electrically

2,462,020
METHOD AND MEANS FOR SEALING CONDUCTORS TO GLASS ENVELOPE WALLS

condensing the vapors evolved by direct contact with a condensing liquid comprising a dilute solution of said polymerizable material of such



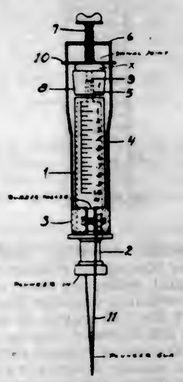
concentration that the total content of polymerizable material brought in with the stripping vapors and in the condensing liquid is soluble in the effluent from the condensing step.

2,462,014

MICROPERMEAMETER FOR MEASURING THE PERMEABILITY OF OIL FIELD CUTTINGS

Henry J. Welge, Tulsa, Okla., assignor to Standard Oil Development Company, a corporation of Delaware

Application August 23, 1946, Serial No. 692,559
3 Claims. (Cl. 73—38)



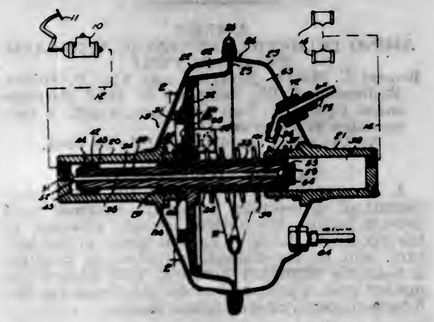
1. A device for measuring the permeability of a fragment of solid material, comprising a hollow cylindrical body member open at each end, a resilient fragment support mounted on one end of said member, there being a passage-way through said support, having an open outer end, and an inner end communicating with the interior of said body member, a plunger, normally filling the interior of said body member, reciprocally movable therein through the other end of the member, a bracket secured to the body member, a clamp carried by said bracket in threaded engagement therewith, movable therein towards said fragment support over the outer end of said passage-way, while exposing a portion of the fragment to the atmosphere, and a plunger stop member carried by said bracket limiting outward movement of the plunger from the body member.

2,462,015

BOOSTER BRAKE MECHANISM

Owen M. Whitten, Detroit, Mich., assignor to Empire Electric Brake Company, Newark, N. J., a corporation of New Jersey

Application July 14, 1945, Serial No. 605,119
7 Claims. (Cl. 121—41)



1. A fluid pressure motor comprising a casing having a pressure-responsive unit therein, a pair of valves carried by said pressure responsive unit and operable for controlling pressures in opposite ends of said casing, a control lever for said valves, a single point bearing for said lever, said lever having mechanical engagement with said valves at points spaced from each other and from said bearing whereby said lever is rockable on either of a pair of axes in its own plane intersecting at said bearing, means for applying a force to said plate to tend to operate it to effect operation of both valves, resilient means carried by said pressure responsive unit and having mechanical engagement with said lever closer to one of said valves than to the other valve whereby operation of said lever will first move said other valve and then move said one valve, and means carried by said pressure unit for adjusting the loading of said resilient means to determine the force which must be applied to said lever to effect operation of said one valve after said other valve has been operated.

2,462,016

ELECTRIC HEATING

Albert P. Wiegand, Pittsburgh, Pa., assignor to Edwin L. Wiegand Company, Pittsburgh, Pa., a corporation of Pennsylvania

Application April 3, 1947, Serial No. 739,156
11 Claims. (Cl. 201—67)

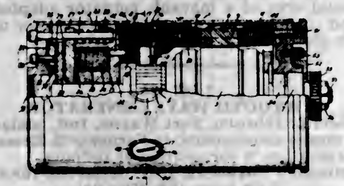
1. A tubular sheathed embedded-resistor electric heating element having an active section comprising a tubular sheath formed to a cross-section consisting substantially of two wall sections disposed in approximately V-relation and having their adjacent edges closed to each other and a complementary wall section generally inverted channel shape in cross-section and having its base extending laterally beyond the separate edges of said two wall sections and its sides continued inwardly and respectively closed to said separate edges, resistor means disposed in said sheath, and compacted granular refractory material disposed in said sheath embedding said resistor means and serving to electrically insulate said resistor means and to conduct the heat from said resistor means to said sheath.

2,462,017

MOTOR AND BRAKE MECHANISM

Glenn D. Willits, Lee, Ind., assignor to General Electric Company, a corporation of New York

Application March 5, 1948, Serial No. 13,124
12 Claims. (Cl. 172—36)



1. A motor and brake mechanism comprising, a stator member for said motor including a core with coils, a plurality of brush holder members for said motor, a housing member for said brake, and insulating material binding all of said members together in a fixed relationship and encasing said core and coils whereby a unitary structure is provided.

2,462,018

X-RAY OPAQUE MARKING MEANS

William H. Wood, University Heights, Ohio, assignor to Harris-Seybold-Potter Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application July 27, 1944, Serial No. 546,907
12 Claims. (Cl. 250—108)

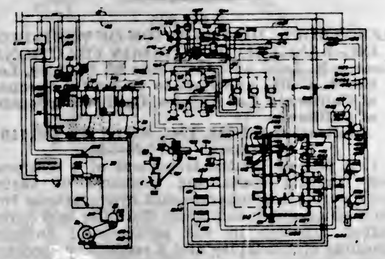
1. A marking material for blocking X-rays and the like, comprising colloidal lead and a compound of a metal of atomic weight at least 184 and a normally solid water-soluble material of wax consistency.

2,462,019

BEVERAGE DISPENSER

Wade W. Bowman, New York, N. Y.

Application January 15, 1942, Serial No. 426,822
10 Claims. (Cl. 225—26)



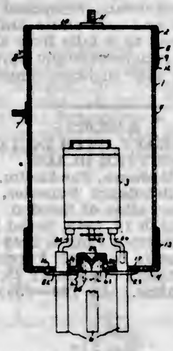
1. In a beverage dispensing mechanism in combination supply means for a plurality of fluids, means for dispensing from one or more of said supplies a predetermined total amount of fluid and means for selectively varying the constituent proportions of said total amount of fluid during the dispensing thereof.

2,462,020

METHOD AND MEANS FOR SEALING CONDUCTORS TO GLASS ENVELOPE WALLS

Palmer H. Craig, Gainesville, Fla.

Application July 2, 1945, Serial No. 604,274
4 Claims. (Cl. 250—27.5)



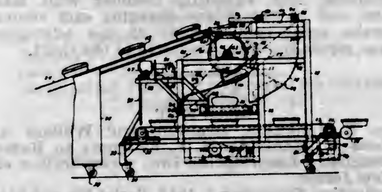
1. An evacuated envelope comprising a wall portion of thin blown glass having an opening therethrough; a portion of the glass wall surrounding the opening comprising metal and wall-glass molecularly intermingled for a substantial depth inwardly from the outer surface of the wall portion and the said outer surface having the property of being adhesive to solder; a metal element having an opening therethrough surrounded by metal of the element; an electrical conductor extending through both said openings and into the envelope and sealingly soldered to the metal element at its opening; and the metal element having a portion circumscribing the wall opening and engaging the surface of the molecularly intermingled metal and glass and sealingly soldered thereto at said circumscribing portion.

2,462,021

EXTRACTING DEVICE FOR BAKERY PRODUCTS

Hilbert John Harker, Detroit, Mich., assignor to Purity Bakeries Service Corporation, a corporation of Illinois

Application January 9, 1947, Serial No. 721,008
4 Claims. (Cl. 214—1.1)



1. In a depanning device for removing loaves of bread or the like from open-topped pans in which they are baked, the combination of conveyor means for conveying a pan of bread to a depanning station, said conveyor means including a downwardly curved section adjacent to the depanning station for at least partially inverting the pan, a lug movable with the conveyor means about the periphery of said curved section for supporting the pan during at least a part of said inverting movement, means adapted to receive

and engage a top portion of the pan during the

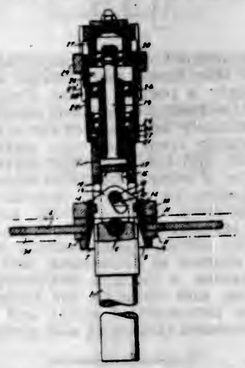
of the nut, and a cap of flexible, elastic material

to vaporize said remaining lower boiling hydrocarbons and certain of said higher boiling hydro-

than that of the air as to establish an immediate and localized turbulent mixture of air and gas about the jets under conditions of incomplete

and engage a top portion of the pan during the inverting movement to arrest the pan and jar the bread from the pan, said arresting means permitting the bread to fall by gravity and momentum from the pan, an inclined chute adapted to receive the bread as it falls from the pan, and bread re-inverting means interposed between the arresting means and said chute and adapted to intercept the bread as it falls from the pan, turn it about an axis transverse to the conveyor means, and drop it on said inclined chute in righted position.

2,462,022
CUTTER SHAFT WITH INCLINABLE CUTTER BLADE
Evert Bernhard Hedman, Stockholm, Sweden, assignor to Aktiebolaget Superior, Stockholm, Sweden, a corporation of Sweden
Application March 16, 1945, Serial No. 583,071
In Sweden June 5, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 25, 1963
5 Claims. (Cl. 144—238)



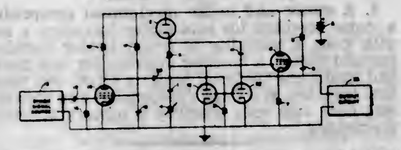
1. In a device of the class described, a driven hollow shaft, a mount pivotally carried by said shaft, a cutter disc secured to said mount, a member rotatably mounted on said shaft and fixed axially with respect thereto, an adjusting member carried solely by and axially displaceable with respect to the first-mentioned member, and means disposed within said hollow shaft and rotatably connecting said adjusting member with said mount and having means engaging said mount whereby axial displacement of the adjusting means pivots the mount relative to the shaft.

2,462,023
SEAL NUT
John E. Johanson, Boonton, and William A. Yonkers, Montville, N. J., assignors to Radio Frequency Laboratories, Inc., a corporation of New Jersey
Application November 2, 1945, Serial No. 626,243
5 Claims. (Cl. 286—29)

1. A seal nut in the under face of which is an annular groove having its center at the axis of the nut, a sealing member in said groove and projecting outwardly therefrom, said member being elastic and compressible into said groove to permit metal to metal contact between the nut and an underlying element whose upper surface is complementary to the under surface of the nut, said nut having also a continuous peripheral groove in a plane transverse to the axis of the nut, and a cap of flexible, elastic material fitted over and covering the outer portion of the nut and provided with a continuous flange sprung into the peripheral groove, the cap having in the

center an opening smaller in area than the cross-sectional area of a movable actuator adapted to extend through the same from an element upon which the nut is to be screwed.

2,462,024
SAWTOOTH WAVE GENERATOR
Lambert L. Johnson, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application August 16, 1947, Serial No. 769,037
7 Claims. (Cl. 250—36)



1. A saw-tooth wave generator comprising, a storage condenser, a charging circuit for said storage condenser including an impedance device, a vacuum tube having an input circuit including a control grid electrode and a cathode electrode, an impedance device connected in circuit with said cathode electrode, means including a condenser for coupling the terminals of said charging circuit impedance device respectively to said input circuit electrodes, whereby to maintain a relatively constant voltage across said charging circuit impedance device, a discharge circuit for said storage condenser including means normally having a relatively high impedance, a discharge circuit for said coupling condenser including means normally having a relatively high impedance, and means for periodically reducing the impedance of said discharge circuits, means whereby to discharge said condensers associated respectively therewith.

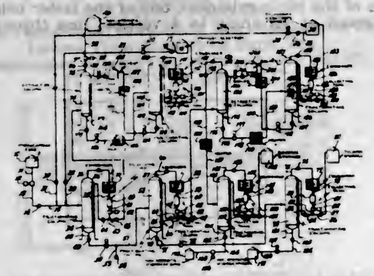
2,462,025
AZEOTROPIC DISTILLATION OF WIDE-BOILING-RANGE HYDROCARBON FRACTIONS
George R. Lake and Josephine M. Stribley, Long Beach, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application July 26, 1944, Serial No. 546,710
10 Claims. (Cl. 202—42)

1. A process for the treatment of a hydrocarbon fraction containing mixtures of various hydrocarbons to separate said hydrocarbons from each other which comprises distilling said hydrocarbon fraction in the presence of sufficient amounts of a primary and a secondary azeotrope former to vaporize certain of the lower boiling hydrocarbons together with said primary azeotrope former as an azeotrope thereby leaving said secondary azeotrope former together with the remaining lower boiling hydrocarbons and all of the higher boiling hydrocarbons contained in said hydrocarbon fraction as distillation residue, separately distilling said distillation residue

2,462,029
ADHESIVE COMPOSITIONS

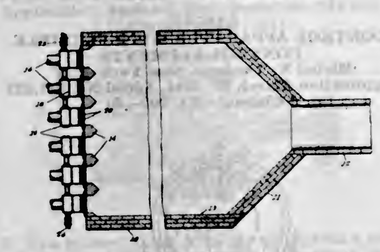
unit, including plate and impression cylinders, a folder, including upper formers, and a multi-

to vaporize said remaining lower boiling hydrocarbons and certain of said higher boiling hydrocarbons together with said secondary azeotrope former thereby leaving the remaining higher boiling hydrocarbons in the residue, said primary azeotrope former being adapted to form azeotropes with certain of the lower boiling hydrocarbons contained in said hydrocarbon fraction which azeotropes boil below the boiling point of said remaining lower boiling hydrocarbons and



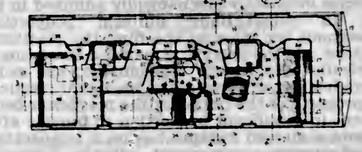
also below the boiling point of any azeotrope formed between said secondary azeotrope former and any hydrocarbons contained in said hydrocarbon fraction and said secondary azeotrope former being adapted to form azeotropes with certain of said higher boiling hydrocarbons which azeotropes boil below the boiling point of any azeotrope formed between said secondary azeotrope former and said remaining higher boiling hydrocarbons.

2,462,026
MANUFACTURE OF CARBON BLACK
William Loving, Pampa, Tex., assignor to Godfrey L. Cabot, Inc., Boston, Mass., a corporation of Massachusetts
Original application January 8, 1943, Serial No. 471,685. Divided and this application April 30, 1946, Serial No. 666,036
3 Claims. (Cl. 23—209.8)



1. The process of making furnace carbon black, which includes the steps of admitting a relatively large body of air, divided into several separate parallel sheets of air, into an elongated unrestricted combustion space, injecting into the combustion space a multiplicity of small jets of carbon-containing gas arranged in rows between adjacent air sheets, flowing the jets of gas in the same general direction as the air sheets and passing directly and in a well distributed manner into the air at such higher velocity than that of the air as to establish an immediate and localized turbulent mixture of air and gas about the jets under conditions of incomplete combustion, thereby decomposing the unconsumed gas while in free space, and collecting the unburned carbon particles from the products of combustion.

2,462,027
RAILWAY SLEEPING CAR
Geodrich K. Murphy, New Canaan, Conn., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 28, 1945, Serial No. 619,138
17 Claims. (Cl. 105—315)



1. In a railway sleeping car, a side aisle, a pair of adjoining rooms between said side aisle and the opposite car side wall, said pair of rooms being defined by end transverse walls and a partition separating them, longitudinally facing seats disposed adjacent the end walls of the respective rooms, the seat in one room being of materially less width than the width of the room and the width of the seat in the other room approaching the full width of the room, a pair of made-up beds in said one room normally stored against the end wall and adjacent the ceiling, respectively, of said room and movable to extend lengthwise at lower and upper levels, respectively, along said car side wall and for substantially the full length of the room when in their use position, and a pair of made-up beds in said other room normally stored behind the seat back and vertically above the seat back, respectively, and both extending lengthwise of the transverse end wall of said room and movable to horizontal use positions at lower and upper levels, respectively, the intermediate partition having means for throwing the rooms into communication.

2,462,028
SHINGLE
Martin G. O'Reilly, Chicago, Ill., assignor to Ford Roofing Products Company, Chicago, Ill., a corporation of Illinois
Application July 25, 1946, Serial No. 686,064
3 Claims. (Cl. 108—8)

1. A thick butt shingle comprising in combination a preformed tapered self-sustaining body of fiber glass about ½ inch thick at its butt, said body being partly impregnated with asphalt to stiffen the same without rendering it rigid and providing a shingle adapted to receive and hold attaching nails, said body having bonded directly to its upper surface a thin layer of coating asphalt in which is partly imbedded a surface layer of granular mineral material.

least one of the segments, while being rotated relative to the same, the end portions of the segments being resiliently flexible at the gap and

said supports providing a channel beneath said jaws through which a workpiece held in said jaws is adapted to fall by gravity when said jaws

2,462,029
ADHESIVE COMPOSITIONS
Lloyd M. Perry, Nashua, N. H., assignor to Nashua Gummed and Coated Paper Company, Nashua, N. H., a corporation of Massachusetts
No Drawing. Application May 25, 1945, Serial No. 595,890
7 Claims. (Cl. 260—29.1)

1. As an adhesive a normally solid, megascopically homogeneous film, non-tacking at room temperatures and activatable to adhesiveness by heat, comprising a plurality of normally solid materials substantially compatible to merge on heating to provide a substantially homogeneous mass, one of the materials being an amorphous, potentially viscid, polymeric material and another a potential plasticizer for the same, the latter being present in the form of discrete crystalline particles intimately mechanically admixed in the film in substantially uniform proportions throughout the mass of the film, the plasticizer particles and the polymeric material coexisting in physically independent individuality, but merging on heating with release of the latent plasticizing property of the particles, the plasticizer being present in significant proportion to provide after heating a merged mixture having a temperature of adhesiveness, subsequent adhesive temperature, at least 10° F. lower than the temperature of adhesiveness, initial adhesive temperature, of the original film before such heating.

2,462,030
OXYCHLORIDE CEMENTATORY MATERIAL
Edward D. F. Whitehead, Chevy Chase, Md., assignor to Whitehead-Craft Corporation, Washington, D. C., a corporation of Delaware
No Drawing. Application October 20, 1947, Serial No. 781,019
12 Claims. (Cl. 106—106)

1. A cementatory material having the following percentage composition

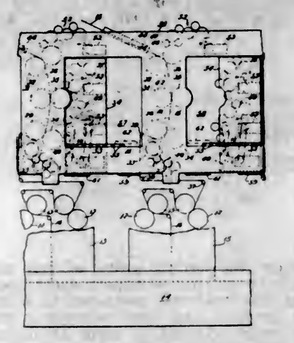
	Mole per cent
SiO_2	26–58.2
MgO	23.3–13.0
Al_2O_3	3.0–1.7
$CuSO_4.5H_2O$	1.2–0.7
$MgCl_2.6H_2O$	3.6–2.0
H_2O	43.5–24.4

2,462,031
CONDENSATION OF KETONES WITH FORMALDEHYDE
Harold Wittcoff, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
No Drawing. Application June 16, 1945, Serial No. 599,947
8 Claims. (Cl. 260—333)

8. Process for the production of tetrahydro-3,3,5-tris-(hydroxymethyl)-5-methyl - 4 - pyranol which comprises condensing formaldehyde with methyl ethyl ketone in a molal ratio of not substantially less than five moles of formaldehyde per mole of methyl ethyl ketone, at a temperature within the approximate range of 40–100° C. in the presence of an alkaline catalyst in the amount of from about 0.25 to 0.75 mole per mole of methyl ethyl ketone, and stopping the reaction when the reaction mixture contains largely tetrahydro-3,3,5-tris-(hydroxymethyl)-5-methyl-4-pyranol.

2,462,032
MULTICOLOR PRINTING PRESS
Otto B. Wolf, Oak Park, Ill., assignor to Tribune Company, Chicago, Ill., a corporation of Illinois
Application January 1, 1945, Serial No. 570,882
11 Claims. (Cl. 270—5)

1. In a newspaper press, a perfecting press unit, including plate and impression cylinders, a folder, including upper formers, and a multi-impression color unit of substantially the same horizontal dimensions as the perfecting unit, said units being arranged in superposed relationship and being together of a height not substantially greater than the normal height of the folder with upper formers, the color unit comprising four plate cylinders arranged in general vertical relationship, coacting impression cylinders, one of which provides the impression for two of the plate cylinders, one of the latter being disposed at an angle to a vertical line through

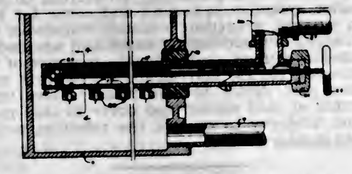


the other, said plate and impression cylinders of the color unit being of the same diameter as the corresponding cylinders of the perfecting unit, an ink motion for each plate cylinder of normal size and number of rollers for newspaper color printing, the ink motion for said angularly disposed plate cylinder being arranged substantially below the center line of the latter and beneath the other plate cylinder which coacts with said common impression cylinder, a part of such ink motion being stationary and a part thereof being movably mounted, and web guide rollers for guiding the web from the perfecting unit through the color unit to the folder.

2,462,033
CONTROL APPARATUS WITH FLEXIBLE CONTROL ELEMENTS
Michel N. Yardeny, New York, N. Y.
Application March 20, 1944, Serial No. 527,232
5 Claims. (Cl. 200—6)

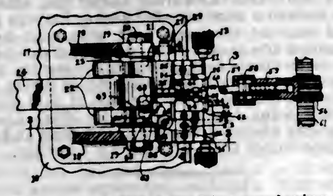
1. Control elements for a control apparatus, one element comprising substantially semi-circular electrically conducting segments separated by a gap, and another element comprising a contact arm mounted concentrically with said segments for rotation relative to the segments and slidably engaging the said segments for causing the arm to remain in slidable engagement with at least one of the segments, while being rotated relative to the same, the end portions of the segments being resiliently flexible at the gap and arranged to yield under pressure of the contact arm when both end portions are engaged by the contact arm for retaining the latter in the gap while allowing a limited relative displacement between the two control elements.

2,462,034
SPRAYING SYSTEM
Ivan Vance Zeck, Iowa Park, Tex., assignor to Lee Lavere Thompson, Iowa Park, Tex.
Application August 17, 1945, Serial No. 610,971
8 Claims. (Cl. 259—95)



1. In an insecticide spraying system, the combination of a mixing receptacle adapted to contain a spray solution, a pump, pipe connections between the pump and the receptacle to withdraw the solution from the receptacle and to direct said withdrawn solution under pressure from said pump, and horizontally arranged mixer tubes mounted in the receptacle at different elevations therein and connected with the pipe connection from the pump for directing the solution back into the receptacle to agitate the solution therein, mixing Venturi jets carried by the mixer tubes and in positions to receive the solution therefrom, and a valve for controlling the flow of the solution to at least one of the mixer tubes.

2,462,035
MACHINE FOR LOCATING SCREWHEADS WITH RESPECT TO DRILLS
Michael J. Carpinella, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application April 12, 1945, Serial No. 588,006
3 Claims. (Cl. 77—21)



1. In a cross-drilling machine employing a pair of drills arranged in common alinement and movable toward and from each other for drilling a workpiece disposed in the path of movement of said drills, a pair of workpiece clamping jaws, one of said jaws being fixed, the other jaw being slidably mounted to move toward and from the fixed jaw, both jaws having axially alined drill receiving apertures, means for automatically delivering a workpiece into position between the apertured portions of said jaws, means engaging the workpiece arranged between the jaws to rotate the same into predetermined stop position, spaced supports for said jaws, the spacing of said supports providing a channel beneath said jaws through which a workpiece held in said jaws is adapted to fall by gravity when said jaws are separated, and means in the jaw members for ejecting the workpiece therefrom when said jaws are separated.

2,462,036
ELECTRICAL CONNECTOR
Geoffrey William Clark, Bramcote, England, assignor to United-Carr Fastener Corporation, Cambridge, Mass.
Application March 6, 1945, Serial No. 581,204
In Great Britain April 13, 1944
1 Claim. (Cl. 173—328)

An electrical socket receptacle for a plug having a pin terminal prong, said receptacle comprising a pair of superposed plates separated by a washer, fastening means securing said plates in assembly and passing through said plates and washer, one plate having a rectangular aperture, a contact member disposed in said rectangular aperture including a base portion in engagement with the outer surface of said one plate, upwardly curved wing elements extending from opposite sides of the base portion through said aperture adjacent opposite edges thereof, inwardly curling contact portions at the free ends of said wing elements providing substantially parallel channels above the plane of the inner surface of said one plate, a U-shaped wire retainer member having arms passing through said channels and extending over and engaging said inner face of said one plate and a base disposed adjacent the outer rim of said washer preventing the retainer member from working free of said channels, and a pin prong-receiving aperture disposed in the other of said plates in line with said rectangular aperture.

2,462,037
SEALING AND REINFORCING TAPE
Lewis Davis and Edwin C. Tuukkanen, Worcester, Mass., assignors to McLaurin-Jones Co., Brookfield, Mass., a corporation of Massachusetts
No Drawing. Application January 11, 1943, Serial No. 472,002
3 Claims. (Cl. 117—122)

1. A sealing tape comprising a strip of backing material and a normally non-tacky coating thereon of a thermoplastic and solvent-applicable adhesive composition consisting essentially of

Ethyl cellulose	1
Hydrogenated rosin	1 to 3
Dihydro methyl abietate	0.5 to 1

2,462,038
CULVERT FORMING MACHINE
Merll L. Eckman, North West Canton, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
Application January 30, 1947, Serial No. 725,362
8 Claims. (Cl. 153—39)

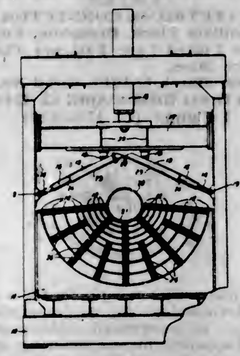
7. In an apparatus for converting substantially cylindrical shells into culverts having substan-

tially flat bottoms and arched tops, a die recessed in conformity with the desired arched top and adapted to receive a shell to be shaped, a pair of loader piston and means operated thereby to hold one of said suction valves open whereby to cause its associated compression piston to reciprocate

porting the switch device so as to be actuated upon flexing of the springs; and means operated

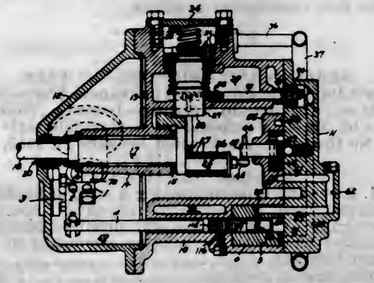
combination a plurality of pulleys feeding the strands in chain form at successively increased speed, a reed spreading the strands of the chain apart into laterally spaced relation to each other,

tially flat bottoms and arched tops, a die recessed in conformity with the desired arched top and adapted to receive a shell to be shaped, a pair of platens having substantially flat faces and disposed for engaging the shell at circumferentially spaced localities outside the die, said platens being adapted for initial engagement with the shell when the faces of the platens lie at an angle of substantially less than 180° to each other, means



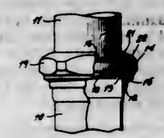
mounting the platens to rock about axes extending longitudinally relative to the shell, and means for moving the platens toward the die to flatten the shell where the platens engage it and to shape its other side against the die recess, said last-mentioned means including means for rocking the platens in a direction to enlarge the aforesaid angle between their faces as they move against the shell and toward the die.

2,462,039
COMPRESSOR UNLOADING MEANS
William F. Gibson, Dayton, Ohio, assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application August 22, 1946, Serial No. 692,269
2 Claims. (Cl. 230—26)



1. A compressor having a plurality of radially extending cylinders each of a plurality of which is adapted to be individually controlled to compress gas or to be unloaded, comprising a first assembly including a main casting, a crank shaft supported thereby, means forming a plurality of radially extending compression cylinders, compression pistons operatively connected to said crank shaft, suction valve and discharge valve assemblies carried by said main casting, a plurality of individual cylinder unloading means carried by said main casting, each comprising an unloader piston and means operated thereby to hold one of said suction valves open whereby to cause its associated compression piston to reciprocate idly, all of said unloader pistons extending toward one end of said main casting, a master valve carried by said main casting, a first end cover for said main casting, a lubricant pump carried by said end cover and including means for establishing driving connection of said pump to said crank shaft when said casting and cover are assembled, means forming a plurality of unloader cylinders in said cover, each in position to receive one of said unloader pistons when said casting and cover are assembled, said cover having a plurality of passages therethrough whereby fluid pressure created by said pump may be transmitted to said master valve and selectively therefrom to said unloader cylinders, a second end cover for said main casting, a suction pressure responsive device carried by said second cover and adapted to collapse or expand as the suction pressure of the compressor varies, and means operatively connecting said device to said master valve upon assembly of said second end cover to said main casting whereby to control the selecting action of said master valve.

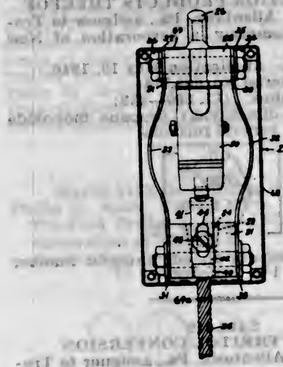
2,462,040
PIPE CONNECTION
Arthur J. Hierts, Bridgeport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn., a corporation of Connecticut
Application June 19, 1945, Serial No. 600,267
3 Claims. (Cl. 285—122)



1. A pipe joint including cooperating metal male and female tapered seats formed to provide cooperatively a fluid-tight metal-to-metal junction when forced directly together, and with the male seat tapering to a smaller minimum diameter than the minimum diameter of the female seat and having a holder for a non-metallic gasket projecting forwardly therefrom, whereby when desired a non-metallic gasket may be positioned parallel the male seat with said holder restraining the gasket from sliding off due to the taper of the male seat, and a fastening for holding said seats forced together both in direct contact and when spaced by the use of said gasket, the joint being formed to provide clearance for said holder when said gasket is not used and said fastening forces the seats directly together.

2,462,041
SAFETY LINK
Robert L. Hohler, Dayton, Ohio
Application May 9, 1945, Serial No. 592,849
6 Claims. (Cl. 200—85)

6. In an electrical hoist apparatus, the combination comprising; a safety link for connecting a load to a hoist apparatus, said link including a relative fixed member and a relative movable member; bowed spring members arranged in parallel to connect the fixed member with the movable member and adapted to flex upon application of load to the link; an electric switch device for indication of overload; means for supporting the switch device so as to be actuated upon flexing of the springs; and means operated



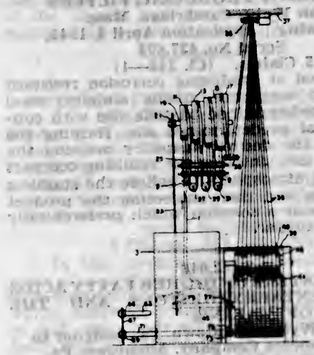
by applying the load to the link for actuating the switch.

2,462,042
CONJOINTLY POLYMERIZED UNSATURATED SUBSTANCES
Arthur M. Howald and John Leslie Jones, Toledo, Ohio, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
No Drawing. Application January 12, 1944, Serial No. 517,986
14 Claims. (Cl. 260—45.4)

11. A hardenable composition comprising four parts of a polymerizable unsaturated polyhydric alcohol-polycarboxylic acid polyester, and one part of a neutral ester of (1) an alcohol having the general formula: R—O—H, wherein R is of the class consisting of beta-chloro allyl and beta-methyl crotyl radicals and unsubstituted beta-gamma-olefinic radicals having from three to four carbon atoms, every R—O-radical in the neutral ester molecule being attached to a >C=O group, with (2) an acid which is an ester of (a) at least one molecule of a hydroxy carboxylic acid of the class consisting of saturated alpha-hydroxy monocarboxylic acids having from two to three carbon atoms and hydroxy benzoic acids with (b) one molecule of a polybasic acid of the class consisting of silicic, malonic, benzene dicarboxylic, biphenyl dicarboxylic, napthalene dicarboxylic, cyclo hexane dicarboxylic, chloromaleic, bromomaleic, chlorofumaric, bromofumaric, unsubstituted saturated normal dibasic acids having from five to ten carbon atoms in the molecule, and unsubstituted dibasic acids having from one to five carbon atoms in the molecule and having not more than a single olefinic unsaturation, in which there are not more than two connecting carbon atoms separating carboxy groups and not more than one carboxy group is attached to a single carbon atom.

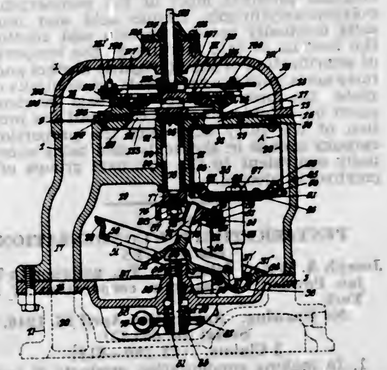
2,462,043
TENSION DEVICE FOR RUBBER COVERING MACHINES
Oscar F. Neidel, Westerly, R. I., assignor to George C. Moore Company, Westerly, R. I., a corporation of Rhode Island
Application April 23, 1946, Serial No. 664,357
14 Claims. (Cl. 57—6)

6. Apparatus for feeding elastic strands to the feed rolls of a strand covering machine having in combination a plurality of pulleys feeding the strands in chain form at successively increased speed, a reed spreading the strands of the chain apart into laterally spaced relation to each other, a roll drawing the strands through the reed and



feeding them forward in laterally spaced relation, and guide means maintaining the strands in spaced and substantially parallel relation and delivering them to the respective feed rolls of the covering machine.

2,462,044
COMPOUND MOTION DISTRIBUTING VALVE FOR EXPANSIBLE CHAMBER METERS
David S. Willson, Muskegon Heights, Mich., assignor to John Wood Manufacturing Company, Inc., Philadelphia, Pa., a corporation of Delaware
Application December 23, 1944, Serial No. 569,478
16 Claims. (Cl. 121—131)



1. In a fluid meter, the combination with displacement mechanism; of means affording a plurality of ports adapted to permit flow to and from said mechanism, each port having a straight outside wall and a curvilinear inner wall; a valve having a plurality of straight sides at its outer edge and having a curved inner edge; means operatively associated with said displacement mechanism for operating said valve; and means

for maintaining each outer straight side of said

substantial excess of concentrated sulfuric acid

nected thereto, and provided with a free end conforming substantially to the interior contour of a

for maintaining each outer straight side of said valve in parallelism with the outside straight wall of the respective port controlled.

2,462,045
METHOD OF PRODUCING FILTERS
John Wulff, Cambridge, Mass.
No Drawing. Application April 4, 1942, Serial No. 437,693
5 Claims. (Cl. 148—4)

1. A method of producing corrosion resistant filters which comprises mixing stainless steel powder of predetermined particle size with copper powder of predetermined size, forming the powder into the desired shape by pressing the mixture in a die; sintering the resulting compact in a reducing atmosphere to cohere the stainless steel particles and then subjecting the product to the action of a solution which preferentially dissolves the copper.

2,462,046
RESINOUS ESTERS OF HIGHER FATTY ACIDS WITH PENTAERYTHRITOLS AND THE METHOD OF MAKING
Joseph A. Wyler, Allentown, Pa., assignor to Trojan Powder Company, Allentown, Pa.
No Drawing. Application January 13, 1945, Serial No. 572,746
4 Claims. (Cl. 260—22)

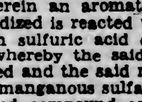
1. The process of preparing a synthetic resinous material which, when applied as a coating film, gives a wrinkled finish, the process comprising heating in an atmosphere of sulfur dioxide a mixture of fatty acids selected from the group consisting of the fatty acids of linseed oil and the fatty acids of soya bean oil, a condensing agent selected from the group consisting of aromatic polycarboxylic acids and their anhydrides, and a polyhydric alcohol selected from the group consisting of pentaerythritol, tripentaerythritol and the syrupy organic polyhydroxy product resulting from preparing pentaerythritol by condensing formaldehyde and acetaldehyde in alkaline media and then removing from the reaction products most of the pentaerythritol, polypentaerythritols, formic acid and mineral salts originally present therein and continuing the heating of said mixture at the temperature of esterification of the polyhydric alcohol and the fatty acids until the reaction is substantially complete, the proportion of the said condensing agent by weight being less than half the proportion of the fatty acids and the proportion of carboxy groups in the acids used being substantially equivalent to the hydroxyl groups of the polyhydric alcohol.

2,462,047
PENTAERYTHRITOL CONDENSATION PRODUCTS
Joseph A. Wyler, Allentown, Pa., assignor to Trojan Powder Company, a corporation of New York
No Drawing. Application April 26, 1946, Serial No. 665,321
3 Claims. (Cl. 260—615)

1. In making condensation products of pentaerythritols, the method which comprises forming a mixture of the selected pentaerythritol with 0.1 to 1 part of sulfuric acid for 100 parts of the pentaerythritol, heating the resulting mixture to a temperature of 200° to 270° C., and continuing the heating to maintain the mixture in fluid condition until test shows reduction of the hydroxyl content to approximately 26% to 40.1% of the weight of the remaining pentaerythritol compound.

2,462,048
EPOXY TETRAMETHYLOL METHANE AND POLYMERIZATION PRODUCTS THEREOF
Joseph A. Wyler, Allentown, Pa., assignor to Trojan Powder Company, a corporation of New York
No Drawing. Application May 10, 1946, Serial No. 668,774
6 Claims. (Cl. 260—333)

1. A 1,3-(2,2 dimethylol) propane monoxide compound of the general formula



in which X represents an odd integral number within the range 1 to 7 inclusive.

2,462,049
PENTAERYTHRITOL CONVERSION
Joseph A. Wyler, Allentown, Pa., assignor to Trojan Powder Company, a corporation of New York
No Drawing. Application May 10, 1946, Serial No. 668,775
4 Claims. (Cl. 260—615)

1. In making condensation products of pentaerythritol, the method which comprises forming a mixture of a compound selected from the group consisting of pentaerythritol, dipentaerythritol and tripentaerythritol with a salt selected from the group consisting of stannous chloride, cadmium chloride, aluminum sulfate, aluminum chloride and lead chloride in the proportion of 0.3 to 10 parts for 100 parts by weight of the said mixture, heating the mixture to a temperature of 220° to 265° C. to cause evolution of water from the said compound and continuing the heating until the amount of water evolved is 5 to 9.9 parts for 100 parts by weight of the said compound.

2,462,050
RECOVERY AND RECYCLING OF MANGANIC SULFATE PASTE IN ORGANIC OXIDATIONS
Bernhard G. Zimmerman, Westfield, N. J., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application May 5, 1945, Serial No. 592,252
1 Claim. (Cl. 260—637)

In the process of oxidizing aromatic organic compounds wherein an aromatic organic compound to be oxidized is reacted with a manganic sulfate paste in sulfuric acid of from 55–65% concentration whereby the said aromatic compound is oxidized and the said manganic sulfate is converted to manganous sulfate and the thus-obtained oxidized compound separated from a mother liquid containing said manganous sulfate, the process of recovering said manganous sulfate and converting it back into a manganic sulfate paste suitable for use in said oxidation process, which comprises treating said mother liquid containing manganous sulfate with an alkali metal carbonate to precipitate manganous carbonate and mixing the thus-obtained manganous carbonate with sulfuric acid at a temperature below 70° C. to form a paste of manganous sulfate in sulfuric acid, cooling the mixture to about 30° C. and adding a slight excess of manganese dioxide thereto, heating the thus-obtained mixture containing a slight excess of manganese dioxide to about 60° C. and adding a substantial excess of concentrated sulfuric acid thereto and thereafter heating the thus-obtained mixture containing an excess of sulfuric acid to about 120° C. to complete the conversion of manganous sulfate to manganic sulfate and form a paste of manganic sulfate in sulfuric acid, adjusting the concentration of sulfuric acid in said paste to 55–65% concentration and using the thus-obtained sulfuric acid paste of manganic sulfate in the oxidation step specified.

2,462,051
RACK FOR HOUSEHOLD UTENSILS
Philip D. Starr, College Park, Md., assignor to Tre-Fold Products, Inc., College Park, Md., a corporation of Maryland
Application June 23, 1947, Serial No. 756,398
10 Claims. (Cl. 211—89)

1. A device of the class described comprising a resilient clip having a base, and a curved body portion in spaced relation to the base and connected thereto, and provided with a free end conforming substantially to the interior contour of a utensil to engage the cup portion of the utensil, and an opposed resilient curved clip connected to said first clip and bearing against the body portion of the first clip to engage the foot portion of the utensil and maintain it with its edge substantially perpendicular to the base of the clip.

2,462,052
METHOD OF CONVERTING SECONDARY AMINES TO NITRAMINES
George F. Wright, Toronto, Ontario, and Walter John Chute, Kentville, Nova Scotia, Canada, assignors to The Honorary Advisory Council for Scientific and Industrial Research, Ottawa, Ontario, Canada, a corporation of Canada
No Drawing. Application December 30, 1944, Serial No. 570,814
3 Claims. (Cl. 260—247)

1. In the preparation of a secondary nitramine of a compound of the group consisting of di-n-butylamine and morpholine, the method which comprises reacting the nitrate salt of one of said compounds with nitric acid and a lower fatty acid anhydride in the presence of a catalyst selected from a group consisting of hydrogen chloride and the chlorides of zinc, iron and aluminium.

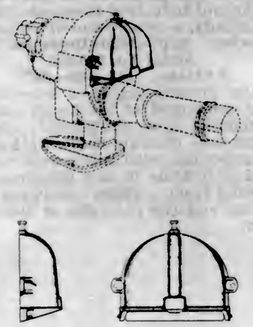
152,672
DESIGN FOR A JEWELRY PENDANT OR

152,674
DESIGN FOR A MARINE VESSEL

DESIGNS

FEBRUARY 15, 1949

152,668
DESIGN FOR A HEATING OIL BURNER OR SIMILAR ARTICLE
Reginald W. Beckett, Elyria, Ohio
Application June 12, 1947, Serial No. 139,598
Term of patent 14 years
(Cl. D61—2)

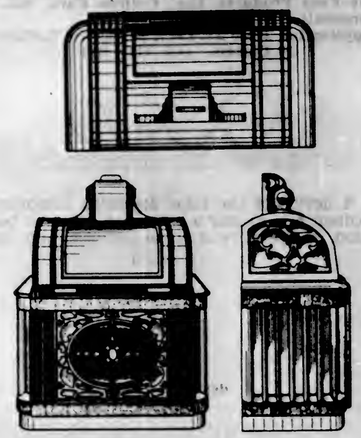


The ornamental design for a heating oil burner or similar article, substantially as shown and described.

152,669
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Henry Bogoff, Chicago, Ill., assignor to Spear Novelty Co., Chicago, Ill., a copartnership
Application December 1, 1948, Serial No. 149,909
Term of patent 7 years
(Cl. D45—19)

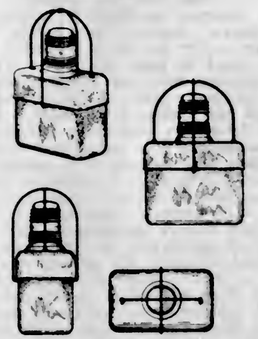
The ornamental design for a brooch or similar article, substantially as shown.

152,670
DESIGN FOR A PHONOGRAPH CABINET
Russell E. Brandenburger, Sr., Shelbyville, Ind., assignor to Packard Manufacturing Corporation, Indianapolis, Ind., a corporation
Application July 21, 1947, Serial No. 140,440
Term of patent 7 years
(Cl. D56—4)



The ornamental design for a phonograph cabinet, as shown.

152,671
DESIGN FOR A PORTABLE SIGNAL LIGHT OR SIMILAR ARTICLE
Eugene C. Briggs, Dayton, Ohio, assignor, by mesne assignments, to Emarco Corporation, Chicago, Ill., a corporation of Illinois
Application March 13, 1947, Serial No. 137,597
Term of patent 14 years
(Cl. D72—1)

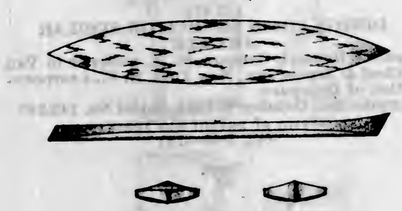


The ornamental design for a portable signal light or similar article, substantially as shown.

152,674
DESIGN FOR A JEWELRY PENDANT OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application November 17, 1948, Serial No. 149,683
Term of patent 14 years
(Cl. D45—15)

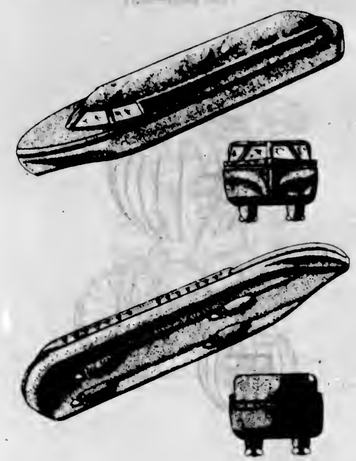
The ornamental design for a jewelry pendant or similar article, substantially as shown.

152,673
DESIGN FOR A CRUISE BOARD
Charles H. Clark, Mill Valley, Calif., assignor, by decree of court and assignments, of one-half to Julia D. Clark and one-half to Paul F. Schumacher, San Francisco, Calif.
Application May 9, 1947, Serial No. 138,944
Term of patent 14 years
(Cl. D71—1)



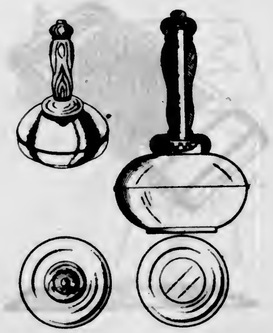
The ornamental design for a cruise board, as shown.

152,674
DESIGN FOR A MARINE VESSEL
William Costa, San Diego, Calif.
Application July 16, 1947, Serial No. 140,320
Term of patent 14 years
(Cl. D71—1)



The ornamental design for a marine vessel, substantially as shown.

152,675
DESIGN FOR A COCKTAIL SHAKER
Andrew Cravaritis, Roslyn, N. Y.
Application January 22, 1947, Serial No. 136,288
Term of patent 7 years
(Cl. D2—3)



The ornamental design for a cocktail shaker, substantially as shown.

152,680
DESIGN FOR A BROOCH OR SIMILAR

152,683
DESIGN FOR A BOTTOM MEMBER FOR MILK

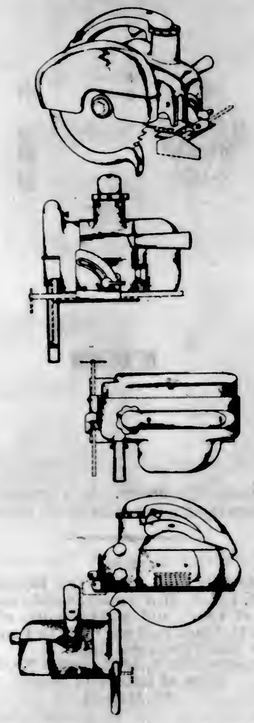
152,676
DESIGN FOR A COOKY JAR, OR SIMILAR ARTICLE
Valeria de Marsa, Los Angeles, Calif., assignor to Triangle Studios, El Monte, Calif., a copartnership
Application November 28, 1947, Serial No. 142,844
Term of patent 14 years
(Cl. D58—25)

The ornamental design for a cooky jar, or similar article, substantially as shown.

152,677
DESIGN FOR A VEGETABLE CUTTER
Ralph P. De Vault, Arcadia, Calif.
Application August 29, 1947, Serial No. 141,112
Term of patent 14 years
(Cl. D89—1)

The ornamental design for a vegetable cutter, as shown.

152,678
DESIGN FOR A ROTARY POWER HANDSAW
Francis D. Dolan, Toledo, and Louis Vavrik, Rossford, Ohio, assignors to The American Floor Surfacing Machine Company, Toledo, Ohio, a corporation of Ohio
Application May 23, 1947, Serial No. 139,320
Term of patent 14 years
(Cl. D93—3)



The ornamental design for a rotary power handsaw, substantially as shown and described.

152,679
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Maurice Duvalet, Congers, N. Y., assignor to Van Cleef & Arpels, Inc., New York, N. Y., a corporation of Delaware
Application October 6, 1948, Serial No. 148,985
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

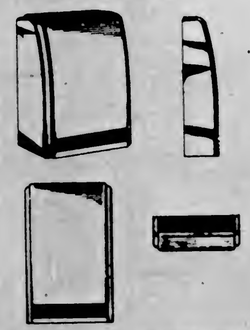
152,680
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Maurice Duvalet, Congers, N. Y., assignor to Van Cleef & Arpels, Inc., New York, N. Y., a corporation of Delaware
Application October 26, 1948, Serial No. 149,294
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,681
DESIGN FOR AN EAR CLIP OR SIMILAR ARTICLE
Maurice Duvalet, Congers, N. Y., assignor to Van Cleef & Arpels, Inc., New York, N. Y., a corporation of Delaware
Application October 28, 1948, Serial No. 149,343
Term of patent 3½ years
(Cl. D45—9)

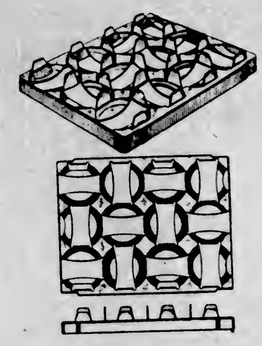
The ornamental design for an ear clip or similar article, substantially as shown.

152,682
DESIGN FOR A GAS CONSOLE HEATER CABINET OR SIMILAR ARTICLE
Harve D. Edwards, Los Angeles, Calif., assignor to Rheem Manufacturing Company, Richmond, Calif., a corporation of California
Application July 7, 1947, Serial No. 140,141
Term of patent 14 years
(Cl. D81—10)



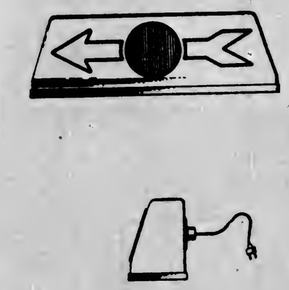
The ornamental design for a gas console heater cabinet or similar article, as shown.

152,683
DESIGN FOR A BOTTOM MEMBER FOR MILK BOTTLE CARRYING CASES AND THE LIKE
Ernest R. Erickson, Des Moines, Iowa, assignor to C. E. Erickson Company, Inc., Des Moines, Iowa, a corporation of Iowa
Application January 12, 1948, Serial No. 143,668
Term of patent 14 years
(Cl. D58—13)



The ornamental design for a bottom member for milk bottle carrying cases and the like, substantially as shown.

152,684
DESIGN FOR AN EMERGENCY AUTOMOBILE LIGHT
Joseph Feits, Jersey City, N. J.
Application April 16, 1946, Serial No. 128,659
Term of patent 14 years
(Cl. D48—32)



The ornamental design for an emergency automobile light, as shown.

152,685
DESIGN FOR A BOTTLE OR SIMILAR

152,687
DESIGN FOR A TABLE

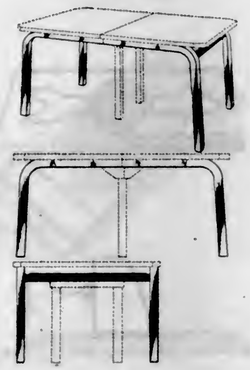
152,689
DESIGN FOR AN ALBUM HOLDER

152,691
DESIGN FOR A SOLDERER HOUSING

152,685
DESIGN FOR A BOTTLE OR SIMILAR ARTICLE
Elizabeth N. Graham, New York, N. Y.
Application December 2, 1947, Serial No. 142,912
Term of patent 14 years
(Cl. D58—6)

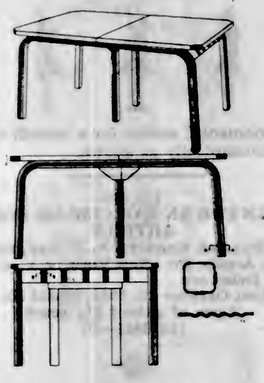
The ornamental design for a bottle or similar article, substantially as shown and described.

152,686
DESIGN FOR A TABLE
Lurelle Guild, New York, N. Y., and Carlton G. Towne, Pittsburgh, Pa., assignors to The Aluminum Cooking Utensil Company, New Kensington, Pa., a corporation of Pennsylvania
Application July 26, 1947, Serial No. 140,542
Term of patent 14 years
(Cl. D33—14)



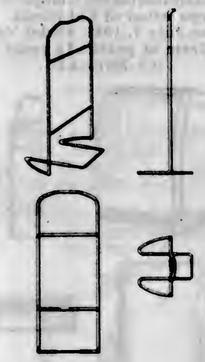
The ornamental design for a table, substantially as shown and described.

152,687
DESIGN FOR A TABLE
Lurelle Guild, New York, N. Y., and Carlton G. Towne, Pittsburgh, Pa., assignors to The Aluminum Cooking Utensil Company, New Kensington, Pa., a corporation of Pennsylvania
Application July 26, 1947, Serial No. 140,543
Term of patent 14 years
(Cl. D33—14)



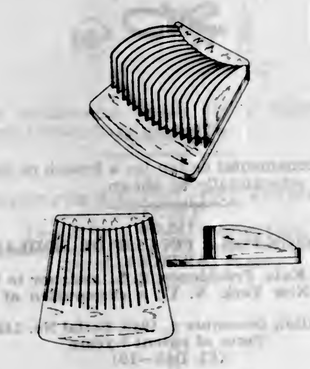
The ornamental design for a table, substantially as shown.

152,688
DESIGN FOR A CLOTHES HANGER
Harry S. Hammond, Garden City, N. Y.
Application May 27, 1947, Serial No. 139,313
Term of patent 3½ years
(Cl. D33—8)



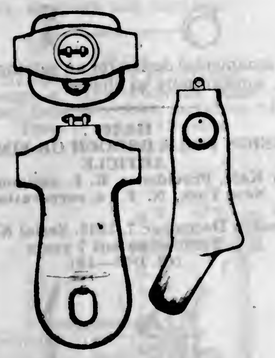
The ornamental design for a clothes hanger, substantially as shown.

152,689
DESIGN FOR AN ALBUM HOLDER
Robert P. Mann, Cleveland, Ohio
Application July 3, 1947, Serial No. 140,086
Term of patent 14 years
(Cl. D33—2)



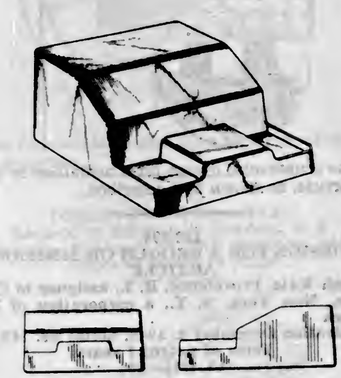
The ornamental design for an album holder, as shown.

152,690
DESIGN FOR A DUMMY FOR TESTING PARACHUTES
William U. Hehwieler, Morrisville, Pa.
Application July 25, 1946, Serial No. 131,904
Term of patent 14 years
(Cl. D71—1)



The ornamental design for a dummy for testing parachutes, substantially as shown.

152,691
DESIGN FOR A SOLDERER HOUSING
Willard J. Humpal and Benhard G. Reimers, Boulder, Colo.
Application May 9, 1947, Serial No. 138,934
Term of patent 14 years
(Cl. D26—5)



The ornamental design for a solderer housing, as shown.

152,692
DESIGN FOR A MEDAL OR SIMILAR ARTICLE
Thomas H. Jones, Washington, D. C., assignor to the United States of America as represented by the Secretary of War
Application July 29, 1947, Serial No. 140,575
Term of patent 14 years
(Cl. D29—19)

The ornamental design for a medal or similar article, as shown and described.

152,693
DESIGN FOR A MEDALLION OR SIMILAR ARTICLE

152,697
DESIGN FOR A BROOCH OR SIMILAR ARTICLE

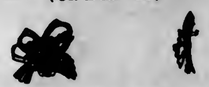
152,701
DESIGN FOR A FINDING FOR JEWELRY
Adolph Katz, Providence, R. I., assignor to Coro,

152,702—Continued

152,693
DESIGN FOR A MEDALLION OR SIMILAR ARTICLE
Thomas H. Jones, Washington, D. C., assignor to the United States of America as represented by the Secretary of War
Application July 29, 1947, Serial No. 140,577
Term of patent 14 years
(Cl. D29—19)

The ornamental design for a medallion or similar article, as shown and described.

152,694
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 4, 1948, Serial No. 149,987
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

152,695
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 4, 1948, Serial No. 149,988
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,696
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 4, 1948, Serial No. 149,989
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,697
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 4, 1948, Serial No. 149,990
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,698
DESIGN FOR A PIN CLIP OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 4, 1948, Serial No. 149,994
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a pin clip or similar article, substantially as shown.

152,699
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 4, 1948, Serial No. 149,996
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,700
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 7, 1948, Serial No. 150,017
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,701
DESIGN FOR A FINDING FOR JEWELRY
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 7, 1948, Serial No. 150,018
Term of patent 7 years
(Cl. D45—1)

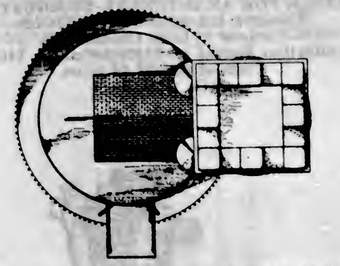
The ornamental design for a finding for jewelry, substantially as shown.

152,702
DESIGN FOR A DECORATIVE ARTIFICIAL CANDLE
George W. Kellogg, Denver, Colo.
Application July 2, 1946, Serial No. 131,270
Term of patent 14 years
(Cl. D73—1)

The ornamental design for a decorative artificial candle, as shown and described.

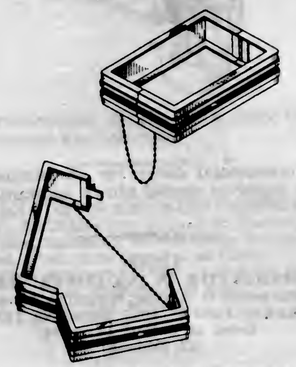
152,703
DESIGN FOR A BUILDING
Joseph A. King, Whitman, Mass.
Application October 1, 1947, Serial No. 141,704
Term of patent 14 years
(Cl. D13—1)

152,703—Continued



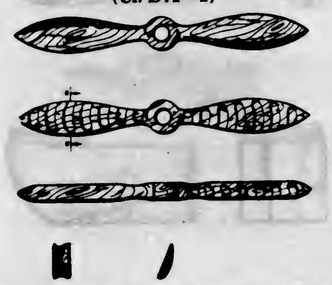
The ornamental design for a building, as shown and described.

152,704
DESIGN FOR A BRACELET
Leopold D. Kline, Kew Gardens, N. Y.
Application February 19, 1948, Serial No. 144,592
Term of patent 14 years
(Cl. D45—4)



The ornamental design for a bracelet, as shown.

152,705
DESIGN FOR AN AIRPLANE PROPELLER BLADE
Arthur P. Leahy, Queens Village, N. Y.
Application June 13, 1947, Serial No. 139,637
Term of patent 14 years
(Cl. D71—1)



The ornamental design for an airplane propeller blade, as shown.

152,706
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 7, 1948, Serial No. 150,019
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,707
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 7, 1948, Serial No. 150,020
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,708
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 7, 1948, Serial No. 150,021
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

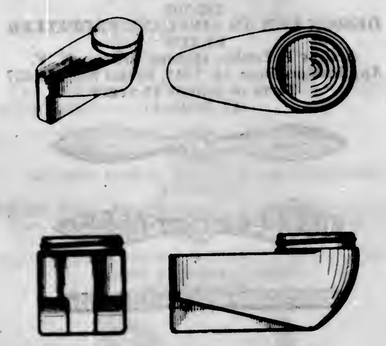
152,710
DESIGN FOR A PORTABLE UPRIGHT

152,711
DESIGN FOR A BOOK-HOLDING LAMP

152,706
DESIGN FOR AN INTERNAL-COMBUSTION ENGINE OR SIMILAR ARTICLE
Casimir E. Leja, Chicago, Ill.
Application August 14, 1947, Serial No. 140,858
Term of patent 14 years
(Cl. D71—1)

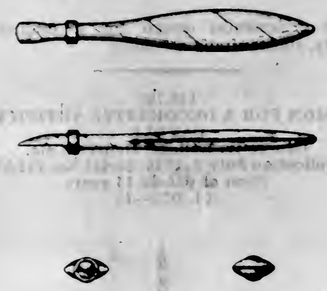
The ornamental design for an internal-combustion engine or similar article, substantially as shown.

152,707
DESIGN FOR AN INK CONTAINER
Raymond O. Letsch, Waterloo, Iowa
Application June 13, 1947, Serial No. 139,671
Term of patent 14 years
(Cl. D74—8)



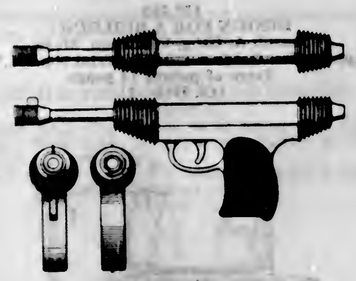
The ornamental design for an ink container, as shown.

152,708
DESIGN FOR A CUTICLE TOOL
Daniel S. Levnaich, Chicago, Ill., assignor to Four-O-Matic Corporation, Chicago, Ill., a corporation of Illinois
Application December 5, 1947, Serial No. 142,970
Term of patent 14 years
(Cl. D66—10)



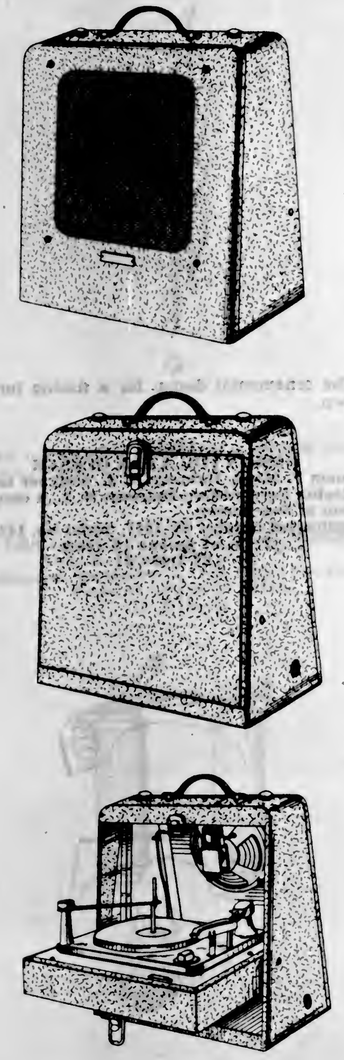
The ornamental design for a cuticle tool, substantially as shown.

152,709
DESIGN FOR A TOY PISTOL
Peter Lim, Los Angeles, Calif.
Application June 30, 1947, Serial No. 140,015
Term of patent 3½ years
(Cl. D34—15)



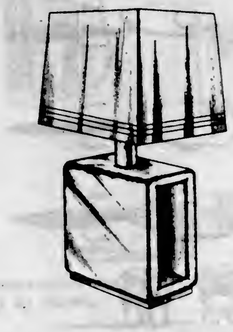
The ornamental design for a toy pistol, as shown.

152,710
DESIGN FOR A PORTABLE UPRIGHT PHONOGRAPH OR THE LIKE
Stuart F. Leuchheim, Beth Ayres, Pa., assignor to Amplitone, Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application September 6, 1947, Serial No. 141,237
Term of patent 14 years
(Cl. D56—4)



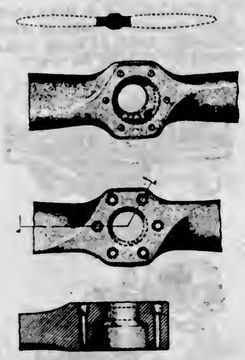
The ornamental design for a portable upright phonograph or the like, as shown.

152,711
DESIGN FOR A BOOK-HOLDING LAMP
Martha Michaelson Lund, Chicago, Ill.
Application May 31, 1946, Serial No. 130,248
Term of patent 7 years
(Cl. D48—20)



The ornamental design for a book-holding lamp, as shown and described.

152,712
DESIGN FOR AN AIRCRAFT PROPELLER
Ernest G. McCauley and Sidney M. Gamsu, Dayton, Ohio, assignors to McCauley Corporation, Dayton, Ohio, a corporation of Ohio
Application January 10, 1947, Serial No. 136,054
Term of patent 14 years
(Cl. D71—1)



The ornamental design for an aircraft propeller, substantially as shown and described.

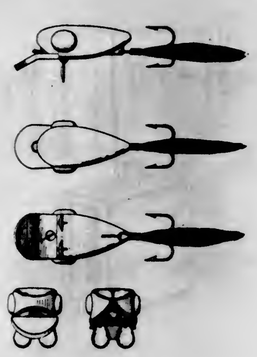
152,713

152,715
DESIGN FOR A FISHING LURE

152,717
DESIGN FOR A WRITING INSTRUMENT

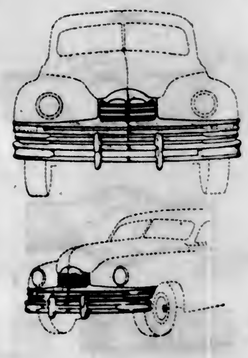
152,719
DESIGN FOR A FLASHLIGHT
Arthur W. Miller, Irvington, N. J.

152,713
DESIGN FOR A FISH LURE
Jesse L. McCollum, Kaufman, Tex.
Application May 12, 1947, Serial No. 139,000
Term of patent 7 years
(Cl. D31—4)



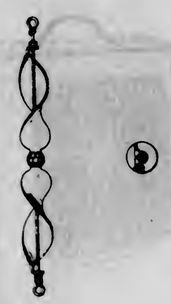
The ornamental design for a fish lure, as shown.

152,714
DESIGN FOR A COMBINED MOTOR VEHICLE GRILLE AND BUMPER
Edward Macauley, Grosse Pointe Farms, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application September 12, 1947, Serial No. 141,333
Term of patent 14 years
(Cl. D14—18)



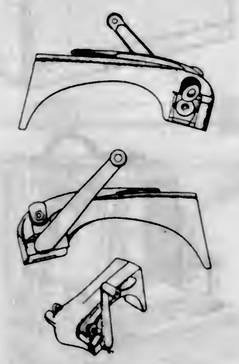
The ornamental design for a combined motor vehicle grille and bumper or similar article, substantially as shown and described.

152,715
DESIGN FOR A FISHING LURE
Jay A. Mackey, Bridgeport, Conn.
Application February 12, 1948, Serial No. 144,430
Term of patent 7 years
(Cl. D31—4)



The ornamental design for a fishing lure, as shown.

152,716
DESIGN FOR A CAN OPENER
Lannon F. Mead, Rahway, N. J., assignor to The Regina Corporation, Rahway, N. J., a corporation of New Jersey
Application October 29, 1947, Serial No. 142,194
Term of patent 14 years
(Cl. D22—2)

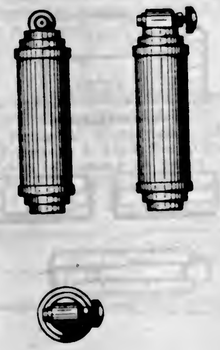


The ornamental design for a can opener, as shown.

152,717
DESIGN FOR A WRITING INSTRUMENT
Charles L. Metzler, Palisades Park, N. J., assignor to Stratford Pen Corporation, New York, N. Y., a corporation of New York
Application November 1, 1947, Serial No. 142,256
Term of patent 14 years
(Cl. D74—17)

The ornamental design for a writing instrument, as shown and described.

152,718
DESIGN FOR A FIRE EXTINGUISHER
Alvin B. Meyer, New York, N. Y.
Application September 5, 1947, Serial No. 141,215
Term of patent 14 years
(Cl. D16—2)



The ornamental design for a fire extinguisher, as shown.

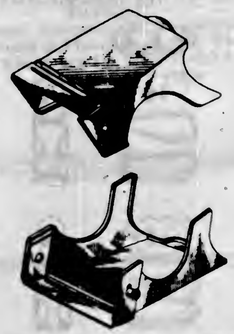
152,719
DESIGN FOR A FLASHLIGHT
Arthur W. Miller, Irvington, N. J.
Application October 17, 1946, Serial No. 134,019
Term of patent 14 years
(Cl. D48—24)

The ornamental design for a flashlight, substantially as shown.

152,720
DESIGN FOR A SOFA
James Mont, New York, N. Y.
Application February 5, 1947, Serial No. 136,713
Term of patent 7 years
(Cl. D15—11)

The ornamental design for a sofa, substantially as shown and described.

152,721
DESIGN FOR A VEGETABLE SLICER
Nathan K. Morris, Asbury Park, N. J.
Application April 13, 1948, Serial No. 145,679
Term of patent 14 years
(Cl. D89—1)

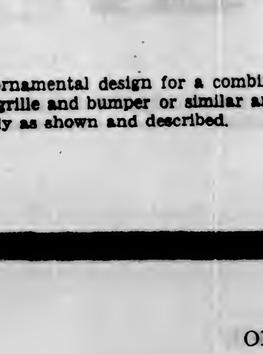


The ornamental design for a vegetable slicer, as shown.

152,722
DESIGN FOR A SHOE
Ralph Nelson, Brockton, Mass., assignor to Endicott Johnson Corporation, Endicott, N. Y., a corporation of New York
Application October 29, 1947, Serial No. 142,195
Term of patent 14 years
(Cl. D2—1)

The ornamental design for a shoe, as shown.

152,723
DESIGN FOR A SHOE
Ralph Nelson, Brockton, Mass., assignor to Endicott Johnson Corporation, Endicott, N. Y., a corporation of New York
Application October 29, 1947, Serial No. 142,196
Term of patent 14 years
(Cl. D2—1)



The ornamental design for a shoe, as shown.

152,724
DESIGN FOR A SHOE
Ralph Nelson, Brockton, Mass., assignor to Endicott Johnson Corporation, Endicott, N. Y., a corporation of New York
Application October 29, 1947, Serial No. 142,197
Term of patent 14 years
(Cl. D2—1)

The ornamental design for a shoe, as shown.

152,725
DESIGN FOR A SHOE
Ralph Nelson, Brockton, Mass., assignor to Endicott Johnson Corporation, Endicott, N. Y., a corporation of New York
Application October 29, 1947, Serial No. 142,198
Term of patent 14 years
(Cl. D2—1)

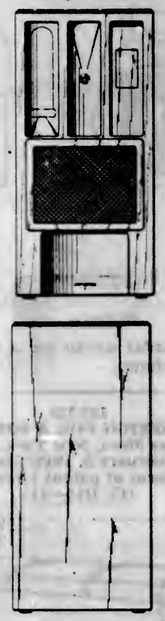
The ornamental design for a shoe, as shown.

152,726
DESIGN FOR A SHOE
Ralph Nelson, Brockton, Mass., assignor to Endicott Johnson Corporation, Endicott, N. Y., a corporation of New York
Application October 29, 1947, Serial No. 142,199
Term of patent 14 years
(Cl. D2—1)

The ornamental design for a shoe, as shown.

152,728
DESIGN FOR A NECKLACE OR SIMILAR

152,722
DESIGN FOR A WATER COOLER
Samuel O. Morrison, Pine Ridge, Pa.
Application September 29, 1947, Serial No. 141,636
Term of patent 14 years
(Cl. D67—4)



The ornamental design for a water cooler, as shown and described.

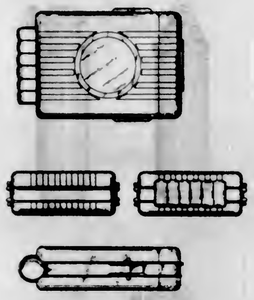
152,723
DESIGN FOR A PERFUME BOTTLE
Alfred Newman, New York, N. Y., assignor to Bombi Perfumer, Inc., New York, N. Y., a corporation of Delaware
Application August 5, 1947, Serial No. 140,712
Term of patent 14 years
(Cl. D58—8)

The ornamental design for a perfume bottle, as shown.

152,724
DESIGN FOR A CONTAINER CAP OR SIMILAR ARTICLE
George Pavlinetz, Carteret, N. J.
Application December 17, 1947, Serial No. 143,181
Term of patent 14 years
(Cl. D68—26)

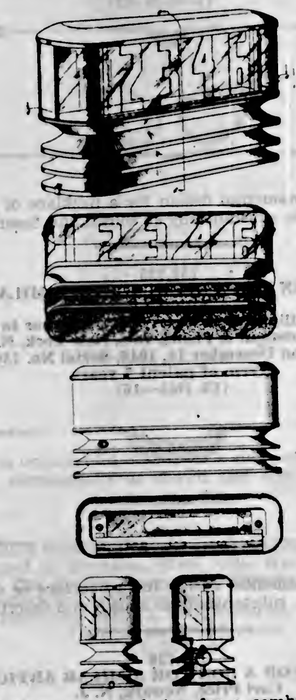
The ornamental design for a container cap or similar article, as shown.

152,725
DESIGN FOR A BEAUTY COMPACT
Sumas Payne, Chicago, Ill.
Application November 20, 1947, Serial No. 142,694
Term of patent 3½ years
(Cl. D86—16)



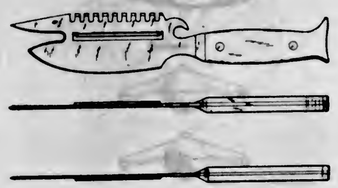
The ornamental design for a beauty compact, as shown and described.

152,726
DESIGN FOR A COMBINED PORCH LIGHT AND ILLUMINABLE HOUSE NUMERAL INDICATOR
David R. Pennell, Lakewood, Ohio
Application August 6, 1947, Serial No. 140,733
Term of patent 7 years
(Cl. D48—20)



The ornamental design for a combined porch light and illuminable house numeral indicator, as shown and described.

152,727
DESIGN FOR A SPORTSMAN'S COMBINATION KNIFE AND UTILITY TOOL
John X. Peterson, Minneapolis, Minn.
Application February 9, 1948, Serial No. 144,368
Term of patent 14 years
(Cl. D22—3)

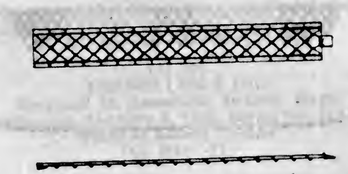


The ornamental design for a sportsman's combination knife and utility tool, as shown.

152,728
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 6, 1948, Serial No. 149,521
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

152,729
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 8, 1948, Serial No. 149,525
Term of patent 7 years
(Cl. D45—4)



The ornamental design for a bracelet or similar article, substantially as shown.

152,730
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 15, 1948, Serial No. 149,629
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

152,731

152,734

152,737
DESIGN FOR A SUN GOGGLE OR THE LIKE

152,739
DESIGN FOR A CONDIMENT SHAKER

152,731
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 18, 1948, Serial No. 149,694
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,732
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 18, 1948, Serial No. 149,695
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,733
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application December 10, 1948, Serial No. 150,087
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

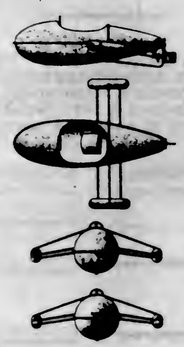
152,734
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application December 14, 1948, Serial No. 150,143
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,735
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application December 14, 1948, Serial No. 150,144
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,736
DESIGN FOR A BOAT OR SIMILAR ARTICLE
Carl Price, Newark, N. J.
Application June 18, 1947, Serial No. 139,786
Term of patent 3½ years
(Cl. D71—1)



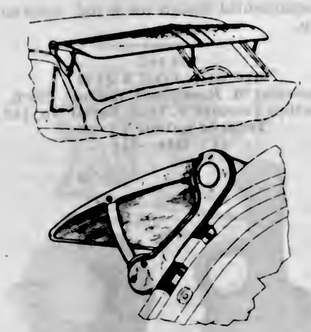
The ornamental design for a boat or similar article, as shown.

152,741

152,737
DESIGN FOR A SUN GOGGLE OR THE LIKE
Harry C. Richards, Morristown, N. J., assignor, by mesne assignments, to Foster Grant Co., Inc., Leominster, Mass., a corporation of Massachusetts
Application September 21, 1946, Serial No. 133,489
Term of patent 14 years
(Cl. D57—1)

The ornamental design for a sun goggle or the like, substantially as shown and described.

152,738
DESIGN FOR A VEHICLE WINDSHIELD VISOR
Howard C. Riemann, West Allis, Wis., assignor to The Fulton Company, Milwaukee, Wis., a corporation of Wisconsin
Application April 21, 1947, Serial No. 138,516
Term of patent 14 years
(Cl. D14—6)



The ornamental design for a vehicle windshield visor, substantially as shown and described.

152,739
DESIGN FOR A CONDIMENT SHAKER
Dale Arden Rode, Arkansaw, Wis.
Application April 22, 1947, Serial No. 138,534
Term of patent 3½ years
(Cl. D44—22)

The ornamental design for a condiment shaker, as shown.

152,740
DESIGN FOR A JUG
Emanuel M. Rosenthal, Detroit, Mich.
Application January 9, 1946, Serial No. 143,608
Term of patent 7 years
(Cl. D44—21)

The ornamental design for a jug, substantially as shown.

152,742

152,743

152,744

152,745

152,746

152,747

152,748

152,741
DESIGN FOR A JUG
Emanuel M. Rosenthal, Detroit, Mich.
Application January 9, 1948, Serial No. 143,610
Term of patent 7 years
(Cl. D44—21)

The ornamental design for a jug, substantially as shown.

152,742
DESIGN FOR A JUG
Emanuel M. Rosenthal, Detroit, Mich.
Application January 9, 1948, Serial No. 143,612
Term of patent 7 years
(Cl. D44—21)

The ornamental design for a jug, substantially as shown.

152,743
DESIGN FOR A JUG
Emanuel M. Rosenthal, Detroit, Mich.
Application January 9, 1948, Serial No. 143,614
Term of patent 7 years
(Cl. D44—21)

The ornamental design for a jug, substantially as shown.

152,744
DESIGN FOR A JUG
Emanuel M. Rosenthal, Detroit, Mich.
Application January 9, 1948, Serial No. 143,615
Term of patent 7 years
(Cl. D44—21)

The ornamental design for a jug, substantially as shown.

152,745
DESIGN FOR A JUG
Emanuel M. Rosenthal, Detroit, Mich.
Application January 9, 1948, Serial No. 143,616
Term of patent 7 years
(Cl. D44—21)

The ornamental design for a jug, substantially as shown.

152,746
DESIGN FOR A JUG
Emanuel M. Rosenthal, Detroit, Mich.
Application January 9, 1948, Serial No. 143,617
Term of patent 7 years
(Cl. D44—21)

The ornamental design for a jug, substantially as shown.

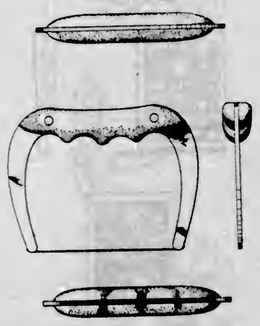
152,747
DESIGN FOR A COMBINATION PEN RACK AND DESK UNIT
Paul Rossi, Warren, Ohio
Application June 24, 1947, Serial No. 139,893
Term of patent 14 years
(Cl. D74—1)

The ornamental design for a combination pen rack and desk unit, as shown and described.

152,748
DESIGN FOR A RADIO AND TABLE CABINET COMBINATION
Wallace Schier, Forest Hills, and David L. Doggett, Mount Kisco, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 11, 1947, Serial No. 136,076
Term of patent 3½ years
(Cl. D56—4)

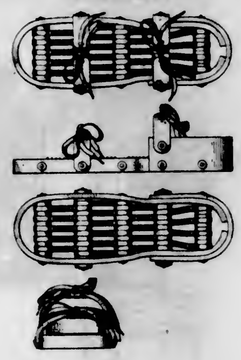
The ornamental design for a radio and table cabinet combination, substantially as shown and described.

152,749
DESIGN FOR A CHEESE SLICER OR THE LIKE
William Selikoff and William B. McBride, Buffalo, N. Y., assignors to Meteor Manufacturing Corp., Buffalo, N. Y., a corporation of New York
Application January 26, 1948, Serial No. 144,016
Term of patent 7 years
(Cl. D22—3)



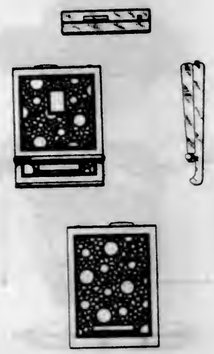
The ornamental design for a cheese slicer or the like, as shown.

152,750
DESIGN FOR AN UNDERSHOE
Harry Shapiro, Augusta, Ga.
Application October 29, 1948, Serial No. 149,379
Term of patent 14 years
(Cl. D7—7)



The ornamental design for an undershoe, substantially as shown.

152,751
DESIGN FOR A MATCH BOOK CASE
Robert Thomas Sporman, Essex County, N. J., assignor to The J. E. Mergott Co., Newark, N. J., a corporation of Delaware
Application January 22, 1948, Serial No. 143,976
Term of patent 3½ years
(Cl. D48—28)

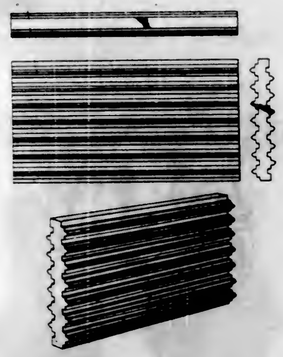


The ornamental design for a match book case, substantially as shown.

152,752
DESIGN FOR A NECKLACE OR LIKE ARTICLE
Harry Steinbach, New York, N. Y.
Application April 1, 1947, Serial No. 138,083
Term of patent 3½ years
(Cl. D45—16)

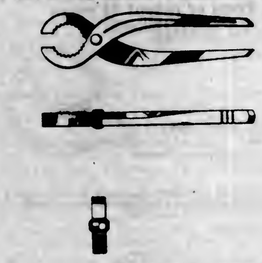
The ornamental design for a necklace or like article, substantially as shown and described.

152,753
DESIGN FOR A METAL ANODE
Joe A. Stone, Chicago, Ill., assignor of one-half to Millard A. Stone, Chicago, Ill.
Application October 2, 1946, Serial No. 133,694
Term of patent 14 years
(Cl. D26—1)



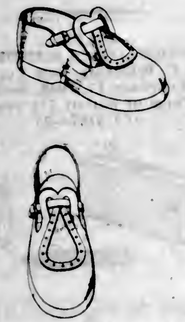
The ornamental design for a metal anode, as shown.

152,754
DESIGN FOR PLIERS
Kingston F. Swallow, Milwaukee, Wis.
Application April 19, 1947, Serial No. 138,503
Term of patent 14 years
(Cl. D54—13)



The ornamental design for pliers, as shown.

152,755
DESIGN FOR A SHOE
David Teitelbaum, New York, N. Y., assignor to Lasting Shoe Co. Inc., Brooklyn, N. Y., a corporation of New York
Application October 11, 1948, Serial No. 149,074
Term of patent 7 years
(Cl. D7—7)



The ornamental design for a shoe, as shown.

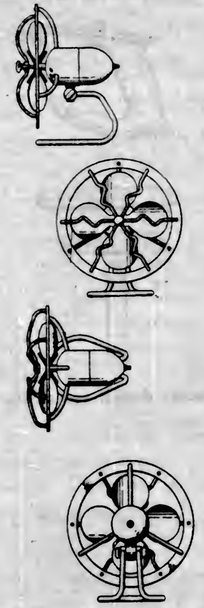
152,756
DESIGN FOR A BILLFOLD OR SIMILAR ARTICLE
Harry I. Thomas, Hagerstown, Md., assignor to The Hagerstown Leather Co., Hagerstown, Md., a corporation of Maryland
Application May 2, 1946, Serial No. 129,228
Term of patent 7 years
(Cl. D87—3)

The ornamental design for a billfold or similar article, substantially as shown and described.

152,757
DESIGN FOR A TAXICAB CRUISING LIGHT
Francis Joseph Toomey, Huntsville, Ohio, assignor to Edith G. Toomey, Huntsville, Ohio
Application December 15, 1947, Serial No. 143,143
Term of patent 7 years
(Cl. D48—32)

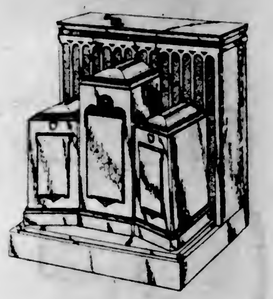
The ornamental design for a taxicab cruising light, substantially as shown.

152,758
DESIGN FOR AN ELECTRIC FAN
Herbert G. Ullman, Rochester, N. Y.
Application August 23, 1946, Serial No. 132,772
Term of patent 14 years
(Cl. D26—7)



The ornamental design for an electric fan, as shown.

152,759
DESIGN FOR AN URN UNIT FOR CREMATED REMAINS
William H. Warren, San Francisco, Calif.
Application November 9, 1946, Serial No. 134,677
Term of patent 14 years
(Cl. D19—1)

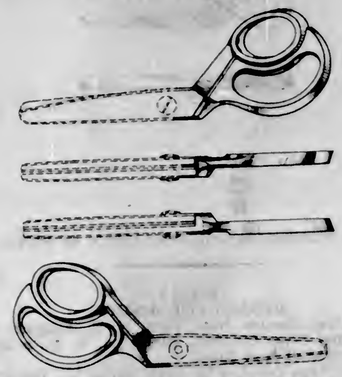


The ornamental design for an urn unit for cremated remains, substantially as shown.

152,760
DESIGN FOR A SAW HANDLE
Frank Weaver, Indianapolis, Ind., assignor to E. C. Atkins and Company, Indianapolis, Ind., a corporation of Indiana
Application March 6, 1947, Serial No. 137,391
Term of patent 14 years
(Cl. D92—4)

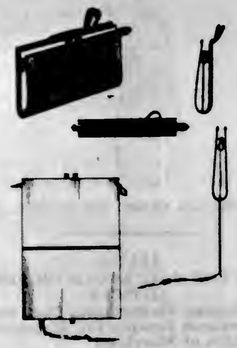
The ornamental design for a saw handle, as shown.

152,761
DESIGN FOR SHEARS
Henry C. Wheeler, Fairfield, Conn., assignor to The Acme Shear Company, Bridgeport, Conn., a corporation of Connecticut
Application February 17, 1948, Serial No. 144,536
Term of patent 14 years
(Cl. D22—5)



The ornamental design for shears, substantially as shown and described.

152,762
DESIGN FOR A HANDBAG
Albert C. Williams, New York, N. Y.
Application February 17, 1948, Serial No. 144,532
Term of patent 3½ years
(Cl. D87—3)



The ornamental design for a handbag, substantially as shown.

Detergent and wetting agent, Liquid, neutral, non-ionic. Haas-Miller Corporation. 435,525, Dec. 30, 1947. Republished Feb. 15.

Dish-washing preparation. J. B. Rosefield. 370,245, Aug. 22, 1939. Republished Feb. 15.

Emery cloth, emery wheels, sand paper, etc. National Co-Operatives, Inc. 377,731, May 14, 1940. Republished Feb. 15.

Shaving soap. Allen B. Wrisley Company. 506,794, Feb. 15; Serial No. 531,279.

Shoe polish. W. F. Boyer. 405,751, Feb. 22, 1944. Republished Feb. 15.

Soap, Cold cream. F. W. Woolworth Co. 360,644, Sept. 20, 1938. Republished Feb. 15.

Soap, Hand, facial soap, shaving cream, etc. The American Products Company. 250,755, renewed Dec. 18, 1948. O. G. Feb. 15.

Soap product, Powdered. G. H. Packwood Mfg. Co. 253,176, renewed Feb. 19, 1949. O. G. Feb. 15.

Soaps. Adams Lockwood and Company. 72,373, re-renewed Jan. 19, 1949. O. G. Feb. 15.

Washing powder. The Stevens-Wiley Manufacturing Co., Inc. 435,252, Dec. 16, 1947. Republished Feb. 15.

CLASS 5

Adhesive tape, Pressure sensitive. The Kendall Company. 435,666, Jan. 6, 1948. Republished Feb. 15.

Glue. McCormick & Company. 45,231, Aug. 8, 1905. Republished Feb. 15.

CLASS 6

Acid, Folic. F. J. Cox. 506,715, Feb. 15; Serial No.

Liquid composition for treating seed corn, beans, peas, etc. The Cedar Hill Formulae Co. 506,693, Feb. 15;

Preservative treating chemicals for fishnets. L. W. Schatz. 506,751, Feb. 15; Serial No. 548,763, published Oct. 19, 1948.

Rifles, machine guns and pistols, etc. Ceskoslovenska Zbrojovka, akciova spolecnost v. Brne. 245,178, renewed Aug. 7, 1948. O. G. Feb. 15.

CLASS 6

Acid, Folic. R. L. Guy. 506,716, Feb. 15; Serial No. 543,708, published Nov. 9, 1948.
Ammonia. National Ammonia Company, Inc. 250,515, renewed Dec. 11, 1948. O. G. Feb. 15.
Antacid preparation. The Wander Company. 506,792, Feb. 15; Serial No. 517,025.
Antacid preparation. Whitehall Pharmacal Company. 506,760, Feb. 15; Serial No. 550,107, published Nov. 2, 1948.
Anti-Histaminic preparations. William R. Warner & Co., Inc. 506,769, Feb. 15; Serial No. 550,881, published Sept. 21, 1948.
Bicarbonate of soda (baking soda). Church & Dwight Co. Inc. 506,745, Feb. 15; Serial No. 547,895, published Oct. 19, 1948.
Camphor, camphorated oil, glycerine, etc. Baker Extract Company. 506,639, Feb. 15; Serial No. 530,054, published Oct. 5, 1948.
Carbon tetrachloride. Parke, Davis & Company. 254,506, renewed Mar. 26, 1949. O. G. Feb. 15.
Chemical preparation used in the treatment of the hair and scalp. F. J. Robinson. 506,661, Feb. 15; Serial No. 535,040, published Nov. 2, 1948.
Chemicals, Textile treatment. J. G. Nathanson. 506,630, Feb. 15; Serial No. 528,502, published Nov. 9, 1948.
Chloride, Calcium. Michigan Alkali Company. 250,303, renewed Dec. 4, 1948. O. G. Feb. 15.
Clarifier, Solvent. The J. B. Ford Company. 251,060, renewed Dec. 25, 1948. O. G. Feb. 15.
Cleansing oil, Body. L. W. Horn. 506,702, Feb. 15; Serial No. 542,471, published Oct. 5, 1948.
Composition of matter. R. L. Schwartz. 506,752, Feb. 15; Serial No. 549,009, published Oct. 19, 1948.
Cough syrup. Sears, Roebuck and Co. 506,729, Feb. 15; Serial No. 545,173, published Oct. 26, 1948.
Cream for the face, hands, skin, etc. A. S. Hinds. 201,586, Aug. 4, 1925. Republished Feb. 15.
Creams, Toilet, hair oil, and deodorant. H. McHenry. 506,675, Feb. 15; Serial No. 537,059, published Oct. 19, 1948.

Dentifrices. J. J. Harris. 506,636, Feb. 15; Serial No. 528,718, published Sept. 28, 1948.
Deodorant, Body, body dusting powder, talcum powder, etc. J. E. McBrady & Co. 506,773, Feb. 15; Serial No. 551,124, published Oct. 26, 1948.
Dyes. E. I. du Pont de Nemours and Company. 506,775, Feb. 15; Serial No. 553,578, published Oct. 26, 1948.
Embalming fluid. H. F. Remmers. 506,706, Feb. 15; Serial No. 542,655, published Sept. 28, 1948.
Endocrine stimulant. G. W. Carnrick Co. 255,711, renewed Apr. 30, 1949. O. G. Feb. 15.
Face powder, lipstick, toilet water, etc. The Lander Co., Inc. 506,615, Feb. 15; Serial No. 518,468, published Oct. 5, 1948.
Face powder, perfume, eau de cologne, etc. Chanel, Inc. 195,359, Feb. 24, 1925. Republished Feb. 15.
Flax seed, mixed with other chemicals, Ground. J. H. Heal. 442,082, Feb. 15; Serial No. 509,286, published Nov. 9, 1948.
Fluid, Brake. Puritan Company, Incorporated. 506,660, Feb. 15; Serial No. 533,613, published Oct. 26, 1948.
Fluid, Hydraulic brake. J. Goldner. 506,616, Feb. 15; Serial No. 519,816, published Oct. 19, 1948.
Flux, Brazing. O. M. Krembs. 254,799, Apr. 2, 1929. Republished Feb. 15.
Food supplement, Vitamin and mineral compound. B. H. Stauffer. 506,717, Feb. 15; Serial No. 544,001, published Aug. 17, 1948.
Hair and beard preparations. The J. B. Williams Company. 37,452, Dec. 10, 1901. Republished Feb. 15.
Hair and scalp preparation. T. V. Rivers. 506,728, Feb. 15; Serial No. 548,038, published Oct. 26, 1948.
Hair dressings. Dusharme Products, Inc. 506,761, Feb. 15; Serial No. 550,130, published Oct. 26, 1948.
Herbicides. J. M. F. Chemical Company. 506,755, Feb. 15; Serial No. 549,151, published Sept. 14, 1948.
Hormone spray, Horticultural. The Sherwin-Williams Company. 506,790, Feb. 15; Serial No. 514,923.
Insecticides. W. R. Powell. 230,121, July 12, 1927. Republished Feb. 15.
Insecticides. Andrew Wilson, Inc. 506,677, Feb. 15; Serial No. 537,266, published Oct. 19, 1948.
Iodophenols in a gelatinous base. Pharmaceuticals, Inc. 506,747, Feb. 15; Serial No. 548,287, published Nov. 2, 1948.
Ion exchange compositions. National Aluminate Corporation. 506,626, Feb. 15; Serial No. 527,935, published Oct. 19, 1948.
Laxative medicines. C. E. Fulford, Limited. 506,665, Feb. 15; Serial No. 534,103, published Oct. 26, 1948.
Liniment. Dox, Inc. 506,650, Feb. 15; Serial No. 533,495, published Oct. 26, 1948.
Liniment. The Great American Tea Company. 506,767, Feb. 15; Serial No. 550,690, published Nov. 2, 1948.
Lipstick and cream rouge. Lillian Cooper Cosmetics, Ltd. 506,758, Feb. 15; Serial No. 549,514, published Nov. 2, 1948.
Lipsticks and nail enamels. Schnefel Bros. Corporation. 506,777, Feb. 15; Serial No. 553,909, published Oct. 26, 1948.
Liquid composition for treating seed corn, beans, peas, etc. The Cedar Hill Formulae Co. 506,693, Feb. 15; Serial No. 541,259, published Oct. 26, 1948.
Liquid compounds or solutions. Novadel-Agene Corporation. 506,652, Feb. 15; Serial No. 532,032, published Oct. 5, 1948.
Liquid preparation for the extermination of flies and mosquitoes. Joseph Triner Company. 178,317, Jan. 8, 1924. Republished Feb. 15.
Liquid preparation for the treatment of coughs, colds, and bronchial affections. Parke, Davis & Company. 254,509, renewed Mar. 26, 1949. O. G. Feb. 15.
Lotion, Medicinal skin. Texas Pharmacal Company. 506,671, Feb. 15; Serial No. 535,436, published July 20, 1948.
Medical preparations. C. Schumann. 228,284, May 31, 1927. Republished Feb. 15.
Medicated cream, Antiseptic. The Great American Tea Company. 506,762, Feb. 15; Serial No. 550,226, published Nov. 2, 1948.
Medicinal preparation. A. H. Kerr. 126,229, Aug. 5, 1919. Republished Feb. 15.
Medicinal preparation. The Upjohn Company. 506,749, Feb. 15; Serial No. 548,432, published Sept. 14, 1948.
Medicinal preparation. The Upjohn Company. 506,772, Feb. 15; Serial No. 551,066, published Oct. 26, 1948.
Medicinal preparation containing antacids. Burroughs Wellcome & Co. (U. S. A.) Inc. 506,637, Feb. 15; Serial No. 529,136, published Oct. 19, 1948.
Medicinal preparation in tablet form. E. J. Strasenburgh Company. 506,750, Feb. 15; Serial No. 548,698, published Sept. 14, 1948.
Medicine. J. Gimánes. 506,770, Feb. 15; Serial No. 550,911, published Nov. 2, 1948.
Medicines. W. & H. Walker, Inc. 249,263, renewed Nov. 13, 1948. O. G. Feb. 15.
Mercurial diuretic. Lakeside Laboratories, Inc. 506,726, Feb. 15; Serial No. 544,742, published Oct. 26, 1948.
Mouth wash. The Fair. 506,673, Feb. 15; Serial No. 536,367, published Oct. 5, 1948.
Mouth wash, Antiseptic astringent. The Great American Tea Company. 506,763, Feb. 15; Serial No. 550,228, published Nov. 2, 1948.
Ointment. The Corona Manufacturing Co. 506,642, Feb. 15; Serial No. 530,295, published Oct. 5, 1948.
Ointment, Cod liver oil, with medicinal gentian. R. J. Moran Co. 506,743, Feb. 15; Serial No. 547,648, published Oct. 26, 1948.
Ointment or medicament. Sperti, Inc. 506,679, Feb. 15; Serial No. 537,541, published Nov. 2, 1948.
Perfume. Chanel, Inc. 210,785, Mar. 23, 1926. Republished Feb. 15.
Perfume. Chanel, Inc. 210,787, Mar. 23, 1926. Republished Feb. 15.
Perfume. Chanel, Inc. 215,477, July 20, 1926. Republished Feb. 15.
Perfume. Chanel, Inc. 215,555, July 20, 1926. Republished Feb. 15.
Perfume. Chanel, Inc. 215,557-9, July 20, 1926. Republished Feb. 15.
Perfume and toilet water. Chanel, Inc. 233,406, Sept. 27, 1927. Republished Feb. 15.
Perfume, toilet water, and perfumed liquid bath preparation. Caron Corporation. 506,744, Feb. 15; Serial No. 547,898, published Nov. 2, 1948.

Preservative treating chemicals for fishnets. L. W. Schatz. 506,751, Feb. 15; Serial No. 548,763, published Oct. 19, 1948.
Pressing oil. L. Scott. 506,759, Feb. 15; Serial No. 549,973, published Oct. 26, 1948.
Pressor principle of the pituitary gland. Parke, Davis & Company. 254,507, renewed Mar. 26, 1949. O. G. Feb. 15.
Product containing the active principals of digitalis freed from inert material. Burroughs Wellcome & Co. (U. S. A.) Inc. 506,638, Feb. 15; Serial No. 529,138, published Oct. 19, 1948.
Propane and butane gas, Bottled. T. Bergman. 506,786, Feb. 15; Serial No. 500,989.
Riboflavin supplement. Publicker Industries Inc. 506,621, Feb. 15; Serial No. 526,592, published Nov. 2, 1948.
Sal soda. The J. B. Ford Company. 253,365, renewed Feb. 26, 1949. O. G. Feb. 15.
Sal soda. The J. B. Ford Company. 253,366, renewed Feb. 26, 1949. O. G. Feb. 15.
Scalp unction. E. Kulp. 506,645, Feb. 15; Serial No. 530,942, published Nov. 9, 1948.
Sedative, vasodilator, cardiotonic, and diuretic. Burroughs Wellcome & Co. (U. S. A.) Inc. 506,611, Feb. 15; Serial No. 500,559, published Oct. 5, 1948.
Silicate of soda. Philadelphia Quarts Company. 506,735-8; Feb. 15; Serial Nos. 547,392-5, published Nov. 2, 1948.
Silicate of soda. Philadelphia Quarts Company. 506,740, Feb. 15; Serial No. 547,397, published Nov. 2, 1948.
Silicate of soda. Philadelphia Quarts Company. 506,741-2, Feb. 15; Serial Nos. 547,398-400, published Nov. 2, 1948.
Silicate of soda. Philadelphia Quarts Company. 506,757, Feb. 15; Serial No. 549,319, published Oct. 26, 1948.
Silicate of soda and silicate of potash. Philadelphia Quarts Company. 506,739, Feb. 15; Serial No. 547,396, published Nov. 2, 1948.
Skin cream, hand cream, cleansing cream, etc. A. Breslauer Export Corp. 506,734, Feb. 15; Serial No. 546,351, published Oct. 26, 1948.
Soda ash, bicarbonate of soda, and caustic soda. Michigan Alkali Company. 32,438, re-renewed Jan. 31, 1949. O. G. Feb. 15.
Solution of sodium citrate, dextrose, and citric acid. Cutter Laboratories. 442,084, Feb. 15; Serial No. 512,291, published Oct. 19, 1948.
Solution which is an estrus stimulating principle derived from the placenta and used as an ovarian and sex stimulant. Harrower Laboratory, Inc. 506,786, Feb. 15; Serial No. 557,277, published Oct. 12, 1948.
Starch, Modified (i. e., oxidised or chlorinated). Anheuser-Busch, Inc. 506,753, Feb. 15; Serial No. 549,042, published Nov. 2, 1948.
Sulfonamide preparation. Smith, Kline & French Laboratories. 506,765, Feb. 15; Serial No. 550,624, published Oct. 26, 1948.
Sulphur. Stauffer Chemical Company. 506,781, Feb. 15; Serial No. 545,595, published Oct. 5, 1948.
Tablets, Aspirin, chocolate coated laxative tablets, headache tablets, etc. H. B. Laymon. 506,654, Feb. 15; Serial No. 532,304, published Oct. 26, 1948.
Tablets, Enteric-coated gland-product. Parke, Davis & Company. 254,001, renewed Mar. 12, 1949. O. G. Feb. 15.
Tablets for the relief of colds. The Grove Laboratories, Inc. 506,771, Feb. 15; Serial No. 550,920, published Oct. 19, 1948.
Tablets, Medicinal. Seeqit, Incorporated. 506,768, Feb. 15; Serial No. 550,835, published Nov. 2, 1948.
Talcum powder, dental cream, lipstick, etc. John H. Woodbury, Inc. 506,756, Feb. 15; Serial No. 549,203, published Oct. 26, 1948.
Toilet preparations. Dorothy Gray. 255,662, renewed Apr. 30, 1949. O. G. Feb. 15.
Toothpaste and tooth-wash. G. A. Swartwout. 71,723, re-renewed Dec. 15, 1948. O. G. Feb. 15.
Tooth powder. The Great American Tea Company. 506,764, Feb. 15; Serial No. 550,229, published Nov. 2, 1948.
Vitamin preparations, analgesics, hypnotics, etc. Parke, Davis & Company. 506,627-9 Feb. 15; Serial Nos. 528,093-5, published Oct. 5, 1948.
Water hardening composition. Wallerstein Company, Inc. 506,643, Feb. 15; Serial No. 530,449, published Sept. 28, 1948.

CLASS 7

Cords, lines, twines, etc. Samson Cordage Works. 255,329, renewed Apr. 23, 1949. O. G. Feb. 15.
Rope, Manila. The Edwin H. Fitler Co. 252,682, renewed Feb. 12, 1949. O. G. Feb. 15.

CLASS 8

Cigarette servers. Tippecanoe Novelty Corporation. 435,901, Jan. 13, 1948. Republished Feb. 15.

CLASS 9

Firecrackers. Balfour Guthrie & Co. 266,163, Jan. 14, 1930. Republished Feb. 15.
Matches, dynamite, fuses, etc. National Co-Operatives, Inc. 396,454, July 21, 1942. Republished Feb. 15.
Rifles, machine guns and pistols, etc. Ceskoslovenska Zbrojovka, akciova spolecnost v. Brne. 245,178, renewed Aug. 7, 1948. O. G. Feb. 15.

CLASS 10

Fertilisers. Chas. W. Priddy & Company, Incorporated. 255,285, renewed Feb. 26, 1949. O. G. Feb. 15.

CLASS 11

Carbon paper. De-Fi Manufacturing Company. 73,511, re-renewed Apr. 27, 1949. O. G. Feb. 15.
Ribbons, Typewriter, and carbon paper. The Carter's Ink Company. 254,586, renewed Mar. 26, 1949. O. G. Feb. 15.

CLASS 12

Airplane hangars, Prefabricated. Timber Structures, Inc. 506,795, Feb. 15; Serial No. 535,772.
Bituminous, Liquid, and semiliquid bituminous compounds and semiliquid bituminous compositions, etc. The Vortex Manufacturing Company. 238,654, renewed Feb. 14, 1948. O. G. Feb. 15.
Blocks, Building. The Celotex Corporation. 402,564, Aug. 8, 1943. Republished Feb. 15.
Brick, Insulating. The Denver Fire Clay Company. 387,653, May 27, 1941. Republished Feb. 15.
Bricks, blocks, and hollow tiles. C. A. Meade. 388,896, July 15, 1941. Republished Feb. 15.
Cement, Refractory high temperature. The Denver Fire Clay Company. 291,462, Feb. 9, 1932. Republished Feb. 15.
Composition to be applied to cement and concrete structures. J. M. Rauhoff. 88,948, Oct. 24, 1911. Republished Feb. 15.
Concrete, Light-weight refractory. The Denver Fire Clay Company. 386,236, Apr. 1, 1941. Republished Feb. 15.
Concrete, Refractory. The Denver Fire Clay Company. 329,690, Nov. 5, 1935. Republished Feb. 15.
Fiber board, Saturated. The Celotex Corporation. 369,564, Aug. 1, 1939. Republished Feb. 15.
Fire-brick material, Refractory. The Denver Fire Clay Company. 265,548, Dec. 31, 1929. Republished Feb. 15.
Gypsum plaster and gypsum board products. The Celotex Corporation. 411,665, Jan. 30, 1945. Republished Feb. 15.
Insulation, Ground paper. A. Joy. 506,798, Feb. 15; Serial No. 547,127.
Lath, Metal. Penn Metal Company. 255,434, renewed Apr. 23, 1949. O. G. Feb. 15.
Lathing, Metal. Penn Metal Company. 255,453-4, renewed Apr. 23, 1949. O. G. Feb. 15.
Lime, Construction. G. & W. H. Corson. 385,860, Mar. 18, 1941. Republished Feb. 15.
Slag aggregate, Expanded. The Celotex Corporation. 400,822, Apr. 6, 1943. Republished Feb. 15.
Wood veneer, Fabric backed. The Flexwood Company. 286,555, Sept. 1, 1931. Republished Feb. 15.

CLASS 13

Caster wheels. Faultless Caster Corporation. 386,026, Mar. 25, 1941. Republished Feb. 15.
Fastenings. Continental Screw Company. 414,317, June 5, 1945. Republished Feb. 15.
Plates, Heel, toe, and sole. Sacks-Barlow Foundries, Inc. 333,329, Mar. 17, 1936. Republished Feb. 15.
Plates, Toe, heel, and sole. Sacks-Barlow Foundries, Inc. 330,500, Dec. 3, 1935. Republished Feb. 15.
Sauce pans, roasters, casseroles, etc., Heavy cast metal. Century Metal Craft Corporation. 329,711, Nov. 5, 1935. Republished Feb. 15.
Screws. Continental Screw Company. 344,380, Mar. 23, 1937. Republished Feb. 15.
Sprinklers, Automatic, automatic sprinkler systems, waterflow alarm valves, etc. Globe Automatic Sprinkler Company. 304,990, July 25, 1933. Republished Feb. 15.
Tubing, Metal. Trent Tube Manufacturing Co. 419,388, Feb. 12, 1946. Republished Feb. 15.
Tubing, Metal. Trent Tube Manufacturing Co. 435,444, Dec. 30, 1947. Republished Feb. 15.
Washers, Spring. Philadelphia Steel and Wire Corporation. 411,571, Jan. 23, 1945. Republished Feb. 15.

CLASS 14

Alloys, Copper base. The Ajax Metal Company. 415,104, July 10, 1945. Republished Feb. 15.
Castings, Malleable-iron. Iowa Malleable Iron Company. 156,690, July 11, 1922. Republished Feb. 15.
Die cast parts. Mid-Western Die Casting Co. 435,552, Dec. 30, 1947. Republished Feb. 15.
Forgings. Atlantic Steel Company. 436,224, Jan. 27, 1948. Republished Feb. 15.
Ingots, and babbitt metal. The Ajax Metal Company. 120,320, Feb. 5, 1918. Republished Feb. 15.
Pieces of nickel. The International Nickel Company. 249,552, renewed Nov. 20, 1948. O. G. Feb. 15.
Spring metal, metal strip, and wire, High carbon. General Steel Warehouse Co., Inc. 371,713, Oct. 3, 1939. Republished Feb. 15.

CLASS 15

Oils and greases, Lubricating. Sunray Oil Corporation. 306,377, Sept. 19, 1933. Republished Feb. 15.
Oils, Hydrocarbon motor-fuel, lubricating oils and greases,

Lamps, Electrical. General Motors Corporation. 506,620, Feb. 15; Serial No. 521,065, published Oct. 19, 1948.
Lamps, Sun. Associated Merchandising Corporation. 506,694, Feb. 15; Serial No. 541,492, published Oct.

Camera and films, Photographic. Universal Camera Corporation. 306,159, Nov. 21, 1933. Republished Feb. 15.
Cameras. Universal Camera Corporation. 364,387, Jan. 31, 1939. Republished Feb. 15.
Cameras. Universal Camera Corporation. 369,618, Aug.

CLASS 27

Watches, clocks, watch-movements, etc. Eisenstadt Manufacturing Company. 112,876, Oct. 3, 1916. Republished Feb. 15.

CLASS 28

Bands, Wrist watch. The Ziploc Company. 506,703, Feb.

CLASS 15

Oils and greases, Lubricating. Sunray Oil Corporation. 306,377, Sept. 19, 1933. Republished Feb. 15.
Oils, Hydrocarbon motor-fuel, lubricating oils and greases, etc. The Pure Oil Company. 252,550, renewed Feb. 12, 1949. O. G. Feb. 15.
Oils, Hydrocarbon motor-fuel, lubricating oils and greases, etc. The Pure Oil Company. 254,907, renewed Apr. 2, 1949. O. G. Feb. 15.
Oils, Hydrocarbon motor-fuel, lubricating oils, etc. The Pure Oil Company. 252,484, renewed Feb. 12, 1949. O. G. Feb. 15.
Oils, Hydrocarbon motor-fuel, lubricating oils, etc. The Pure Oil Company. 252,544–6, renewed Feb. 12, 1949. O. G. Feb. 15.
Oils, Hydrocarbon motor-fuel, lubricating oils, etc. The Pure Oil Company. 252,585, renewed Feb. 12, 1949. O. G. Feb. 15.

CLASS 16

Enamels, Paint, and flat paints. The Gilbert Spruance Company. 251,626, renewed Jan. 8, 1949. O. G. Feb. 15.
Finishes, General industrial. Grand Rapids Varnish Corporation. 373,618, Dec. 12, 1939. Republished Feb. 15
Floor-paint. The A. Bursdal Company. 72,852, re-renewed Mar. 2, 1949. O. G. Feb. 15.
Paint, Non-drying. Inertol Co., Inc. 394,796, Apr. 28, 1942. Republished Feb. 15.
Paint or enamel coating, Waterproofing and protective. Inertol Co., Inc. 387,383–4, May 13, 1943. Republished Feb. 15.
Paint or enamel coating, Waterproofing and protective. Inertol Co., Inc. 402,389, Aug. 3, 1943. Republished Feb. 15.
Paint or enamel coating, Waterproofing and protective. Inertol Co., Inc. 402,715, Aug. 10, 1943. Republished Feb. 15.
Paints and varnishes, Ready-mixed. Varnish Products Co. 233,524, Oct. 4, 1927. Republished Feb. 15.
Paints, varnishes, and paint enamels, Ready mixed. National Co-Operatives, Inc. 358,787, July 26, 1938. Republished Feb. 15.
Polish for furniture, automobiles, and finished surfaces, Cleaning. Grand Rapids Varnish Corporation. 422,772, Aug. 13, 1946. Republished Feb. 15.
Spray oil and polish. C-Z Chemical Company. 417,867, Nov. 20, 1945. Republished Feb. 15.
Stains, Wood. Grand Rapids Varnish Corporation. 329,821, Nov. 12, 1935. Republished Feb. 15.
Stains, Wood, paste fillers, liquid sealers, liquid lacquers, varnishes, etc. Jamestown Finishing Products, Inc. 442,086, Feb. 15; Serial No. 497,796.

CLASS 17

Cigars, cigarettes, smoking tobacco, etc. National Co-Operatives, Inc. 377,941, May 21, 1940. Republished Feb. 15.
Tobacco, Smoking. Christian Peper Tobacco Company. 435,924, Jan. 13, 1948. Republished Feb. 15.

CLASS 19

Dollies, Trailer. Wilson Trailer Co. Inc. 506,793, Feb. 15; Serial No. 517,279.
Mirrors and parts therefor, Rear vision, exhaust pipe gas deflectors, and gas tank caps. Robins-Berke Co. 425,955, Dec. 10, 1946. Republished Feb. 15.
Trucks, Dolly. A. S. Campbell Co., Inc. 402,246, July 13, 1943. Republished Feb. 15.

CLASS 20

Rugs, mats, and floor covering, Felt base. Congoleum-Nairn Inc. 319,427, Nov. 27, 1934. Republished Feb. 15.

CLASS 21

Alarm bell and control instruments and parts thereof, Electric. American Electrical Corporation of Massachusetts. 506,684, Feb. 15; Serial No. 540,017, published Oct. 26, 1948.
Automobile accessories. Inter-State Auto Parts Co., Inc. 249,737, renewed Nov. 20, 1948. O. G. Feb. 15.
Capacitors, Electrical. Solar Manufacturing Corporation. 506,619, Feb. 15; Serial No. 520,359, published Oct. 19, 1948.
Capacitors, Paper tubular. Solar Manufacturing Corporation. 506,612, Feb. 15; Serial No. 510,900, published Oct. 19, 1948.
Circuit breakers, Single pole switch, and double pole junction boxes and safety feeder switches, etc. The Ohio Brass Company. 506,618, Feb. 15; Serial No. 520,053, published Oct. 19, 1948.
Condensers, Electric. Aerovox Corporation. 506,724, Feb. 15; Serial No. 544,645, published Nov. 2, 1948.
Conducting wire, Electrical. Essex Wire Corporation. 428,996, Apr. 15, 1947. Republished Feb. 15.
Fixtures for germicidal lamps. Venture Manufacturing Company. 506,789, Feb. 15; Serial No. 501,350.
Furnaces, Electric. The Ajax Metal Company. 416,392, Sept. 11, 1945. Republished Feb. 15.
Heaters, Radiant electric. The Anderson-Pitt Corporation. 255,452, renewed Apr. 23, 1949. O. G. Feb. 15.
Lamps, Electrical. General Motors Corporation. 506,630, Feb. 15; Serial No. 521,068, published Oct. 19, 1948.
Lamps, Sun. Associated Merchandising Corporation. 506,694, Feb. 15; Serial No. 541,492, published Oct. 26, 1948.
Lighting, Automotive, and safety appliances. Noma Electric Corporation. 506,674, Feb. 15; Serial No. 536,529, published Nov. 2, 1948.
Lighting fixtures, Electric, and luminous signs. Moore-Montroy Electric Co. 506,631, Feb. 15; Serial No. 528,576, published Nov. 2, 1948.
Lighting fixtures, Electric, electric lamps, gaseous conduction lamps, etc. Zeon. 506,625, Feb. 15; Serial No. 527,559, published Oct. 19, 1948.
Motors, Electric. Raytheon Manufacturing Company. 506,701, Feb. 15; Serial No. 541,964, published Aug. 31, 1948.
Motors, Electric. Star Electric Motor Company. 421,184, May 21, 1946. Republished Feb. 15.
Phonographs, radio-phonograph combinations and parts of electric phonographs, etc., Electric. Westinghouse Electric Corporation. 506,647, Feb. 15; Serial No. 530,997, published Oct. 26, 1948.
Radio receiving sets and parts thereof. Oakes & Company. 506,687, Feb. 15; Serial No. 540,561, published Sept. 7, 1948.
Storage batteries. Hobbs Battery Company. 506,698, Feb. 15; Serial No. 541,678, published Oct. 26, 1948.
Storage batteries. Standard Electric Company, Inc. 506,668, Feb. 15; Serial No. 534,829, published Oct. 26, 1948.
Switch plates, Molded industrial plastic electric. Penn-Plastics Corporation. 506,657, Feb. 15; Serial No. 532,752, published Oct. 19, 1948.
Switches, relays, solenoids, etc., Electrical. Essex Wire Corporation. 418,361, Dec. 18, 1945. Republished Feb. 15.
Transducers, Mechanoelectric energy. Sonotone Corporation. 506,727, Feb. 15; Serial No. 544,921, published Nov. 2, 1948.

CLASS 22

Basketballs. A. G. Spalding & Bros. Inc. 506,689, Feb. 15; Serial No. 541,034, published Oct. 5, 1948.
Basketballs. Sport Products, Inc. 506,646, Feb. 15; Serial No. 530,974, published Oct. 5, 1948.
Billiard balls. Albany Billiard Ball Company. 506,685, Feb. 15; Serial No. 540,235, published Oct. 5, 1948.
Exercising apparatus. Fred Medart Manufacturing Company. 73,640, re-renewed May 4, 1949. O. G. Feb. 15.
Fishing lines. B. F. Gladding & Co. Inc. 506,622, Feb. 15; Serial No. 527,062, published Oct. 5, 1948.
Games, Question and answer, card games, table board games, etc. Quiz Kids, Inc. 390,568, Sept. 30, 1941. Republished Feb. 15.
Tennis rackets, baseballs, footballs, etc. A. G. Spalding & Bros. Inc. 506,690, Feb. 15; Serial No. 541,041, published Oct. 5, 1948.
Toy pistols. The Kilgore Manufacturing Company. 336,461, July 7, 1936. Republished Feb. 15.
Toy scooters. American Metalcraft Corporation. 432,128, Aug. 19, 1947. Republished Feb. 15.

CLASS 23

Ageing machines, atomizers, boiling machines, etc. H. W. Butterworth and Sons Company. 435,441, Dec. 30, 1947. Republished Feb. 15.
Milking machines, including parts and appurtenances thereof. The Universal Milking Machine Company. 399,017, Dec. 5, 1942. Republished Feb. 15.
Presses, Power, bench presses, punching presses, etc. The V & O Press Company, Incorporated. 426,895–6, Apr. 8, 1947. Republished Feb. 15, 1949.
Pulverizing and crushing apparatus. The Jeffrey Manufacturing Company. 255,648, renewed Apr. 30, 1949. O. G. Feb. 15.
Razor blades. The May Department Stores Company. 248,506, renewed Oct. 23, 1948. O. G. Feb. 15.
Spinning machines, Electrically driven. H. W. Butterworth and Sons Company. 435,474, Dec. 30, 1947. Republished Feb. 15.

CLASS 24

Clothespins. George W. Simmons Corporation. 260,493, Aug. 27, 1929. Republished Feb. 15.
Sad-irons. The Enterprise Manufacturing Company of Pennsylvania. 60,517, Feb. 12, 1907. Republished Feb. 15.
Washing machines, Electric and gasoline motored, and electric ironers. National Co-Operatives, Inc. 368,016, Mar. 28, 1939. Republished Feb. 15.
Washing machines, Laundry. Eastern Outfitting Co. of Los Angeles Calif. 306,884, Sept. 26, 1933. Republished Feb. 15.

CLASS 26

Analyzers, Motor. Atlas Supply Company. 506,651, Feb. 15; Serial No. 531,757, published Sept. 28, 1948.
Articles of refractory material. Champion Porcelain Company. 251,784, renewed Jan. 15, 1949. O. G. Feb. 15.

Camera and films, Photographic. Universal Camera Corporation. 306,159, Nov. 21, 1933. Republished Feb. 15.
Cameras. Universal Camera Corporation. 364,387, Jan. 31, 1939. Republished Feb. 15.
Cameras. Universal Camera Corporation. 369,618, Aug. 1, 1939. Republished Feb. 15.
Charts and graphs, Renewable wall. Visi-Trol Corporation. 506,606, Feb. 15; Serial No. 502,358, published Sept. 28, 1948.
Control apparatus. Minneapolis-Honeywell Regulator Company. 506,705, Feb. 15; Serial No. 542,622, published Oct. 19, 1948.
Dairy, hog, and poultry equipment. Sears, Roebuck and Co. 417,822, Nov. 20, 1945. Republished Feb. 15.
Film, Photographic. Universal Camera Corporation. 308,158, Nov. 21, 1933. Republished Feb. 15.
Film, Sensitised photographic. The Di-Noc Manufacturing Company. 416,407, Sept. 11, 1945. Republished Feb. 15.
Frames, Eyeglass and spectacle. The Kono Manufacturing Company. 506,704, Feb. 15; Serial No. 542,593, published Oct. 5, 1948.
Frames, Eyeglass and spectacle. The Kono Manufacturing Co. 506,718, Feb. 15; Serial No. 544,169, published Oct. 26, 1948.
Frames, Optical. Marine Optical Mfg. Co. 506,614, Feb. 15; Serial No. 517,501, published Sept. 28, 1948.
Frames, Optical, and mountings, optical lenses, etc. The Walman Optical Company. 506,653, Feb. 15; Serial No. 532,072, published Sept. 28, 1948.
Frames, Spectacle. Newport Optical Manufacturing Co., Inc. 506,613, Feb. 15; Serial No. 517,082, published Sept. 28, 1948.
Furnaces for laboratory uses, Electric. Ajax Electrothermic Corporation. 413,028, Apr. 3, 1945. Republished Feb. 15.
Gages and accessories thereof, Liquid level. Jerguson Gage & Valve Company. 506,748, Feb. 15; Serial No. 546,375, published Oct. 26, 1948.
Lenses and edge finishes, Eyeglass. N. P. Benson Optical Company Inc. 375,872, Mar. 5, 1940. Republished Feb. 15.
Lenses, Camera. Universal Camera Corporation. 369,979, Aug. 8, 1939. Republished Feb. 15.
Lenses, frames, mountings, etc., Ophthalmic. The White-Haines Optical Company. 506,678, Feb. 15; Serial No. 537,383, published Oct. 19, 1948.
Lenses, Objective. Bausch & Lomb Optical Company. 506,723, Feb. 15; Serial No. 544,531, published Oct. 26, 1948.
Lenses, Telephoto, photographic lenses, and cameras. Universal Camera Corporation. 377,742, May 14, 1940. Republished Feb. 15.
Machines used for determining and correcting the static or dynamic balance, or both, of automobile wheels, etc. R. A. Kennedy. 506,650, Feb. 15; Serial No. 531,682, published Sept. 28, 1948.
Measuring-faucets and measuring-pumps. The Enterprise Manufacturing Company of Pennsylvania. 59,604, Jan. 15, 1907. Republished Feb. 15.
Photographic and dark-room apparatus, accessories and specialties. Raygram Corporation. 506,655–6, Feb. 15; Serial Nos. 532,495–6, published Oct. 26, 1948.
Photographic paper, Sensitised. General Aniline & Film Corporation. 506,669, Feb. 15; Serial No. 535,025, published Oct. 19, 1948.
Projectors and parts thereof, Motion picture. Century Projector Corporation. 435,878, Jan. 13, 1948. Republished Feb. 15.
Projectors, Picture, and combined phonographs and projectors. Operadio Manufacturing Co. 506,714, Feb. 15; Serial No. 543,212, published Oct. 26, 1948.
Protractors. E. P. Bugge. 506,722, Feb. 15; Serial No. 544,321, published Oct. 26, 1948.
Recorders, Watch rate. American Time Products, Inc. 378,441, June 11, 1940. Republished Feb. 15.
Recording galvanometers, amplifiers, cameras, etc., Sound picture film. Berndt-Bach, Incorporated. 506,670, Feb. 15; Serial No. 535,123, published Oct. 5, 1948.
Ruler, Adjustable curved. Cook Specialty Company. 506,707, Feb. 15; Serial No. 543,098, published Oct. 26, 1948.
Scales, Weighing. Rock-Ola Manufacturing Corporation. 506,699, Feb. 15; Serial No. 541,786, published Oct. 19, 1948.
Scoops, Measuring. The Robson Corporation. 506,725, Feb. 15; Serial No. 544,676, published Oct. 26, 1948.
Tapes for measuring purposes, Graduated steel. Master Rule Manufacturing Co., Inc. 506,661, Feb. 15; Serial No. 533,761, published Oct. 26, 1948.
Tapes for measuring purposes, Graduated steel. Master Rule Manufacturing Co., Inc. 506,662, Feb. 15; Serial No. 533,763, published Oct. 26, 1948.
Tapes for measuring purposes, Graduated steel. Master Rule Manufacturing Co., Inc. 506,663, Feb. 15; Serial No. 533,764, published Oct. 26, 1948.
Testers, Headlight. Kent-Moore Organization Inc. 374,135, Jan. 2, 1940. Republished Feb. 15.
Thermostatic temperature controls. H. T. Kueers. 506,617, Feb. 15; Serial No. 519,961, published Sept. 28, 1948.

CLASS 27

Watches, clocks, watch-movements, etc. Eisenstadt Manufacturing Company. 112,876, Oct. 3, 1916. Republished Feb. 15.

CLASS 28

Bands, Wrist watch. The Ziploc Company. 506,703, Feb. 15; Serial No. 542,497, published Oct. 26, 1948.
Bowls, dishes, flower holders, etc. The Napier Company. 506,688, Feb. 15; Serial No. 540,854, published Oct. 26, 1948.
Bracelets and wristlets. Eisenstadt Manufacturing Company. 174,889, Oct. 23, 1923. Republished Feb. 15.
Bracelets, Ladies'. M. C. Poole. 506,667, Feb. 15; Serial No. 534,555, published Oct. 26, 1948.
Buckles, Belt, necktie pins, necktie clasps, etc. Ricardo Metal Mfg. Co. 506,692, Feb. 15; Serial No. 541,182, published Oct. 26, 1948.
Flatware, Sterling silver, hollow ware, and table cutlery. Gorham Manufacturing Company. 506,607, Feb. 15; Serial No. 503,081, published Oct. 26, 1948.
Flatware, Sterling silver, hollow ware, and table cutlery. Gorham Manufacturing Company. 506,608, Feb. 15; Serial No. 503,083, published Oct. 26, 1948.
Flatware, Sterling silver, hollow ware, and table cutlery. Gorham Manufacturing Company. 506,609, Feb. 15; Serial No. 503,091, published Oct. 26, 1948.
Hollow ware. W. & S. Blackinton Co., Inc. 506,686, Feb. 15; Serial No. 540,243, published Oct. 26, 1948.
Hollow ware and flat ware, Sterling silver. The Fisher Silversmiths, Inc. 506,664, Feb. 15; Serial No. 534,010, published Oct. 26, 1948.
Jewelry. Dolan & Bullock Co. 506,632–3, Feb. 15; Serial Nos. 528,703–4, published Oct. 26, 1948.
Jewelry. Dolan & Bullock Co. 506,634–5, Feb. 15; Serial Nos. 528,707-8, published Oct. 26, 1948.
Jewelry. Joseff-Hollywood. 506,658, Feb. 15; Serial No. 532,830, published Oct. 26, 1948.
Jewelry, Lawrence Mfg., Inc. 413,315, Apr. 17, 1945. Republished Feb. 15.
Jewelry. Lawrence Mfg., Inc. 431,432, July 22, 1947. Republished Feb. 15.
Jewelry. F. H. Noble & Co. 506,644, Feb. 15; Serial No. 530,553, published Oct. 26, 1948.
Jewelry, R. S. Schwachter. 506,666, Feb. 15; Serial No. 534,198, published Oct. 26, 1948.
Jewelry, Diamond-set. D. C. Percival & Co., Inc. 279,115, Jan. 6, 1931. Republished Feb. 15.
Knives, forks, spoons, etc. Rogers, Lunt & Bowlen Company. 506,732, Feb. 15; Serial No. 545,769, published Oct. 26, 1948.
Necklaces, bracelets, brooches, etc. The Napier Company. 506,691, Feb. 15; Serial No. 541,166, published Oct. 26, 1948.
Pins, jewelry clips, hair ornaments, etc., Ornamental. Coro, Inc. 506,683, Feb. 15; Serial No. 538,726, published Oct. 26, 1948.
Rings, Finger. Biancard & Company, Inc. 251,816, renewed Jan. 15, 1949. O. G. Feb. 15.
Rings, Wedding. Alfred Humbert & Son. 193,226–7, Dec. 23, 1924. Republished Feb. 15.

CLASS 29

Brooms, whisk brooms, scrubbing brushes, etc. National Co-Operatives, Inc. 375,085, Feb. 6, 1940. Republished Feb. 15.
Toothbrushes. Owens Brush Company. 506,640–1, Feb. 15; Serial Nos. 530,246–7, published Oct. 5, 1948.

CLASS 30

Pottery, crockery, earthenware, etc. John Wanamaker New York. 263,526, Nov. 5, 1929. Republished Feb. 15.

CLASS 31

Coolers, Milk, and milk filter discs. Sears, Roebuck and Co. 422,641, Aug. 6, 1946. Republished Feb. 15.
Filters, Sisal pad. Armaly Sponge & Chamois Co. Inc. 408,929, Sept. 5, 1944. Republished Feb. 15.
Refrigerators and ice boxes. Hecht & Company. 120,101, Jan. 8, 1918. Republished Feb. 15.
Refrigerators, Electric. National Co-Operatives, Inc. 361,160, Oct. 11, 1938. Republished Feb. 15.

CLASS 32

Cabinets, Filing, and filing cabinet drawers. Acme Visible Records, Inc. 435,709, Jan. 6, 1948. Republished Feb. 15.
Guards for the sides of cribs, Bumper and draft. Rose-Derry Company. 418,134, Dec. 4, 1945. Republished Feb. 15.
Mattress with wetproof lining, pillow, and coverlet, Combination. Rose-Derry Company. 404,631–2, Dec. 7, 1943. Republished Feb. 15.

CLASS 33

Wheeler, Henry C., Fairfield, assignor to The Acme Shear Company, Bridgeport, Conn. Shears. 152,761, Feb. 15.
Williams, Albert C., New York, N. Y. Handbag. 152,762, Feb. 15.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 15TH DAY OF FEBRUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acme Steel Company, assignee: *See*—
Spiller, William E., and Barley.
Adamczyk, Alojzy, New York, N. Y. Motor propelled toy vehicle. 2,461,672, Feb. 15.
Adams, Harold E., assignor to Nash Engineering Company, South Norwalk, Conn. Pump. 2,461,865, Feb. 15.
Adams, Harold S.: *See*—
Worth, Arthur A., and Adams.
Adsorptive Process Company, assignee: *See*—
Smith, Arthur D.
Aerojet Engineering Corporation, assignee: *See*—
Zwicky, Fritz.
Aeroquip Corporation, assignee: *See*—
Zeeb, Stanley H.
Aerotec Corporation, The, assignee: *See*—
Burdock, Joseph L., Best, and McBride.
Agriculture, the United States of America as represented by the Secretary of, assignee: *See*—
Lathrop, Elbert C., and Aronovsky.
Air Reduction Company, Incorporated, assignee: *See*—
Anderson, Nelson E.
Ajax, Eric J.: *See*—
McLelland, William H., and Ajax.
Aktiebolaget Superior, assignee: *See*—
Hedman, Evert B.
Alikas, Nicholas, Plainville, Conn. Footrest. 2,461,622, Feb. 15.
Alldredge, Marshall H., Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio. Joint. 2,461,866, Feb. 15.
Allen, Robert R., assignor to Custom Scientific Instruments, Inc., Arlington, N. J. Microtome blade holder. 2,461,821, Feb. 15.
Allin, Frederick R., Euclid, and F. D. Wyss, Cleveland Heights, assignors to The Weatherhead Company, Cleveland, Ohio. Trailer hand control for power brakes. 2,461,712, Feb. 15.
Alpak, assignee: *See*—
Crane, Walton B. and W. B., Jr.
American Can Company, assignee: *See*—
Martin, William M., Pilinik, and Wobbe.
American Cyanamid Company, assignee: *See*—
Booth, Robert B., and Herkenhoff.
Herrick, Guy S.
Thurston, Jack T.
American Hardware Corporation, The, assignee:
Grigaitunas, Joseph G.
American Optical Company, assignee: *See*—
Finegan, John C.
Schanweker, George H.
American Safety Razor Corporation, assignee: *See*—
Nelson, Edgar A.
American Viscose Corporation, assignee: *See*—
Bouvet, Rene.
De Brabander, Camiel.
Decker, Ferdinand A., Jr.
Hollihan, John P., Jr.
Stanley, Richard W.
American Woolen Company, assignee: *See*—
Worth, Arthur A., and Adams.
Andersen, Axel B., Larchmont, and K. Horn, assignors to F. L. Smidth & Co., New York, N. Y. Air separation method for slurry separation. 2,461,584, Feb. 15.
Anderson, Nelson E., Scotch Plains, N. J., assignor to Air Reduction Company, Incorporated. Tracer with power-driven steerable traction wheel. 2,461,585, Feb. 15.
Anderson, Nelson R., Scotch Plains, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y. Automatic arc startar. 2,461,798, Feb. 15.
Anschicks, Rudolph J., C. Widell, and J. R. Mantsh, assignors to Prismacolor, Inc., Chicago, Ill. Multiple lens light control for projectors. 2,461,673, Feb. 15.
Apex Electrical Manufacturing Co., The, assignee: *See*—
Harris, Thomas, and Swilk.
Argus, Incorporated, assignee: *See*—
McLelland, William H., and Ajax.
Armerding, George D., Oak Park, Ill., assignor to Mojonnier Bros. Co. Visual observation and silhouette projection apparatus. 2,461,623, Feb. 15.
Armstrong, Walter, Washington, D. C. Detecting and measuring radiant energy for locating subterranean petroleum deposits. 2,461,799, Feb. 15.
Armstrong, Walter, Washington, D. C. Apparatus for detecting and measuring radiant energy for locating subterranean petroleum deposits. 2,461,800, Feb. 15.
Armstrong, Walter, Washington, D. C. Apparatus and method for detecting and measuring radiant energy for locating subterranean petroleum deposits. 2,461,801, Feb. 15.
Armstrong, Walter, Washington, D. C. Apparatus and method for detecting and measuring radiant energy for locating subterranean petroleum deposits. 2,461,802, Feb. 15.
Armstrong, Walter, Washington, D. C. Apparatus and method for detecting and measuring radiant energy for locating subterranean petroleum deposits. 2,461,803, Feb. 15.
Aronovsky, Samuel I.: *See*—
Lathrop, Elbert C., and Aronovsky.
Aronson, William, New York, N. Y. Centrifuge apparatus for obtaining blood plasma. 2,461,674, Feb. 15.
Art metal Construction Company, assignee: *See*—
Jones, James R.
Athey Products Corporation, assignee: *See*—
Nadherny, Russell J.
Atwood, Wilfrid L., Newton Lower Falls, Mass., assignor to The Girdler Corporation, Louisville, Ky. Variable inductance device. 2,461,804, Feb. 15.
Automatic Electric Laboratories, Inc., assignee: *See*—
McCreary, Harold J.
Autophon Aktiengesellschaft, assignee: *See*—
Tschumi, Otto.
Avco Manufacturing Corporation, assignee: *See*—
Bass, Harland A.
Avila, Frank W., Columbia City, Ind., assignor to International Harvester Company. Vehicle axle suspension. 2,461,867, Feb. 15.
Ayers, Fred L., Watertown, Mass., assignor of twenty-two one-hundredths to C. G. Keferstein, New York, N. Y. Innersole and making the same. 2,461,713, Feb. 15.
Backlin, Clarence R.: *See*—
Wonnacott, Norman, and Backlin.
Baecher, Bernard J., Brooklyn, N. Y. Electronic relay transmitter and receiver self-synchronous system. 2,461,511, Feb. 15.
Baird, Roland W., Dallas, Tex. Dough molding machine attachment. 2,461,868, Feb. 15.
Bakewell, William E., assignor to Viking Pump Company, Cedar Falls, Iowa. Sanitary pump. 2,461,624, Feb. 15.
Balton, James, Baltimore, Md. Stapling machine. 2,461,869, Feb. 15.
Bargmeyer, Ernest G., Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y. Compounding copolymers of butadiene and styrene. 2,461,953, Feb. 15.
Bargmeyer, Ernest G., Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y. Manufacture of butadiene-styrene copolymer cements. 2,461,954, Feb. 15.
Barker, Parrish, Temple City, Calif. Airplane wing arrangement. 2,461,805, Feb. 15.
Barley, Leo D.: *See*—
Spiller, William R., and Barley.
Barnes, Evander B., Cody, Wyo. Flow barrel. 2,461,512, Feb. 15.
Barnes, Stuart C., Detroit, Mich. No-draft ventilating window for automobiles. 2,461,955, Feb. 15.
Barrows, Clarence G., Hamden, Conn., assignor to The Safety Car Heating and Lighting Company, Inc. Window shade construction. 2,461,870, Feb. 15.
Bass, Harland A., Mount Healthy, assignor to Avco Manufacturing Corporation, Cincinnati, Ohio. Relaxation oscillator capacitance multivibrator. 2,461,871, Feb. 15.
Bastian-Blessing Company, The, assignee: *See*—
Sundstrom, Savin L.
Baxter Laboratories, Inc., assignee: *See*—
Nesset, Maurice M.
Beatty, Elmer W., assignor of one-half to I. W. Millard, Danville, Ill. Finger cot. 2,461,872, Feb. 15.
Beckwith, Robert W., Syracuse, N. Y., assignor to General Electric Company. Frequency response circuits. 2,461,956, Feb. 15.
Beeh, Louis, Long Meadow, Mass., assignor to Bulova Watch Company, Inc., New York, N. Y. Expansible plunger. 2,461,873, Feb. 15.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Christensen, Carl J., Rigterink, and Treptow.
Meacham, Larned A.
Benson, George O., assignor to Chisholm-Ryder Company, Incorporated, Niagara Falls, N. Y. Telescopic structure. 2,461,625, Feb. 15.
Berestneff, Alexis A., assignor to Carrier Corporation, Syracuse, N. Y. Control arrangement for absorption refrigeration systems. 2,461,513, Feb. 15.
Berg, Christy L., St. Louis, Mo. Lowering and handling apparatus for burial vaults. 2,461,675, Feb. 15.
Berg, Emanuel, assignee: *See*—
Fox, Cecil M.

Berger, Paul, Chicago, Ill., assignor, by mesne assignments, of one-half to H. Epstein and one-half to L. R.

Buxton, Loran O., Maplewood, and C. E. Dryden, East Orange, assignors to Nopco Chemical Company, Har-

Coffman, Donald D. and R. D. Cramer, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. De-

Davis, Adolph H.: *See*—
Hartley, Albert L., and Davis.
Davis, Garland H. B., Elizabeth, N. J., assignor to

Berger, Paul, Chicago, Ill., assignor, by mesne assignments, of one-half to H. Epstein and one-half to L. R. Duman. Transformer. 2,461,957, Feb. 15.
Bersworth, Frederick C., Verona, N. J. Producing carboxylic substituted aliphatic amines and metallic salts thereof. 2,461,519, Feb. 15.
Best, Philip F.: *See—*
 Burdock, Joseph L., Best, and McBride.
Betz Corporation, assignee: *See—*
 Boyle, John R.
Betz, Paul L., assignor to Consolidated Gas Electric Light and Power Company of Baltimore, Baltimore, Md. Safety control for gaseous fuel burners. 2,461,714, Feb. 15.
Biggerstaff, Andrew G. Rumson, N. J. Child's table. 2,461,715, Feb. 15.
Blackburn, Virgil A.: *See—*
 Schaldach, Alvin J., and Blackburn.
Blandford, Joseph H.: *See—*
 Leonard, Alfred H., and Blandford.
Blatt, Leland F., Detroit, Mich. Adjustable drill guide and pilot. 2,461,716, Feb. 15.
Boeckeler, B. Clark, assignee: *See—*
 Lowen, Leslie.
Boelsums, Willem F., Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Condenser motor. 2,461,717, Feb. 15.
Bohlen, Charles, Jr., Jenkintown, Pa. Vehicle spring. 2,461,874, Feb. 15.
Bonnell, Leonard S., Westfield, N. J., assignor to Standard Oil Development Company. Treating hydrocarbon fluids. 2,461,958, Feb. 15.
Booth, James H., Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio. Joint. 2,461,626, Feb. 15.
Booth, Robert B., Springdale, and E. C. Herkenhoff, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Froth flotation of iron ores. 2,461,875, Feb. 15.
Borel, André, Paris, France. Chromatic harmonicon. 2,461,806, Feb. 15.
Boskovich, Milan N., assignee: *See—*
 Hall, Arthur O.
Bouvet, René, Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del. Up-twister. 2,461,586, Feb. 15.
Bowers, Jack L., San Diego, Calif. Voltage regulator. 2,461,514, Feb. 15.
Bowman, Wade W., New York, N. Y. Beverage dispenser. 2,462,019, Feb. 15.
Boyer, Myron, assignee: *See—*
 Einhart, Harvey A.
Boyle, John R., Chicago, Ill., assignor to Betz Corporation, Hammond, Ind. Liquid distributor for refrigerating systems. 2,461,876, Feb. 15.
Brandon, Richard C., Elizabeth, N. J., assignor to Standard Oil Development Company. Catalytic hydrogenation of triisobutylene. 2,461,959, Feb. 15.
Bray, Alfred, & Sons Limited, assignee: *See—*
 Staples, Frederick.
Brereton, Christopher F., assignor to Vickers-Armstrongs Limited, London, England. Moving and controlling the motion of machinery. 2,461,877, Feb. 15.
Brewster, George A., Buffalo, N. Y. Operating table. 2,461,627, Feb. 15.
Bridgeport Brass Company, assignee: *See—*
 Hiertz, Arthur J.
Briggs Manufacturing Company, assignee: *See—*
 Ulick, Peter J.
Bright Star Battery Company, assignee: *See—*
 Doose, Otto.
Bristol Aeroplane Company Limited, The, assignee: *See—*
 Whitehead, Frederick W., and Lovering.
Bronwell, Arthur B., Evanston, Ill. Color television system. 2,461,515, Feb. 15.
Brown, Herbert C.: *See—*
 Schlesinger, Hermann I., and Brown.
Bruno, Anthony J., New York, N. Y. Film viewer. 2,461,718, Feb. 15.
Bryant, Austin U., Alameda, Calif. Egg cleaning apparatus. 2,461,960, Feb. 15.
Buckmann, John P., Redondo Beach, and L. L. Neff, Long Beach, assignors to Union Oil Company of California, Los Angeles, Calif. Lubricating composition. 2,461,961, Feb. 15.
Budak, Nicholas M., Waterloo, Iowa. Lock protector. 2,461,676, Feb. 15.
Budd Company, The, assignee: *See—*
 Murphy, Goodrich K.
Bullock, Martin T., Meridian, Miss. Water meter reducing adapter. 2,461,516, Feb. 15.
Bulova Watch Company, Inc., assignee: *See—*
 Beeh, Louis.
Burdock, Joseph L., Old Greenwich, and P. F. Best, Riverside, Conn., and C. B. McBride, Port Chester, assignors to The Aerotec Corporation, White Plains, N. Y. Apparatus for separating suspended particles from gases. 2,461,677, Feb. 15.
Buxton, Loran O., Maplewood, and C. E. Dryden, East Orange, assignors to Nopco Chemical Company, Harrison, N. J. Stabilization of fatty materials. 2,461,807, Feb. 15.
Buxton, Loran O., Maplewood, and C. E. Dryden, East Orange, assignors to Nopco Chemical Company, Harrison, N. J. Production of antioxidants for fatty materials. 2,461,808, Feb. 15.
Cabot, Godfrey L., Inc., assignee: *See—*
 Loving, William.
Calladine, Joseph: *See—*
 De Grave, Marvin F., and Calladine.
Caloric Gas Stove Works, assignee: *See—*
 Klein, Gustav.
Caplan, Solomon: *See—*
 Harvey, Mortimer T., and Caplan.
Carbide and Carbon Chemicals Corporation, assignee: *See—*
 Quarles, Richard W., and Spessard.
Carlino, Carmelo, Buenos Aires, Argentina. Sole stitching machine. 2,461,587, Feb. 15.
Carlson, Bernard E., Chicago, Ill. Telltale lamp socket. 2,461,962, Feb. 15.
Carnegie-Illinois Steel Corporation, assignee: *See—*
 Lorig, Edwin T.
Carnegie Institute of Technology, assignee: *See—*
 Kiebler, Myron.
Carnevale, John C., Menlo Park, Calif. Spray gun for coating the interior of conduits. 2,461,517, Feb. 15.
Carpinella, Michael J., assignor to Scoville Manufacturing Company, Waterbury, Conn. Machine for locating screwheads with respect to drills. 2,462,035, Feb. 15.
Carrier Corporation, assignee: *See—*
 Berestneff, Alexis A.
Cawley, Aloysius J., Pittston, Pa. Road engaging means for automobiles. 2,461,719, Feb. 15.
Cawood, Richard L., and B. W. Richardson, assignors to The Patterson Foundry & Machine Co., East Liverpool, Ohio. Mixing apparatus. 2,461,720, Feb. 15.
Celanese Corporation of America, assignee: *See—*
 Hunter, Robert L., and Cramer.
 Olpin, Henry C., and Wesson.
 Rowley, Robert D., and Thompson.
Chace, Paul G., Attleboro Falls, assignor to Metals & Controls Corporation, Attleboro, Mass. Corrosion-resisting thermstat metal. 2,461,518, Feb. 15.
Chadwick, Lee S., Shaker Heights, assignor to Perfection Stove Company, Cleveland, Ohio. Chuck. 2,461,628, Feb. 15.
Chance, A. B., Company, assignee: *See—*
 Hubbard, David C.
Chase Brass & Copper Co., Incorporated, assignee: *See—*
 Hallberg, August W.
Chemprotin Products, assignee: *See—*
 Lowen, Leslie.
Cheney, B. C., assignee: *See—*

Crane Packing Company, assignee: *See—*
 Vorhees, Vance E.
Crane, Walton B. and W. B., Jr., assignors to Alpak, Los Angeles, Calif. Container. 2,461,879, Feb. 15.
Crane, William B., Jr.: *See—*
 Crane, Walton B. and W. B., Jr.
Crawford, James R., Clinton, S. C. Portable power-driven tree felling circular saw. 2,461,589, Feb. 15.
Crever, Frederick E., Scotia, N. Y., assignor to General Electric Company. Regulator circuit. 2,461,964, Feb. 15.
Crook, Louis H., Washington, D. C. Spark plug. 2,461,590, Feb. 15.
Cull, John W., Normandy, Mo., and E. Nilsson, Berkeley, Calif. Cargo and combat pack. 2,461,526, Feb. 15.
Curran Cushion and Textile Company, assignee: *See—*
 Curran, Frank J.
Curran, Frank J., Downers Grove, Ill., assignor to Curran Cushion and Textile Company. Cushion or back rest. 2,461,880, Feb. 15.
Currier, Loren C., Tulsa, Okla. Wheel balancing machine. 2,461,591, Feb. 15.
Curtis, John C., Claremont, N. H., assignor to Joy Manufacturing Company. Supporting column. 2,461,810, Feb. 15.
Curtis, John C., and E. G. Gartin, Claremont, N. H., assignors to Joy Manufacturing Company. Percussive tool. 2,461,527, Feb. 15.
Curtis, John C., and E. G. Gartin, Claremont, N. H., assignors to Joy Manufacturing Company. Rock drill. 2,461,528, Feb. 15.
Curtis, John C., and E. G. Gartin, Claremont, N. H., assignors to Joy Manufacturing Company. Valve mechanism. 2,461,529, Feb. 15.
Curtis, John C., and E. G. Gartin, Claremont, N. H., assignors to Joy Manufacturing Company. Rock drill. 2,461,530, Feb. 15.
Cusano, Paul, Union City, N. J. Scoreboard. 2,461,811, Feb. 15.
Custom Scientific Instrument, Inc., assignee: *See—*
 Allen, Robert R.
Cuthbertson, William J., Pittsfield, and L. S. Schell, Jr., Lenox, Mass., assignors to General Electric Company. Electric switch. 2,461,965, Feb. 15.
Cutler-Hammer, Inc., assignee: *See—*
 Rouse, William H.
Daniel, Frederick K., Kew Gardens, assignor, by mesne assignments, to Sun Chemical Corporation, New York, N. Y. Removal or replacement of electrolytes in physiologically active materials. 2,461,505, Feb. 15.
Daniel, Frederick K., Kew Gardens, assignor to Sun Chemical Corporation, New York, N. Y. Regeneration of ion exchange material. 2,461,506, Feb. 15.
Darash, Nicholas P., assignor to The Warner & Swasey Company, Cleveland, Ohio. Machine tool. 2,461,631, Feb. 15.
Datlow, Joseph, New York, N. Y. Nitrating cellulose lace-backing fabrics. 2,461,632, Feb. 15.
Davidson, Roy H., assignor to B. Cohn, Chicago, Ill., and himself. Yarn protector. 2,461,724, Feb. 15.
Davis, Adolph H.: *See—*
 Hartley, Albert L., and Davis.
Davis, Garland H. B., Elizabeth, N. J., assignor to Standard Oil Development Company. Oxidized polyisobutylene. 2,461,966, Feb. 15.
Davis, Lewis and E. C. Tuukkanen, Worcester, assignors to McLaurin-Jones Co., Brookfield, Mass. Sealing and reinforcing tape. 2,462,037, Feb. 15.
Dearborn Chemical Company, assignee: *See—*
 Gunderson, Lewis O.
De Brabander, Camiel, Newport, assignor to American Viscose Corporation, Wilmington, Del. Inspection system. 2,461,592, Feb. 15.
Decker, Ferdinand A., Jr., Parkersburg, W. Va., assignor to American Viscose Corporation, Wilmington, Del. Winding machine. 2,461,593, Feb. 15.
De Ferrari, Edmond, San Francisco, Calif. Exerciser and amusement device for infants. 2,461,682, Feb. 15.
De Grave, Marvin F., and J. Calladine, Salem, Ohio, assignors to Eljer Company, Ford City, Pa. Pop-up waste valve. 2,461,812, Feb. 15.
De Havilland Aircraft Company Limited, The, assignee: *See—*
 Warde, Robert H.
Dench, Edward C.: *See—*
 Hardy, Arthur C., and Dench.
Derham, Philip A., Rosemont, Pa., assignor to Victor Metal Products Corporation, Brooklyn, N. Y. Snap-on bottle base. 2,461,968, Feb. 15.
De Vilbiss Company, The, assignee: *See—*
 Peeps, Donald J.
Devlin, Leo J., and E. H. Heinemann, Los Angeles, assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif. Aerodynamic retarder. 2,461,967, Feb. 15.
Diamond, Al, New York, N. Y. Shoulder pad. 2,461,881, Feb. 15.
Dierickx, Walter C., Lake Worth, Fla. Table and chair combination. 2,461,683, Feb. 15.
Dierickx, Walter C., Lake Worth, Fla. Dinette set. 2,461,684, Feb. 15.
Dillehay, Edward R., Glen Ellyn, and R. D. Schuetz, Chicago, Ill., assignors to The Richardson Company, Lockland, Ohio. Furfuryl alcohol resin and making the same. 2,461,882, Feb. 15.
Dixon, John C., Sewell, N. J. Edge lighting unit. 2,461,532, Feb. 15.
Dodge, Howard M., Wabash, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio. Vibration absorbing support. 2,461,969, Feb. 15.
Donovick, Richard: *See—*
 Rake, Geoffrey W., Koerber, and Donovick.
Doose, Otto, assignor to Bright Star Battery Company, Clifton, N. J. Flashlight. 2,461,634, Feb. 15.
Dorey, George B., Westmount, Quebec, Canada. Resilient connection for brake rods and the like. 2,461,633, Feb. 15.
Dosé, Robert G., United States Navy, Chevy Chase, Md. Automatic skid corrector. 2,461,533, Feb. 15.
Douglas Aircraft Company, Inc., assignee: *See—*
 Devlin, Leo J., and Heinemann.
 Rose, Edward H.
Dryden, Charles E.: *See—*
 Buxton, Loran O., and Dryden.
Dualoc Syndicate, assignee: *See—*
 Randall, Ralph R.
Duke, James B.: *See—*
 Greene, Ernest W., and Duke.
Duke, James B., Lakeland, Fla., assignor to Minerals Separation North American Corporation, New York, N. Y. Concentration of phosphate minerals. 2,461,813, Feb. 15.
Duman, Louis R., assignee: *See—*
 Berger, Paul.
Dumore Company, The, assignee: *See—*
 Nelson, James H., and Servis.
Du Pont, E. I. de Nemours & Company, assignee: *See—*
 Coffman, Donald D., and Cramer.
 Gray, Allen G., Gresham, and Loder.
 Hamilton, Lyle A., and Pedersen.
 Johnson, Charles W.
 Londergan, Thomas E.
 Pratt, Burt C.
Dutchess Tool Company, Inc., assignee: *See—*
 Seem, Charles B.
Eastman Kodak Company, assignee: *See—*
 Knott, Edward B., and Morgan.
Eckman, Merll L., North West Canton, assignor to Republic Steel Corporation, Cleveland, Ohio. Culvert forming machine. 2,462,038, Feb. 15.
Einhart, Harvey A., assignor of thirty-three and one-third per cent to M. Boyer and thirty-three and one-third per cent to A. Ray, Clyde, Ohio. Cable clamp. 2,461,725, Feb. 15.
Eljer Company, assignee: *See—*
 De Grave, Marvin F., and Calladine.
Ellefson, Bennett S., assignor to Sylvania Electric Products Inc., Emporium, Pa. Fluorescent products and preparation thereof. 2,461,726, Feb. 15.
Ellis, Grenville B., Little Silver, N. J., assignor to the United States of America as represented by the Secretary of War. Leak resistant electrical cell. 2,461,534, Feb. 15.

Elsässer, Otto, and C. Ronzi, Zurich, Switzerland. Apparatus for the permanent waving of hair. 2,461,883, Feb. 15.
Gartin, Elmer G.: *See—*
 Curtis, John C., and Gartin.
Gates Rubber Company, assignee: *See—*

Greene, Ernest W., and J. B. Duke, Lakeland, Fla., assignors to Minerals Separation North American Corporation, New York, N. Y. Concentration of phosphate minerals from their ores. 2,461,817, Feb. 15.
Hedman, Evert B., assignor to Aktiebolaget Superior, Stockholm, Sweden. Cutter shaft with inclinable cutter-blade. 2,462,022, Feb. 15.
Heiberger, Charles A., Nitro, W. Va., assignor to United

Eleßaser, Otto, and C. Ronzi, Zurich, Switzerland. Apparatus for the permanent waving of hair. 2,461,883, Feb. 15.

Elsinger, Louis S., Tampa, Fla.: J. E. Gillen, trustee in bankruptcy of said L. S. Elsinger. Level wind for fishing reels. 2,461,864, Feb. 15.

Empire Electric Brake Company, assignee: *See*— Whitten, Owen M.

Engle, Loy S.: *See*— Lee, Ernest D., and Engle.

Epstein, Hirsh, assignee: *See*— Berger, Paul.

Erhardt, Oscar P., West Haven, assignor to The A. C. Gilbert Company, New Haven, Conn. Toy building blocks with closure panes. 2,461,535, Feb. 15.

Estes, Joseph R., Cedar Rapids, Iowa. Latching means for tractor hitch bars. 2,461,885, Feb. 15.

Falk Corporation, The, assignee: *See*— Schmitter, Carl, and Klea.

Farkas, Emil N., Chicago, Ill. Display device. 2,461,536, Feb. 15.

Farnsworth Research Corporation, assignee: *See*— Johnson, Lambert L.

Faust, Howard C., assignee: *See*— Posun, John L., and Houghton.

Feild, Alexander S., Houston, Tex., assignor to Shell Development Company, San Francisco, Calif. Floating roof storage tank. 2,461,537, Feb. 15.

Feller, Anton M., Rahway, N. J., assignor to Control Instrument Company, Inc., Brooklyn, N. Y. Magneto-strictive pressure indicator. 2,461,635, Feb. 15.

Ferwerda, Ray, assignee: *See*— Moss, Reginald.

Filiatreault, Damas C., Jr., Chicago, Ill. Tool handle. 2,461,886, Feb. 15.

Finegan, John C., East Orange, N. J., assignor to American Optical Company, Southbridge, Mass. Finger cot and making same. 2,461,971, Feb. 15.

Fischer, Earl K., Long Island City, assignor to Interchemical Corporation, New York, N. Y. Fire-retarding compositions. 2,461,538, Feb. 15.

Fischer, Herbert G. M., Westfield, N. J., assignor, by mesne assignments, to Standard Catalytic Company. Asphalt with improved adhesion properties for aggregates. 2,461,971, Feb. 15.

Fischer, Herbert G. M., Westfield, N. J., assignor to Standard Oil Development Company. Motor fuels. 2,461,972, Feb. 15.

Fisher, Ernest F., assignor to Whiting Corporation, Harvey, Ill. Sludge handling and disposal system. 2,461,814, Feb. 15.

Fitch, Oran F., Alturas, Calif. Hay stacker device. 2,461,973, Feb. 15.

Fletcher, Edward C., East Lansing, Mich. Cartridge case. 2,461,539, Feb. 15.

Fletcher, Ralph A., Westford, Mass. Fabricated pallet. 2,461,887, Feb. 15.

Flora, Lee, Danville Ill. Enclosure for tractors. 2,461,974, Feb. 15.

Flounders, James M., Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Steam hose. 2,461,594, Feb. 15.

Folse, Julius A.: *See*— Skinner, Leslie A., and Folse.

Ford Meter Box Company, Inc., The, assignee: *See*— Ford, Wilbur E.

Ford Roofing Products Company, assignee: *See*— O'Reilly, Martin G.

Ford, Wilbur E., assignor to The Ford Meter Box Company, Inc., Wabash, Ind. Meter setter. 2,461,888, Feb. 15.

Foreman, William, executor: *See*— Kuff, Fred R.

Fossa, Joseph, Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine and manufacture of shoes. 2,461,889, Feb. 15.

Foster, Edwin B., Austin, Tex. Retractable landing gear. 2,461,595, Feb. 15.

Foundry Services Limited, assignee: *See*— Strauss, Kossy.

Fox, Cecil M., Toledo, Ohio, assignor, by mesne assignments, to E. Berg, New York, N. Y. Cigarette lighter. 2,461,890, Feb. 15.

French, Henry C., Elm Grove, assignor to The Heil Co., Milwaukee, Wis. Steering mechanism for two-wheeled tractors or the like. 2,461,596, Feb. 15.

Frey, Frederick E., Bartlesville, Okla., assignor to Phillips Petroleum Company. Isomerisation of a low-boiling saturated hydrocarbon. 2,461,540, Feb. 15.

Frey, Frederick E., Bartlesville, Okla., assignor to Phillips Petroleum Company. Isomerising a low-boiling isomerisable saturated hydrocarbon. 2,461,541, Feb. 15.

Frey, Hugo: *See*— Miescher, Karl, Frey, Meystre, and Wettstein.

Fritsch, Walter, assignee, et al.: *See*— Stranberg, Don F.

Fuller, Edward D., assignor to The Visking Corporation, Chicago, Ill. Method of making flattened thermoplastic tubing of predetermined desired characteristics. 2,461,975, Feb. 15.

Gallaher, Andrew J., St. Louis, Mo. Sectional boiler assembly. 2,461,597, Feb. 15.

Gardner, Robert L., San Diego, Calif. Means and method for detecting leaks in drill stems. 2,461,727, Feb. 15.

Gartin, Elmer G.: *See*— Curtis, John C., and Gartin.

Gates Rubber Company, assignee: *See*— Nassimbene, Ernest.

Gaylor, Peter J., Union, N. J. Self-defrosting refrigeration system. 2,461,636, Feb. 15.

General Aniline & Film Corporation, assignee: *See*— Zimmerman, Bernhard G.

General Controls Co., assignee: *See*— Ray, William A.

General Electric Company, assignee: *See*— Beckwith, Robert W. Crever, Frederick E. Cuthbertson, William J., and Schell, Jr. Hansen, Elmer F. Kalikow, Irving. Patterson, Franklin G. Willits, Glenn D.

General Mills, Inc., assignee: *See*— Wittcoff, Harold.

General Motors Corporation, assignee: *See*— Clark, Kendall. Olt, Richard G.

General Railway Signal Company, assignee: *See*— Merkel, Joseph F.

General Tire & Rubber Company, The, assignee: *See*— Dodge, Howard M. Thiry, Leon F.

Gerlinger, Carl F., assignee: *See*— Waters, John L.

Germany, Leslie W., Cambridge, England. Circuit arrangement for producing a sine wave voltage from a pulse waveform. 2,461,637, Feo. 15.

Gessford, Ross K., assignor to Sylvania Electric Products Inc., Emporium, Pa. Electron discharge device. 2,461,728, Feb. 15.

Gibbs, William J., Brooklyn, N. Y. Apparatus for storing and dispensing stacked articles. 2,461,638, Feb. 15.

Gibson, James D., Bartlesville, Okla., assignor to Phillips Petroleum Company. Isomerisation of paraffins. 2,461,598, Feb. 15.

Gibson, William F., Dayton, Ohio, assignor to Chrysler Corporation, Highland Park, Mich. Compressor unloading means. 2,462,039, Feb. 15.

Gilbert, A. C., Company, The, assignee: *See*— Erhardt, Oscar P. Smith, William E.

Gilbert & Barker Manufacturing Company, assignee: *See*— Logan, Joseph A. Rapisarda, Edward D.

Giles, Henry G., Pittsburgh, Pa. Tube dispensing device. 2,461,891, Feb. 15.

Gill, Robert L., Ridgfield, Wash. Vehicle ash receiver with suction discharge. 2,461,815, Feb. 15.

Gillen, J. E., trustee: *See*— Elsinger, Louis S.

Gilmour, Thomas, Brooklyn, N. Y. Detachable shoe heel ornament. 2,461,977, Feb. 15.

Giovanini, Anna A. Y., Los Angeles, Calif. Knitting needle holder. 2,461,816, Feb. 15.

Girdler Corporation, The, assignee: *See*— Atwood, Wilfrid L.

Gleim, Clyde E.: *See*— Clifford, Albert M., and Gleim.

Glick, Joseph, assignee: *See*— McMahon, Walter J.

Glidden Company, The, assignee: *See*— Moore, Charles G.

Glitsch Engineering Company, assignee: *See*— Glitsch, Hans C.

Glitsch, Hans C., Dallas, Tex., assignor, by mesne assignments, to Glitsch Engineering Company. Bubble cap mounting. 2,461,729, Feb. 15.

Globe Oil Tools Company, assignee: *See*— Smith, Edward M., Whittaker, and Goodwin.

Globe-Union Inc., assignee: *See*— Roup, Rolland R.

Godsey, Frank W., Jr., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Torque and power measuring device for shafts. 2,461,685, Feb. 15.

Goodrich, B. F., Company, The, assignee: *See*— Flounders, James M. Slemmons, Charles O. Slemmons, Charles O., and Smith.

Goodwin, John S.: *See*— Smith, Edward M., Whittaker, and Goodwin.

Gorman-Rupp Company, The, assignee: *See*— Rupp, Herbert E.

Gottlieb, Bertha, Cleveland, Ohio. Invisible seam. 2,461,542, Feb. 15.

Graef, Jean P., La Chaux-de-Fonds, Switzerland. Hour-increment hour hand setting mechanism. 2,461,599, Feb. 15.

Grand Specialties Company, assignee: *See*— Hopfeld, Fred P.

Gray, Allen G., Rocky River, Ohio, and W. F. Gresham and D. J. Loder, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Electrodepositing composition and process. 2,461,507, Feb. 15.

Gray, Alvin N., Joppa, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for vulcanising articles. 2,461,600, Feb. 15.

Greene, Ernest W., and J. B. Duke, Lakeland, Fla., assignors to Minerals Separation North American Corporation, New York, N. Y. Concentration of phosphate minerals from their ores. 2,461,817, Feb. 15.

Greig, Harold G., Princeton, N. J., assignor to Radio Corporation of America. Electrolytic recording. 2,461,892, Feb. 15.

Gresham, William F.: *See*— Gray, Allen G., Gresham, and Loder.

Grigaitunas, Joseph G., assignor to The American Hardware Corporation, New Britain, Conn. Combined socket and spanner grip wrench for shoe calks. 2,461,639, Feb. 15.

Guagliano, Pasquale, Mill Valley, Calif. Readily releasable liquid container and cap sealing means. 2,461,893, Feb. 15.

Guardian Electric Manufacturing Co., assignee: *See*— Obenauny, Theodore, and Rowell.

Gunderson, Lewis O., Park Ridge, assignor to Dearborn Chemical Company, Chicago, Ill. Inhibiting foam formation in an aqueous gas-liquid system. 2,461,730, Feb. 15.

Gunn, Ross, Washington, D. C. Apparatus and method for studying wave propagations. 2,461,543, Feb. 15.

Guth, Carl R., McPherson, Kans. Preheating liquid fuel torch. 2,461,731, Feb. 15.

Gyro-Balance Corporation, assignee: *See*— Kalimann, Heins E.

Hague, Fred, Devon, assignor to Sun Oil Company, Philadelphia, Pa. Self-sealing coupling. 2,361,818, Feb. 15.

Hale, George C., and D. Hart, Dover, N. J. Fuse powder composition. 2,461,544, Feb. 15.

Hall, Arthur O., Wenatchee, Wash., assignor of fifty-one one-hundredths to M. N. Boskovich, Midvale, Utah. Mechanical mine shaft shovel. 2,461,978, Feb. 15.

Hall, Marcus A., Bethany, assignor, by mesne assignments, to Churchward & Company, Incorporated, West Haven, Conn. Boat hull. 2,461,819, Feb. 15.

Hallberg, August W., assignor to Chase Brass & Copper Co. Incorporated, Waterbury, Conn. Producing dies for extruding externally finned tubes. 2,461,640, Feb. 15.

Hamilton, Lyle A., Pitman, and C. J. Pedersen, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Condensation products of tri-(beta-aminoethyl)-amine and beta-diketones or hydroxy methylene ketones. 2,461,894, Feb. 15.

Hancock, James C., Roanoke, Va. Foldable reel. 2,461,979, Feb. 15.

Hansen, Elmer F., Marblehead, Mass., assignor to General Electric Company. Electric contact device. 2,461,980, Feb. 15.

Hansen, Fred G., Toledo, Ohio. Machine tool working head. 2,461,732, Feb. 15.

Hanson, Donald R., assignee, as trustee: *See*— Noble, Warren.

Harder, Arthur J., Chicago, Ill. Clamp for cement form panels. 2,461,733, Feb. 15.

Hardy, Arthur C., Wellesley, Mass., and E. C. Dench, West Hartford, Conn., assignors to Interchemical Corporation, New York, N. Y. Multiplying apparatus. 2,461,895, Feb. 15.

Harker, Hilbert J., Detroit, Mich., assignor to Purity Bakeries Service Corporation. Extracting device for bakery products. 2,462,021, Feb. 15.

Harris-Seybold-Potter Company, assignee: *See*— Wood, William H.

Harris, Thomas, East Cleveland, and E. C. Swilik, assignor to The Apex Electrical Manufacturing Co., Cleveland, Ohio. Converting rotary to intermittent oscillating motion. 2,461,641, Feb. 15.

Hart, David: *See*— Hale, George C., and Hart.

Hartford National Bank and Trust Company, assignee, trustee: *See*— Boelsums, Willem F.

Hartley, Albert L., and A. H. Davis, assignors to The R. K. LeBlond Machine Tool Co., Cincinnati, Ohio. Flame hardening apparatus. 2,461,734, Feb. 15.

Harvel Research Corporation, assignee: *See*— Harvey, Mortimer T. Harvey, Mortimer T., and Caplan.

Harvey, Mortimer T., South Orange, N. J., assignor to Harvel Research Corporation. Friction element comprising discrete particles of insoluble furfuraldehyde ketone resin. 2,461,508, Feb. 15.

Harvey, Mortimer T., South Orange, N. J., assignor to Harvel Research Corporation. Compositions of matter and methods and steps of making and using the same. 2,461,510, Feb. 15.

Harvey, Mortimer T., South Orange, N. J., and S. Caplan, New York, N. Y., assignors to Harvey Research Corporation. Making tertiary alkyl amides. 2,461,509, Feb. 15.

Hayes, Albert E., Jr., West Hartford, Conn., assignor to Haseltine Research, Inc., Chicago, Ill. Frequency-stabilised wave-signal apparatus. 2,461,642, Feb. 15.

Hayes, C. Willard, assignee, as trustee: *See*— Noble, Warren.

Haseltine Research, Inc., assignee: *See*— Hayes, Albert E., Jr. Lewis, Harold M.

Hedman, Evert B., assignor to Aktiebolaget Superior, Stockholm, Sweden. Cutter shaft with inclinable cutter-blade. 2,462,022, Feb. 15.

Heiberger, Charles A., Nitro, W. Va., assignor to United States Rubber Company, New York, N. Y. Treating interpolymers of styrene, allylic fumarate, and allylic alcohol. 2,461,735, Feb. 15.

Heil Co., The, assignee: *See*— French, Henry C.

Heinemann, Edward H.: *See*— Devlin, Leo J., and Heinemann.

Hemmeter, George T., Berkeley, Calif. Dynamic balancer. 2,461,643, Feb. 15.

Hendricks, Homer D., Seattle, Wash. Portable golf tee support. 2,461,601, Feb. 15.

Hepp, Harold J., Bartlesville, Okla., assignor to Phillips Petroleum Company. Isomerisation process. 2,461,545, Feb. 15.

Herkenhoff, Earl C.: *See*— Booth, Robert B., and Herkenhoff.

Hermetikindustriens Laboratorium, assignee: *See*— Matthiesen, Erling.

Herr, Harvey E., assignor to Herr Manufacturing Company, Inc., Buffalo, N. Y. Spinning ring and traveler. 2,461,546, Feb. 15.

Herr Manufacturing Company, Inc., assignee: *See*— Herr, Harvey E.

Herrick, Guy S., Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y. Preparation of crystal violet. 2,461,896, Feb. 15.

Hetzel, Stanford J., Cheltenham, and R. M. Kennedy, Drexel Hill, assignors to Sun Oil Company, Philadelphia, Pa. Conversion of ethylene. 2,461,820, Feb. 15.

Hiebert, John, Brownvale, Alberta, Canada. Garment hanger. 2,461,686, Feb. 15.

Hiertz, Arthur J., assignor to Bridgeport Brass Company, Bridgeport, Conn. Pipe connection. 2,462,040, Feb. 15.

Hillhouse, Earl C., Tulsa, Okla. Toy. 2,461,644, Feb. 15.

Hills, Joseph E., assignor to Kraft Foods Company, Chicago, Ill. Packaging. 2,461,981, Feb. 15.

Hingley, Cecil D., assignee: *See*— Clark, John R.

Hingley, Ernest A., assignee: *See*— Clark, John R.

Hohler, Robert L., Dayton, Ohio. Safety link. 2,462,041, Feb. 15.

Holdenline Company, assignee: *See*— Terr, Joseph.

Holliban, John P., Jr., Garden City, Pa., assignor to American Viscose Corporation, Wilmington, Del. Manufacturing synthetic sutures and the like. 2,461,602, Feb. 15.

Honorary Advisory Council for Scientific and Industrial Research, The, assignee: *See*— Wright, George F., and Chute.

Hooper, John E., Burbank, Calif. Coffee filter. 2,461,736, Feb. 15.

Hopfeld, Fred P., Elmwood Park, assignor to Grand Specialties Company, Chicago, Ill. Welder's clamp. 2,461,887, Feb. 15.

Hopkins, Jerold W., assignor of sixty-five per cent to R. C. Cheney, La Crosse, Wis., and twenty-five per cent to W. C. Cheney, Lake City, Minn. Fish pole bracket for automobiles. 2,461,897, Feb. 15.

Horn, Knud: *See*— Andersen, Axel B., and Horn.

Horne, Burchard E., assignor to Watts Regulator Company, Lawrence, Mass. Control valve. 2,461,982, Feb. 15.

Houghton, Le Roy: *See*— Posun, John L., and Houghton.

Howald, Arthur M., and J. L. Jones, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Conjointly polymerized unsaturated substances. 2,462,042, Feb. 15.

Howard, Giles P. E., and A. Ivanoff, Luton, England. Centrifugal pump. 2,461,821, Feb. 15.

Hubbard, David C., assignor to A. B. Chance Company, Centralia, Mo. Fuse guard for cutouts. 2,461,898, Feb. 15.

Huffman, Hal P., Rockford, and R. B. Snively, Winnebago, Ill. Emergency tire chain. 2,461,737, Feb. 15.

Huge, Henry M., Lorain, Ohio, assignor to Lorain Products Corporation. Telephone ringing current generator. 2,461,547, Feb. 15.

Humphrey, Neva H., Olathe, Colo. Saddle blanket for horses. 2,461,899, Feb. 15.

Hunter, Robert L., and R. D. Cramer, Cumberland, Md., assignors to Celanese Corporation of America. Patterned textile material. 2,461,603, Feb. 15.

Huntsman, Francis D., Salt Lake City, Utah. Window structure of protective devices. 2,461,548, Feb. 15.

Huntaman, Francis D., Salt Lake City, Utah. Protective device. 2,461,604, Feb. 15.

Huntsman, Francis D., Salt Lake City, Utah. Headgear. 2,461,605, Feb. 15.

Hussey, Mary C., Mount Vernon, N. Y. Candle. 2,461,822, Feb. 15.

Hydropress, Incorporated, assignee: *See*— Cozzo, Giuseppe.

Illinois Watch Case Co., assignee: *See*— Wewetzer, Albert.

Illsche, Arthur, Rye, N. Y. Mass production machine for die-forming sheet metal blanks. 2,461,688, Feb. 15.

Interchemical Corporation, assignee: *See*— Fischer, Earl K.

Kowalski, Ted, Toledo, Ohio. Bucket holder. 2,461,825, Feb. 15.

Kraft Foods Company, assignee: *See*— Hills, Joseph E.

Lorig, Edwin T., Bellevue, Pa., assignor to Carnegie-Illinois Steel Corporation. Method and apparatus for the electrolytic coating of metal strip. 2,461,556, Feb. 15.

Lott, David L., Denver, Colo. Gun for spraying powder.

McLelland, William H., Mansfield, Ohio, and E. J. Ajax, Minneapolis, Minn., assignors, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich. Sadiron assembly. 2,461,551, Feb. 15.

McLelland, William H., Mansfield, Ohio, and E. J. Ajax, Minneapolis, Minn., assignor, by mesne assignments, to

Illsche, Arthur, Rye, N. Y. Mass production machine for die-forming sheet metal blanks. 2,461,688, Feb. 15.

Interchemical Corporation, assignee: *See*—
Fischer, Earl K.
Hardy, Arthur C., and Dench.
Lee, Ernest D., and Engle.
Radi, Lino J.

International Harvester Company, assignee: *See*—
Avila, Frank W.

International Nickel Company, Inc., The, assignee: *See*—
Stockdale, John, and Rison.

Ivanoff, Alexander: *See*—
Howard, Giles P. E., and Ivanoff.

Ivers-Lee Company, assignee: *See*—
Salfisberg, Leroy L.

Jackson, Harold F., Springfield, assignor to The Ohio Steel Foundry Company, Lima, Ohio. Work supporting means for heat treating furnaces. 2,461,606, Feb. 15.

Jacobs, Helen H., United States Navy. Self-luminous ash tray. 2,461,349, Feb. 15.

Jarrett, Samuel D., Duncan, Okla. Wheel spacer for tractors. 2,461,983, Feb. 15.

Johanson, John E., Boonton, and W. A. Yonkers, Montville, N. J., assignors to Radio Frequency Laboratories, Inc. Seal nut. 2,462,023, Feb. 15.

Johnson, Charles W., East Brunswick Township, Middlesex County, N. J., assignor to E. I. du Pont de Nemours & Co., Wilmington, Del. Low shrinking cellulosic repair putty. 2,461,900, Feb. 15.

Johnson, Lambert L., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Sawtooth wave generator. 2,462,024, Feb. 15.

Johnson, Walter C., Princeton, N. J. Device for solving equations. 2,461,738, Feb. 15.

Jones, James R., Lakewood, assignor to Art Metal Construction Company, Jamestown, N. Y. Top securing means for furniture. 2,461,823, Feb. 15.

Jones, John L.: *See*—
Howald, Arthur M., and Jones.

Joy Manufacturing Company, assignee: *See*—
Curtis, John C.
Curtis, John C., and Gartin.

Kaehms, Charles G., Oakland, Calif., assignor, by mesne assignments, to Southern Pacific Company. Flaw detector mounting and control. 2,461,984, Feb. 15.

Kalikow, Irving, Swampscott, Mass., assignor to General Electric Company. Dynamoelectric machine. 2,461,985, Feb. 15.

Kalikow, Irving, West Lynn, Mass., assignor to General Electric Company. Dynamoelectric machine. 2,461,986, Feb. 15.

Kallmann, Heinz E., Boston, Mass., assignor to Gyro-Balance Corporation, Greenwich, Conn. Balancing machine. 2,461,645, Feb. 15.

Kartaschoff, Valentin, Basel, assignor to Sandoz Ltd., Fribourg, Switzerland. Sulfurized phenolic tanning agents and their manufacture. 2,461,901, Feb. 15.

Kasperek, Adam, assignee: *See*—
Kostka, Edward.

Keferstein, Charles G., assignee: *See*—
Ayers, Fred L.

Keller, Margot, assignee: *See*—
Sorrell, Anne.

Kennedy, Robert M.: *See*—
Hetzel, Stanford J., and Kennedy.

Kershaw, Knox and R., Montgomery, Ala. Pile splice. 2,461,739, Feb. 15.

Kershaw, Royce: *See*—
Kershaw, Knox and R.

Kiebler, Myron, assignor to Carnegie Institute of Technology, Pittsburgh, Pa. Making organic acids from carbonaceous material. 2,461,740, Feb. 15.

Kies, Steven M.: *See*—
Schmitter, Carl, and Kies.

Klein, Gustav, Melrose Park, assignor to Caloric Gas Stove Works, Philadelphia, Pa. Detachable oven door. 2,461,902, Feb. 15.

Knott, Edward B., and J. Morgan, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y. Antiplumming agents for photographic emulsions. 2,461,987, Feb. 15.

Kochli, Ernest G., Scarsdale, N. Y., and C. A. Olcott, West Milford, N. J. Automatically controlled sprayer for centrifugals. 2,461,741, Feb. 15.

Koerber, Walter L.: *See*—
Rake, Geoffrey W., Koerber, and Donovick.

Kokatnur, Vaman R.: *See*—
Wicser, Sol B., and Kokatnur.

Komline-Sanderson Engineering Corporation, assignee: *See*—
Komline, Thomas R.

Komline, Thomas R., Glen Rock, assignor to Komline-Sanderson Engineering Corporation, Ridgewood, N. J. Continuous rotary drum filter. 2,461,824, Feb. 15.

Kooijman, Pieter L., Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Hydrogen peroxide distillation after removal of organic peroxides. 2,461,988, Feb. 15.

Kormendi, Laszlo, assignee: *See*—
Lowen, Leslie.

Kostka, Edward, assignor of one-half to A. Kasperek, La Porte, Ind. Wheel. 2,461,742, Feb. 15.

Kowalski, Ted, Toledo, Ohio. Bucket holder. 2,461,825, Feb. 15.

Kraft Foods Company, assignee: *See*—
Hills, Joseph E.
Riemer, John.

Krahl, Walter L., Emporium, Pa., assignor to Sylvania Electric Products, Inc. Electrode securing means. 2,461,743, Feb. 15.

Krautter, Louis M., Glencoe, Ill. Golf swing trainer. 2,461,826, Feb. 15.

Kuft, Fred B., deceased, Baltimore, Md.; W. Foreman and H. L. Morvitz, executors, assignors to The Southern Galvanizing Company, Baltimore, Md. Clothesline prop. 2,461,607, Feb. 15.

Kurtz, Edward F., assignor to Metals and Controls Corporation, Attleboro, Mass. Thermostatic control. 2,461,903, Feb. 15.

Květoň, Alois, Brunn, Czechoslovakia. Hair drier. 2,461,689, Feb. 15.

Lafield, Reggie L., San Antonio, Tex. Child's shampoo support. 2,461,744, Feb. 15.

Laing, Marvin R., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Valve control apparatus. 2,461,608, Feb. 15.

Lake, George R., and J. M. Stribley, Long Beach, assignors to Union Oil Company of California, Los Angeles, Calif. Azeotropic distillation of wide-boiling-range hydrocarbon fractions. 2,462,025, Feb. 15.

Lambach, Fritz, Tenafly, N. J. Warp knitting machine. 2,461,550, Feb. 15.

Lang, John M., Bridgeport, assignor to United Aircraft Corporation, East Hartford, Conn. Hinge structure for aircraft surfaces. 2,461,745, Feb. 15.

Lathrop, Elbert C., and S. I. Aronovsky, Peoria, Ill., assignors to the United States of America as represented by the Secretary of Agriculture. Aerator. 2,461,746, Feb. 15.

Lavietes, David P., Boone, N. C. Smoker's pipe. 2,461,905, Feb. 15.

Le Blond, R. K., Machine Tool Co., The, assignee: *See*—
Hartley, Albert L., and Davis.

Lee, Ernest D., Teaneck, and L. S. Engle, Harrington Park, N. J., assignors to Interchemical Corporation, New York, N. Y. Composition comprising a rubbery copolymer of butadiene and styrene and a resin occurring in Utah resin-bearing coal. 2,461,551, Feb. 15.

Lee, Leighton, II, Rocky Hill, assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn. Combination pump and valve mechanism. 2,461,827, Feb. 15.

Leonard, Alfred H., San Diego, Calif., and J. H. Blandford, Twin Falls, Idaho. Aircraft wing mounting. 2,461,747, Feb. 15.

Leong, Kim K., San Francisco, Calif. Knife sharpener. 2,461,690, Feb. 15.

Le Roy, Gene, South Charleston, W. Va. Sight glass assembly. 2,461,989, Feb. 15.

Lewis, Harold M., Allenhurst, N. J., assignor, by mesne assignments, to Haseltine Research, Inc., Chicago, Ill. Carrier-wave communication system. 2,461,646, Feb. 15.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Howald, Arthur M., and Jones.

Librascope, Incorporated, assignee: *See*—
Opocensky, Willard J.

Lichty, Joy G., Stow, assignor to Wingfoot Corporation, Akron, Ohio. Polymers and copolymers of propiolates. 2,461,990, Feb. 15.

Ligett, Waldo B., Detroit, Mich., and E. T. McBee, Lafayette, and V. V. Lindgren, assignors to Purdue Research Foundation, West Lafayette, Ind. Aromatic fluorocarbon. 2,461,554, Feb. 15.

Light, Harry B., San Gabriel, Calif. Combination cradle and perambulator. 2,461,609, Feb. 15.

Lindgren, Vincent V.: *See*—
Ligett, Waldo B., McBee, and Lindgren.

Line Material Company, assignee: *See*—
Schults, William O.

Linsley, Douglas F., Greenwich, Conn. Cannister shell. 2,461,555, Feb. 15.

Lloyd, Charles G.: *See*—
Smith, David M., and Lloyd.

Loder, Donald J.: *See*—
Gray, Allen G., Gresham, and Loder.

Logan, Joseph A., Hadley, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Oil by-pass structure to avoid smoking of oil burners. 2,461,991, Feb. 15.

Lomelino, George F., assignor of one-half to L. E. Ostrom, Olney, Ill. Extension joint. 2,461,828, Feb. 15.

Londergan, Thomas E., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of halogenated alcohols and formals. 2,461,906, Feb. 15.

Looker, William H., Burlington, Iowa. Christmas tree stand or holder. 2,461,748, Feb. 15.

Lorain Products Corporation, assignee: *See*—
Huge, Henry M.

Lord, Chester R., Mineral City, Ohio. Screened eaves trough. 2,461,610, Feb. 15.

Lorig, Edwin T., Bellevue, Pa., assignor to Carnegie-Illinois Steel Corporation. Method and apparatus for the electrolytic coating of metal strip. 2,461,556, Feb. 15.

Lott, David L., Denver, Colo. Gun for spraying powder. 2,461,611, Feb. 15.

Lovell, Clifton L.: *See*—
Strohmaier, Alfred J.

Lovering, William G.: *See*—
Whitehead, Frederick W., and Lovering.

Lovett, Leroy W., and S. S. Sherrill, Baltimore, and A. Steigler, Towson, Md., assignors to Western Electric Company, Incorporated, New York, N. Y. Apparatus for applying plastic material to cables. 2,461,647, Feb. 15.

Lo Vico, Rosario, Astoria, Long Island, N. Y. Preset pressure can for frozen foods or the like. 2,461,557, Feb. 15.

Loving, William, Pampa, Tex., assignor to Godfrey L. Cabot, Inc., Boston, Mass. Manufacture of carbon black. 2,462,026, Feb. 15.

Lowen, Leslie, Wyandotte, assignor, by mesne assignments, of nine thousand four hundred and forty-eight ten thousand five hundred and seventieths to Chemprotin Products, Trenton, Mich., five hundred and sixty-one ten thousand five hundred and seventieths to L. Kormendi, New York, N. Y., and five hundred and sixty-one ten thousand five hundred and seventieths to B. C. Bockeler, Grosse Ile, Mich. Gluten containing compositions. 2,461,829, Feb. 15.

Lundberg, Hans T. F., assignee: *See*—
Zuechlag, Theodore.

Lynn, Robert G., Passaic, N. J. Gripper gauge. 2,461,691, Feb. 15.

Macleod, Donald K., assignor to United Steel Fabricators, Inc., Wooster, Ohio. Fastening. 2,461,648, Feb. 15.

MacPhillamy, Harold B.: *See*—
Winterstciner, Oskar, and MacPhillamy.

Magnesen, Charles D., assignor to Modern Design Products Company, Chicago, Ill. Bearing seal. 2,461,907, Feb. 15.

Magnesen, Charles D., Chicago, Ill. Container and cover. 2,461,908, Feb. 15.

Mahon, Thomas C., Burnaby, British Columbia, Canada. Antisiphon valve. 2,461,830, Feb. 15.

Mallr, Joseph, Jr., Denver, Colo. Safety cutout for automotive engines. 2,461,692, Feb. 15.

Mallette, Fredrika, Piedmont, Calif. Infant's bed covering. 2,461,749, Feb. 15.

Manning, Timothy C., Kansas City, Mo., assignor to Uhlmann Grain Company, Chicago, Ill. Automatic grain fumigant application system. 2,461,649, Feb. 15.

Mantsh, John R.: *See*—
Anschicks, Rudolph J., Widell, and Mantsh.

Marler, Dunn C., Lake Charles, La. Well packer. 2,461,650, Feb. 15.

Marmor, Ralph A., and W. W. Moyer, assignors to A. E. Staley Manufacturing Company, Decatur, Ill. Preparation of phosphatides. 2,461,750, Feb. 15.

Marmor, Ralph A., and W. W. Moyer, assignors to A. E. Staley Manufacturing Company, Decatur, Ill. Preparation of phosphatides. 2,461,751, Feb. 15.

Martin, Glenn L., Company, The, assignee: *See*—
Weber, Louis.

Martin, William M., River Forest, W. F. Pillnik, Harvey, and D. B. Wobbe, Maywood, Ill., assignors to American Can Company, New York, N. Y. Apparatus for washing the side seams of can bodies. 2,461,559, Feb. 15.

Martinek, Louis P., Cleveland, Ohio. Print-handling device. 2,461,831, Feb. 15.

Mathiesen, Erling, assignor to Hermetikkindustriens Laboratorium, Stavanger, Norway. Treating sea animal products. 2,461,651, Feb. 15.

McAloon, Francis R., Waterbury, assignor to The United States Time Corporation, Middlebury, Conn. Wrist watch strap. 2,461,693, Feb. 15.

McBee, Earl T.: *See*—
Ligett, Waldo B., McBee, and Lindgren.

McBride, Charles E.: *See*—
Burdock, Joseph L., Best, and McBride.

McClure, Stanley J., Louisville, Ky. Beverage faucet and adjustable flow restrictor. 2,461,909, Feb. 15.

McConnell, Clifford H., Fort Peck, Mont. Storage battery holder. 2,461,752, Feb. 15.

McCreary, Harold J., Lombard, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Magnetic frequency reducer. 2,461,992, Feb. 15.

McCubbin, Keator, and C. E. Monical, assignors to A. E. Staley Manufacturing Company, Decatur, Ill. Deodorization of oils. 2,461,694, Feb. 15.

McEwen, Norman S., Fort Lauderdale, Fla. Safety control for presses. 2,461,753, Feb. 15.

McKinnis, Art C., assignor to Union Oil Company of California, Los Angeles, Calif. Hydrocarbon separation by azeotropic distillation. 2,461,993, Feb. 15.

McLaurin-Jones Co., assignee: *See*—
Davis, Lewis, and Tuukkanen.

McLelland, William H., Mansfield, Ohio, and E. J. Ajax, Minneapolis, Minn., assignors, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich. Electric iron. 2,461,560, Feb. 15.

McLelland, William H., Mansfield, Ohio, and E. J. Ajax, Minneapolis, Minn., assignors, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich. Sadiron assembly. 2,461,561, Feb. 15.

McLelland, William H., Mansfield, Ohio, and E. J. Ajax, Minneapolis, Minn., assignor, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich. Electric iron assembly. 2,461,562, Feb. 15.

McMahon, Walter J., assignor of one-half to J. Glick, New York, N. Y. Manicuring accessory. 2,461,695, Feb. 15.

Meacham, Larned A., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Phase shifting apparatus. 2,461,832, Feb. 15.

Meagher, James E., Glendale, Calif. Transfusion apparatus. 2,461,558, Feb. 15.

Mercier, Dewey P., Burlington, Vt. Sinker for fishing lines. 2,461,833, Feb. 15.

Merck & Co., Inc., assignee: *See*—
Shabica, Anthony C.
Stein, Gustav A., and Tishler.
Wolf, Frank J.

Merkel, Joseph F., assignor to General Railway Signal Company, Rochester, N. Y. Wire terminal. 2,461,994, Feb. 15.

Merta, Fred A., assignor to Traylor Engineering & Manufacturing Company, Allentown, Pa. Sealing ring for rotary kilns. 2,461,754, Feb. 15.

Metals & Controls Corporation, assignee: *See*—
Chace, Paul G.
Kurtz, Edward F.
Vaughan, Victor G.

Metropolitan-Vickers Electrical Company Limited, assignee: *See*—
Smith, David M., and Lloyd.

Meystre, Charles: *See*—
Miescher, Karl, Frey, Meystre, and Wettstein.

Miescher, Karl, Riehen, H. Frey, Olten, and C. Meystre and A. Wettstein, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Incorporated, Summit, N. J. Degradation of the side-chain of steroids and steroids suitable therefor. 2,461,563, Feb. 15.

Miescher, Karl, Riehen, H. Frey, Olten, and C. Meystre and A. Wettstein, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Inc., Summit, N. J. Degradation of the side-chain of steroids and steroids suitable therefor. 2,461,910, Feb. 15.

Miescher, Karl, Riehen, H. Frey, Olten, and C. Meystre and A. Wettstein, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Inc., Summit, N. J. Degradation of the side-chain of steroids and steroids suitable therefor. 2,461,911, Feb. 15.

Miescher, Karl, Riehen, H. Frey, Olten, and C. Meystre and A. Wettstein, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Inc., Summit, N. J. Degradation of the side-chain of a steroid containing a nuclear α,β-unsaturated keto group. 2,461,912, Feb. 15.

Millard, Irwin W., assignee: *See*—
Beatty, Elmer W.

Miller, Myron C., Seattle, Wash. Fish lure. 2,461,755, Feb. 15.

Minerals Separation North American Corporation, assignee: *See*—
Duke, James B.
Greene, Ernest W., and Duke.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Laing, Marvin R.
Newton, Alwin B.
Taylor, Daniel G.

Modern Design Products Company, assignee: *See*—
Magnesen, Charles D.

Modern Plastic Machinery Corporation, assignee: *See*—
Tornberg, Henning T.

Modes, Edward E., Chicago, Ill. Differential screw micrometer. 2,461,995, Feb. 15.

Mojonnier Bros. Co., assignee: *See*—
Armerding, George D.

Molins Machine Company Limited, assignee: *See*—
Powell, Gordon F. W.

Monical, Charles E.: *See*—
McCubbin, Keator, and Monical.

Montgomery, James W., Sr., Duluth, Minn. Knock down caster. 2,461,652, Feb. 15.

Moore, Charles G., River Forest, Ill., assignor to The Glidden Company, Cleveland, Ohio. Preparing oil-acid modified alkyd material. 2,461,564, Feb. 15.

Moore, George C., Company, assignee: *See*—
Neidel, Oscar F.

Moore, Ralph S., Visalia, Calif. Disk picture projector. 2,461,756, Feb. 15.

Moores, Mortimer H., Honolulu, Territory of Hawaii. Internal-combustion engine. 2,461,757, Feb. 15.

Morgan, John: *See*—
Knott, Edward B., and Morgan.

Morin, Louis H., Bronx, N. Y. Coaxial conductor. 2,461,834, Feb. 15.

Morningstar, Alfred, Hammond, Ind. Collector shoe. 2,461,696, Feb. 15.

Morrill, Wayne J., Fort Wayne, Ind. Metal sleeve expanding device with integral wedge and piston rod. 2,461,565, Feb. 15.

Morrill, Wayne J., Fort Wayne, Ind. Dynamoelectric machine rotor construction. 2,461,566, Feb. 15.

Morris, Rupert C.: *See*—
Snider, Alva V., and Morris.

Morris, Rupert C., Berkeley, and A. V. Snider, Richmond, assignors to Shell Development Company, San Francisco, Calif. Amino trimethyl hexenoic acids and their [illegible]. 2,462,009, Feb. 15.

Omar, Alejandro G., Madrid, Spain. Demountable building and structural unit therefor. 2,461,916, Feb. 15.

Oplin, Henry C., and A. J. Wesson, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America. Dyeing of resins with polyhydroxy alcohol assistants. 2,461,612, Feb. 15.

Rake, Geoffrey W., Milltown, and W. L. Koerber, Kingston, N. J., and R. Donovick, assignors to E. R. Squibb & Sons, New York, N. Y. Antibiotic extraction from solids of actinomyces griseus culture. 2,461,922, Feb. 15.

Ramsay, Erskine, Birmingham, Ala. Rotary dump. 2,461,771, Feb. 15.

Schacht, William F., II, assignee: *See*—
Schacht, William F.

Schacht, William J., executor: *See*—
Schacht, William F.

Schaidach, Alvin J., and V. A. Blackburn, Sacramento, Calif. Automobile transport van. 2,461,927, Feb. 15.

Morris, Rupert C.: *See*—
Snider, Alva V., and Morris.

Morris, Rupert C., Berkeley, and A. V. Snider, Richmond, assignors to Shell Development Company, San Francisco, Calif. Amino trimethyl hexenoic acids and their lactams. 2,462,009, Feb. 15.

Morvitz, H. Levin, executor: *See*—
Kuff, Fred E.

Mosier, Murlin L., Sioux City, Iowa. Gas burner and support therefor. 2,461,913, Feb. 15.

Moss, Reginald, North Miami, Fla., assignor of one-half to R. Ferwerda, Cleveland, Ohio. Tire-protecting skid. 2,461,758, Feb. 15.

Moths, Raymond J., Fox Point, Wis. Adjustable spacer bar. 2,461,996, Feb. 15.

Moyer, Wendell W.: *See*—
Marmor, Ralph A., and Moyer.

Murphy, Daniel, New Castle, Pa. Double-acting centrifugal pump. 2,461,835, Feb. 15.

Murphy, Goodrich K., New Canaan, Conn., assignor to The Budd Company, Philadelphia, Pa. Railway sleeping car. 2,462,027, Feb. 15.

Nadherny, Russell J., assignor to Athey Products Corporation, Chicago, Ill. Vehicle mounted shovel. 2,461,653, Feb. 15.

Nash Engineering Company, assignee: *See*—
Adams, Harold E.

Nashua Gummed and Coated Paper Company, assignee: *See*—
Perry, Lloyd M.

Nassimbene, Ernest, assignor to Gates Rubber Company, Denver, Colo. High-speed belt. 2,461,654, Feb. 15.

National Lock Company, assignee: *See*—
Stone, Roy A.

Neff, Loren L.: *See*—
Buckmann, John P., and Neff.

Neidel, Oscar F., assignor to George C. Moore Company, Westerly, R. I. Tension device for rubber covering machines. 2,462,043, Feb. 15.

Nelson, Allen K., Washington, D. C. Foul ball indicator. 2,461,836, Feb. 15.

Nelson, Edgar A., New York, assignor to American Safety Razor Corporation, Brooklyn, N. Y. Safety razor and blade magazine therefor. 2,461,914, Feb. 15.

Nelson, James H. and H. Servis, assignors to The Dumore Company, Racine, Wis. Alternating current brake motor. 2,461,759, Feb. 15.

Neuset, Naurice M., assignor to Baxter Laboratories, Inc., Glenview, Ill. Handling sterile liquids. 2,461,837, Feb. 15.

Neuhart, Frederick C., Bartlesville, Okla., assignor to Phillips Petroleum Company. Solid bed catalyst regeneration process. 2,461,838, Feb. 15.

Neutelings, Theodoor R., Bergen-op-Zoom, Netherlands. Device for restoring to shape the walls of deformed sheet-metal boxes and their lids. 2,461,839, Feb. 15.

Neuwirth, Herman, assignor to Testrite Instrument Co., Inc., New York, N. Y. Tripod leg. 2,461,915, Feb. 15.

Newton, Alwin B., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Multiple refrigeration system with controls therefor. 2,461,760, Feb. 15.

Nicoll, Frederick H., Princeton, N. J., assignor to Radio Corporation of America. Forming low-reflecting surfaces on optical elements. 2,461,840, Feb. 15.

Niles-Bement-Pond Company, assignee: *See*—
Lee, Leighton.

Nilsson, Einar: *See*—
Cull, John W., and Nilsson.

Noble, Warren, Garden City, N. Y., assignor, by mesne assignments, to D. R. Hanson, Melrose, Mass., and C. W. Hayes, Bethesda, Md., as trustees. Seal. 2,461,655, Feb. 15.

Nopco Chemical Company, assignee: *See*—
Buxton, Loran O., and Dryden.

Nordberg, Martin E., assignor to Corning Glass Works, Corning, N. Y. Making fibrous glass articles. 2,461,841, Feb. 15.

Norman, Glenn A., Des Moines, Iowa. Flushing device. 2,461,656, Feb. 15.

Nye, Louis E., Elkhart, Ind., assignor to United States Rubber Company, New York, N. Y. Making cellular resin material. 2,461,761, Feb. 15.

Obsarny, Thedore, Chicago, Ill., and J. J. Rowell, New York, N. Y., assignors to Guardian Electric Manufacturing Co., Chicago, Ill. Handgrip control. 2,461,997, Feb. 15.

O'Donnell, John R., Brooklyn, N. Y. Scaffold and scaffold construction element. 2,461,762, Feb. 15.

Offenhauser, Paul, Houston, Tex. Tank roof. 2,461,763, Feb. 15.

Ohio Steel Foundry Company, The, assignee: *See*—
Jackson, Harold F.

Olcott, Charles A.: *See*—
Kochli, Ernest G., and Olcott.

Olcott, Charles A., West Milford, N. J. Control means for centrifugals. 2,461,764, Feb. 15.

Olin Industries, Inc., assignee: *See*—
Williams, David M.

Olin, John F., Grosse Ile, Mich., assignor to Sharples Chemicals Inc. Condensation of nitriles with amides and the production of beta-alamine. 2,461,842, Feb. 15.

Olt, Richard G., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Making composite bearings. 2,461,765, Feb. 15.

Omar, Alejandro G., Madrid, Spain. Demountable building and structural unit therefor. 2,461,916, Feb. 15.

Oplin, Henry C., and A. J. Wesson, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America. Dyeing of resins with polyhydroxy alcohol assistants. 2,461,612, Feb. 15.

Opocensky, Willard J., Glendale, assignor to Librascope, Incorporated, Burbank, Calif. Potentiometer. 2,461,843, Feb. 15.

O'Reilly, Martin G., assignor to Ford Rooding Products Company, Chicago, Ill. Shingle. 2,462,028, Feb. 15.

Orelup, John W., Short Hills, N. J. Aromatic amines and fuels containing the same. 2,461,917, Feb. 15.

Osterberg, Carl L., Providence, R. I., assignor to A. J. Schwartz, New York, N. Y. Cuff link or cuff button. 2,461,845, Feb. 15.

Ostrom, Lawrence E., assignee: *See*—
Lomelino, George F.

Overland, Leo D., Brooklyn, N. Y. Stick holder. 2,461,844, Feb. 15.

Paasche, Jens A., Chicago, Ill. Automatic spray coating apparatus. 2,461,657, Feb. 15.

Patterson Foundry & Machine Co., The, assignee: *See*—
Cawood, Richard L., and Richardson.

Patterson, Franklin G., Schenectady, N. Y., assignor to General Electric Company. Pulse echo systems and pulse indicating means. 2,461,998, Feb. 15.

Payne, P. M., & Company, assignee: *See*—
Payne, Pearson M.

Payne, Pearson M., assignor to P. M. Payne & Company, Denver, Colo. Separable mold and refractory trough assembly. 2,461,999, Feb. 15.

Pedersen, Charles J.: *See*—
Hamilton, Lyle A., and Pedersen.

Peepe, Donald J., assignor to The De Vilbiss Company, Toledo, Ohio. Apparatus for heating and circulating spray material. 2,461,766, Feb. 15.

Pennington, John T., Alexandria, Va. Multiplex photographic equipment support. 2,461,567, Feb. 15.

Perfection Stove Company, assignee: *See*—
Chadwick, Lee S.

Perry, Lloyd M., assignor to Nashua Gummed and Coated Paper Company, Nashua, N. H. Adhesive compositions. 2,462,029, Feb. 15.

Pessell, Yank, assignee: *See*—
Cowan, John V.

Petke, Frederick E., Cincinnati, Ohio, assignor to Sterling Drug Inc., New York, N. Y. Polyamine resinous composition and an ink make therefrom. 2,461,918, Feb. 15.

Peyton, William T., Dallas, Tex. Carload bracing spur cleat. 2,461,767, Feb. 15.

Philco Corporation, assignee: *See*—
Bunstein, David E.

Phillips Petroleum Company, assignee: *See*—
Frey, Frederick E.
Gibson, James D.
Hepp, Harold J.
Neuhart, Frederick C.
Richmond, John L.

Pillnik, Walter F.: *See*—
Martin, William M., Pillnik, and Wobbe.

Poor & Company, assignee: *See*—
Chester, Allan E., and Reisinger.

Porter, James T., La Mesa, Calif. Oscillating water sprinkler. 2,461,768, Feb. 15.

Powell, Gordon F. W., assignor to Molins Machine Company Limited, London, England. Dynamic braking arrangements for direct current motors. 2,461,919, Feb. 15.

Pozun, John L., and L. Houghton, assignors of one-third to H. C. Faust, Johnstown, Pa. Trestle. 2,461,769, Feb. 15.

Pratt, Burt C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polyhydric alcohol mixed esters. 2,461,920, Feb. 15.

Prismacolor, Inc., assignee: *See*—
Anschicks, Rudolph J., Widell, and Mantah.

Puccinelli, Romolo L., Turlock, Calif. Dehydrator. 2,461,770, Feb. 15.

Purdue Research Foundation, assignee: *See*—
Ligett, Waldo B., McBee, and Lindgren.

Purity Bakeries Service Corporation, assignee: *See*—
Harker, Hilbert J.

Quarles, Richard W., Pittsburgh, and C. I. Speasard, Leechburg, Pa., assignors to Carbide and Carbon Chemicals Corporation. Dispersions of vinyl chloride resins. 2,461,613, Feb. 15.

Queneau, Augustin L. J., Morristown, N. J. Recovery of zinc from its ores. 2,461,697, Feb. 15.

Rabinowitz, Harold M., Brooklyn, N. Y. Antispasmodic composition. 2,461,921, Feb. 15.

Radi, Lino J., Union City, N. J., assignor to Interchemical Corporation, New York, N. Y. Adhesive composition containing an isobutene-diolefin rubbery copolymer and a resin occuring in Utah resin-bearing coal. 2,461,552, Feb. 15.

Radi, Lino J., Union City, N. J., assignor to Interchemical Corporation. Adhesive composition containing polychloroprene rubber and a resin occuring in Utah resin-bearing coal. 2,461,553, Feb. 15.

Radio Corporation of America, assignee: *See*—
Greig, Harold G.
Nicoll, Frederick H.

Radio Frequency Laboratories, Inc., assignee: *See*—
Johanson, John E., and Yonkers.

Rake, Geoffrey W., Milltown, and W. L. Koerber, Kingston, N. J., and R. Donovick, assignors to E. R. Squibb & Sons, New York, N. Y. Antibiotic extraction from solids of actinomyces griseus culture. 2,461,922, Feb. 15.

Ramsay, Erskine, Birmingham, Ala. Rotary dump. 2,461,771, Feb. 15.

Randall, Ralph E., Freeport, assignor to Dualoc Syndicate, Rockford, Ill. Nonequalizing-torque differential transmission. 2,462,000, Feb. 15.

Rapisarda, Edward D., Agawam, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Electrically operated spray outfit. 2,462,001, Feb. 15.

Ray, Alexander, assignee: *See*—
Einhart, Harvey A.

Ray, William A., Los Angeles, Calif., assignor to General Controls Co., Fluid control valve. 2,461,772, Feb. 15.

Raytheon Manufacturing Company, assignee: *See*—
Stutsman, Paul W.

Rasek, Joseph, Llanerch, Pa., assignor, by mesne assignments, to O. W. Storey, Wheaton, as trustee, for the partnership of O. W. Storey & Associates, Chicago, Ill. Apparatus for measuring high resistance. 2,461,923, Feb. 15.

Read, Harold J., assignor to H. H. Robertson, Pittsburgh, Pa. Cutting tip for cutting tools. 2,462,002, Feb. 15.

Reid, Thomas H., Brooklyn, N. Y. Balancing centrifugal machine. 2,461,773, Feb. 15.

Reisinger, Frederick F.: *See*—
Chester, Allan E., and Reisinger.

Republic Steel Corporation, assignee: *See*—
Eckman, Merril L.

Richardson, Bryant W.: *See*—
Cawood, Richard L., and Richardson.

Richardson Company, The, assignee: *See*—
Dillehay, Edward R., and Schuetz.

Richmond, John L., Bartlesville, Okla., assignor to Phillips Petroleum Company. Paraffin isomerization process. 2,461,568, Feb. 15.

Riemer, John, Green Bay, Wis., assignor to Kraft Foods Company. Packaging apparatus. 2,461,569, Feb. 15.

Rigterink, Merle D.: *See*—
Christensen, Carl J., Rigterink, and Treptow.

Rile-Coe Filter Process, Inc., assignee: *See*—
Coe, Mayne R.

Rison, Donald E.: *See*—
Stockdale, John, and Rison.

Roberts, Joseph K., Flossmoor, assignor to Standard Oil Company, Chicago, Ill. Synthesis of liquids from carbon monoxide and hydrogen. 2,461,570, Feb. 15.

Robertson, Charles J., Hattiesburg, Miss. Impact type log peeler. 2,461,924, Feb. 15.

Robertson, H. H., assignee: *See*—
Read, Harold J.

Robertson, Leroy R., Richmond, Va. Hot water heating system. 2,461,774, Feb. 15.

Robinson, Girard C., Maywood, Ill. Power-driven hammer. 2,461,571, Feb. 15.

Roll-Rite Corporation, assignee: *See*—
Christensen, Carl O.

Ronzi, Carl: *See*—
Elsasser, Otto, and Ronzi.

Roos, Delmar G., assignor to Willys-Overland Motors, Inc., Toledo, Ohio. Vehicle spring suspended half-axle for supporting steerable wheels. 2,461,775, Feb. 15.

Rose, Edward H., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif. Universal gauge holder. 2,462,003, Feb. 15.

Rothery, Albert, Springfield, Mass. Cushion. 2,462,004, Feb. 15.

Roup, Rolland R., assignor to Globe-Union Inc., Milwaukee, Wis. Electric circuit unit. 2,461,658, Feb. 15.

Rouse, William H., Greenfield, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Motor drive. 2,461,659, Feb. 15.

Rowan, Peyton, Anniston, Ala. Shaving brush heating means. 2,461,776, Feb. 15.

Rowell, John J.: *See*—
Obsarny, Theodore, and Rowell.

Rowley, Robert D., and R. F. Thompson, Narrows, Va., assignors to Celanese Corporation of America. Ripening cellulose esters. 2,461,572, Feb. 15.

Rupp, Herbert E., assignor to The Gorman-Rupp Company, Mansfield, Ohio. Self-priming centrifugal pump. 2,461,925, Feb. 15.

Russell, Winfield, P., Malden, Mass. Educational device. 2,461,926, Feb. 15.

Safety Car Heating and Lighting Company, Inc., The, assignee: *See*—
Barrows, Clarence G.

Salisbery, Leroy L., South Orange, assignor to Ivers-Lee Company, Newark, N. J. Package. 2,461,660, Feb. 15.

Sandoz Ltd., assignee: *See*—
Kartaschoff, Valentin.

Saunders, Ferdinand A., Nedrow, N. Y. Showcase with display racks therein. 2,461,698, Feb. 15.

Schacht, Robert W., assignee: *See*—
Schacht, William F.

Schacht, William F., deceased; W. J. Schacht, executor, assignor to W. F. Schacht II, and R. W. Schacht, Huntington, Ind. Cattle marker with means to limit the swinging movement of the marker plate. 2,461,777, Feb. 15.

Schacht, William F., deceased; W. J. Schacht, executor, assignor to W. F. Schacht II, and R. W. Schacht, Huntington, 2nd. Caster. 2,461,778, Feb. 15.

Schacht, William F., II, assignee: *See*—
Schacht, William F.

Schacht, William J., executor: *See*—
Schacht, William F.

Schaldach, Alvin J., and V. A. Blackburn, Sacramento, Calif. Automobile transport van. 2,461,927, Feb. 15.

Schall, Elmer J., Germania, Pa. Road sander. 2,461,779, Feb. 15.

Schauweker, George H., assignor to American Optical Company, Southbridge, Mass. Face shield for use with respirators. 2,462,005, Feb. 15.

Schelwer, Albert T., Erie, Pa. Coupling. 2,461,699, Feb. 15.

Schelwer, Albert T., Erie, Pa. Sealed coupling. 2,461,700, Feb. 15.

Schell, Le Roy S., Jr.: *See*—
Cuthbertson, William J., and Schell, Jr.

Schenk, Bernard H., Western Springs, assignor to The Visking Corporation, Chicago, Ill. Method of making flattened thermoplastic tubing of predetermined desired characteristics. 2,461,976, Feb. 15.

Schlesinger, Hermann I., Chicago, Ill., and H. C. Brown, Detroit, Mich., assignors to the United States of America as represented by the United States Atomic Energy Commission. Preparation of alkali metal compounds. 2,461,661, Feb. 15.

Schlesinger, Hermann I., Chicago, Ill., and H. C. Brown, Detroit, Mich., assignors to the United States of America as represented by the United States Atomic Energy Commission. Preparation of alkali metal compounds. 2,461,662, Feb. 15.

Schlesinger, Hermann I., Chicago, Ill., and H. C. Brown, Detroit, Mich., assignors to the United States of America as represented by the United States Atomic Energy Commission. Preparation of alkali metal borohydrides. 2,461,663, Feb. 15.

Schmitter, Carl, West Allis, and S. M. Kies, assignors to The Falk Corporation, Milwaukee, Wis. Rotary joint. 2,462,006, Feb. 15.

Schopf, John S., Spokane, Wash. Exterior form for use in molding burial vaults and the like. 2,461,928, Feb. 15.

Schreck, Irvin F., Cleveland Heights, Ohio. Auxiliary supporting roller arrangement for pallet trucks. 2,462,007, Feb. 15.

Schuetz, Robert D.: *See*—
Dillehay, Edward R., and Schuetz.

Schultz, William O., assignor to Line Material Company, South Milwaukee, Wis. Automatic switch construction. 2,461,846, Feb. 15.

Schwartz, Arthur J., assignee: *See*—
Osterberg, Carl I.

Schweizer, Paul, Easton, Pa., assignor to T. W. & C. B. Sheridan Company, New York, N. Y. Machine for stuffing newspapers or similar sheet material assemblages. 2,461,573, Feb. 15.

Scovill Manufacturing Company, assignee: *See*—
Carpinella, Michael J.
Spender, Donald L.
Treciokas, Jacob P.

Seagram, Joseph E., & Sons, Inc.: *See*—
Strohmaier, Alfred J.

Seaman, Robert E., Lansing, Mich. Flush toggle switch attachment. 2,461,614, Feb. 15.

Seem, Charles B., assignor to Dutchess Tool Company, Inc., Beacon, N. Y. Dough rounder. 2,461,929, Feb. 15.

Servis, Hoyt: *See*—
Nelson, James H., and Servis.

Shabica, Anthony C., assignor to Merck & Co., Inc., Rahway, N. J. Preparation of dl-threonine. 2,461,847, Feb. 15.

Sharples Chemicals Inc., assignee: *See*—
Olin, John F.

Shell Development Company, assignee: *See*—
Feild, Alexander S.
Kooliman, Pieter L.
Morris, Rupert C., and Snider.
Snider, Alva V., and Morris.

Shellmar Products Corporation, assignee: *See*—
Speyer, Fred B.

Sheridan, T. W. & C. B., Company, assignee: *See*—
Schweizer, Paul.

Sherrill, Sloan S.: *See*—
Lovett, Leroy W., Sherrill, and Stiegler.

Shildneck, Paul R., Decatur, Ill., assignor to A. E. Staley Manufacturing Company. Conversion of alpha amino acids to alpha hydroxy acids. 2,461,701, Feb. 15.

Simons, Harry D., Kearney, N. J. Testing camera synchronizers. 2,461,848, Feb. 15.

Simpson Electric Company, assignee: *See*—
Simpson, Ray.

Simpson, Ray, River Forest, assignor to Simpson Electric Company, Chicago, Ill. Exposure meter having coordinated meter pointer and calculating disk. 2,461,930, Feb. 15.

Skinner, Leslie A., Berkeley, Calif., and J. A. Folse, Miami, Fla., assignors to the United States of America as represented by the Secretary of War. Firing mechanism. 2,461,574, Feb. 15.

Slaybaugh, Elmer H., Parsons, Kans. Composition for fluoroscopic observation and roentgenography. 2,461,702, Feb. 15.

Slemmons, Charles O., South Bend, Ind., assignor to The B. F. Goodrich Company, New York, N. Y. Tractor vehicle. 2,461,850, Feb. 15.

Slemmons, Charles O., South Bend, Ind., and R. W. Smith, Copley, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Vehicle track. 2,461,849, Feb. 15.

Sterling Drug Inc., assignee: *See*—
Petke, Frederick E.

Stiegler, August: *See*—
Lovett, Leroy W., Sherrill, and Stiegler.

Stockdale, John, Clent, and D. E. Rison, Acocks Green, Birmingham, England, assignors to The International Nickel Company, Inc., New York, N. Y. Insulated

Thurston, Jack T., Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y. Alpha, beta-unsaturated guanamines. 2,461,943, Feb. 15.

Tishler, Max: *See*—
Stein, Gustav A., and Tishler.

Tornberg, Henning T., Ridgewood, assignor to Modern Plastic Machinery Corporation, Lodi, N. J. Traverse

Vorhees, Vance E., Lincolnwood, assignor to Crane Packing Company, Chicago, Ill. Diaphragm-type seal. 2,461,710, Feb. 15.

Walker, Alec H. B., London, England, assignor, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa. Apparatus for frequency multiplication of alternating electric currents. 2,461,861, Feb. 15.

Wallace, James M., Jr.: *See*—

Slemmons, Charles O., South Bend, Ind., assignor to The B. F. Goodrich Company, New York, N. Y. Tractor vehicle. 2,461,850, Feb. 15.

Slemmons, Charles O., South Bend, Ind., and R. W. Smith, Copley, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Vehicle track. 2,461,849, Feb. 15.

Smidth, F. L., & Co.: assignee: *See*—
Andersen, Axel B., and Horn.

Smith, Arthur D., Park Ridge, assignor to Adsorptive Process Company, Chicago, Ill. Process and apparatus for the treatment of hydrocarbon oil with catalysts. 2,461,932, Feb. 15.

Smith, David M., Stretford, Manchester, and C. G. Lloyd, Haguley, assignors to Metropolitan-Vickers Electrical Company Limited London, England. Multistage compressor. 2,461,931, Feb. 15.

Smith, Edward M., C. E. Whittaker and J. S. Goodwin, Whittier, assignors to Globe Oil Tools Company, Los Nietos, Calif. Starting gate. 2,461,780, Feb. 15.

Smith, Joseph A.: *See*—
Smith, Paul T. and J. A.

Smith, Paul T., Esmond, and J. A. Smith, Cranston, R. I. Rhodium alloy coatings and method of making same. 2,461,933, Feb. 15.

Smith, Robert W.: *See*—
Slemmons, Charles O., and Smith.

Smith, William R., Philadelphia, Pa., assignor to The A. C. Gilbert Company, New Haven, Conn. Vapor generation and puffing with audible effects in toys. 2,461,664, Feb. 15.

Snider, Alva V.: *See*—
Morris, Rupert C., and Snider.

Snider, Alva V., Richmond, and R. C. Morris, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Amino trimethyl hexanoic acids and their lactams. 2,462,008, Feb. 15.

Snively, Ralph B.: *See*—
Huffman, Hal P., and Snively.

Solomon, Nathan L., Englewood, N. J. Barrette. 2,461,934, Feb. 15.

Sorrell, Anne, Hollywood, assignor of one-half to M. Keller, Beverly Hills, Calif. Manicurist buffer. 2,461,781, Feb. 15.

Southern Galvanizing Company, The, assignee: *See*—
Kuff, Fred E.

Southern Pacific Company, assignee: *See*—
Kaehms, Charles G.

Spanel, Abraham N., Princeton, N. J. Receptacle closure. 2,461,703, Feb. 15.

Spender, Donald L., Naugatuck, assignor to Scovill Manufacturing Company, Waterbury, Conn. Composite bottle cap. 2,462,010, Feb. 15.

Spessard, Clayton I.: *See*—
Quaries, Richard W., and Spessard.

Speyer, Fred B., Salem, Mass., assignor to Shellmar Products Corporation, Mount Vernon, Ohio. Adhesive and coating composition. 2,461,704, Feb. 15.

Spiller, William R., and L. D. Barley, Dayton, Ohio, assignors, by mesne assignments, to Acme Steel Company, Chicago, Ill. Reel support. 2,461,665, Feb. 15.

Squibb, E. R., & Sons, assignee: *See*—
Rake, Geoffrey W., Koerber, and Donovick.
Wintersteiner, Oskar, and Mac Phillamy.

Stadick, Conrad, Searles, Minn. Saw setting machine. 2,461,782, Feb. 15.

Staley, A. E., Manufacturing Company, assignee: *See*—
Marmor, Ralph A., and Moyer.
McCubbin, Keator, and Monical.
Shildneck, Paul R.

Standard Catalytic Company, assignee: *See*—
Fischer, Herbert G. M.

Standard Oil Company, assignee: *See*—
Roberts, Joseph K.

Standard Oil Development Company, assignee: *See*—
Bonnell, Leonard S.
Brandon, Richard C.
Davis, Garland H. B.
Fischer, Herbert G. M.
Waterman, Wendell W.
Weirge, Henry J.

Stanley, Richard W., Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del. Thread advancing reel. 2,461,575, Feb. 15.

Stanley, Richard W., Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del. Reinforced thread-advancing reel. 2,461,576, Feb. 15.

Staples, Frederick, assignor to Alfred Bray & Sons Limited, Leicester, England. Circular knitting machine. 2,461,851, Feb. 15.

Stark, Charles J., Duluth, Minn. Gauge for collocating pipe sections. 2,461,783, Feb. 15.

Stark, John H., Jr., Springfield, Ohio. Collapsible trailer. 2,461,577, Feb. 15.

Starr, Philip D., assignor to Tre-Fold Products, Inc., College Park, Md. Rack for household utensils. 2,462,051, Feb. 15.

Stein, Gustav A., Plainfield, and M. Tishler, assignors to Merck & Co., Inc., Rahway, N. J. Stabilization of DDT. 2,461,852, Feb. 15.

Steiner, Hans, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland. Cylinder liner for opposed piston engines. 2,461,853, Feb. 15.

Sterling Drug Inc., assignee: *See*—
Petke, Frederick E.

Stiegler, August: *See*—
Lovett, Leroy W., Sherrill, and Stiegler.

Stockdale, John, Cleat, and D. E. Rison, Acocks Green, Birmingham, England, assignors to The International Nickel Company, Inc., New York, N. Y. Insulated electrical resistances. 2,461,935, Feb. 15.

Stone, Roy A., assignor to National Lock Company, Rockford, Ill. Mounting for hooks and the like. 2,461,936, Feb. 15.

Storey, O. W., & Associates: *See*—
Razek, Joseph.

Storey, Oliver W., assignee, trustee: *See*—
Razek, Joseph.

Stranberg, Don F., Libertyville, assignor to C. L. Conroy, Waukegan, and W. Fritsch, Libertyville, Ill. Self-sealing releasable coupling. 2,461,705, Feb. 15.

Strauss, Kossy, assignor to Foundry Services Limited, Birmingham, England. Degassing and grain refining of magnesium. 2,461,937, Feb. 15.

Streed, Clifford E., Minneapolis, Minn. Engine starting device. 2,461,784, Feb. 15.

Stribley, Josephine M.: *See*—
Lake, George R., and Stribley.

Strohmaier, Alfred J., Louisville, Ky., and C. L. Lovell, West Lafayette, Ind., assignors to Joseph E. Seagram & Sons, Inc., Shively, Ky. Method of clarifying mash. 2,461,938, Feb. 15.

Stuart, Elisabeth R. B., assignee: *See*—
Wilson, Allen B.

Stuart, Kimberly, assignee: *See*—
Wilson, Allen B.

Stull, John S., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Optical inspection apparatus for use in inspecting potentiometer cards. 2,461,939, Feb. 15.

Stutsman, Paul W., Needham, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrode assembly for electron-discharge tubes. 2,461,578, Feb. 15.

Sullivan, Frank J., Oshkosh, Wis. Quick release mechanism for parachute harnesses. 2,461,785, Feb. 15.

Sullivan, Timothy J., assignor to Sullivan Valve and Engineering Company, Butte, Mont. Vacuum regulator. 2,461,666, Feb. 15.

Sullivan Valve and Engineering Company, assignee: *See*—
Sullivan, Timothy J.

Sulzer Freres, Society Anonyme, assignee: *See*—
Steiner, Hans.

Sun Chemical Corporation, assignee: *See*—
Daniel, Frederick K.

Sun Oil Company, assignee: *See*—
Hague, Fred.
Hetzel, Stanford J., and Kennedy.

Sundstrom, Savin L., assignor to The Bastian-Blessing Company, Chicago, Ill. Liquefied petroleum gas system. 2,461,940, Feb. 15.

Sunstein, David E., Cynwyd, Pa., assignor to Philco Corporation. Electrical system. 2,461,667, Feb. 15.

Sutton, Robert W., Milwaukee, Oreg. Folding gaff. 2,461,941, Feb. 15.

Swilik, Edward C.: *See*—
Harris, Thomas, and Swilik.

Sylvania Electric Products Inc., assignee: *See*—
Ellefson, Bennett S.
Gessford, Ross K.
Krahl, Walter L.

Szalka, Alexander, Budapest, Hungary. Combined paper dispenser and advertising device. 2,461,706, Feb. 15.

Szerlip, Alexander and S., Brooklyn, N. Y. Switch. 2,461,707, Feb. 15.

Szerlip, Stanley: *See*—
Szerlip, Alexander and S.

Taborski, Alfred F., Buffalo, N. Y. Necktie. 2,461,854, Feb. 15.

Taylor, Daniel G., assignor to Minneapolis Honeywell Regulator Company, Minneapolis, Minn. Fluid control device. 2,461,615, Feb. 15.

Ten Broeck, Walter T. L., Jr., assignor to Wingfoot Corporation, Akron, Ohio. Vinyl chloride-alkyl ester of unsaturated dicarboxylic acid copolymer sponge composition. 2,461,942, Feb. 15.

Terr, Joseph, assignor to Holdenline Company, Cleveland, Ohio. Fluorescent lighting fixture. 2,461,786, Feb. 15.

Testrite Instrument Co., Inc., assignee: *See*—
Neuwirth, Herman.

Thein, William, Bremerton, Wash. Fire and burglar proof safe. 2,461,708, Feb. 15.

Thiry, Leon F., Montclair, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio. Cushioning support. 2,462,011, Feb. 15.

Thomas, Albert, Munhall, Pa. Tool. 2,461,579, Feb. 15.

Thompson, Lee L., assignee: *See*—
Zeck, Ivan V.

Thompson Products, Inc., assignee: *See*—
Alldredge, Marshall H.
Booth, James H.

Thompson, Robert F.: *See*—
Rowley, Robert D., and Thompson.

Thompson, William D., San Diego, Calif. Film holder for photographic enlargers. 2,461,668, Feb. 15.

Threedy, Clarence E., assignee, trustee: *See*—
Tratsch, Walter A.

Thurston, Jack T., Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y. Alpha, beta-unsaturated guanamines. 2,461,943, Feb. 15.

Tishler, Max: *See*—
Stein, Gustav A., and Tishler.

Tornberg, Henning T., Ridgewood, assignor to Modern Plastic Machinery Corporation, Lodi, N. J. Traverse feed control means. 2,461,855, Feb. 15.

Tornberg, Henning T., Ridgewood, assignor to Modern Plastic Machinery Corporation, Lodi, N. J. Die mount for plastic extruders. 2,461,856, Feb. 15.

Tornberg, Henning T., Ridgewood, assignor to Modern Plastic Machinery Corporation, Lodi, N. J. Automatic locking spindle. 2,461,857, Feb. 15.

Towers, Augustus R., Richmond, Va. Shaving implement. 2,461,858, Feb. 15.

Trachtenberg, Samuel, Cleveland, Ohio. Jewelry box. 2,461,787, Feb. 15.

Tratsch, Walter A., assignor to C. E. Threedy, Chicago, Ill., trustee. Shooting gallery. 2,461,788, Feb. 15.

Traylor Engineering & Manufacturing Company, assignee: *See*—
Merts, Fred A.

Treciokas, Jacob P., Oakville, assignor to Scovill Manufacturing Company, Waterbury, Conn. Machine for forming and joining snap fastener tapes. 2,461,944, Feb. 15.

Tre-Fold Products, Inc., assignee: *See*—
Starr, Philip D.

Treptow, Arnold W.: *See*—
Christensen, Carl J., Rigterink, and Treptow.

Tribune Company, assignee: *See*—
Wolf, Otto R.

Trojan Powder Company, assignee: *See*—
Wyler, Joseph A.

Tschumi, Otto, assignor to the firm Autophon Aktiengesellschaft, Soleure, Switzerland. Receiver-connection in electroacoustic duplex system. 2,461,945, Feb. 15.

Tuukkanen, Edwin C.: *See*—
Davis, Lewis, and Tuukkanen.

Uhlmann Grain Company, assignee: *See*—
Manning, Timothy C.

Ulick, Peter J., assignor to Briggs Manufacturing Company, Detroit, Mich. Toolholder. 2,461,946, Feb. 15.

Union Oil Company of California, assignee: *See*—
Buckmann, John P., and Neff.
Lake, George R., and Stribley.
McKinnis, Art C.

Union Special Machine Company, assignee: *See*—
Clark, Philip B.

Union Switch and Signal Company, The, assignee: *See*—
Walker, Alec H. B.

United Aircraft Corporation, assignee: *See*—
Lang, John M.

United-Carr Fastener Corporation, assignee: *See*—
Clark, Geoffrey W.

United Shoe Machinery Corporation, assignee: *See*—
Fossa, Joseph.

United Steel Fabricators, Inc., assignee: *See*—
Macleod, Donald K.

United States of America, assignee: *See*—
Whitehead, Richard H.

United States Atomic Energy Commission, the United States of America as represented by the, assignee: *See*—
Schlesinger, Hermann I., and Brown.

United States Rubber Company, assignee: *See*—
Bargmeyer, Ernest G.
Heiberger, Charles A.
Nye, Louis E.

United States Time Corporation, assignee: *See*—
McAloon, Francis R.

Usai, Mario G., East Paterson, N. J. Hair-treating comb. 2,461,789, Feb. 15.

Vanity Fair Mills, Inc., assignee: *See*—
Young, George O.

Vasselli, Anthony J., Newark, N. J. Transmission belt joint. 2,461,859, Feb. 15.

Vaughan, Victor G., assignor to Metals & Controls Corporation, Attleboro, Mass. Thermostatic control. 2,461,904, Feb. 15.

Vaughn, Albert E., Orange, N. J. Lipstick holder and lipstick. 2,461,790, Feb. 15.

Venne, Claude E., Tomahawk, Wis. Can perforator. 2,461,709, Feb. 15.

Vickers-Armstrongs Limited, assignee: *See*—
Brereton, Christopher F.

Victor Metal Products Corporation, assignee: *See*—
Derham, Phillip A.

Victor, Victor A., Brooklyn, N. Y. Apparatus for making pile fabrics. 2,461,860, Feb. 15.

Viking Pump Company, assignee: *See*—
Bakewell, William E.

Vilter, Ernest F., assignor to The Vilter Manufacturing Company, Milwaukee, Wis. Refrigerant deoiler. 2,462,012, Feb. 15.

Vilter Manufacturing Company, The, assignee: *See*—
Vilter, Ernest F.

Visking Corporation, The, assignee: *See*—
Fuller, Edward D.
Schenk, Bernard H.

Vorhees, Vance E., Lincolnwood, assignor to Crane Packing Company, Chicago, Ill. Diaphragm-type seal. 2,461,710, Feb. 15.

Walker, Alec H. B., London, England, assignor, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa. Apparatus for frequency multiplication of alternating electric currents. 2,461,861, Feb. 15.

Wallace, James M., Jr.: *See*—
Cox, Fred W., and Wallace.

Walter, Charles W. P., Woodhaven, assignor to Western Electric Company, Incorporated, New York, N. Y. Contact fixture. 2,461,616, Feb. 15.

War, United States of America as represented by the Secretary of, assignee: *See*—
Ellis, Grenville B.
Skinner, Leslie A., and Foise.

Warde, Robert H., assignor to The De Havilland Aircraft Company Limited, Hatfield, England. Variable pitch airscrew. 2,461,791, Feb. 15.

Warner & Swasey Company, The, assignee: *See*—
Darash, Nicholas P.

Waterman, Wendell W., Cranford, N. J., assignor to Standard Oil Development Company. Stripping of emulsion polymerization latices. 2,462,013, Feb. 15.

Waters, John L., Salem, assignor, by mesne assignments, to C. F. Gerlinger, Dallas, Oreg. Rotary ball valve. 2,461,617, Feb. 15.

Watts Regulator Company, assignee: *See*—
Horne, Burchard E.

Weatherhead Company, The, assignee: *See*—
Allin, Frederick E., and Wyss.

Weaver, Thomas E., Chicago, Ill. Eyeglass case with sight openings. 2,461,792, Feb. 15.

Weber, Louis, Jacksonville, Fla., assignor to The Glenn L. Martin Company, Middle River, Md. Undercutting tool. 2,461,947, Feb. 15.

Weis, Albert H., deceased, by B. Weis, executrix, South Nyack, assignor to Willcox & Gibbs Sewing Machine Company, New York, N. Y. Sewing machine. 2,461,862, Feb. 15.

Weis, Barbara, executrix: *See*—
Weis, Albert H.

Weirge, Henry J., Tulsa, Okla., assignor to Standard Oil Development Company. Micropermeameter for measuring the permeability of oil field cuttings. 2,462,014, Feb. 15.

Wesson, Alexander J.: *See*—
Olpin, Henry C., and Wesson.

Western Electric Company, Incorporated, assignee: *See*—
Gray, Alvin N.
Lovett, Leroy W., Sherrill, and Stiegler.
Stull, John S.
Walter, Charles W. P.

Westinghouse Electric Corporation, assignee: *See*—
Godsey, Frank W., Jr.

Wettstein, Albert: *See*—
Miescher, Karl, Frey, Meystre, and Wettstein.

Wewetzer, Albert, assignor to Illinois Watch Case Co., Elgin, Ill. Compact. 2,461,711, Feb. 15.

Whitehead-Craft Corporation, assignee: *See*—
Whitehead, Edward D. F.

Whitehead, Edward D. F., Chevy Chase, Md., assignor to Whitehead-Craft Corporation, Washington, D. C. Oxychloride cementatory material. 2,462,030, Feb. 15.

Whitehead, Frederick W., and W. G. Lovering, assignors to The Bristol Aeroplane Company Limited, Bristol, England. Honing or the like machine. 2,461,948, Feb. 15.

Whitehead, Richard H., New Haven, Conn., assignor, by mesne assignments, to the United States of America. Releasing mechanism for time fuses. 2,461,793, Feb. 15.

Whiting Corporation, assignee: *See*—
Fisher, Ernest F.

Whittaker, Alvin, Burbank, Calif. Folding box. 2,461,618, Feb. 15.

Whittaker, Charles E.: *See*—
Smith, Edward M., Whittaker, and Goodwin.

Whitten, Owen M., Detroit, Mich., assignor to Empire Electric Brake Company, Newark, N. J. Booster brake mechanism. 2,462,015, Feb. 15.

Wicser, Sol B., Washington, D. C., and V. R. Kokatnur, New York, N. Y. Method and apparatus for emulsifying fuels. 2,461,580, Feb. 15.

Widell, Charles: *See*—
Anschicks, Rudolph J., Widell, and Mantsh.

Wiegand, Albert P., assignor to Edwin L. Wiegand Company, Pittsburgh, Pa. Electric heating. 2,462,016, Feb. 15.

Wiegand, Edwin L., Company, assignee: *See*—
Wiegand, Albert P.

Wiley, Max R., Wichita, Kans. Variable incidence wing control for aircraft. 2,461,669, Feb. 15.

Willcox & Gibbs Sewing Machine Company, assignee: *See*—
Weis, Albert H.
Wonnacott, Norman, and Backlin.

Williams, David M., assignor to Olin Industries, Inc., New Haven, Conn. Automatic sear-releasing mechanism for firearms. 2,461,670, Feb. 15.

Williams, Jay E., Dubuque, Iowa. Support for electrical fixtures. 2,461,794, Feb. 15.

Williamson, Floyd M., Detroit, Mich. Compound angle computer. 2,461,795, Feb. 15.

Willits, Glean D., Leo, Ind., assignor to General Electric Company. Motor and brake mechanism. 2,462,017, Feb. 15.

Willys-Overland Motors, Inc., assignee: *See*—

Wright, George F., Toronto, Ontario, and W. J. Chute, Kentville, Nova Scotia, assignors to The Honorary Advisory Council for Scientific and Industrial Research, Ottawa, Ontario, Canada. Nitramines and their preparation. 2,461,582, Feb. 15.

LIST OF REISSUE INVENTIONS

Willits, Glean D., Leo, Ind., assignor to General Electric Company. Motor and brake mechanism. 2,462,017, Feb. 15.

Willys-Overland Motors, Inc., assignee: *See*—
Boos, Delmar G.

Wilquin, Carl L., Chicago, Ill. Cheese slicer. 2,461,796, Feb. 15.

Wilson, Allen B., Evanston, Ill., assignor, by mesne assignments, of one-half to K. Stuart and one-half to E. R. B. Stuart, Menasha, Wis. Container and manufacture. 2,461,581, Feb. 15.

Willson, David S., Muskegon Heights, Mich., assignor to John Wood Manufacturing Company, Inc., Philadelphia, Pa. Compound motion distributing valve for expansible chamber meters. 2,462,044, Feb. 15.

Wingfoot Corporation, assignee: *See*—
Cheyney, La Verne E.
Clifford, Albert M., and Gleim.
Cox, Fred W., and Wallace.
Lichty, Joy G.
Ten Broeck, Walter T. L., Jr.

Wintersteiner, Oskar, and H. B. MacPhillamy, New Brunswick, N. J., assignors to E. R. Squibb & Sons, New York, N. Y. Obtaining a crystalline sodium penicillin. 2,461,949, Feb. 15.

Wittcoff, Harold, Minneapolis, Minn., assignor to General Mills, Inc. Condensation of ketones with formaldehyde. 2,462,031, Feb. 15.

Wobbe, Delbert E.: *See*—
Martin, William M., Pillnik, and Wobbe.

Wolcott, Herbert, Columbia, Mo. Auxiliary backwash for water-treating systems. 2,461,619, Feb. 15.

Wolf, Frank J., Westfield, assignor to Merck & Co., Inc., Rahway, N. J. 2 or 4-amino quinazolines. 2,461,950, Feb. 15.

Wolf, Otto R., Oak Park, assignor to Tribune Company, Chicago, Ill. Multicolor printing press. 2,462,032, Feb. 15.

Wonnacott, Norman, Scarsdale, and C. R. Backlin, Floral Park North, assignors to Willcox & Gibbs Sewing Machine Company, New York, N. Y. Sewing machine. 2,461,951, Feb. 15.

Wood, John, Manufacturing Company, Inc., assignee: *See*—
Willson, David S.

Wood, William H., University Heights, assignor to Harris-Seybold-Potter Company, Cleveland, Ohio. X-ray opaque marking means. 2,462,018, Feb. 15.

Worth, Arthur A., Penobscot, and H. S. Adams, Skowhegan, Maine, assignors to American Woolen Company, New York, N. Y. Ring spinning frame. 2,461,952, Feb. 15.

Wright, George F., Toronto, Ontario, and W. J. Chute, Kentville, Nova Scotia, assignors to The Honorary Advisory Council for Scientific and Industrial Research, Ottawa, Ontario, Canada. Nitramines and their preparation. 2,461,582, Feb. 15.

Wright, George F., Toronto, Ontario, and W. J. Chute, Kentville, Nova Scotia, assignors to The Honorary Advisory Council for Scientific and Industrial Research, Ottawa, Ontario, Canada. Converting secondary amines to nitramines. 2,462,062, Feb. 15.

Wright, Jack R., Los Angeles, Calif. Detachable cleat for shoes. 2,461,671, Feb. 15.

Wright, Ray C., Flint, Mich. Dispensing closure cap. 2,461,620, Feb. 15.

Wulff, John, Cambridge, Mass. Producing filters. 2,462,045, Feb. 15.

Wyler, Joseph A., assignor to Trojan Powder Company, Allentown, Pa. Resinous esters of higher fatty acids with pentaerythritols and making. 2,462,046, Feb. 15.

Wyler, Joseph A., Allentown, Pa., assignor to Trojan Powder Company. Pentaerythritol condensation products. 2,462,047, Feb. 15.

Wyler, Joseph A., Allentown, Pa., assignor to Trojan Powder Company. Epoxy tetramethylol methane and polymerization products thereof. 2,462,048, Feb. 15.

Wyler, Joseph A., Allentown, Pa., assignor to Trojan Powder Company. Pentaerythritol conversion. 2,462,049, Feb. 15.

Wyss, Frederic D.: *See*—
Allin, Frederick R., and Wyss.

Yardeny, Michel N., New York, N. Y. Control apparatus with flexible control elements. 2,462,033, Feb. 15.

Yonkers, William A.: *See*—
Johanson, John E., and Yonkers.

Young, George O., Robesonia, assignor to Vanity Fair Mills, Inc., Reading, Pa. Knitting machine. 2,461,583, Feb. 15.

Zeck, Ivan V., assignor to L. L. Thompson, Iowa Park, Tex. Spraying system. 2,462,034, Feb. 15.

Zeeb, Stanley H., assignor, by mesne assignments, to Aeroquip Corporation, Jackson, Mich. Coupling. 2,461,863, Feb. 15.

Zimmerman, Bernhard G., Westfield, N. J., assignor to General Aniline & Film Corporation, New York, N. Y. Recovery and recycling of manganic sulfate paste in organic oxidations. 2,462,050, Feb. 15.

Zuschlag, Theodore, West Englewood, N. J., assignor to H. T. F. Lundberg, Toronto, Ontario, Canada. Instrument for geophysical exploration. 2,461,864, Feb. 15.

Zwicky, Fritz, Pasadena, assignor to Aerojet Engineering Corporation, Azusa, Calif. Reaction propelled device for operation through water. 2,461,797, Feb. 15.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 15TH DAY OF FEBRUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Nitriles, Purifying. A. W. Ralston, L. T. Crews, and E. W. Colt. Re. 23,084, Feb. 15.

LIST OF PLANT INVENTIONS

Rose plant. E. S. Boerner. 823, Feb. 15.

Rose plant. E. S. Boerner. 824, Feb. 15.

LIST OF DESIGN INVENTIONS

Anode, Metal. J. A. Stone. 152,753, Feb. 15.

Billfold or similar article. H. I. Thomas. 152,756, Feb. 15.

Blade, Airplane propeller. A. P. Leahy. 152,705, Feb. 15.

Boat or similar article. C. Price. 152,736, Feb. 15.

Bottle or similar article. E. N. Graham. 152,685, Feb. 15.

Bottle, Perfume. A. Newman. 152,723, Feb. 15.

Bottom member for milk bottle carrying cases and the like. E. R. Erickson. 152,683, Feb. 15.

Bracelet. L. D. Kline. 152,704, Feb. 15.

Bracelet or similar article. A. Philippe. 152,729, Feb. 15.

Bracelet or similar article. A. Philippe. 152,733, Feb. 15.

Brooch or similar article. H. Bergé. 152,669, Feb. 15.

Brooch or similar article. M. Duvalet. 152,679–80, Feb. 15.

Brooch or similar article. A. Kats. 152,694–7, Feb. 15.

Brooch or similar article. A. Kats. 152,700, Feb. 15.

Building. J. A. King. 152,703, Feb. 15.

Burner or similar article, Heating oil. R. W. Beckett. 152,668, Feb. 15.

Cabinet combination, Radio and table. W. Schier and D. L. Doggett. 152,748, Feb. 15.

Cabinet or similar article, Gas console heater. H. D. Edwards. 152,682, Feb. 15.

Cabinet, Phonograph. R. E. Brandenburger, Sr. 152,670, Feb. 15.

Candle, Decorative artificial. G. W. Kellogg. 152,702, Feb. 15.

Cap or similar article, Container. G. Pavlinets. 152,724, Feb. 15.

Case, Match book. R. T. Sporman. 152,751, Feb. 15.

Clip or similar article, Ear. M. Duvalet. 152,681, Feb. 15.

Clip or similar article, Pin. A. Kats. 152,698, Feb. 15.

Compact, Beauty. S. Payne. 152,725, Feb. 15.

Container, Ink. R. O. Letsch. 152,707, Feb. 15.

Cooky jar or similar article. V. de Marsa. 152,676, Feb. 15.

Cooler, Water. S. O. Morrison. 152,722, Feb. 15.

Cruise board. C. H. Clark. 152,673, Feb. 15.

Cutter, Vegetable. E. P. De Vault. 152,677, Feb. 15.

Dummy for testing parachutes. W. U. Hohwieler. 152,690, Feb. 15.

Earring or similar article. A. Kats. 152,699, Feb. 15.

Engine or similar article, Internal-combustion. C. E. Leja. 152,706, Feb. 15.

Extinguisher, Fire. A. B. Meyer. 152,718, Feb. 15.

Fan, Electric. H. G. Ullman. 152,758, Feb. 15.

Finding for jewelry. A. Kats. 152,701, Feb. 15.

Fish lure. J. L. McCollum. 152,713, Feb. 15.

Fishing lure. J. A. Mackey. 152,715, Feb. 15.

Flashlight. A. W. Miller. 152,719, Feb. 15.

Goggle or the like, Sun. H. C. Richards. 152,737, Feb. 15.

Grille and bumper, Combined motor vehicle. E. Macauley. 152,714, Feb. 15.

Handbag. A. C. Williams. 152,762, Feb. 15.

Hand saw, Rotary power. F. D. Dolan and L. Vavrik. 152,678, Feb. 15.

Handle, Saw. F. Weaver. 152,760, Feb. 15.

Hanger, Clothes. H. S. Hammond. 152,688, Feb. 15.

Holder, Album. R. P. Henn. 152,689, Feb. 15.

Housing, Solderer. W. J. Humpal and B. G. Reimers. 152,691, Feb. 15.

Instrument, Writing. C. L. Metzler. 152,717, Feb. 15.

Jewelry pendant or similar article. M. Chernow. 152,672, Feb. 15.

Jug. E. M. Rosenthal. 152,740–6, Feb. 15.

Knife and utility tool, Sportsman's combination. J. X. Peterson. 152,727, Feb. 15.

Lamp, Book-holding. M. M. Lund. 152,711, Feb. 15.

Light and illuminable house numeral indicator, Combined porch. D. R. Pennell. 152,726, Feb. 15.

Light, Emergency automobile. J. Feltz. 152,684, Feb. 15.

Light or similar article, Portable signal. E. C. Briggs. 152,671, Feb. 15.

Light, Taxicab cruising. F. J. Toomey. 152,757, Feb. 15.

Marine vessel. W. Costa. 152,674, Feb. 15.

Medal or similar article. T. H. Jones. 152,692, Feb. 15.

Medallion or similar article. T. H. Jones. 152,693, Feb. 15.

Necklace or like article. H. Steinbach. 152,752, Feb. 15.

Necklace or similar article. A. Philippe. 152,728, Feb. 15.

Necklace or similar article. A. Philippe. 152,730–2, Feb. 15.

Necklace or similar article. A. Philippe. 152,734–5, Feb. 15.

Opener, Can. L. F. Mead. 152,716, Feb. 15.

Phonograph or the like, Portable upright. S. F. Louchheim. 152,710, Feb. 15.

Pliers. K. F. Swallow. 152,754, Feb. 15.

Propeller, Aircraft. E. G. McCauley and S. M. Gamsu. 152,712, Feb. 15.

Rack and desk unit, Combination pen. P. Rossi. 152,747, Feb. 15.

Shaker, Cocktail. A. Cravaritis. 152,675, Feb. 15.

Shaker, Condiment. D. A. Rode. 152,739, Feb. 15.

Shears. H. C. Wheeler. 152,761, Feb. 15.

Shoe. D. Teitelbaum. 152,755, Feb. 15.

Slicer or the like, Cheese. W. Sellkoff and W. B. McBride. 152,749, Feb. 15.

Slicer, Vegetable. N. K. Morris. 152,721, Feb. 15.

Sofa. J. Mont. 152,720, Feb. 15.

Table. L. Guild and C. G. Towne. 152,686–7, Feb. 15.

Tool, Cuticle. D. S. Levnaich. 152,708, Feb. 15.

Toy pistol. P. Lim. 152,709, Feb. 15.

Undershoe. H. Shapiro. 152,750, Feb. 15.

Urn unit for cremated remains. W. H. Warren. 152,759, Feb. 15.

Visor, Vehicle windshield. H. C. Riemann. 152,738, Feb. 15.

LIST OF INVENTIONS

Chain: *See*—
Emergency tire chain.

Child's shampoo support. R. L. Lafield. 2,461,744, Feb. 15.

Child's table. A. G. Biggerstaff. 2,461,715, Feb. 15.

Chuck. L. S. Chadwick. 2,461,628, Feb. 15.

Crystalline sodium penicillin, Obtaining a. O. Wintersteiner and H. B. MacPhillamy. 2,461,949, Feb. 15.

Culvert forming machine. M. L. Eckman. 2,462,038, Feb. 15.

Cushion, A. Rothery. 2,462,004, Feb. 15.

Cushion or back rest. F. J. Curran. 2,461,880, Feb. 15.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 15TH DAY OF FEBRUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Adapter, Water meter reducing. M. T. Bullock. 2,461,516, Feb. 15.
Adhesive and coating composition. F. B. Speyer. 2,461,704, Feb. 15.
Adhesive composition containing an isobutene-diolefin rubbery copolymer and a resin occurring in Utah resin-bearing coal. L. J. Radi. 2,461,552, Feb. 15.
Adhesive composition containing polychloroprene rubber and a resin occurring in Utah resin-bearing coal. L. J. Radi. 2,461,553, Feb. 15.
Adhesive compositions. L. M. Perry. 2,462,029, Feb. 15.
Adjustable spacer bar. R. J. Moths. 2,461,996, Feb. 15.
Aerator. E. C. Lathrop and S. I. Aronovsky. 2,461,746, Feb. 15.
Aircraft wing mounting. A. H. Leonard and J. H. Blandford. 2,461,747, Feb. 15.
Airplane wing arrangement. P. Barker. 2,461,805, Feb 15.
Airscrew, Variable pitch. R. H. Warde. 2,461,791, Feb. 15.
Air separation method for slurry separation. A. B. Andersen and K. Horn. 2,461,584, Feb. 15.
Alcohol mixed esters, Polyhydric. B. C. Pratt. 2,461,920, Feb. 15.
Alcohol resin and making the same, Furfuryl. E. R. Dillehay and R. D. Schuetz. 2,461,882, Feb. 15.
Alcohols and formals, Production of halogenated. T. E. Londergan. 2,461,906, Feb. 15.
Alkali metal borohydrides, Preparation of. H. I. Schlesinger and H. C. Brown. 2,461,663, Feb. 15.
Alkali metal compounds, Preparation of. H. I. Schlesinger and H. C. Brown. 2,461,661–2, Feb. 15.
Alpha amino acids to alpha hydroxy acids, Conversion of. P. R. Shildneck. 2,461,701, Feb. 15.
Alpha, beta-unsaturated guanamines. J. T. Thurston. 2,461,943, Feb. 15.
Alternating current brake motor. J. H. Nelson and H. Servis. 2,461,759, Feb. 15.
Amines and fuels containing the same, Aromatic. J. W. Orelup. 2,461,917, Feb. 15.
Amines to nitramines, Converting secondary. G. F. Wright and W. J. Chute. 2,462,062, Feb. 15.
Amino trimethyl hexanoic acids and their lactams. A. V. Snider and R. C. Morris. 2,462,008, Feb. 15.
Amino trimethyl hexenoic acids and their lactams. R. C. Morris and A. V. Snider. 2,462,009, Feb. 15.
Antibiotic extraction from solids of actinomyces griseus culture. G. W. Rake, W. L. Koerber, and R. Donovick. 2,461,922, Feb. 15.
Antioxidants for fatty materials, Production of. L. O. Buxton and C. E. Dryden. 2,461,808, Feb. 15.
Antiplumming agents for photographic emulsions. E. B. Knott and J. Morgan. 2,461,987, Feb. 15.
Antisiphon valve. T. C. Mahon. 2,461,830, Feb. 15.
Antispasmodic composition. H. M. Rabinowitz. 2,461,921, Feb. 15.
Apparatus and method for detecting and measuring radiant energy for locating subterranean petroleum deposits. W. Armstrong. 2,461,801, Feb. 15.
Apparatus and method for detecting and measuring radiant energy for locating subterranean petroleum deposits. W. Armstrong. 2,461,802–3, Feb. 15.
Apparatus and method for studying wave propagations. R. Gunn. 2,461,543, Feb. 15.
Apparatus for applying plastic material to cables. L. W. Lovett, S. S. Sherrill, and A. Stiegler. 2,461,647, Feb. 15.
Apparatus for detecting and measuring radiant energy for locating subterranean petroleum deposits. W. Armstrong. 2,461,800, Feb. 15.
Apparatus for frequency multiplication of alternating electric currents. A. H. B. Walker. 2,461,861, Feb. 15.
Apparatus for heating and circulating spray material. D. J. Peeps. 2,461,766, Feb. 15.
Apparatus for making pile fabrics. V. A. Victor. 2,461,860, Feb. 15.
Apparatus for measuring high resistance. J. Rasek. 2,461,923, Feb. 15.
Apparatus for molding wax. J. V. Cowan. 2,461,723, Feb. 15.
Apparatus for separating suspended particles from gases. J. L. Burdock, P. F. Best, and C. B. McBride. 2,461,677, Feb. 15.
Apparatus for storing and dispensing stacked articles. W. J. Gibbs. 2,461,638, Feb. 15.
Apparatus for the permanent waving of hair. O. Elsässer and C. Ronsi. 2,461,883, Feb. 15.
Apparatus for vulcanising articles. A. N. Gray. 2,461,600, Feb. 15.
Apparatus for washing the side seams of can bodies. W. McK. Martin, W. F. Pilinik, and D. E. Wobbe. 2,461,559, Feb. 15.
Arc starter, Automatic. N. E. Anderson. 2,461,798, Feb. 15.
Ash receiver with suction discharge, Vehicle. R. L. Gill. 2,461,815, Feb. 15.
Ash tray, Self-luminous. H. H. Jacobs. 2,461,549, Feb. 15.
Asphalt with improved adhesion properties for aggregates. H. G. M. Fischer. 2,461,971, Feb. 15.
Automobile transport van. A. J. Schaldach and V. A. Blackburn. 2,461,927, Feb. 15.
Azeotropic distillation of wide-boiling-range hydrocarbon fractions. G. R. Lake and J. M. Stribley. 2,462,025, Feb. 15.
Backwash for water-treating systems, Auxiliary. H. Wolcott. 2,461,619, Feb. 15.
Balancer, Dynamic. G. T. Hemmeter. 2,461,643, Feb. 15.
Balancing machine. H. E. Kallmann. 2,461,645, Feb. 15.
Bar: *See*—
Adjustable spacer bar.
Barrel, Flow. E. B. Barnes. 2,461,512, Feb. 15.
Barrette. N. L. Solomon. 2,461,934, Feb. 15.
Base, Snap-on bottle. P. A. Derham. 2,461,968, Feb. 15.
Bearings, Making composite. R. G. Olt. 2,461,765, Feb. 15.
Belt, High-speed. E. Nassimbene. 2,461,654, Feb. 15.
Beverage dispenser. W. W. Bowman. 2,462,019, Feb. 15.
Blanket for horses, Saddle. N. H. Humphrey. 2,461,899, Feb. 15.
Boiler assembly, Sectional. A. J. Gallaher. 2,461,597, Feb. 15.
Box: *See*—
Folding box. Jewelry box.
Bracket for automobiles, Fish pole. J. W. Hopkins. 2,461,897, Feb. 15.
Brake mechanism, Booster. O. M. Whitten. 2,462,015, Feb. 15.
Braking arrangements for direct current motors, Dynamic. G. F. W. Powell. 2,461,919, Feb. 15.
Bubble cap mounting. H. C. Glitsch. 2,461,729, Feb. 15.
Bucket holder. T. Kowalski. 2,461,825, Feb. 15.
Building and structural unit therefor, Demountable. A. G. Omar. 2,461,916, Feb. 15.
Buffer, Manicurist. A. Sorrell. 2,461,781, Feb. 15.
Burner and support therefor, Gas. M. L. Mosier. 2,461,913, Feb. 15.
Butadiene-styrene copolymer cements, Manufacture of. E. G. Bargmeyer. 2,461,954, Feb. 15.
Button, Cuff link or cuff. C. I. Osterberg. 2,461,845, Feb. 15.
Cable clamp. H. A. Einhart. 2,461,725, Feb. 15.
Can for frozen foods or the like, Preset pressure. R. Lo Vico. 2,461,557, Feb. 15.
Candle. M. C. Hussey. 2,461,822, Feb. 15.
Cannister shell. D. F. Linsley. 2,461,555, Feb. 15.
Cap: *See*—
Composite bottle cap. Dispensing closure cap.
Car: *See*—
Railway sleeping car.
Carboxylic substituted aliphatic amines and metallic salts thereof, Producing. F. C. Bersworth. 2,461,519, Feb. 15.
Cargo and combat pack. J. W. Cull and E. Nilsson. 2,461,526, Feb. 15.
Carload bracing spur cleat. W. T. Peyton. 2,461,767, Feb. 15.
Cartridge case. E. C. Fletcher. 2,461,539, Feb. 15.
Case: *See*—
Cartridge case.
Case with sight openings, Eyeglass. T. E. Weaver. 2,461,792, Feb. 15.
Caster. W. F. Schacht. 2,461,778, Feb. 15.
Caster, Knock down. J. W. Montgomery, Sr. 2,461,652, Feb. 15.
Catalyst regeneration process, Solid bed. F. C. Neuhart. 2,461,838, Feb. 15.
Catalytic hydrogenation of trilsobutylene. R. C. Brandon. 2,461,959, Feb. 15.
Cell, Leak resistant electrical. G. B. Ellis. 2,461,534, Feb. 15.
Cellular resin material, Making. L. E. Nye. 2,461,761, Feb. 15.
Cellulose esters, Ripening. R. D. Rowley and R. F. Thompson. 2,461,572, Feb. 15.
Cellulose lace-backing fabrics, Nitrating. J. Datlow. 2,461,632, Feb. 15.
Cellulosic repair putty, Low shrinking. C. W. Johnson. 2,461,900, Feb. 15.
Centrifugal machine, Balancing. T. H. Reid. 2,461,773, Feb. 15.
Centrifugal pump. G. P. E. Howard and A. Ivanoff. 2,461,821, Feb. 15.
Centrifuge apparatus for obtaining blood plasma. W. Aronson. 2,461,674, Feb. 15.

Chain: *See*—
Emergency tire chain.
Child's shampoo support. R. L. Lafield. 2,461,744, Feb. 15.
Child's table. A. G. Biggerstaff. 2,461,715, Feb. 15.
Chuck. L. S. Chadwick. 2,461,628, Feb. 15.
Circuit: *See*—
Regulator circuit.
Circuit arrangement for producing a sine wave voltage from a pulse waveform. L. W. Germany. 2,461,637, Feb. 15.
Circuit unit, Electric. R. R. Roup. 2,461,658, Feb. 15.
Circuits, Frequency response. R. W. Beckwith. 2,461,956, Feb. 15.
Clamp: *See*—
Cable clamp. Welser's clamp.
Clamp for cement form panels. A. J. Harder. 2,461,733, Feb. 15.
Clarifying mash. A. J. Strohmaier and C. L. Lovell. 2,461,938, Feb. 15.
Cleaning apparatus, Egg. A. U. Bryant. 2,461,960, Feb. 15.
Cleat for shoes, Detachable. J. R. Wright. 2,461,671, Feb. 15.
Clothesline prop. F. E. Kuff. 2,461,607, Feb. 15.
Clutch and brake mechanism. K. Clark. 2,461,629, Feb. 15.
Coating apparatus, Automatic spray. J. A. Paasche. 2,461,657, Feb. 15.
Coating of metal strip, Method and apparatus for the electrolytic. E. T. Lorig. 2,461,556, Feb. 15.
Coffee filter. J. E. Hooper. 2,461,736, Feb. 15.
Color stabilisation of vinyl halide resins. F. W. Cox and J. M. Wallace, Jr. 2,461,531, Feb. 15.
Comb, Hair-treating. M. G. Usal. 2,461,789, Feb. 15.
Communication system, Carrier-wave. H. M. Lewis. 2,461,646, Feb. 15.
Compact. A. Wewetzer. 2,461,711, Feb. 15.
Composite bottle cap. D. L. Spender. 2,462,010, Feb. 15.
Composition comprising a rubbery copolymer of butadiene and styrene and a resin occurring in Utah resin-bearing coal. E. D. Lee and L. S. Engle. 2,461,551, Feb. 15.
Composition for fluoroscopic observation and roentgenography. E. H. Slaybaugh. 2,461,702, Feb. 15.
Compositions of matter and methods and steps of making and using the same. M. T. Harvey. 2,461,810, Feb. 15.
Compressor, Multistage. D. M. Smith and C. G. Lloyd. 2,461,931, Feb. 15.
Compressor unloading means. W. F. Gibson. 2,462,039, Feb. 15.
Computer, Compound angle. F. M. Williamson. 2,461,795, Feb. 15.
Condensation products of tri-(beta-aminoethyl)-amine and beta-diketones or hydroxy methylene ketones. L. A. Hamilton and C. J. Pedersen. 2,461,894, Feb. 15.
Condenser motor. W. F. Boelsums. 2,461,717, Feb. 15.
Conductor, Coaxial. L. H. Morin. 2,461,834, Feb. 15.
Conductors to glass envelope walls, Sealing. P. H. Craig. 2,462,020, Feb. 15.
Connection for brake rods and the like, Resilient. G. B. Dorey. 2,461,633, Feb. 15.
Connector: *See*—
Electrical connector.
Container. Walton B. and William B. Crane, Jr. 2,461,879, Feb. 15.
Container and cap sealing means, Readily releasable liquid. P. Guagliano. 2,461,893, Feb. 15.
Container and cover. C. D. Magnesen. 2,461,908, Feb. 15.
Container and manufacture. A. B. Wilson. 2,461,581, Feb. 15.
Continuous rotary drum filter. T. R. Komline. 2,461,824, Feb. 15.
Control apparatus with flexible control elements. M. N. Yardeny. 2,462,033, Feb. 15.
Control arrangement for absorption refrigeration systems. A. A. Berestneff. 2,461,513, Feb. 15.
Control for gaseous fuel burners, Safety. P. L. Bets. 2,461,714, Feb. 15.
Control for power brakes, Trailer hand. F. R. Allin and F. D. Wyss. 2,461,712, Feb. 15.
Control for presses, Safety. N. S. McEwen. 2,461,753, Feb. 15.
Control means for centrifugals. C. A. Olcott. 2,461,764, Feb. 15.
Control mechanism for sewing machines and the like. P. B. Clark. 2,461,520, Feb. 15.
Control valve. B. E. Horne. 2,461,982, Feb. 15.
Converting rotary to intermittent oscillating motion. T. Harris and E. C. Swilik. 2,461,641, Feb. 15.
Copolymers of butadiene and styrene, Compounding. E. G. Bargmeyer. 2,461,953, Feb. 15.
Cot and making same, Finger. J. C. Finegan. 2,461,970, Feb. 15.
Cot, Finger. E. W. Beatty. 2,461,872, Feb. 15.
Coupling: *See*—
Sealed coupling. Self-sealing releasable coupling.
Self-sealing coupling.
Coupling. A. T. Schelwer. 2,461,699, Feb. 15.
Coupling. S. H. Zeeb. 2,461,863, Feb. 15.
Covering, Infant's bed. F. Mallette. 2,461,749, Feb. 15.
Cradle and perambulator, Combination. H. B. Light. 2,461,609, Feb. 15.
Crystal violet, Preparation of. G. S. Herrick. 2,461,896, Feb. 15.
Crystalline sodium penicillin, Obtaining a. O. Wintersteiner and H. B. MacPhillamy. 2,461,949, Feb. 15.
Culvert forming machine. M. L. Eckman. 2,462,038, Feb. 15.
Cushion, A. Rothery. 2,462,004, Feb. 15.
Cushion or back rest. F. J. Curran. 2,461,880, Feb. 15.
Cushioning support. L. F. Thiry. 2,462,011, Feb. 15.
Cutout for automotive engines, Safety. J. Malir, Jr. 2,461,692, Feb. 15.
DDT, Stabilization of. G. A. Stein and M. Tishler. 2,461,852, Feb. 15.
Degassing and grain refining of magnesium. K. Strauss. 2,461,937, Feb. 15.
Degradation of the side-chain of a steroid containing a nuclear α,β-unsaturated keto group. K. Miescher, H. Frey, C. Meystre, and A. Wettstein. 2,461,912, Feb. 15.
Degradation of the side-chain of steroids and steroids suitable therefor. K. Miescher, H. Frey, C. Meystre, and A. Wettstein. 2,461,910–11, Feb. 15.
Degradation of the side-chain of steroids and steroids suitable therefor. K. Miescher, H. Frey, C. Meystre, and A. Wettstein. 2,461,911, Feb. 15.
Dehydrator. R. L. Puccinelli. 2,461,770, Feb. 15.
Dehydrofluorination of polyfluoroalkanes. D. D. Coffman and R. D. Cramer. 2,461,523, Feb. 15.
Detachable oven door. G. Klein. 2,461,902, Feb. 15.
Detecting and measuring radiant energy for locating subterranean petroleum deposits. W. Armstrong. 2,461,799, Feb. 15.
Device for restoring to shape the walls of deformed sheet-metal boxes and their lids. T. R. Neutelings. 2,461,839, Feb. 15.
Device for solving equations. W. C. Johnson. 2,461,738, Feb. 15.
Dies for extruding externally finned tubes, Producing. A. W. Hallberg. 2,461,640, Feb. 15.
Dinette set. W. C. Dierickx. 2,461,694, Feb. 15.
Discharge device, Electron. R. K. Gessford. 2,461,728, Feb. 15.
Dispenser: *See*—
Beverage dispenser.
Dispenser and advertising device, Combined paper. A. Szalka. 2,461,706, Feb. 15.
Dispensing closure cap. R. C. Wright. 2,461,620, Feb. 15.
Dispensing device, Tube. H. G. Giles. 2,461,891, Feb. 15.
Dispersions of vinyl chloride resins. R. W. Quarles and C. I. Spessard. 2,461,613, Feb. 15.
Display device. E. N. Farkas. 2,461,536, Feb. 15.
Distributor for refrigerating systems, Liquid. J. R. Boyle. 2,461,876, Feb. 15.
Di-threonine, Preparation of. A. C. Shabica. 2,461,847, Feb. 15.
Door: *See*—
Detachable oven door.
Double-acting centrifugal pump. D. Murphy. 2,461,835, Feb. 15.
Dough rounder. C. B. Seem. 2,461,929, Feb. 15.
Drier: *See*—
Hair drier.
Drill: *See*—
Rock drill.
Drive, Motor. W. H. Rouse. 2,461,859, Feb. 15.
Dump, Rotary. E. Ramsay. 2,461,771, Feb. 15.
Dyeing of resins with polyhydroxy alcohol assistants. H. C. Olpin and A. J. Weeson. 2,461,612, Feb. 15.
Dynamoelectric machine. I. Kalikow. 2,461,985–6, Feb. 15.
Edge lighting unit. J. C. Dixon. 2,461,532, Feb. 15.
Educational device. W. P. Russell. 2,461,926, Feb. 15.
Electric contact device. E. F. Hansen. 2,461,980, Feb. 15.
Electric heating. A. P. Wiegand. 2,462,016, Feb. 15.
Electric iron. W. H. McLelland and E. J. Ajax. 2,461,550, Feb. 15.
Electric switch. W. J. Cuthbertson and L. S. Schell, Jr. 2,461,965, Feb. 15.
Electrical connector. G. W. Clark. 2,462,036, Feb. 15.
Electrical resistances, Insulated. J. Stockdale and D. E. Rison. 2,461,935, Feb. 15.
Electrical system. D. E. Sunstein. 2,461,667, Feb. 15.
Electrode assembly for electron-discharge tubes. P. W. Stutsman. 2,461,578, Feb. 15.
Electrode securing means. W. L. Krahl. 2,461,743, Feb. 15.
Electrodepositing composition and process. A. G. Gray, W. F. Gresham, and D. J. Loder. 2,461,507, Feb. 15.
Electrolytes in physiologically active materials, Removal or replacement of. F. K. Daniel. 2,461,505, Feb. 15.
Electrolytic recording. H. G. Greig. 2,461,892, Feb. 15.
Emergency tire chain. H. P. Huffman and E. B. Snively. 2,461,737, Feb. 15.
Enclosure for tractors. L. Flora. 2,461,974, Feb. 15.
Engine: *See*—
Internal-combustion engine.
Engine starting device. C. E. Streed. 2,461,784, Feb. 15.
Epoxy tetramethylol methane and polymerisation products thereof. J. A. Wyler. 2,462,048, Feb. 15.
Ethylene, Conversion of. S. J. Hetzel and R. M. Kennedy. 2,461,820, Feb. 15.
Exerciser and amusement device for infants. E. de Ferrari. 2,461,682, Feb. 15.

2,461,559. Feb. 15.

Aronson. 2,461,674, Feb. 15.

Extension joint. G. F. Lomeline. 2,461,828, Feb. 15.
Exterior form for use in molding burial vaults and the like. J. S. Schopf. 2,461,928, Feb. 15.
Extracting device for bakery products. H. J. Harker. 2,462,021, Feb. 15.
Fastening. D. K. Macleod. 2,461,648, Feb. 15.
Fatty materials, Stabilization of. L. O. Buxton and C. E. Dryden. 2,461,807, Feb. 15.
Faucet and adjustable flow restrictor, Beverage. S. J. McClure. 2,461,909, Feb. 15.
Feed control means, Traverse. H. T. Tornberg. 2,461,855, Feb. 15.
Feeder: *See*—
  Poultry feeder.
Film, Rubber hydrochloride. L. E. Cheyney. 2,461,963, Feb. 15.
Filter: *See*—
  Coffee filter.
  Continnuous rotary drum filter.
Filters, Producing. J. Wulff. 2,462,045, Feb. 15.
Fire-retarding compositions. E. K. Fischer. 2,461,538, Feb. 15.
Firing mechanism. L. A. Skinner and J. A. Folse. 2,461,574, Feb. 15.
Fish lure. M. C. Miller. 2,461,755, Feb. 15.
Fixture, Contact. C. W. P. Walter. 2,461,616, Feb. 15.
Fixture, Fluorescent lighting. J. Terr. 2,461,786, Feb. 15.
Flame hardening apparatus. A. L. Hartley and A. H. Davis. 2,461,784, Feb. 15.
Flashlight. O. Doose. 2,461,634, Feb. 15.
Floating roof storage tank. A. S. Feild. 2,461,537, Feb. 15.
Fluid control device. D. G. Taylor. 2,461,615, Feb. 15.
Fluid control valve. W. A. Ray. 2,461,772, Feb. 15.
Fluorescent products and preparation thereof. B. S. Ellefson. 2,461,726, Feb. 15.
Fluorocarbon, Aromatic. W. B. Ligett, E. T. McBee, and V. V. Lindgren. 2,461,554, Feb. 15.
Flushing device. G. A. Norman. 2,461,656, Feb. 15.
Foldable reel. J. C. Hancock. 2,461,979, Feb. 15.
Folding box. A. Whittaker. 2,461,618, Feb. 15.
Footrest. N. Alikas. 2,461,622, Feb. 15.
Foul ball indicator. A. K. Nelson. 2,461,836, Feb. 15.
Frame: *See*—
  Ring spinning frame.
Frequency reducer, Magnetic. H. J. McCreary. 2,461,992, Feb. 15.
Friction element comprising discrete particles of insoluble furfuraldehyde ketone resin. M. T. Harvey. 2,461,508, Feb. 15.
Fuels, Method and apparatus for emulsifying. S. B. Wicser and V. R. Kokatnur. 2,461,580, Feb. 15.
Fumigant application system, Automatic grain. T. C. Manning. 2,461,649, Feb. 15.
Gaff, Folding. R. W. Sutton. 2,461,941, Feb. 15.
Gallery, Shooting. W. A. Tratsch. 2,461,788, Feb. 15.
Garment hanger. J. Hiebert. 2,461,686, Feb. 15.
Gate, Starting. E. M. Smith, C. E. Whittaker, and J. S. Goodwin. 2,461,790, Feb. 15.
Gauge: *See*—
  Gripper gauge.
Gauge for collocating pipe sections. C. J. Stark. 2,461,783, Feb. 15.
Gear: *See*—
  Retractable landing gear.
Generator: *See*—
  Sawtooth wave generator.
  Telephone ringing current generator.
Glass articles, Making fibrous. M. E. Nordberg. 2,461,841, Feb. 15.
Golf swing trainer. L. M. Krautter. 2,461,826, Feb. 15.
Gluten containing compositions. L. Lowen. 2,461,829, Feb. 15.
Gripper gauge. R. G. Lynn. 2,461,661, Feb. 15.
Guard for cutouts, Fuse. D. C. Hubbard. 2,461,898, Feb. 15.
Guide and pilot, Adjustable drill. L. F. Blatt. 2,461,716, Feb. 15.
Gun for spraying powder. D. L. Lott. 2,461,611, Feb. 15.
Hair drier. A. Květoň. 2,461,689, Feb. 15.
Hammer, Power-driven. G. C. Robinson. 2,461,571, Feb. 15.
Handbag sounding device. A. S. Cooper. 2,461,588, Feb. 15.
Handgrip control. T. Obsarny and J. J. Rowell. 2,461,997, Feb. 15.
Handle: *See*—
  Tool handle.
Hanger: *See*—
  Garment hanger.
Hanger device for automobile windows. C. C. Coons. 2,461,722, Feb. 15.
Harmonicon, Chromatic. A. Borel. 2,461,806, Feb. 15.
Hay stacker device. O. F. Fitch. 2,461,978, Feb. 15.
Headgear. F. D. Huntsman. 2,461,605, Feb. 15.
Heating system, Hot water. L. R. Robertson. 2,461,774, Feb. 15.
Holder: *See*—
  Bucket holder.
  Knitting needle holder.
  Microtome blade holder.
  Stick holder.
  Storage battery holder.
  Universal gauge holder.
Holder and lipstick, Lipstick. A. E. Vaughn. 2,461,790, Feb. 15.
Holder for photographic enlargers, Film. W. D. Thompson. 2,461,668, Feb. 15.
Honing or the like machine. F. W. Whitehead and W. G. Lovering. 2,461,948, Feb. 15.
Hose, Steam. J. M. Flounders. 2,461,594, Feb. 15.
Hour-increment hour hand setting mechanism. J. P. Graef. 2,461,599, Feb. 15.
Hull, Boat. M. A. Hall. 2,461,819, Feb. 15.
Hydrocarbon fluids, Treating. L. S. Bonnell. 2,461,958, Feb. 15.
Hydrocarbon oil with catalysts, Process and apparatus for the treatment of. A. D. Smith. 2,461,932, Feb. 15.
Hydrocarbon separation by azeotropic distillation. A. C. McKinnis. 2,461,993, Feb. 15.
Hydrogen peroxide distillation after removal of organic peroxides. P. L. Kooijman. 2,461,988, Feb. 15.
Implement, Shaving. A. R. Towers. 2,461,858, Feb. 15.
Indicator: *See*—
  Foul ball indicator.
  Magnetostrictive pressure indicator.
Inhibiting foam formation in an aqueous gas-liquid system. L. O. Gunderson. 2,461,730, Feb. 15.
Innersole and making the same. F. L. Ayers. 2,461,713, Feb. 15.
Inspection system. C. de Brabander. 2,461,592, Feb. 15.
Instrument for geophysical exploration. T. Zuschlag. 2,461,864, Feb. 15.
Internal-combustion engine. M. H. Moores. 2,461,757, Feb. 15.
Interpolymers of styrene, allylic fumarate, and allylic alcohol, Treating. C. A. Heiberger. 2,461,735, Feb. 15.
Ion exchange material, Regeneration of. F. K. Daniel. 2,461,506, Feb. 15.
Iron: *See*—
  Electric iron.
Iron assembly, Electric. W. H. McLelland and E. J. Ajax. 2,461,562, Feb. 15.
Iron ores, Froth flotation of. R. B. Booth and E. C. Herkenhoff. 2,461,875, Feb. 15.
Isomerization of a low-boiling saturated hydrocarbon. F. E. Frey. 2,461,540, Feb. 15.
Isomerization of paraffins. J. D. Gibson. 2,461,598, Feb. 15.
Isomerization process. H. J. Hepp. 2,461,545, Feb. 15.
Isomerization process, Paraffin. J. L. Richmond. 2,461,568, Feb. 15.
Isomerizing a low-boiling isomerizable saturated hydrocarbon. F. E. Frey. 2,461,541, Feb. 15.
Jewelry box. S. Trachtenberg. 2,461,787, Feb. 15.
Joint: *See*—
  Extension joint.
  Rotary joint.
  Transmission belt joint.
Joint. M. H. Alldredge. 2,461,866, Feb. 15.
Joint. J. H. Booth. 2,461,626, Feb. 15.
Ketones with formaldehyde, Condensation of. H. Wittcoff. 2,462,031, Feb. 15.
Knitting machine. G. O. Young. 2,461,583, Feb. 15.
Knitting machine, Circular. F. Staples. 2,461,851, Feb. 15.
Knitting machine, Warp. F. Lambach. 2,461,550, Feb. 15.
Knitting needle holder. A. A. Y. Giovanini. 2,461,816, Feb. 15.
Latching means for tractor hitch bars. J. R. Estes. 2,461,885, Feb. 15.
Leaks in drill stems, Detecting. R. I. Gardner. 2,461,727, Feb. 15.
Light control for projectors, Multiple lens. R. J. Anschicks, C. Widell, and J. R. Mantsh. 2,461,673, Feb. 15.
Lighter, Cigarette. C. M. Fox. 2,461,890, Feb. 15.
Liner for opposed piston engines, Cylinder. H. Steiner. 2,461,853, Feb. 15.
Link, Safety. R. L. Hobler. 2,462,041, Feb. 15.
Liquids from carbon monoxide and hydrogen, Synthesis of. J. K. Roberts. 2,461,570, Feb. 15.
Lock protector. N. M. Budak. 2,461,676, Feb. 15.
Low-reflecting surfaces on optical elements, Forming. F. H. Nicoll. 2,461,840, Feb. 15.
Lowering and handling apparatus for burial vaults. C. L. Berg. 2,461,675, Feb. 15.
Lubricating composition. J. P. Buckmann and L. L. Neff. 2,461,961, Feb. 15.
Machine and method for manufacture of shoes. J. Fossa. 2,461,889, Feb. 15.
Machine for die-forming sheet metal blanks, Mass production. A. Illsche. 2,461,688, Feb. 15.
Machine for forming and joining snap fastener tapes. J. P. Treciokas. 2,461,944, Feb. 15.
Machine for locating screwheads with respect to drills. M. J. Carpinella. 2,462,036, Feb. 15.
Machine for stuffing newspapers or similar sheet material assemblages. P. Schweitzer. 2,461,973, Feb. 15.
Machine rotor construction, Dynamoelectric. W. J. Morrill. 2,461,566, Feb. 15.

Machine tool. N. P. Darash. 2,461,631, Feb. 15.
Machine tool working head. F. G. Hansen. 2,461,732, Feb. 15.
Magnetostrictive pressure indicator. A. M. Feller. 2,461,635, Feb. 15.
Manganic sulfate paste in organic oxidations, Recovery and recycling of. B. G. Zimmerman. 2,462,050, Feb. 15.
Manicuring accessory. W. J. McMahon. 2,461,695, Feb. 15.
Manufacture of carbon black. W. Loving. 2,462,026, Feb. 15.
Marker with means to limit the swinging movement of the marker plate, Cattle. W. F. Schacht. 2,461,777, Feb. 15.
Measuring device for shafts, Torque and power. F. W. Godsey, Jr. 2,461,685, Feb. 15.
Mechanism for parachute harnesses. Quick release. F. J. Sullivan. 2,461,785, Feb. 15.
Metal, Corrosion-resisting thermostat. P. G. Chace. 2,461,518, Feb. 15.
Metallising composition. C. J. Christensen, M. D. Rigterink, and A. W. Treptow. 2,461,878, Feb. 15.
Meter having coordinated meter pointer and calculating disk, Exposure. R. Simpson. 2,461,930, Feb. 15.
Meter setter. W. E. Ford. 2,461,888, Feb. 15.
Micrometer, Differential screw. E. E. Modes. 2,461,995, Feb. 15.
Micropermeameter for measuring the permeability of oil field cuttings. H. J. Weige. 2,462,014, Feb. 15.
Microtome blade holder. R. R. Allen. 2,461,621, Feb. 15.
Mixing apparatus. R. L. Cawood and B. W. Richardson. 2,461,720, Feb. 15.
Mold and refractory trough assembly, Separable. P. M. Payne. 2,461,999, Feb. 15.
Molding machine attachment, Dough. R. W. Baird. 2,461,868, Feb. 15.
Motion of machinery, Moving and controlling the. C. F. Brereton. 2,461,877, Feb. 15.
Motor: *See*—
  Alternating current brake motor.
  Condenser motor.
Motor and brake mechanism. G. D. Willets. 2,462,017, Feb. 15.
Motor fuels. H. G. M. Fischer. 2,461,972, Feb. 15.
Motor propelled toy vehicle. A. Adamczyk. 2,461,672, Feb. 15.
Mount for plastic extruders, Die. H. T. Tornberg. 2,461,856, Feb. 15.
Mounting: *See*—
  Aircraft wing mounting.
  Bubble cap mounting.
Mounting and control, Flaw detector. C. G. Kaehms. 2,461,984, Feb. 15.
Mounting for hooks and the like. R. A. Stone. 2,461,936, Feb. 15.
Multicolor printing press. O. R. Wolf. 2,462,032, Feb. 15.
Multiplex photographic equipment support. J. T. Pennington. 2,461,567, Feb. 15.
Multiplying apparatus. A. C. Hardy and E. C. Dench. 2,461,896, Feb. 15.
Necktie. A. F. Taborski. 2,461,854, Feb. 15.
Nitramines and their preparation. G. F. Wright and W. J. Chute. 2,461,582, Feb. 15.
Nitriles with amides and the production of beta-alamine, Condensation of. J. F. Olin. 2,461,842, Feb. 15.
Nut, Seal. J. E. Johanson and W. A. Yonkers. 2,462,023, Feb. 15.
Oil-acid modified alkyd material, Preparing. C. G. Moore. 2,461,564, Feb. 15.
Oil by-pass structure to avoid smoking of oil burners. J. A. Logan. 2,461,991, Feb. 15.
Oils, Deodorization of. K. McCubbin and C. R. Monical. 2,461,694, Feb. 15.
Operating table. G. A. Brewster. 2,461,627, Feb. 15.
Optical inspection apparatus for use in inspecting potentiometer cards. J. S. Stull. 2,461,939, Feb. 15.
Organic acids from carbonaceous material, Making. M. Kiebler. 2,461,740, Feb. 15.
Ornament, Detachable shoe heel. T. Gilmour. 2,461,977, Feb. 15.
Oscillator capacitance multivibrator, Relaxation. H. A. Bass. 2,461,871, Feb. 15.
Oxychloride cementatory material. E. D. F. Whitehead. 2,462,030, Feb. 15.
Package. L. L. Salfisberg. 2,461,660, Feb. 15.
Packaged meat and like products and process thereof. M. R. Coe. 2,461,522, Feb. 15.
Packaging. J. E. Hills. 2,461,981, Feb. 15.
Packaging apparatus. J. Riemer. 2,461,569, Feb. 15.
Packer, Well. D. C. Marler. 2,461,650, Feb. 15.
Pad: *See*—
  Shoulder pad.
Pallet, Fabricated. R. A. Fletcher. 2,461,887, Feb. 15.
Peeler, Impact type log. C. J. Robertson. 2,461,924, Feb. 15.
Peeler, Nut. H. J. Cook. 2,461,524, Feb. 15.
Pentaerythritol condensation products. J. A. Wyler. 2,462,047, Feb. 15.
Pentaerythritol conversion. J. A. Wyler. 2,462,049, Feb. 15.
Percussive tool. J. C. Curtis and E. G. Gartin. 2,461,527, Feb. 15.
Perforator, Can. C. E. Venne. 2,461,709, Feb. 15.
Petroleum gas system, Liquefied. S. L. Sundstrom. 2,461,940, Feb. 15.
Phase shifting apparatus. L. A. Meacham. 2,461,832, Feb. 15.
Phosphate minerals, Concentration of. J. B. Duke. 2,461,813, Feb. 15.
Phosphate minerals from their ores, Concentration of. E. W. Greene and J. B. Duke. 2,461,817, Feb. 15.
Phosphatides, Preparation of. R. A. Marmor and W. W. Moyer. 2,461,750–1, Feb. 15.
Pile splice. K. and R. Kershaw. 2,461,739, Feb. 15.
Pipe: *See*—
  Smoker's pipe.
Pipe connection. A. J. Hierts. 2,462,040, Feb. 15.
Plastic material extrusion head. G. Cezzo. 2,461,630, Feb. 15.
Plug: *See*—
  Spark plug.
Plunger, Expansible. L. Beeh. 2,461,873, Feb. 15.
Polyamine resinous composition and an ink made therefrom. F. E. Petke. 2,461,918, Feb. 15.
Polyisobutylene, Oxidised. G. H. B. Davis. 2,461,966, Feb. 15.
Polymerised unsaturated substances, Conjointly. A. M. Howald and J. L. Jones. 2,462,042, Feb. 15.
Polymers and copolymers of propiolates. J. G. Lichty. 2,461,990, Feb. 15.
Pop-up waste valve. M. F. De Grave and J. Calladine. 2,461,812, Feb. 15.
Portable golf tee support. H. D. Hendricks. 2,461,601, Feb. 15.
Potentiometer. W. J. Opocensky. 2,461,843, Feb. 15.
Poultry feeder. A. W. Corrigan. 2,461,525, Feb. 15.
Powder composition, Fuse. G. C. Hale and D. Hart. 2,461,544, Feb. 15.
Press: *See*—
  Multicolor printing press.
Print-handling device. L. P. Martinek. 2,461,831, Feb. 15.
Projection apparatus, Visual observation and silhouette. G. D. Armerding. 2,461,623, Feb. 15.
Projector, Disk picture. R. S. Moore. 2,461,756, Feb. 15.
Protective device. F. D. Huntsman. 2,461,604, Feb. 15.
Protector: *See*—
  Lock protector.
  Yarn protector.
Pulse echo systems and pulse indicating means. F. G. Patterson. 2,461,998, Feb. 15.
Pump: *See*—

Shovel, Mechanical mine shaft. A. O. Hall. 2,461,978, Feb. 15.
Shovel, Vehicle mounted. R. J. Nadherny. 2,461,653, Feb. 15.
Showcase with display racks therein. F. A. Saunders. 2,461,698, Feb. 15.
Sight glass assembly. G. Le Roy. 2,461,989, Feb. 15.
Sinker for fishing lines. D. P. Mercier. 2,461,833, Feb. 15.
Skid corrector, Automatic. R. G. Dosé. 2,461,533, Feb. 15.
Sleeve expanding device with integral wedge and piston rod, Metal. W. J. Morrill. 2,461,565, Feb. 15.
Slicer, Cheese. C. L. Wilquin. 2,461,796, Feb. 15.
Sludge handling and disposal system. E. F. Fisher. 2,461,814, Feb. 15.
Smoker's-pipe. D. P. Lavietes. 2,461,905, Feb. 15.
Socket, Telltale lamp. B. E. Carlson. 2,461,962, Feb. 15.
Spacer for tractors, Wheel. S. D. Jarrett. 2,461,983, Feb. 15.
Spark plug. L. H. Crook. 2,461,590, Feb. 15.
Spindle, Automatic locking. H. T. Tornberg. 2,461,857, Feb. 15.
Spray gun for coating the interior of conduits. J. C. Carnevale. 2,461,517, Feb. 15.
Spray outfit, Electrically operated. E. D. Rapisarda. 2,462,001, Feb. 15.
Sprayer for centrifugals, Automatically controlled. E. G. Kochli and C. A. Olcott. 2,461,741, Feb. 15.
Spraying system. I. V. Zeck. 2,462,034, Feb. 15.
Spring: *See*—
Vehicle spring.
Sprinkler, Oscillating water. J. T. Porter. 2,461,768, Feb. 15.
Stand or holder, Christmas tree. W. H. Looker. 2,461,748, Feb. 15.
Stapling machine. J. Balton. 2,461,869, Feb. 15.
Steering mechanism for two-wheeled tractors or the like. H. C. French. 2,461,596, Feb. 15.
Sterile liquids, Handling. N. M. Nesset. 2,461,837, Feb. 15.
Stick holder. L. D. Overland. 2,461,844, Feb. 15.
Stitching machine, Sole. C. Carlino. 2,461,587, Feb. 15.
Storage battery holder. C. H. McConnell. 2,461,752, Feb. 15.
Strap, Wrist watch. F. R. McAloon. 2,461,693, Feb. 15.
Stripping of emulsion polymerization latices. W. W. Waterman. 2,462,013, Feb. 15.
Structure for aircraft surfaces, Hinge. J. M. Lang. 2,461,745, Feb. 15.
Sulfurised phenolic tanning agents and their manufacture. V. Kartaschoff. 2,461,901, Feb. 15.
Support: *See*—
Child's shampoo support. Portable golf tee support.
Cushioning support. Reel support.
Multiplex photographic equipment support. Vibration absorbing support.
Support for electric sadirons. J. A. Cragan. 2,461,681, Feb. 15.
Support for electrical fixtures. J. E. Williams. 2,461,794, Feb. 15.
Supporting column. J. C. Curtis. 2,461,810, Feb. 15.
Switch: *See*—
Electric switch.
Switch. A. and S. Sserlip. 2,461,707, Feb. 15.
Switch attachment, Flush toggle. R. E. Seaman. 2,461,614, Feb. 15.
Switch construction, Automatic. W. O. Schultz. 2,461,846, Feb. 15.
Synthetic sutures and the like, Manufacturing. J. P. Hollihan, Jr. 2,461,602, Feb. 15.
Table: *See*—
Child's table. Operating table.
Table and chair combination. W. C. Dierickx. 2,461,683, Feb. 15.
Table for moving individually separated eggs across a light source, Egg inspection. J. R. Clark. 2,461,721, Feb. 15.
Tank: *See*—
Floating roof storage tank.
Tank roof. P. Offenhauser. 2,461,763, Feb. 15.
Tape, Sealing and reinforcing. L. Davis and E. C. Tuukkanen. 2,462,037, Feb. 15.
Telephone ringing current generator. H. M. Huge. 2,461,547, Feb. 15.
Telescopic structure. G. O. Benson. 2,461,625, Feb. 15.
Television system, Color. A. B. Bronwell. 2,461,515, Feb. 15.
Tension device for rubber covering machines. O. F. Neidel. 2,462,043, Feb. 15.
Tertiary alkyl amides, Making. M. T. Harvey and S. Caplan. 2,461,509, Feb. 15.
Testing camera synchronisers. H. D. Simons. 2,461,848, Feb. 15.
Textile material, Patterned. R. L. Hunter and R. D. Cramer. 2,461,603, Feb. 15.
Thermostatic control. E. F. Kurts. 2,461,903, Feb. 15.
Thermostatic control. V. G. Vaughan. 2,461,904, Feb. 15.
Thread advancing reel. R. W. Stanley. 2,461,575, Feb. 15.
Tip for cutting tools, Cutting. H. J. Read. 2,462,002, Feb. 15.
Tire-protecting skid. R. Moss. 2,461,758, Feb. 15.
Tool: *See*—
Machine tool. Undercutting tool.
Percussive tool.
Tool. A. Thomas. 2,461,579, Feb. 15.
Tool handle. D. C. Filiatreault, Jr. 2,461,886, Feb. 15.
Toolholder. P. J. Ulick. 2,461,946, Feb. 15.
Torch, Preheating liquid fuel. C. R. Guth. 2,461,731, Feb. 15.
Toy. E. C. Hillhouse. 2,461,644, Feb. 15.
Toy building blocks with closure panes. O. P. Erhardt. 2,461,535, Feb. 15.
Tracer with power-driven steerable traction wheel. N. E. Anderson. 2,461,585, Feb. 15.
Track, Vehicle. C. O. Slemmons and R. W. Smith. 2,461,849, Feb. 15.
Tractor vehicle. C. O. Slemmons. 2,461,850, Feb. 15.
Trailer, Collapsible. J. H. Stark, Jr. 2,461,577, Feb. 15.
Transformer. P. Berger. 2,461,957, Feb. 15.
Transfusion apparatus. J. E. Meagher. 2,461,558, Feb. 15.
Transmission belt joint. A. J. Vasselli. 2,461,859, Feb. 15.
Transmission, Nonequalizing-torque differential. R. R. Randall. 2,462,000, Feb. 15.
Transmitter and receiver self-synchronous system, Electronic relay. B. J. Baecher. 2,461,511, Feb. 15.
Trestle. J. L. Posun and L. Houghton. 2,461,769, Feb. 15.
Tripod leg. H. Neuwirth. 2,461,915, Feb. 15.
Trough, Screened eaves. C. R. Lord. 2,461,610, Feb. 15.
Tubing of predetermined desired characteristics, Making flattened thermoplastic. E. D. Fuller. 2,461,975, Feb. 15.
Tubing of predetermined desired characteristics, Making flattened thermoplastic. B. H. Schenk. 2,461,976, Feb. 15.
2 or 4-amino quinazolines. F. J. Wolf. 2,461,950, Feb. 15.
Undercutting tool. L. Weber. 2,461,947. Feb. 15.
Universal gauge holder. E. H. Rose. 2,462,003, Feb. 15.
Up-twister. R. Bouvet. 2,461,586, Feb. 15.

Vacuum regulator. T. J. Sullivan. 2,461,666, Feb. 15.
Valve: *See*—
Antisiphon valve. Pop-up waste valve.
Control valve. Rotary ball valve.
Fluid control valve.
Valve control apparatus. M. B. Laing. 2,461,608, Feb. 15.
Valve for expansible chamber meters, Compound motion distributing. D. S. Willson. 2,462,044, Feb. 15.
Valve mechanism. J. C. Curtis and E. G. Gartin. 2,461,529, Feb. 15.
Vapor generation and puffing with audible effects in toys. W. R. Smith. 2,461,664, Feb. 15.
Variable inductance device. W. L. Atwood. 2,461,804, Feb. 15.
Vehicle: *See*—
Motor propelled toy vehicle. Tractor vehicle.
Vehicle axle suspension. F. W. Avila. 2,461,867, Feb. 15.
Vehicle spring. C. Bohlen, Jr. 2,461,874, Feb. 15.
Vehicle spring suspended half-axle for supporting steerable wheels. D. G. Roos. 2,461,775, Feb. 15.
Vibration absorbing support. H. M. Dodge. 2,461,969, Feb. 15.
Viewer, Film. A. J. Bruno. 2,461,718, Feb. 15.
Vinyl chloride-alkyl ester of unsaturated dicarboxylic acid copolymer sponge composition. W. T. L. Ten Broeck, Jr. 2,461,942, Feb. 15.
Voltage regulator. J. L. Bowers. 2,461,514, Feb. 15.
Wave-signal apparatus, Frequency-stabilized. A. E. Hayes, Jr. 2,461,642, Feb. 15.
Welder's clamp. F. P. Hopfeld. 2,461,687, Feb. 15.
Wheel. E. Kostka. 2,461,742, Feb. 15.
Wheel balancing machine. L. C. Currier. 2,461,591, Feb. 15.
Wind for fishing reels, Level. L. S. Elsinger. 2,461,884, Feb. 15.
Winding machine. F. A. Decker, Jr. 2,461,593, Feb. 15.
Window for automobiles, No-draft ventilating. S. C. Barnes. 2,461,955, Feb. 15.
Window shade construction. C. G. Barrows. 2,461,870, Feb. 15.
Window structure of protective devices. F. D. Huntsman. 2,461,548, Feb. 15.
Wing control for aircraft, Variable incidence. M. R. Wiley. 2,461,669, Feb. 15.
Wire terminal. J. F. Merkel. 2,461,994, Feb. 15.
Work supporting means for heat treating furnaces. H. F. Jackson. 2,461,606, Feb. 15.
Wrench for shoe calks, Combined socket and spanner grip. J. G. Grigalunas. 2,461,639, Feb. 15.
Wrench with threaded nut holding member. P. T. Cousino. 2,461,680, Feb. 15.
X-ray opaque marking means. W. H. Wood. 2,462,018, Feb. 15.
Yarn protector. R. H. Davidson. 2,461,724, Feb. 15.
Zinc electroplating. A. E. Chester and F. F. Reisinger. 2,461,809, Feb. 15.
Zinc from its ores, Recovery of. A. L. J. Queneau. 2,461,697, Feb. 15.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 15, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

Total	1,290			

Patents expiring: Patent Numbers 1,846,011 to 1,847,065, inclusive, and Plant Patents Numbers 8 to 9, inclusive, issued February 23, 1932, expire February 23, 1949

Condition of Applications Under Examination at Close of Business Feb. 4, 1949

Total number of patent applications awaiting action, 154,467. Date of oldest new application, February 10, 1947; date of oldest amended application, May 25, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action: New	Amended	Applications awaiting action
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry, Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	8-25-47	6-12-47	2028
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	5-10-47	2-10-47	2894
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	5-11-48	5-17-48	1199
4. BISHOP, WALTER C., Power Driven Conveyers; Hoists; Handling Apparatus; Excavating; Fire Escapes; Ladders; Scaffolds; Mining, Quarrying, and Ice Harvesting.	5-10-47	4-23-47	4186
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	1-19-48	1-13-47	1632
6. SUBLE, H., Carbon Chemistry (part)	3-24-48	1-13-48	1944
7. HANLIN, GEORGE, Optics; Photographic Apparatus	5-10-48	2-11-48	1614
8. LEWIS, R. O., Beds; Chairs, Seats; Racks, Cabinets; Miscellaneous Furniture	7-2-47	1-17-47	4442
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	8-15-47	4-7-47	2412
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	4-20-48	4-6-48	1879
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Cutlery, Leather Manufactures; Nailing and Stapling.	1-8-48	8-1-47	2047
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	4-16-48	11-12-46	2180
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	2-27-47	3-1-47	2304
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire: Misc. Processes); Wire Fabrics; Farriery	3-15-48	1-8-48	1344
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	3-12-48	7-16-47	1987
16. LOVEWELL, N. N., Television; Telephony	5-6-48	9-3-47	1680
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding: Sheet or Web Feeding.	7-3-47	11-29-46	2188
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	2-10-48	1-25-47	2311
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	2-26-48	3-17-47	1837
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	9-11-47	5-16-47	2088
21. MADER, R. C., Textiles	1-12-48	11-29-47	1369
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices (part)	3-16-48	3-11-47	1788
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	4-23-48	1-8-47	1180
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	1-3-48	1-2-48	2239
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	5-5-48	8-22-47	1788
26. YOUNG, R. B., Electricity—Generation, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Brush, Broom and Mop Making.	9-4-47	3-4-47	3315
28. BRAUNER, R. H., (Acting), Internal-Combustion Engines (part); Cylinders; Pistons; Spring, Weight and Horsepower Motors; Dumping Vehicles, Wheel Substitutes; Vehicle Fenders; Hand and Hoist Line Implements; Chutes, Skids, Guides. Ways; Fluid Current Conveyers; Pneumatic Dispatch; Store Service.	4-30-48	2-12-48	908
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	6-10-47	6-12-47	3282
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating and Heating Systems; Illuminating Burners; Ammunition and Explosive Devices.	5-5-48	5-5-48	962
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	6-1-48	6-1-48	2102
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating	6-19-47	11-5-46	2126
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	5-22-47	3-10-47	3754
34. SAPERSTEIN, S., Railways; Track Sanders; Signals and Indicators	12-8-47	3-29-47	1365
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	10-21-47	1-20-47	3540
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	3-13-47	1-8-47	2070
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	4-21-48	10-2-47	1495
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	1-21-48	1-9-48	1648
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	1-8-48	12-6-46	3186
40. DRUMMOND, E. J., Receptacles (part); Packages	3-15-48	3-25-47	3192
41. GURLEY, R. B., Check-controlled Apparatus; Coin Handling: Article Dispensing Cabinets; Deposit Receptacles, Buckles, Buttons, Clasps.	4-1-48	1-21-47	2297
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	6-4-48	5-26-48	1095
43. STONE, L. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	5-21-48	3-23-48	1234
44. HARVEY, L. P., Refrigeration	2-10-47	1-14-47	1087
45. MANTER W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires and Axles; Railway Wheels and Axles; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Animal Draft Appliances.	8-8-47	3-20-47	2008
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	1-3-48	3-4-47	1841

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 154,467. Date of oldest new application, February 10, 1947; date of oldest amended application, May 25, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action: New	Amended	Applications awaiting action
47. HOFFMAN, E. G., Pipe Joints; Supports: Hangers; Bridges; Gates; Structural Steel Making; Metal Working (Miscellaneous Processes); Metal Treatment; Amusement Devices; Toys; Games; Archery; Rope Making; Knotting.	5-10-48	5-10-48	1200
48. HOFFMAN, J. D., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
49. HOWARD, W. L., Internal-Combustion Engines (part); Cylinders; Pistons; Spring, Weight and Horsepower Motors; Dumping Vehicles, Wheel Substitutes; Vehicle Fenders; Hand and Hoist Line Implements; Chutes, Skids, Guides. Ways; Fluid Current Conveyers; Pneumatic Dispatch; Store Service.	4-30-48	2-12-48	908
50. HUNTER, R. S., Electricity, Circuit Makers and Breakers	4-21-48	10-2-47	1495
51. JENNINGS, A. W., Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	6-4-48	5-26-48	1095
52. KAMM, W. E., Organic Compounds (part); Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	5-21-48	3-23-48	1234
53. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
54. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
55. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
56. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
57. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
58. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
59. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
60. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
61. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
62. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
63. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
64. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
65. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
66. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
67. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
68. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
69. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
70. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
71. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
72. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
73. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
74. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
75. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
76. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
77. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
78. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
79. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
80. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
81. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
82. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
83. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
84. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
85. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167
86. KEARNEY, J. W., Electricity, Motive Power, Transmission to Vehicles; Elevators	4-7-48	4-18-47	1167

DECISIONS IN PATENT AND TRADE-MARK CASES

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 154,467. Date of oldest new application, February 10, 1947; date of oldest amended application, May 25, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	5-4-48	10-31-47	2182
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	5-19-48	8-13-47	1464
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Textiles, Ironing or Smoothing; Wells; Earth Boring.	9-10-47	3-19-47	2226
50. LEVIN, SAMUEL, Synthetic Resins	6-2-48	2-27-48	2145
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	5-5-48	2-10-48	1561
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	1-22-48	3-13-47	3810
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Closures, Partitions and Panels, Flexible and Portable Harness; Whip Apparatus.	10-27-47	12-13-46	2443
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	5-7-48	8-25-47	1609
55. HERTZ, M., Artificial Body Members; Dentistry; Surgery; Toilet	4-2-48	11-6-47	1811
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Liquid Separation or Purification	12-26-47	12-2-47	1854
57. MILLER, A. B., Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys	3-8-47	4-14-47	3475
58. DOWELL, E. F., Abrading Processes and Apparatus; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	4-28-47	5-3-47	1917
59. SHEPARD, P. W., Inorganic Chemistry; Fertilizers; Gas, Heating and Illuminating; Preserving	1-30-48	6-6-47	1651
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	5-8-48	11-20-47	1220
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	2-15-47	10-10-46	3777
62. PUGH, E. C., Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors	3-11-48	8-7-47	1556
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Carbon Chemistry (part)	3-8-48	11-8-47	2014
64. NASH, P. M., Compositions—Coating or Plastic (part); Abrasive Tool Making Processes and Materials; Fuel and Miscellaneous.	7-16-48	7-9-48	1725
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	5-1-48	10-13-47	2307
66. LISANN, L., Geometrical Instruments	4-3-48	5-25-46	2084
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	4-1-48	9-4-47	1981
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Step Control	6-21-48	1-16-48	1539
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording; Recorders.	9-15-47	4-5-47	2217

Appellant avoids the afore-mentioned condition and secures other advantages by using, instead of cane or beet sugar, a sweetening medium derived from fruit juice by treating the juice with chemicals which remove the acids and ash forming materials, thus producing a sirup which is sweeter than the juice itself and which has a sugar content con-

In refusing to read that definition into the expression "corrugated wire in strand form," appearing in the appealed claims, we said:

> Whatever of limitation there may be in this definition such limitation does not appear in the appealed claims and it is well settled that, while claims are to be read in the light of the specification, limitations set in the claims need not be considered even though the application disclosure would support such limitations. [Italics quoted.]

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE ERICKSON

No. 5488. Decided December 7, 1948

[— F.2d —; 80 USPQ 94]

1. CLAIMS—CONSTRUCTION—LIMITATIONS NOT EXPRESSED.

It is well settled that the claims of a pending application are to be given the broadest interpretation which they will reasonably support and that limitations which are not expressed will not be read into them.

2. SAME—WORDS AND PHRASES—"SYRUP."

Held that the word "syrup" appearing in some of the claims does not distinguish from fruit juice.

3. PATENTABILITY—INVENTION—STATE OF THE ART.

Where the reference principally relied on appears to treat dried fruit with fruit juices, and the other references show it to be old to add various flavoring solutions to fresh fruit, *Held* that the application of fruit juices to fresh fruit does not involve invention.

4. SAME—SAME—SAME.

Where the specific application of appellant's idea set forth in certain claims is not found to be fairly suggested by the prior art, *Held* that, in view of this fact and of the advantageous result obtained, these claims are patentable over the references of record.

5. SAME—FRUIT COMPOSITION AND METHOD OF PREPARATION.

Certain claims to a fruit composition comprising fresh fruit and fruit juices *Held* properly rejected as defining nothing patentable over the prior art, while other claims limited to the treatment of fruit which is harvested before it is ripe *Held* patentable over the references of record.

APPEAL from the Patent Office. Serial No. 413,165.

MODIFIED.

Moore, Olson & Trexler (*Ballard Moore* and *Mark H. Clayton* of counsel) for Erickson.

W. W. Cochran (*Clarence W. Moore* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims, Nos. 17 to 24, inclusive, in appellant's application for a patent for an alleged invention relating to a food product and a method of preparing it.

Claims 17, 18, 19, 23, and 24 are product claims. Claims 20, 21, and 22 are process claims.

Claims 17, 18, and 21 are representative of the appealed claims. They read:

17. A fruit composition comprising a fresh fruit material and a readily blendable and compatible added sweetening medium derived from fruit and having substantially the same sugar composition as fruit and containing inert non-sugar constituents of fruit, said sweetening medium being of such blendability and compatibility with respect to the fruit material that it enters into immediate osmotic equilibrium with the fruit material thus to preserve the original appearance of the latter over long periods of time.

18. A fruit composition comprising fresh fruit harvested before it is ripe and a readily blendable and compatible added sweetening medium derived from fruit and having substantially the same sugar composition as fruit and containing inert non-sugar constituents of fruit, said sweetening medium being of such blendability and compatibility with respect to the fruit that it enters into immediate osmotic equilibrium with the fruit thus to preserve the original appearance of the latter over long periods of time, the quantity of said sweetening medium being present at least sufficient to give said fruit the ripe, sweet taste of fruit ripened before harvesting.

21. A method of preparing fruit compositions which comprises adding to fresh fruit harvested before it is ripe at least a sufficient quantity of a readily blendable and compatible sweetening medium to give the fruit material the ripe, sweet taste of fruit ripened before harvesting, said sweetening medium being derived from fruit and having substantially the same sugar composition as fruit, containing inert, non-sugar constituents of fruit, and being of such blendability and compatibility with respect to the fruit that it enters into immediate osmotic equilibrium with the fruit thus to preserve the original appearance of the latter over long periods of time.

The references are: Alexandrian, 772,018, October 11, 1904; Negrete, 1,243,964, October 23, 1917; Fritz-Williams, 1,402,847, January 3, 1922; Hunt, "Honey and its Uses in the Home," 1922, pp. 24–25; Cruess, "Commercial Fruits and Vegetable Products," 1924, pp. 66–67–263; Nichols, 1,550,321, August 18, 1925; Barlow, 1,717,489, June 18, 1929; Wickenden, 1,906,295, May 2, 1933.

Appellant's application relates to the preparation and preserving of fruits, and especially to the sirups used in such processes. It has been the conventional practice to employ sirups made from cane or beet sugars which, as stated in appellant's brief, are composed essentially of sucrose which, in turn, is made up of fructose (levulose) and glucose (dextrose). Sucrose, upon hydrolysis, yields equal quantities of dextrose and levulose. The mixture of levulose and dextrose resulting from the hydrolysis of sucrose is known as invert sugar. See Hackh's Chemical Dictionary, 1929, pp. 314, 382 and 387. The sugar found in fruits, as pointed out in appellant's brief, differs materially from cane and beet sugars, as regards the amounts of dextrose and levulose present. Accordingly, the addition of cane or beet sugar to fruit may cause a considerable interchange of sugars in solution before osmotic equilibrium is reached, and such interchange may adversely affect the fruit being treated.

Vol. 619 • No. 4 Tuesday, February 22, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

tion of appellant's idea is not found to be fairly suggested by the prior art and, in view of this fact, and of the advantageous result obtained, we are of opinion that claims 18, 21, and 22 are patentable over the references of record.

[5] For the reasons stated, the decision of the Board of Appeals is modified, being affirmed as to

prior art all of the claims, 15, 18, 20, 21, 22, 25, 26, 28, and 29, of an application for a patent, Serial No. 378,740, for resinous moulding compositions.

The prior art relied upon by the Examiner is as follows: I. G. Farben (British), 490,688, August 19, 1938; Ripper, 2,318,560, May 4, 1943; D'Alelio, 2,320,816, June 1, 1943; D'Alelio, 2,320,818, June 1, 1943; Synthetic Resins and Allied Plastics, 1937 edi-

Appellant avoids the afore-mentioned condition and secures other advantages by using, instead of cane or beet sugar, a sweetening medium derived from fruit juice by treating the juice with chemicals which remove the acids and ash forming materials, thus producing a sirup which is sweeter than the juice itself and which has a sugar content conforming in character to that of the fruit to be treated. As a further application of appellant's idea, such a sweetening medium may be applied to unripe fruit, in which case it supplies the sugars which would be produced in the normal ripening of the fruit, thus duplicating the flavor of tree-ripened fruit.

The patent to Barlow, which is the reference principally relied on in support of the rejection of the appealed claims, discloses a process of treating dried fruit by soaking it in the juice of another fruit and drying it again. In the preferred example, dried prunes are soaked in lemon juice, but the patentee states that:

Any fleshy fruit which on pressure yields a desirable juice may be used to furnish the fruit juice. Agreeable combinations will usually result on combining fruits of opposite or unlike qualities, as the highly flavored with the insipid and the sour with the sweet.

So far as we are here concerned, the quoted language fairly contemplates the addition of a relatively sweet fruit juice to a relatively sour fruit.

The remaining references disclose the use of various sweetening media such as honey, sucrose, and invert sugar in the preparation of ripe and unripe fruits. They do not show the use of a sweetening medium prepared from fruit juice.

The principal ground of rejection relied on by both the Primary Examiner and the Board of Appeals is stated as follows by the Examiner:

The addition of sweetening mediums to fresh fruit and unripe fruit being shown by Cruess, Wickenden, Hunt and Alexandrian, respectively, it is held obvious and uninventive to add a natural juice to *fresh or unripe* fruit in view of Barlow who shows the similar addition of natural fruit juice to dried fruit. [Italics quoted.]

[1] It was evidently the position of the Patent Office tribunals that a natural fruit juice could be considered a sweetening medium within the meaning of the appealed claims. Counsel for appellant disagree with this position and point out that appellant's specification defines a sweetening medium as one which is substantially free from materials which detract from its sweetening power. It is well settled, however, that the claims of a pending application are to be given the broadest interpretation which they will reasonably support and that limitations which are not expressed will not be read into them. *In re Carr*, 54 App. D. C. 288, 297 Fed. 542, 323 O. G. 4, and *In re Bryson D. Horton*, 19 CCPA (Patents) 871, 54 F.2d 961, 12 USPQ 221, 418 O. G. 273. A case directly in point is *In re Hegan*, 25 CCPA (Patents) 1182, 97 F.2d 86, 37 USPQ 750, 497 O. G. 558. In that case, the specification of the application on appeal contained the statement that:

It is to be further understood that the term 'corrugated wire in strand form' is intended to denote free strands of wire as distinguished from strands which are woven or knitted together in screen or like form.

In refusing to read that definition into the expression "corrugated wire in strand form," appearing in the appealed claims, we said:

Whatever of limitation there may be in this definition, such limitation does not appear in the appealed claims and it is well settled that, while claims are to be read in the light of the specification, limitations set in the claims need not be considered even though the application disclosure would support such limitations. [Italics quoted.]

In the instant case the term sweetening medium, in the appealed claims, must be given its normal broad interpretation of a medium which will render the substance sweeter to which it is added. It follows that the term does not distinguish over the process of the Barlow patent, in which a juice of one fruit may be added to a dried fruit which is less sweet.

[2] Similarly, the word "syrup" appearing in some of the claims does not distinguish from fruit juice, since one meaning of this word, as defined by Webster's New International Dictionary is "* * * any concentrated, more or less viscid aqueous solution of sugar."

[3] We are of opinion that the position of the Examiner and the Board that, in view of the patent to Barlow and the other references cited, there would be no invention in adding natural fruit juice to fresh fruit, is sound. Although the patentee Barlow appears to be concerned only with dried fruits, the other references show it to be old to add various flavoring solutions to fresh fruit and, under such circumstances, we are of opinion that the application of fruit juices to fresh fruit, in the manner in which the patentee Barlow applies them to dried fruit, does not involve invention. Sterilizing and packaging the resultant product, as contemplated by claim 19, is a conventional step and is not a matter of invention. Claims 23 and 24 call for the addition of the sirup to a fruit juice and to a "fresh juicy pulp" respectively. Those claims obviously do not involve more than variations of the idea of adding the sirup to the fruit itself. Claims 17, 19, 20, 23, and 24 define nothing more, in our opinion, than obvious modifications of the patentee Barlow's idea of adding the juice of one fruit to another fruit as a flavoring medium.

For the reasons stated, we are of opinion that appealed claims 17, 19, 20, 23, and 24 define nothing patentable over the prior art, and that they were properly rejected. Had appellant included in those claims the limitation that acids and ash-forming materials had been eliminated from the sweetening medium, a different issue would have been presented.

[4] Claims 18, 21, and 22 are limited to the treatment of fruit which is harvested before it is ripe, and to the addition of enough of a sweetening medium derived from fruit to supply the sweetness which would normally be acquired in tree-ripening. It is pointed out in appellant's application that this procedure results in a more natural flavor than can be obtained if the sugar deficiency is supplied by cane, beet, or similar sugars. This specific application of appellant's idea is not found to be fairly suggested by the prior art and, in view of this fact, and of the advantageous result obtained, we are of opinion that claims 18, 21, and 22 are patentable over the references of record.

[5] For the reasons stated, the decision of the Board of Appeals is modified, being affirmed as to claims 17, 19, 20, 23, and 24, and reversed as to claims 18, 21, and 22.

MODIFIED.

U. S. Court of Customs and Patent Appeals

IN RE RIPPER, DECEASED, ETC.

No. 5489. Decided December 7, 1948

[— F.2d —; 80 USPQ 96]

1. APPEAL TO BOARD OF APPEALS—AFFIDAVITS—RULE 68.
Held that where affidavits are filed subsequent to the statement of the Examiner, it was at a time where the Examiner had lost jurisdiction of the matter and the case was not subject to amendment under Rule 68.

2. APPEAL TO COURT OF CUSTOMS AND PATENT APPEALS—AFFIDAVITS—RULE 138.
Where subsequent to the statement of the Examiner three affidavits were filed on behalf of appellant, and where it does not appear that the application was remanded to the Examiner under Rule 138, and there is no mention in the decision of the Board of Appeals of those affidavits, and where there is no showing here that the Board could have considered the affidavits under Rule 138, *Held* that they are not before us for consideration.

3. PATENTABILITY—COMPOSITION—CRITICAL LIMITATION.
Where appellant bases his contention that the involved claims are patentable over the prior art upon a limitation which is contained in some of the claims but not in others, *Held* that such limitation can not be considered to be critical, and that it can not be held to be a patentable distinction over the prior art.

4. WORDS AND PHRASES—"THREAD."
Where the word "Thread" as used in the involved application and claims is not used in a chemical sense, *Held* that in ascertaining the meaning of "thread," reference properly may be made to the ordinary dictionaries.

5. SAME—"CLOTH."
Held that cloth is not necessarily woven, it being commonly known that cloth or sheet fabric may be made by a felting process.

6. PATENTABILITY—RESINOUS MOLDING COMPOSITION.
Certain claims to a resinous molding composition containing asbestos thread and the process of producing such molding compositions, *Held* properly rejected as unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 378,740.

AFFIRMED.

James Edwin Archer (*Hal H. McCaghren* of counsel) for appellant.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

JACKSON, J.:

Kurt E. Ripper, deceased, by American Cyanamid Company, assignee, has appealed here from a decision of the Board of Appeals of the United States Patent Office affirming a decision of the Primary Examiner finally rejecting as unpatentable over the prior art all of the claims, 15, 18, 20, 21, 22, 25, 26, 28, and 29, of an application for a patent, Serial No. 378,740, for resinous moulding compositions.

The prior art relied upon by the Examiner is as follows: I. G. Farben (British), 490,686, August 19, 1938; Ripper, 2,318,560, May 4, 1943; D'Alelio, 2,320,816, June 1, 1943; D'Alelio, 2,320,818, June 1, 1943; Synthetic Resins and Allied Plastics, 1937 edition, Morrell, pages 92, 93, and 94.

The Board in its decision reversed the decision of the Primary Examiner with respect to his rejection on the Ripper patent of claims 18, 20, 21, and 28 on the ground of double patenting, but otherwise affirmed the action of the Examiner.

Claims 15, 28, and 29 are article claims. All of the other claims are directed to process.

The alleged invention relates to the production of plastic molding compositions, which are consolidated under heat and pressure in order to produce articles possessing high mechanical strength, good arc heat and glow resistance, as well as high impact strength.

It is said that the alleged invention is attained by the intimate association of pieces of asbestos thread or cord woven or unwoven with an amino plastic resin "which may be polymerized under alkaline conditions to the infusible and insoluble stage." Claims 18 and 28 are illustrative of the subject matter involved and read as follows:

18. A process of producing molding compositions, moldings of which have high mechanical strength, which comprises impregnating spun asbestos threads with an amino plastic resin which is a formaldehyde condensation product of an amidine and which will cure under alkaline conditions, drying the impregnated asbestos threads and dividing the impregnated asbestos threads into pieces about ¼–1 inch in length.

28. A molding composition suitable for the production of moldings having a high mechanical strength comprising spun asbestos threads about ¼–1 inch in length impregnated with a polymerizable melamine-formaldehyde resin syrup.

Claim 20 is similar to claim 18 except that it calls for "impregnating asbestos cloth" instead of "impregnating spun asbestos threads," and also in that it provides for dividing the cloth after it has been impregnated into pieces of an area of about ¼ square inch to about 1 square inch.

Claim 21 is like claim 18 but in addition thereto it provides for "partially polymerizing the resin."

Claim 22 is similar to claim 18 but is limited to "a melamine-formaldehyde resin syrup."

Claim 25 differs from claim 18 in that it calls for impregnating spun asbestos threads with an amino plastic resin, the threads being cut to length and divided before impregnation with the resin and the drying and consolidating of said threads with heat and pressure.

Claim 26 is like claim 25 except that the amidine is restricted to "a melamine-formaldehyde resin syrup."

Claim 29 is the same as claim 28 except that it does not call for "spun asbestos threads."

Claims 18, 21, 22, 25, 26, and 28 all call for "spun" asbestos threads.

The I. G. Farben patent discloses the manufacture of electrical insulating bodies made from a resin. One of the means of forming that resin is by con-

densing formaldehyde with "melamine." Asbestos as a filler in the resin is also disclosed.

The patent to D'Alelio, No. 2,320,816, is for aminoplast containing halogenated nitrile. It discloses resins made from formaldehyde and amidines, such as dicyandiamide or triazines. It also discloses asbestos in rather short fiber lengths among other materials to be used as a filler for the resin. It is

resin of the class set out in the involved claim, but they likewise disclose the use of asbestos fibres as a filler in the making of moldable compositions.

[6] Appellant seems to base his contention that the involved claims are patentable over the prior art upon the ground that all of the claims relate to "thread" and "spun thread" as distinguished from

Appellant in his brief appears to lay some stress upon the recitation of "partially polymerized resin" as appearing in claim 21. We find nothing critical in the limitation of "partial polymerization" for the reason that in the specification it is set out that "since the partial polymerization is not essential, it may even be omitted entirely or in part."

ed for two minutes at 130° C. under a pressure of 2,000 pounds per square inch."

It is clear to us that the references disclose not only the molding composition but also the process of appellant.

[5] While claim 20 recites the use of asbestos cloth, the said asbestos fabric disclosed in the D'Alelio patent, No. 2,320,818, meets that limitation.

densing formaldehyde with "melamine." Asbestos as a filler in the resin is also disclosed.

The patent to D'Alelio, No. 2,320,816, is for aminoplast containing halogenated nitrile. It discloses resins made from formaldehyde and amidines, such as dicyandiamide or triazines. It also discloses asbestos in rather short fiber lengths among other materials to be used as a filler for the resin. It is said in the specification of the patent that the products of the invention are particularly adapted for use as fire retardants and in the making of arc-extinguishing tubes, which are capable of producing an arc-extinguishing gas under the heat produced by the arc.

The D'Alelio patent, No. 2,320,818, relates to condensation products of aminotriazines, aldehydes and halogenated aliphatic nitriles. It discloses a molding compound of a melamine-formaldehyde partial condensation product. It also discloses among various other fillers to be compounded with the resin "asbestos, including defibrated asbestos."

In the Morrell publication the use of asbestos is shown as an important filler for resins and also that when asbestos is used in plastic compositions that the fibers should not be more than ¼ inch to 1½ inches long. In commenting on the use of shorter fibres of asbestos, it is stated in the publication that "Shorter fibres are used with synthetic resins to make fireproof and heat-resisting mouldings."

It is not necessary to discuss the Ripper patent for the reason hereinbefore stated.

The Primary Examiner rejected all of the claims as unpatentable over either of the patents of D'Alelio and also as being unpatentable over the I. G. Farben patent in view of the Morrell publication.

[1] Subsequent to the statement of the Examiner, three affidavits were filed on behalf of appellant. At the time the affidavits were filed the Examiner had lost jurisdiction of the matter and the case was not subject to amendment under rule 68, Rules of Practice, U. S. Patent Office.

[2] It does not appear that the application was remanded to the Examiner under rule 138, Rules of Practice, U. S. Patent Office, and there is no mention in the decision of the Board of those affidavits. Therefore, there is no showing here that the Board could have considered the affidavits under rule 138, and consequently they are not before us for consideration. *In re Ayers*, 33 CCPA (Patents) 874, 154 F.2d 182, 69 USPQ 109, 587 O. G. 337.

It is admitted by appellant that the D'Alelio patents and that of the I. G. Farben patent describe a moldable composition comprising a resin of the class claimed by appellant, but appellant contends that those references are directed to a particular resin within the class and to the properties of such resin, and that the disclosure of asbestos fibres being used as a filler is "prophetically stated" among other "innumerable modifying agents." It is clear, however, that those references not only disclose a resin of the class set out in the involved claim, but they likewise disclose the use of asbestos fibres as a filler in the making of moldable compositions.

[3] Appellant seems to base his contention that the involved claims are patentable over the prior art upon the ground that all of the claims relate to "thread" and "spun thread" as distinguished from asbestos fibres. Several of appellant's claims are restricted to "spun" threads, as hereinbefore mentioned. We are unable to see that such limitation can be held to be a patentable distinction over the prior art. Other claims do not contain such limitation. Therefore, it can not be considered to be critical. *In re Fear*, 30 CCPA (Patents) 1197, 136 F.2d 908, 58 USPQ 408, 555 O. G. 331.

It seems to us to be obvious that spun thread would possess a higher mechanical strength than fibers. Therefore, we can not properly hold that there is any unexpected improvement when spun threads are used.

[4] Counsel for appellant argues vigorously that all of the references disclose asbestos fibres, and that the use of the term "thread" in the involved claims renders them patentable over the prior art. In support of that contention, counsel for appellant cites the case of *In re Hill*, 34 CCPA (Patents) 1062, 161 F.2d 367, 73 USPQ 482, 603 O. G. 873, and states that "dictionary definitions are not evidentiary on chemical matters in the absence of chemistry reference works in support thereof." In that case, the meaning of "carbamide," which is a distinct chemical term, was involved, and it is our opinion that the word "thread" as used in the involved application and claims is not used in a chemical sense. While "thread" is defined in Hackh's Chemical Dictionary, Third Edition, as "a string, q. v."; there is also found in the same publication with reference to the term "string" that it is a gold-plated quartz thread used in Einthoven galvanometers. Therefore, it is clear that in ascertaining the meaning of "thread" as it appears herein, reference properly may be made to the ordinary dictionaries.

Thread is defined in Funk and Wagnalls New Standard Dictionary, 1938, as not only being a slender cord composed of two or more yarns or filaments, but also as "A filament of any substance; * * *." That definition it seems to us renders the ordinary meaning of the word "thread" to include a "fiber." Therefore, we hold that the "thread" of appellant's application is not patentably distinguishable from the fiber disclosed in the references.

Appellant points out in his brief that claim 18 calls for aminoplastic resin which will cure under alkaline conditions, and the drying of an impregnated asbestos thread. Even though such statement is correct, it appears to us that the condensation products disclosed in the D'Alelio patent, No. 2,320,818, are aminoplasts and may be cured under alkaline conditions. The drying of the patentee's compound is described in that patent.

Appellant in his brief appears to lay some stress upon the recitation of "partially polymerized resin" as appearing in claim 21. We find nothing critical in the limitation of "partial polymerization" for the reason that in the specification it is set out that "since the partial polymerization is not essential, it may even be omitted entirely or in part."

While it is true that claim 22 calls for a specific melamine-formaldehyde resin, one of the examples in the D'Alelio patent, No. 2,320,818, mentions a "melamine-formaldehyde partial condensation product."

While claims 25 and 26 call for "the additional element of consolidating the impregnated threads with heat and pressure," the D'Alelio patent last referred to discloses that the compound "was molded for two minutes at 130° C. under a pressure of 2,000 pounds per square inch."

It is clear to us that the references disclose not only the molding composition but also the process of appellant.

[5] While claim 20 recites the use of asbestos cloth, the said asbestos fabric disclosed in the D'Alelio patent, No. 2,320,818, meets that limitation. Cloth is not necessarily woven. It is commonly known that cloth or sheet fabric may be made by a felting process. Therefore, we find no patentable difference between appellant's use of asbestos cloth which is woven, and the asbestos fabric of the patent made by the felting process.

[6] For the reasons hereinbefore set out, the decision of the Board of Appeals is affirmed.

AFFIRMED.

1,970,518, H. Aaron, Hair clipper, D. C., S. D. N. Y., Doc. 87/396, *F. A. Fraser* v. *H. Aaron.* Judgment dismissing defendant's counterclaim Aug. 3, 1939; claims 1, 3, 7, 8, 9, 14, and 15 held valid Apr. 9, 1941.

1,970,611, C. E. Marshall, Clip, filed Jan. 5, 1949, D. C., E. D. N. Y., Doc. 9616, *C. E. Marshall* v. *Peerless Tool & Metal Mfg. Co.*

1,996,634, V. G. Vaughan, Water heater control system, D. C., N. D. Calif., S. Div., Doc. 27951–H, *Westinghouse Electric Corp.* v. *Addison Furniture Co.* Patent held valid and infringed Apr. 15, 1948.

2,038,713, D. J. Brunner, Jr., Collision guard for motor vehicles, filed Jan. 12, 1949, D. C., N. D. Ohio, E. Div., Doc. 26143, *D. J. Brunner, Jr.* v. *Rop Loc Products Co.*

2,053,481, J. Kainen, Method of making buckle frames, filed Jan. 12, 1949, D. C., S. D. N. Y., Doc. 48/621, *Algren Watch Findings Co., Inc.*, v. *Herkel Mfg. Co.*

2,058,137, G. W. Curtiss, Typographic keyboard mechanism; 2,076,882, same, Typographic casting mechanism, D. C., N. D. Ga. (Atlanta), Doc. 3442, *G. W. Curtiss* v. *Southern Printing Co.* Consent order of settlement, allowing injunction Jan. 7, 1949.

2,076,882. (See 2,058,137.)

2,120,138, C. B. Mathews et al., Method for producing food products; 2,295,868, Schwebke & Hoadley, Process for preparing food products, D. C., S. D. Ohio, W. Div., Doc. 1876, *Emery Products Co.* v. *Adams Corp. et al.* Order dismissing action for want of jurisdiction Dec. 24, 1948.

2,143,194, G. L. Holzapfel, Carburetion apparatus for internal combustion engines, D. C., S. D. Calif. (Los Angeles), Doc. 8011, *W. P. Mealey* v. *American Liquid Gas Corp.* Decree for plaintiff (notice Jan. 6, 1949).

2,152,197, J. Levy, Lighting fixture construction, D. C., N. D. Calif. (San Francisco), Doc. 28069–H, *Century Lighting, Inc.*, v. *Associated Lighting Service.* Consent decree holding claims 2 and 4 valid Nov. 24, 1948.

2,180,586, E. Gustafsson, Spray booth; 2,385,077, G. A. Harker et al., same, suit for declaratory judgment filed Nov. 15, 1948, D. C., S. D. Calif. (Los Angeles), Doc. 8878–W, *Acme Associates, Inc.*, v. *Binks Mfg. Co.* (To correct error in 617 O. G. 909, formerly published as filed in District Court of New York.

2,212,033, C. E. Morely, Mounting for rear view mirrors, D. C., E. D. Mich., S. Div., Doc. 6872, *Knight-Morley Corp. et al.* v. *Ajax Mfg. Corp. et al.* Patent held invalid as to all claims; complaint dismissed with prejudice (notice Jan. 4, 1949).

2,242,197, B. G. West et al., Sound reproducing system; 2,291,115, Stark & Leyrer, Wired music distribution system, D. C., N. D. Calif., S. Div., Doc. 27741–G, *Rodney Pantages, Inc.*, v. *Radion Music Co.* Patents held valid and infringed, injunction Dec. 27, 1948.

2,258,638, W. A. Zarth, Bone construction audiphone; Re. 22,658, H. Koch, same, D. C., S. D. N. Y., Doc. 33/110, *Dictograph Products Co., Inc.*, v. *Zenith Radionics Corp. of N. Y.* Consent order dismissing complaint with prejudice (notice Jan. 12, 1949).

2,291,115. (See 2,242,197.) 2,295,868. (See 2,120,138.)

2,298,373, Hansen & Hurst, Slow speed synchronous motor, filed Dec. 30, 1948, D. C., S. D. Ind. (Evansville), Doc. 381, *General Time Instruments Corp.* v. *Hansen Mfg. Co., Inc.*

2,305,910, C. P. Taylor, Method of drafting, D. C., S. D. Calif. (Los Angeles), Doc. 8053–WM, *C. P. Taylor* v. *L. A. Brainard Co. et al.* Patent held valid and infringed (notice Jan. 4, 1949).

2,346,760, J. O. Kieber, Wave record mold, filed Jan. 6, 1949, D. C. N. J. (Camden), Doc. 39/49, *Lincoln Records, Inc., et al.*, v. *Bubet Laboratories, Inc.* Same, D. C. N. J. (Newark), Doc. 11925, *Lincoln Records, Inc., et al.*, v. *Woods Plastics, Inc.* Dismissed (notice Jan. 12, 1949).

2,346,821, W. M. Cissell, Apparatus for spotting fabric materials, D. C., W. D. Mo. (Kansas City), Doc. 4562, *W. M. Cissell* v. *Cleaners Specialties, Inc.* Patent held valid and infringed; injunction granted Jan. 3, 1949.

2,352,390, E. R. Kirkland, Hydraulic jack, filed Sept. 17, 1948, D. C., S. D. Calif. (Los Angeles), Doc. 8654, *American Hydraulics, Inc., et al.*, v. *The Culnever Co. et al.*

2,446,000, S. Hyman, Combined wallet and cigarette case, filed Jan. 10, 1949, D. C., S. D. N. Y., Doc. 48/593, *Mighty Midget Leather Goods Co.* v. *Re-on Sales Corp. et al.*

2,452,834, C. B. Clapper, Hot-air deflector for tractors, filed Jan. 5, 1949, D. C., W. D. Mo. (St. Joseph), Doc. 500, *C. B. Clapper* v. *S. J. Shepherd.*

Re. 20,817, W. J. Maddox, Abrading roll, (declaratory judgment), C. C. A., 6th Cir., Doc. 10693, *Even-Cut Abrasive Road & Pavement Corp. et al.* v. *The Cleveland Concrete Crusher Co.* Decree affirming dismissal of complaint Dec. 6, 1948.

Des. 151,203, S. K. Wolff, Wall shelf, filed Jan. 6, 1949, D. C., E. D. N. Y., Doc. 9620, *Wolff Appliance Corp* v. *Empire Housewares, Inc., et al.*

Des. 151,461, L. E. Meadow, Handbag, filed Jan. 14, 1949, D. C., S. D. N. Y., Doc. 48/648, *Lufcan Bag Co., Inc.*, v. *Tally-Ho Creations, Inc.*

NOTICES

Registration to Practice

The following list contains the names of all applicants for registration to practice before the United States Patent Office who attained passing grades in the examination of November 15, 1948. Information tending to affect the eligibility of any of said applicants on moral or ethical grounds should be furnished the Commissioner of Patents on or before March 22, 1949.

THOMAS F. MURPHY,
Chairman, Committee on Enrollment.

February 7, 1949.

List of Applicants Who Passed the Examination for Registration to Practice Before the Patent Office Held November 15, 1948

California

Clay, Robert G., 124–A Moss Ave., Oakland, Calif.
Coryell, Harold W., 103 Hilltop Road, Bldg. 30, Sec. B, San Francisco, Calif.
Downes, Harold J., 3355 Alma Ave., Apt. E, Lynwood, Calif.
Fibe, Paul B., 1739 Yosemite Drive, Los Angeles, Calif.
Gibson, Kenneth F., %Kelco Co., 530 Broadway, San Diego, Calif.
Hager, William D., 1521 Third Ave., Oakland, Calif.
Hicks, James C., 620 Kenwood Drive, Menlo Park, Calif.
James, Ivor John, Jr., 5958 Pearce Ave., Bellflower, Calif.
Larsen, Delmar H., 8601 W. Knoll Drive, Los Angeles, Calif.
Lewis, Charlton Miner, 413 Edison Bldg., Los Angeles, Calif.
Myers, William H., 1106 Ninth Ave., San Mateo, Calif.
Seidner, Orville E., 1705 W. Pedley Drive, Alhambra, Calif.
Stoner, John, Jr., % Patent Dept., California Research Corp., 200 Bush St., San Francisco, Calif.
Wands, Herbert B., Jr., 118 Spencer Ave., Sausalito, Calif.
Wood, A. Gordon, 10 Carolina Ave., San Anselmo, Calif.
Zimmerman, Harris, 7718 Cheryl St., Castro Valley, Calif.

Connecticut

Casey, Robert T., 35 Westchester Drive, Bristol, Conn.
Dunn, James T., 176 4th St., Park Lane Villas, Stamford, Conn.
Kelton, John T., Nutmeg Lane, Westport, Conn.
Lucia, Robert E., 10 Brighton Road, West Hartford, Conn.
McCarthy, Jack Nestor, 40 Turnbull Road, Manchester, Conn.
Newby, Arthur A., 35 King St., Hamden, Conn.
Wallick, Earle W., Jr., P. O. Box 491, Ridgefield, Conn.
Weklind, Leonard F., 136 Loomis Drive, West Hartford, Conn.

District of Columbia

Brodahl, Raymond G., 810 Washington Bldg., Washington, D. C.
Cannamo, Anthony D., 125 Joliet St. S. W., Apr. 2C, Washington, D. C.
Dowell, A. Yates, Jr., 1158 Munsey Bldg., Washington, D. C.
French, William T., 601 19th St. N. W., Washington, D. C.
Geauque, Robert E., 3700 Massachusetts Ave. N. W., Washington, D. C.
Haskell, Boris, 3032 Rodman St. N. W., Washington, D. C.
Johnson, Norton S., 2310 40th Place N. W., Washington, D. C.
Julien, Carl A., 2135 Branch Ave. S. E., Washington, D. C.
Kemon, Solon B., 3406 Macomb St. N. W., Washington, D. C.
Kramer, Jerome F., 350 37th Place S. E., Washington, D. C.
Mandeville, Hubert T., 534 National Press Bldg., Washington, D. C.
Pavitt, William H., Jr., 5807 Augusta Lane, Glen Mar Park, Md., % Friendship P. O., Washington 16, D. C.
Reed, Vaughn De Witt, 816 E St. N. E., Washington, D. C.
Reiffin, Martin G., 1767 Que St. N. W., Washington, D. C.
Rosenberg, Seymour M., 215 C St. S. E., Washington, D. C.
Sinderbrand, Alvin, 247 Delaware Ave. S. W., Washington, D. C.
Wilder, Henry Page, 636 Rock Creek Church Road, Washington, D. C.

Illinois

Barber, Frank T., % Armour and Company, Union Stock Yards, Chicago, Ill.
Beecher, Keith D., 8255 Maryland Ave., Apt. 3E, Chicago, Ill.
Dufinecz, Michael, 2241 Oak St., Northbrook, Ill.
Jurow, Edward F., 53 W. Jackson Blvd., Chicago, Ill.
Krause, Otto Raymond, 11020 Emerald Ave., Chicago, Ill.
McCormick, Roger B., 403 S. School St., Lombard, Ill.
Pederson, John J., 2320 Thayer St., Evanston, Ill.
Peters, Carl F., 5541 Kimbark St., Chicago, Ill.
Schroeder, Charles F., 1540 W. 70th St., Chicago, Ill.
Settle, Hiram P., Jr., Yorkville, Ill.
Wiles, Bradford, Room 2200, 20 N. Wacker Drive, Chicago, Ill.

Indiana

Traylor, William H., 4014 Primrose Ave., Indianapolis, Ind.

Kansas

Hamilton, John A., 717 N. 18th St., Kansas City, Kans.

Louisiana

Krieg, Lewis R., 3426 Washington Ave., Baton Rouge, La.

Massachusetts

Price, George W., 175 Aspen Road, Swampscott, Mass.
Russell, Robert B., Room 606, 24 School St., Boston, Mass.

Michigan

Blanchard, Raywood H., 1405 Baker Ave., Kalamazoo, Mich.
Crupi, Joseph, 25420 Cherry Hill, Dearborn, Mich.
D'Amico, Alfonse J., 18054 Albany St., Detroit, Mich.
Gaines, John W., 718 Merton Road, Detroit, Mich.
Martin, Adolph G., 5439 Maple Ave., Dearborn, Mich.
Spalding, John L., 2958 W. Stewart Road, Midland, Mich.
Waldrop, Neal A., Jr., 3617 Parker St., Detroit, Mich.
Williams, Robert C., 830 Hibbard Ave., Jackson, Mich.

Minnesota

Cardew, Richard P., 4182 Robinson St., Duluth, Minn.
Gumm, Mark W., 2000 Fauquier Ave., St. Paul, Minn.
Meyers, Frederick C., 55 Inner Drive, St. Paul, Minn.
Stueber, William C., 5005 Tracy Ave., Minneapolis, Minn.
Wicks, Jack W., 1825 Selby Ave., St. Paul, Minn.

Missouri

Henschke, John J., Jr., 432 E. Big Bend Road, Webster Groves, Mo.
Lieder, Roy A., % Carr, Carr & Gravely, 705 Olive St., St. Louis, Mo.

Nebraska

Sturges, Arthur H., Jr., 78 Carter Lake Club, Omaha, Nebr.

New Jersey

Ardis, Robert B., 118 Oak Ridge Ave., Summit, N. J.
Arnold, Albert E., Jr., 50 W. Maple Ave., Apt. 15D Merchantville, N. J.
Bratlie, Olstein J., 781 7th Ave., River Edge, N. J.
Geier, George, 513 Englehardt Terrace, Ridgefield, N. J.
Hotchinson, Milo H., 9 Washington Park, Maplewood, N. J.
Le Fever, Kleon McKnight, 736 Embree Crescent, Westfield, N. J.
O'Brien, John S., 431 Madison Ave., Elizabeth, N. J.
Phillion, Donald W., 15 Snowden Place, Glen Ridge, N. J.
Relph, James M., 314 Crest Ave., Haddon Heights, N. J.
Tirico, Arthur L., 46 Fairway Ave., Belleville, N. J.

New Mexico

Kinnaman, Ross L., 1972–B Quince St., Los Alamos, N. Mex.

New York

Balogh, Julius, 1586 E. 48th St., Brooklyn, N. Y.
Bridger, Homer J., 1575 Odell St., New York 62, N. Y.
Brumbaugh, John W., 3541 76th St., Jackson Heights, N. Y.
Buckles, Robert A., Jr., 21 E. 9th St., New York, N. Y.
Conner, James A., 241 Willis Ave., Mineola, N. Y.
Cuningham, John B., 20 Pine St., New York, N. Y.
Flannery, Mrs. Margaret M., 3542 91st St., Jackson Heights, N. Y.
Gilkes, Arthur G., 104 Beechknoll Road, Forest Hills, L. I., N. Y.
Hale, Charles R., 1010 Terrace Blvd., New Hyde Park, L. I., N. Y.
Hoynak, Stephen, 617 W. 168th St., New York 32, N. Y.
Hugrett, Charles A., 1 Castle Heights Place, White Plains, N. Y.
Joseph, Hans Georg, 63 Park Row, New York 7, N. Y.
Keefauver, William L., 463 West St., New York, N. Y.
Legris, Ernest W., 119 Ballston Ave., Ballston Spa, N. Y.
Levy, Edward F., 660 W. 180th St., New York, N. Y.
Macy, Milton J., 625 Montgomery St., Brooklyn, N. Y.
Masnik, Michael, 9642 115th St., Richmond Hill, L. I., N. Y.
McLaughlin, Catherine M. (Miss), Laurel St., Northport, N. Y.
McTiernan, Charles E., 524 83rd St., Brooklyn, N. Y.
Mullerheim, Kurt, 812 Riverside Drive, New York 32, N. Y.
Nathanson, Arthur L., 184 Park Ave., Merrick, N. Y.
Petersen, George W., 818 Eaton Road, Rochester, N. Y.
Peterson, Milton M., 18 N. Pine St., Corning, N. Y.
Reitler, Henry L., 1252 Baker Ave., Schenectady, N. Y.
Rhoads, Charles S., 124 Rumsey Road, Yonkers, N. Y.
Roston, Ellsworth R., 177—28 Ursina Road, Springfield Gardens, L. I., N. Y.
Rubens, George J., % Harry Ernest Rubens, 2 Sutton Place, South, New York, N. Y.
Sachs, Bernard, 1033 E. 12th St., Brooklyn, N. Y.
Schlamp, Philip L., 104—24 93rd Ave., Richmond Hill, N. Y.
Schlorff, Russell E., % Ramsey, Chisholm & Hilder, 11 Park Place, New York, N. Y.
Slover, William L., 48 Caton Place, Brooklyn, N. Y.
Smith, Delavan P., Washington & Piermont Sts., Sparkill, N. Y.
Spencer, Benjamin F., 120 Wilson St., Garden City, N. Y.
Trigg, Hastings S., 502 Harding Ave., W. Hempstead, L. I., N. Y.
Turin, Henry, 41 Park Row, New York, N. Y.
Weiss, Tobias, 850 E. 175th St., New York, N. Y.
Zappert, Robert H., 91 Seminary Ave., Binghamton, N. Y.

North Carolina

Sims, Nathaniel G., Law Bldg., Charlotte, N. C.

Ohio

Fay, Horace B., Jr., 1022 Leader Bldg., Cleveland, Ohio.
Kasik, George B., 24901 Lakeview Drive, Bay Village, Ohio.
Kuns, Warren, 6107 Graceland Ave., Cincinnati, Ohio.
Matthews, Denbigh S., 208 W. Norwich Ave., Columbus, Ohio.
Scalso, Joseph R., 1303 Parkside Blvd., Toledo, Ohio.
Schwenner, George A., 1935 Kinney Ave., Cincinnati, Ohio.
Strasser, Albert E., 3029 Auten Ave., Cincinnati, Ohio.
Taylor, Wesley B., 641 E. Broadway, Toledo, Ohio.
Wilson, Robert W., 134 N. Pearl St., Kent, Ohio.
Wursburger, Paul D., 3255 E. Monmouth Road, Cleveland Heights, Ohio.

Oklahoma

Turner, James Otho, 1438 Dewey Ave., Bartlesville, Okla.

Pennsylvania

Buell, Eugene Franklin, 1319 Farmers Bank Bldg., Pittsburgh, Pa.
Ferrito, Donald S., 255 Castle Road, Pittsburgh, Pa.
Frick, Sidney W., 1335 Land Title Bldg., Philadelphia, Pa.
Harding, George J., 3rd, 112 Old Gulph Road, Ardmore, Pa.
Rogers, Ross, Jr., 536 Winsor Ave., Pittsburgh, Pa.
Wofford, William T., 118 Cherry Valley Rd., Forest Hills, Pittsburgh, Pa.

Tennessee

Behrman, Howard W., 125 E. Vance Road, Oak Ridge, Tenn.

Texas

Richards, D. Carl, 3926 Penrod St., Dallas, Tex.

Virginia

Bowyer, Jesse C., 915 S. Alfred St., Alexandria, Va.
Flynn, William J., 26 S. Old Glebe Road, Arlington, Va.
Hill, William B., Jr., 200 N. Thomas St., Apt. #1, Arlington, Va.
Klarquist, Kenneth S., 4312 12th Road South, Apt. 21, Arlington, Va.
McClure, Kenneth F., 1108 N. Pitt St., Alexandria, Va.
Quesenberry, William O., 2418 N. Dickerson St., Arlington, Va.

Wisconsin

Coffee, James F., 2922 N. 90th St., Milwaukee, Wis.
Schultz, Ernst W., 4153 N. Bartlett Ave., Milwaukee, Wis.

Erratum

In the OFFICIAL GAZETTE of Jan. 25, 1949, Trade-Mark Registrations Republished, page 1055, second column, line 7, for "Reg. No. 242,809" read *Reg. No. 342,809.*

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,484,245, G. F. Johnson, Grinding machine, decided Jan. 17, 1949, claims 1, 2, 4, 7, 8, and 10.

Pat. 2,446,506, C. D. Barrett and C. R. Whitehead, Snubbed bolster car truck, decided Jan. 24, 1949, claims 1 and 2.

Disclaimers

2,143,697.—*John G. Jackson*, Detroit, Mich. ELECTRIC SWITCHING DEVICE. Patent dated Jan. 10, 1939. Disclaimer filed Dec. 31, 1948, by the assignee, *Square D Company.*

Hereby enters this disclaimer to claims 31, 32, 33, 34, 35, and 36 in said specification.

2,440,162.—*Lloyd L. Anderson*, Grand Rapids, Mich. REFRIGERATION LATCH MECHANISM. Patent dated Apr. 20, 1948. Disclaimer filed Jan. 15, 1949, by the assignee, *Winters & Crampton Corporation.*

Hereby enters this disclaimer to claim 10 of said patent.

Important Information

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz: Application as originally filed. (Petition, specification, oath, and drawings, as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.) Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.) Original application. (Facsimile petition, specification, oath, and drawings.) Prints within file-wrapper. (Photoprints of the contents of the file-wrapper.) Prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)

File-wrapper contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be

Important Information

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:
Application as originally filed. (Petition, specification, oath, and drawings, as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)
Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)
Original application. (Facsimile petition, specification, oath, and drawings at present time.)
Specification as originally filed. (As received in Office.)
Specification as amended. (With amendments entered.)
Specification as allowed. (As passed by the Examiner for issue.)
Original specification. (Facsimile at present time.)
File-wrapper. (File-wrapper only.)
File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)
File-wrapper contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)
Assignment. (Give the liber and page of the record as well as the name of the inventor.)
Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)
Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

The following four patents are owned by The Ohio Injector Company of Wadsworth, Ohio. Correspondence to William H. Finckel, Jr., Room 900, 1319 F St., N. W., Washington 4, D. C.

Pat. 2,309,061. INFLATION VALVE. Patented Jan. 19, 1943. In this patent a metallic inflation valve having a base flange is removably secured to a tire tube or other inflatable article by mechanical means, thus avoiding the necessity of vulcanising rubber to metal. During manufacture of tube a molded semi-cured rubber pad having a feathered edge and two-dimension bore is pressed over an opening in the tube. An adapter is inserted into bore of pad. The tube, with adhering pad and inserted adapter, is placed in a curing mold and air introduced through the adapter to inflate the tube. When pad and tube are simultaneously vulcanised to properly cure them, they unite, forming an integral structure. The bore of the pad and the lower end of the valve and its flange are shaped so that they interlock in a fluid-tight inseparable manner when valve is clamped to pad by a clamping nut. Groups 30—11; 35—69. Reg. No. 19,067.

Pat. 2,320,452. METHOD OF AND MACHINE FOR ASSEMBLING INFLATION VALVE PARTS. Patented June 1, 1943. Sets of inflation valve cores, which consist of a valve body, pin, spring, and washer, may be manually or automatically fed into an annular series of resilient chucks mounted in a carrier disk of this machine. The disk is intermittently rotated to successively index the chucks below cam-actuated swaging and burnishing heads. The swaging head depresses washer and deforms upper end of pin to increase its diameter to prevent withdrawal of washer from pin. The burnishing head depresses washer and gradually applies increasing pressure to top of swaged pin to provide a smooth finish. The machine is timed so that during a swaging operation a burnishing operation is simultaneously performed on a previously swaged pin. A blast of air ejects finished cores from chucks into a suitable receptacle. Group 35—59—69. Reg. No. 19,068.

Pat. 2,329,346. METHOD FOR MOLDING RUBBER ARTICLES. Patented Sept. 14, 1943. This patent relates particularly to the molding of rubber inflation valves for tire tubes wherein uncured rubber valves are molded and vulcanised to uncured tubes. The uncured valve having a rubber base flange with a feathered edge is formed by forcing uncured rubber into a mold containing a liner and a mandrel, which mandrel ultimately serves to form the axial bore through the valve. The uncured stem with liner and mandrel is then bodily removed as a unit from the mold and placed in a curing mold for both the uncured stem and an uncured tube. Air is then introduced through the mandrel to inflate the tube. Simultaneous vulcanisation of the stem and tube to properly cure them integrally unites base of stem and tube. When removed from curing mold, the liner and mandrel are removed from stem. Group 30—11. Reg. No. 19,069.

Pat. 2,363,508. MOLDING RUBBER ARTICLES. Patented Nov. 28, 1944. This patent shows a method of molding a rubber inflation valve having a base flange with a feathered edge. During the molding operation the stem and upper part of its flange are fully cured, while the face of the flange is maintained uncured. This permits the flange of the stem to be integrally united with an uncured tire tube (or other uncured inflatable article) during ultimate curing of tube without any preliminary preparation of tube or valve. Group 30—11. Reg. No. 19,070.

Pat. 2,449,927. ATOMIZER. Patented Sept. 21, 1948. Atomiser, particularly adapted for oil burners, has the free end of a vibrator stem projecting into the center of the discharge orifice from which the stream of fuel to be atomised issues. The stem is rapidly vibrated or oscillated in all directions so that it will contact all points on the periphery of the orifice wall by the action of the passage through the atomiser of the stream of fuel to be atomised, the atomising currents, and the atomized mixture. This prevents deposits of fuel or other foreign matter from building up in the orifice or on the inner approaches thereto so that the original size of the orifice is continuously maintained. (Owner) John Checkon, 632 Maryland St., Gary, Ind. Group 33—62—63. Reg. No. 19,071.

Pat. 2,452,946. DIRECT FUEL FIRED UNIT AIR HEATER. Patented Nov. 2, 1948. This furnace heats air to comparatively low temperatures for drying, baking, and similar purposes where smoke- and odor-free air are required for drying raw cotton, textiles, food stuffs, and like commodities. A central combustion chamber made of refractory material is provided with a lower outlet, grate, and upper opening. A double cylindrical shell, also made of refractory material, surrounds the chamber and provides space for a fuel burner which discharges heat tangentially. A hood having a stack and damper fits over the assembly and provides an air inlet. (Owner) McConnell Sales & Engineering Corporation, 2809 Central Ave., Birmingham 9, Ala. Groups 32—59; 33—62. Reg. No. 19,072.

Pat. 2,062,690. TERMINAL CLIP. Patented Dec. 1, 1936. A terminal clip for electrical conductors or wires has resilient gripping portions automatically spread apart when a terminal wire is forced between them. Formed from a resilient metal blank with a mounting portion projecting therefrom. Blank is bent to form a loop with the free ends bent upwardly to form a pair of contacting springy arms with diverging lips. One arm is formed with a transverse outward bulge to provide a seating groove for the end of wire when wire is pressed laterally inwardly between arms. Modifications shown. (Owner) Paul Weynand, 112 Kayton Ave., San Antonio 10, Tex. Group 36—11. Reg. No. 19,073.

Pat. 2,387,787. VALVE SEAT GRINDING TOOL. Patented Oct. 30, 1945. Valve grinder, especially adapted for airplane engines, directs a spray of water upwardly to wash away grindings during use of tool. An emery wheel is mounted on a shaft above a small annular tapered flange on shaft. Outlets in the shaft (which is hollow below the flange) are provided for directing a spray of water upwardly. A flexible disk on shaft below outlets deflects the spray upwardly. The lower end of shaft below the disk is surrounded by a sleeve which fits in bore of valve so that the shaft acts as a pilot to insure accuracy of the grinding. A flexible coupling on the shaft above emery wheel has a socket for receiving the end of either a hand- or power-operated driving member. (Owner) Paul Weynand, 112 Kayton Ave., San Antonio 10, Tex. Groups 33—52; 35—41. Reg. No. 19,074.

Pat. 2,045,706. GOVERNOR. Patented June 30, 1936. Governor is a plate inserted between a conventional carburetor and intake manifold of an internal combustion engine. In addition to a fuel passage the plate includes a notch at one end and an arcuate slot both of which receive bolts which attach it to the carburetor and manifold. The slot permits the plate to be shifted to regulate the fuel passage opening before tightening the bolts. (Owner) Emil J. Giara, 304 Stocking St., Mobile 19, Ala. Group 38—31. Reg. No. 19,075.

on either side to support garment hangers. The rack is movable (by means of the disk) throughout entire length of the guide member and may be turned through a complete circle. (Owner) Armand H. Newman, 561 West 169th St., New York, N. Y. Groups 25—99; 33—40—73; 39—81. Reg. No. 19,080.

Pat. 2,452,688. COMBINATION EMERGENCY WHEEL AND ARTISAN DEVICE. Patented Nov. 2, 1948. An emergency

to the base, moving the matches to a vertical position, exposing any advertising matter. After a match is removed, the book is closed to expose the striking surface. (Owner) August Visco, 737 South 8th St., Philadelphia 47, Pa. Groups 25—93; 40. Reg. No. 19,066.

Pat. 2,381,651. VALVE MECHANISM. Patented Aug. 7, 1945. Four-way valve which may be set manually or auto-

Pat. 2,451,922. COAL DRILL AND CHUCK. Patented Oct. 19, 1948. A drill chuck has a threaded end for attachment to a drill drive shaft. A drill stop mounted in the chuck adjacent the threaded end has a centered countersunk depression into which the end of a coal drill bit is seated. A pair of hooked lugs at end of the drill engage a pair of rivets in the chuck to withdraw or retard the drill. Drill is quickly detached from chuck by giving a short turn to the left. (Co-owner) Andrew J. Cox, Route 1, Box 77, Falls Mills, Va. Group 35—33—43. Reg. No. 19,090.

Pat. 2,045,706. GOVERNOR. Patented June 30, 1936. Governor is a plate inserted between a conventional carburetor and intake manifold of an internal combustion engine. In addition to a fuel passage the plate includes a notch at one end and an arcuate slot both of which receive bolts which attach it to the carburetor and manifold. The slot permits the plate to be shifted to regulate the fuel passage opening before tightening the bolts. (Owner) Emil J. Giara, 304 Stocking St., Mobile 19, Ala. Group 38—31. Reg. No. 19,075.

Pat. 2,082,389. FUEL ECONOMIZER FOR INTERNAL COMBUSTION ENGINES. Patented June 1, 1937. Device operates automatically, when vehicle is moving, to open an auxiliary air inlet passage between carburetor and intake valves of engine so that air is drawn in and expelled without mixing it with fuel. Briefly, a tubular air inlet provided between carburetor and manifold is controlled by a valve coupled with a solenoid having a core that moves from the solenoid into a closed cylinder. An air conduit connects the cylinder with the manifold so that the core is moved in one direction to open the valve by suction from the manifold, and in the opposite direction to close the valve when the solenoid is energized. (Owner) Emil J. Giara, 304 Stocking St., Mobile 19, Ala. Group 38—31. Reg. No. 19,076.

Pat. 2,452,746. AERIAL TOY. Patented Nov. 2, 1948. Toy parachute and releasing unit are adapted to be used in combination with a kite. Fabric or paper parachute is suspended on kite string by a hook and is caused by wind to slide upwardly on the string until it reaches the releasing unit. The releasing unit is a paper blank threaded on the string and folded to form an inverted pyramid having a number of triangular vanes. When the parachute reaches the point where the unit is fixed, it is forced to ride onto the edge of one of the vanes and is automatically disconnected, opening as it falls. Any number of parachutes may be sent up in succession. Modifications shown. (Owner) Emil J. Giara, 304 Stocking St., Mobile 19, Ala. Groups 39—41; 40. Reg. No. 19,077.

Pat. 2,452,450. THERAPEUTIC DEVICE. Patented Oct. 26, 1948. Therapeutic device resembles a flashlight of the pencil type and is used to apply heat and light to the mouth and throat of a person being treated for respiratory ailments. An ordinary light bulb of low voltage is completely housed in an insulated plastic casing provided with a stop to prevent the device from being placed too far within the mouth. The device is connected to a transformer and a source of current. (Owner) C. H. Fredenburg, Meridian, Idaho. Groups 34—81; 39—15. Reg. No. 19,078.

Pat. 2,445,349. GARMENT SUPPORTER. Patented July 20, 1948. A hose supporter, for attachment to a girdle, etc., consists of two straps fastened together at upper ends and placed one in front of the other. Non-elastic front strap has a series of longitudinally spaced snap buttons. Elastic under-strap is long enough to loop through a link attached to a clasp and fasten (by means of a snap eyelet in a non-elastic web portion) to any one of the snap buttons, allowing adjustment in length of supporter. (Owner) Rose M. Garbutt, 1908 5th Ave., San Diego, Calif. Group 23—42—84. Reg. No. 19,079.

Pat. 2,451,110. SUSPENSION RACK. Patented Oct. 12, 1948. A movable suspension rack for clothes hangers, for use in closets, show cases, etc. A channel-shaped guide member, provided with end stops, is secured to the under side of a shelf or the like. A disk rider slides and turns within the channel grooves. A stem depending from the disk supports horisontally a notched rack arm extending on either side to support garment hangers. The rack is movable (by means of the disk) throughout entire length of the guide member and may be turned through a complete circle. (Owner) Armand E. Newman, 561 West 169th St., New York, N. Y. Groups 25—99; 33—49—73; 36—81. Reg. No. 19,080.

Pat. 2,452,688. COMBINATION EMERGENCY WHEEL AND ANTISKID DEVICE. Patented Nov. 2, 1948. An emergency wheel and antiskid device for vehicles is normally held in a raised stationary position beside vehicle wheel but may be lowered by foot pedal on floor board. The emergency wheel has a stationary ring with connectors extending from top to bottom which move upward and downward in spring-actuated guide channels attached to the wheel axle. A channel-shaped ring rotates about the stationary ring. One of its flanges has teeth or other power-transmitting elements for interengagement with power-transmitting elements of the vehicle wheel when lowered to ground. A disk formation having an inwardly-turning rim extends from axle housing to exclude dust. (Owner) Otto Schlett, 56-05 43rd Ave., Woodside, Long Island, N. Y. Groups 37—21; 38—11—81. Reg. No. 19,081.

Pat. 2,317,136. SPRING WHEEL. Patented Apr. 20, 1943. Spring wheel for vehicles has a solid rubber tire cemented to the rim to take the place of the usual pneumatic tire. It includes the hub, spokes, and rim of a conventional wire-spoke wheel. A felly surrounding rim is connected thereto by a series of spokes in pairs which are each bent into a single convolute coil to add resiliency to spokes. A dished tire-carrying rim is secured to the felly. Flexible side covers enclose the space between the two rims. (Owner) W. E. Dailey, 116 South Laflin St., Chicago, Ill. Group 38—11—81. Reg. No. 19,082.

Pat. 2,452,841. TOY. Patented Nov. 2, 1948. A wind-up noise-emitting toy in the form of a grotesque animal on wheels travels on the floor in a circle or straight path. A bell-shaped body has a humped back and an elongated mouse head. When the toy is wound and travels on the floor, a whistle blows intermittently. A tube extending forwardly of the whistle into the snout discharges air from the whistle, which stirs up dust on the floor and creates the impression of an animal snorting. (Owner) W. E. Dailey, 116 South Laflin St., Chicago, Ill. Group 39—41. Reg. No. 19,083.

Pat. 2,450,598. BICYCLE. Patented Oct. 5, 1948. Bicycle is designed with driving mechanism to increase the driving power and decrease effort of operation. In this bicycle the usual rear wheel, hub, and sprocket chain are omitted. Instead a small wheel is mounted on the lower end of the rear forked frame of bicycle for free rotation in an inner circumferential groove of a large traction wheel when traction wheel is driven by a belt. Another small wheel mounted on forked frame also travels in the groove to steady traction wheel. The driving belt is trained around an outer circumferential groove of traction wheel and around a pulley. The pulley is driven through a train of gears by the usual pedal-operated sprocket wheel of bicycle. (Owner) Cornelius W. Kerr, P. O. Box 435, Lewes, Del. Group 37—41. Reg. No. 19,084.

Pat. 2,452,882. FOLDING MATCH BOOK. Patented Nov. 2, 1948. A conventional folding match book has matches formed to simulate any desired article. A false cover overlies the book base and has slots to support the matches. Hinged tabs at opposite ends of the false cover are secured to a marginal strip and to the base. To open, the cover is lifted and the marginal tab pulled parallel to the base, moving the matches to a vertical position, exposing any advertising matter. After a match is removed, the book is closed to expose the striking surface. (Owner) August Vinco, 737 South 8th St., Philadelphia 47, Pa. Groups 26—93; 40. Reg. No. 19,085.

Pat. 2,381,651. VALVE MECHANISM. Patented Aug. 7, 1945. Four-way valve which may be set manually or automatically is devised for reversing the compression-evaporation cycle of a refrigerating system. By reversing the cycle, heat (usually absorbed by the evaporation of the refrigerant within the condenser) is expelled as the refrigerant is compressed and condensed within the evaporator. Frost, accumulated on the evaporator, is melted free and falls off in solid form. The manner of freeing the evaporator of ice does not raise the temperature of the refrigerated space so that the valve is adapted for use on equipment designed for below-freezing evaporation. The valve is automatically released when the defrosting operation is complete. (Owner) Lonnie A. Dickens, 816 Brookside Ave., Charlotte, N. C. Group 35—84. Reg. No. 19,086.

Pat. 2,438,154. HILL-HOLDING BRAKE DEVICE. Patented Mar. 23, 1948. Device may be added to a conventional automobile gear shifting mechanism. Mounted on counter gear ahead of reversing mechanism at point where transmission turns in same direction as motor. This converts the counter gear with its driving gear into a hydraulic pump so that it will not run in reverse inasmuch as normal grease is drawn into housing formed by the device locking the gears. This action restricts the vehicle from moving backward when any forward gears are in mesh, and from forward movement when reverse gears are in mesh, but permits movement in selected direction without restriction. (Owner) Lonnie A. Dickens, 816 Brookside Ave., Charlotte, N. C. Group 38—31. Reg. No. 19,087.

Pat. 2,446,910. CONTROLS AND SYSTEMS FOR DEFROSTING COOLING UNITS OF REFRIGERATING MACHINES. Patented Aug. 10, 1948. A motor-operating mechanism for a valve, the function of which is similar to Patent 2,381,651 (Reg. No. 19,086) in reversing the operations of a refrigerator condenser and evaporator for defrosting purposes. A reversing valve is connected to both sides of the compressor, and to one end of the evaporator and condenser, the latter each provided with a thermostatically controlled expansion valve. Movement of the valve stem is limited by tension, and automatically adjusts itself so that required pressure is exerted on the stem to compensate for any wear on the valve seat. A clutch is included in the mechanism which slips when proper tension is exerted on the stem to break the circuit operating the motor in the direction last traveled, but when necessary leaves the circuit closed to operate the motor in the opposite direction. (Owner) Lonnie A. Dickens, 816 Brookside Ave., Charlotte, N. C. Group 35—84. Reg. No. 19,088.

Pat. 2,452,694. ANCHOR FASTENING. Patented Nov. 2, 1948. Picture hook is formed from a single strip of metal. Upper end of strip is bent to form a V-shaped hook to receive picture wire. Outer leg of hook terminates in an in-bent flange through which a screw is threaded to clamp wire in hook. Lower end of strip is bent to form an intermediate offset portion with inclined ends, the upper end bearing against unbent portion of strip. To anchor hook to wall, a nail is passed through misaligned openings in doubled lower end of strip and driven into wall. (Owner) Aurelius Sofia, 87 Bradford St., Harrison, N. Y. Groups 23—59; 39—99; 40. Reg. No. 19,089.

Pat. 2,451,923. COAL DRILL AND CHUCK. Patented Oct. 19, 1948. A drill chuck has a threaded end for attachment to a drill drive shaft. A drill stop mounted in the chuck adjacent the threaded end has a centered countersunk depression into which the end of a coal drill bit is seated. A pair of hooked lugs at end of the drill engage a pair of rivets in the chuck to withdraw or retard the drill. Drill is quickly detached from chuck by giving a short turn to the left. (Co-owner) Andrew J. Cox, Route 1, Box 77, Falls Mills, Va. Group 35—33—43. Reg. No. 19,090.

Pat. 2,432,829. ANTISKID DEVICE FOR VEHICLES. Patented Dec. 9, 1947. An anti-skid tire chain has a series of spaced metal plates with spaced hollow projections to prevent skidding, and cut-outs near the ends for attachment to side chains. The plates are formed with inclined portions to prevent slippage on the tire and have curled ends which are so positioned as to space the chains away from the tire to prevent wear and tear on the tire. (Owner) Mads Marthinsen, 412 Fir St., Michigan City, Ind. Group 33—49. Reg. No. 19,091.

Pat. 2,452,827. SHARPENING DEVICE FOR THE CUTTING ROLLERS OF PENCIL SHARPENERS. Patented Nov. 2, 1948. A device for sharpening the rollers of a conventional pencil sharpener. A detachable U-shaped bracket has an abrasive portion which is inserted over the spiral cutting rollers after the shavings case has been removed. By turning the handle of the pencil sharpener in a reverse direction the cutting rollers will turn in a reverse direction so that the cutting edges are sharpened. Holder may be made of plastic, and abrasive portion (such as emery cloth) held by an elastic band. (Owner) Fred H. Bearden, 712 Maple St., Spartanburg, S. C. Groups 32—91; 33—51; 35—79; 39—51; 40. Reg. No. 19,092.

Pat. 2,453,530. FOOD PRESERVING APPARATUS. Patented Nov. 9, 1948. This cabinet is designed to permit food to be preserved during many months of the year by utilising the free flow of cold atmospheric air. The air is humidified by water in a reservoir inside bottom of cabinet. When necessary this action may be supplemented by operating a conventional mechanical refrigerating unit inside top of cabinet. The water reservoir is separated from food compartment by a perforated plate. A draft pipe and a vent pipe, both communicating with atmosphere and with food compartment, project inwardly through rear of cabinet. Adjustable closures over inner ends of these pipes may be thermostatically controlled. (Owner) Homer L. Moore, 233 Central Ave., S., Hapeville, Ga. Group 35—84. Reg. No. 19,093.

Pat. 2,443,849. HEATED WINDSHIELD WIPER. Patented June 22, 1948. This heated windshield wiper has a closed circuit for the heating medium whereby the medium is retained and recirculated through the wiper. Wiper maintains a constant temperature which is governed by the temperature of the engine. A closed tubular chamber has a wiper thereon and is provided with an inlet and an outlet for the heating medium. (Owner) James W. Childs, R. F. D. 2, Warrenton, Va. Group 38—81. Reg. No. 19,094.

Pat. 2,452,886. WHEEL CHAIR. Patented Nov. 2, 1948. In this wheel chair occupant may use one hand to turn a crank to propel chair and other hand to operate a steering handle. Chair has a pair of large rear wheels and a pair of small pivotally mounted front wheels. Base of chair is made up of several layers of longitudinally disposed wooden members and interspaced transversely disposed

wooden members. Front wheels are mounted on vertical forks connected by suitable steering mechanism. Steering handle is removably connected to upper end of an axial member of one of the forks. A sprocket wheel on hub of right rear wheel is connected by an endless chain to a small crank-operated sprocket wheel on the upper end of an upright. (Owner) Frank H. Wood, 1958 Junction Ave., Sturgis, S. Dak. Group 25—32. Reg. No. 19,095.

from wire may be conveniently carried by user. It consists of a rotating head having an axially aligned shank, which is connected to a small electric motor. Head and shank are formed so as to receive end of an insulated wire. Pivoted levers connected to a pair of radially disposed tool members in head are suitably weighted to respond to centrifugal force when head is rotated to move the tool members inwardly into operative engagement with the wire. A spring connected to the levers normally holds them and

wooden members. Front wheels are mounted on vertical forks connected by suitable steering mechanism. Steering handle is removably connected to upper end of an axial member of one of the forks. A sprocket wheel on hub of right rear wheel is connected by an endless chain to a small crank-operated sprocket wheel on the upper end of an upright. (Owner) Frank E. Wood, 1958 Junction Ave., Sturgis, S. Dak. Group 25—32. Reg. No. 19,095.

Pat. 2,452,684. PORTABLE HOD STAND. Patented Nov. 2, 1948. A portable hod carrier stand has an inverted U-shaped cross bar supporting collapsible legs pivotally mounted therein. The hod rests in a channel having a slot in lower surface in which the cross bar is slidably connected. When the hod is being carried, the legs fold against an extensible handle and are held by a spring clip. The legs extend outwardly and co-act with the handle to form a tripod for supporting hod in upright position when it is being loaded or unloaded. (Owner) Vernon C. Robinson, 738 South 4th St., Phoenix, Aris. Group 25—54. Reg. No. 19,096.

Pat. 2,452,831. ANTISKID DEVICE. Patented Nov. 2, 1948. Anti-skid device for tires consists of a U-shaped tread plate with replaceable anti-slip elements detachably secured to its outer surface, and non-chafing means for securing device to wheel and tire. Each anti-slip element consists of a U-shaped base strip having a section of chain welded to its outer face with calk-like formations projecting from alternate links to provide better traction. Each anti-slip element seats in a channel formed between spaced ribs on outer surface of tread plate. The non-chafing means includes tough fabric wings secured to ends of tread plate for embracing sides of tire. (Owner) R. J. Burkhart, 198 Walnut St., Nutley, N. J. Groups 33—49; 38—31. Reg. No. 19,097.

Pat. 2,452,423. TOOL FOR REMOVING WIRE INSULATION. Patented Oct. 26, 1948. Small power-driven tool for removing hard insulation, such as coatings of enamel, etc., from wire may be conveniently carried by user. It consists of a rotating head having an axially aligned shank, which is connected to a small electric motor. Head and shank are formed so as to receive end of an insulated wire. Pivoted levers connected to a pair of radially disposed tool members in head are suitably weighted to respond to centrifugal force when head is rotated to move the tool members inwardly into operative engagement with the wire. A spring connected to the levers normally holds them and tool members in retracted position. (Owner) Arthur P. Bass, 318 Mulberry St., Newark, N. J. Groups 33—52; 35—42—43. Reg. No. 19,098.

Dedicated Patents

The two companies Jackson & Perkins Company of Newark, N. Y., and Dixie Rose Nursery of Tyler, Tex., do hereby dedicate the following patent to the people of the United States of America for the free use of all persons.

Plant Pat. 163. ROSE. Patented Jan. 21, 1936. The bloom of this rose is identical to its parent variety known commercially as the "Gov. Alfred E. Smith." Plant differs, however, in that it is distinguished by a climbing habit. Plant reaches great height in one season and, since the wood is hard, with little pith, it may be grown in northern areas.

Chemre Corporation, a corporation of Nevada, does hereby assign and dedicate the improvements described in the following patent to the people of the United States of America for the free use of all persons, firms, and corporations in the United States, its territories, and possessions.

Pat. 2,359,380. JAR SEAL. Patented Oct. 3, 1944. Lid for a fruit jar is formed with an annular depending flange. A gasket loaded with thermoplastic material or the like surrounds the flange. When the lid is placed on neck of a jar having an upwardly opening annular groove, the flange seats in the groove. The gasket is heated to desired temperature so that material will exude from gasket and flow into a crevice between lower end of flange of lid and groove of jar. Modifications shown. Group 32—21.

TRADE-MARKS

FOR PERFUMES.
Claims use since October 1932.

Ser. No. 525,420. SUN OIL COMPANY, Philadelphia, Pa. Filed July 1, 1947.

SUNOCO

FOR CHEMICAL ANTI-FRICTION COMPOUND FOR RUBBER MOUNTINGS OR FITTINGS; INSECTICIDES; SHOCK ABSORBER FLUID; ANTI-FREEZE; RADIATOR STOP LEAK COMPOUND; CHEMICAL RADIATOR CLEANER; MICROCRYSTALLINE AND CRYSTALLINE PETROLEUM WAX AND HAVING A GENERAL USE IN INDUSTRY; CHEMICAL RADIATOR RUST RESISTOR AND BRAKE FLUID.
Claims use since June 14, 1947.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 522,308. RUSSELL INDUSTRIES, INC., Bridgeville, Pa. Filed May 13, 1947.

PAV-ALL

The syllable "Pav" is disclaimed apart from the mark.
FOR ASPHALTIC PAVING MATERIAL FOR ROADS AND THE LIKE, AND MADE FROM AGGREGATE MIXED WITH ASPHALT OR TAR.
Claims use since Mar. 15, 1944.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 525,011. JOHN H. MILLIGAN, San Francisco, Calif. Filed June 27, 1947.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 469,956. EASTERN AMPLIFIER CORPORATION, New York, N. Y. Filed Oct. 15, 1945.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 524,978. D. P. HARRIS HARDWARE & MANUFACTURING CO., INC., New York, N. Y. Filed June 27, 1947.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 490,589. GRAY COMPANY, INC., Minneapolis, Minn., assignor to Gray Company, Inc., a corporation of Minnesota. Filed Oct. 27, 1945.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 525,011. JOHN H. MILLIGAN, San Francisco, Calif. Filed June 27, 1947.

MAR-MIL

FOR CLEANER CAN STAND—NAMELY, A PLASTIC HOLDER POSITIONED ON THE SINK OR LIKE PLACE IN A KITCHEN, WHICH HOLDER DETACHABLY RETAINS THEREIN A CLEANSER CONTAINING CAN.
Claims use since Sept. 4, 1946.

CLASS 15

OILS AND GREASES

Ser. No. 500,403. MARITIME PETROLEUM CORPORATION, New York, N. Y. Filed Apr. 17, 1946.

MARIPET

FOR GASOLINE, KEROSENE, LUBRICATING OIL, AND GREASES, AND FUEL OIL FOR HEATING.
Claims use since Aug. 30, 1945.

Ser. No. 521,325. GEORGE S. W. COCHRANE, Minneapolis, Minn. Filed Apr. 25, 1947.

MOLENE

FOR LUBRICATING OIL AND GREASE.
Claims use since December 1946.

Ser. No. 524,836. UNION CARBIDE AND CARBON CORPORATION, New York, N. Y. Filed June 25, 1947.

HALOWAX

FOR SYNTHETIC OIL AND SOLID DERIVATIVES THEREOF FOR USE AS ADDITIVES FOR GASOLENE TO PREVENT AND ELIMINATE GUM DEPOSITS, FOR USE AS ADDITIVES FOR LUBRICATING OIL TO INCREASE THE FILM STRENGTH AND PENETRATING QUALITY OF THE OIL AND FOR USE AS ADDITIVES FOR CUTTING OILS TO ACT AS A COOLANT AND TO PROVIDE ANTI-FLUX ACTION AT TOOL POINT CONTACTS.
Claims use since 1926.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 489,950. EASTERN AMPLIFIER CORPORATION, New York, N. Y. Filed Oct. 15, 1945.

The schematic representation of the electronic tube is disclaimed apart from the mark.
FOR RADIO-RECEIVING SETS, RADIO-TRANSMITTING SETS, TELEVISION-RECEIVING SETS, TELEVISION-TRANSMITTING SETS, SOUND-AMPLIFIER SETS AND INSTRUMENTS.
Claims use since Sept. 12, 1945.

Ser. No. 494,168. TECO SOCIETE ANONYME, Bois-de-Breux, near Liege, Belgium. Filed Dec. 31, 1945.

SURMAS

FOR APPARATUS FOR PROTECTION AGAINST SHOCK CAUSED BY SHORT CIRCUITS ON ELECTRICALLY OPERATED MACHINERY AND APPLIANCES, SAID APPARATUS CONSISTING OF A COIL AND SWITCH AND FUNCTIONING TO BREAK THE POWER CIRCUIT UPON ACCIDENTAL GROUNDING OF THE LINE CONDUCTOR ON THE MACHINERY AND/OR APPLIANCES.
Claims use since June 1933.

Ser. No. 507,937. THE REFLEX SPARK PLUG COMPANY, Cleveland, Ohio. Filed Aug. 23, 1946.

REFLEX

FOR SPARK PLUGS.
Claims use since June 15, 1909.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 524,978. D. P. HARRIS HARDWARE & MANUFACTURING CO., INC., New York, N. Y. Filed June 27, 1947.

FOR CHILDREN'S BICYCLES.
Claims use since 1927.

Ser. No. 524,982. D. P. HARRIS HARDWARE & MANUFACTURING CO., INC., New York, N. Y. Filed June 27, 1947.

FOR CHILDREN'S BICYCLES.
Claims use since 1927.

Ser. No. 524,984. D. P. HARRIS HARDWARE & MANUFACTURING CO., INC., New York, N. Y. Filed June 27, 1947.

FOR CHILDREN'S BICYCLES.
Claims use since 1905.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 490,589. GRAY COMPANY, INC., Minneapolis, Minn., assignor to Gray Company, Inc., a corporation of Minnesota. Filed Oct. 27, 1945.

The word "Products" is disclaimed apart frm the mark.
FOR TREADLE, HAND, AIR, AND/OR MECHANICALLY OPERATED CLEANING MACHINES FOR THE WASHING OF AUTOMOTIVE TYPE AIR CLEANERS AND OTHER SMALL AUTOMOTIVE PARTS AND TOOLS BY FORCING CLEANING FLUID UNDER PRESSURE IN AN AGITATED STATE UPON, OVER, AROUND, AND THROUGH THE PARTS BEING CLEANED; PORTABLE UNITARY PRESSURE ACTIVATED HYDRAULIC BRAKE BLEEDERS; NON-ELECTRIC PORTABLE CABINET VACUUM CLEANERS WITH ATTACHMENTS FOR CLEANING AUTOMOTIVE INTERIORS; WORK BENCHES; AIR AND ELECTRICALLY OPERATED PUMPS FOR THE PUMPING OF MASTICS—NAMELY, SOUND-DEADENING MATERIALS, UNFIBRATED AND FIBRATED PROTECTIVE COATINGS, MILL WHITE PAINTS, OIL PAINTS, LACQUER, AND CASEIN PAINTS; TIRE BUFFING LATHES AND BUFFERS; ELECTRICALLY HEATED RECAPPERS FOR VULCANIZING NEW TREAD OR CAMELBACK ON TIRES; GASOLINE DRIVEN SINGLE CATERPILLAR GARDEN CULTIVATING MACHINES; AND LUBRICATING AND LUBRICANT-HANDLING DEVICES, EQUIPMENT, APPARATUS, MACHINES, MACHINERY, TOOLS, AND IMPLEMENTS MANUALLY, ELECTRICALLY, HYDRAULICALLY, MECHANICALLY, OR PNEUMATICALLY OPERATED—NAMELY, GREASE, GEAR OIL, AND LUBRICATING OIL DISPENSERS AND LUBRICATORS FOR THE PRESSURE APPLICATION OF GREASES, GEAR OILS, AND LUBRICATING OILS TO LUBRICATION FITTINGS OR OTHER LUBRICATION POINTS, GEAR CASES AND CRANK CASES OF AUTOMOBILES AND FARM AND INDUSTRIAL EQUIPMENT; GREASE GUNS; LUBRICANT-DISPENSING COMPRESSORS; GREASE COMPRESSORS; NON-MEASURING PUMPS FOR PUMPING GREASES, GEAR OILS, AND LUBRICATING OILS; NON-MEASURING PUMPS FOR THE PUMPING OF GASOLINE, KEROSENE, SOLVENTS, ALCOHOL, AND OTHER LIQUIDS; PRESSURE OIL SPRAYERS; METAL CABINETS AND CABINET-LIKE SHIELDS EQUIPPED WITH PUMPS FOR DISPENSING LUBRICATING OILS, GREASES, AND GEAR OILS AND WITH VALVES OR FAUCETS AND GAUGES; HOSE REELS FORMING PART OF LUBRICATING EQUIPMENT, ON WHICH REELS ARE MOUNTED HOSES FOR THE DISPENSING OF GREASES, GEAR OILS, AND LUBRICATING OILS, WHICH HOSES ARE RETRACTED BY SPRING ACTION UPON THE REELS AFTER THE SUBSTANCE BEING DISPENSED HAS BEEN DELIVERED; WELLS IN THE FORM OF ENCLOSURES INTO WHICH LUBRICANT-DISPENSING HOSES ARE RETRACTED BY WEIGHTS; CRANK CASE AND GEAR CASE FLUSHERS FOR THE CIRCULATION OF FLUSHING OILS, WHETHER HEATED OR COLD, THROUGH SUCH

CASES AND FOR THE REMOVAL OF THE FLUSHING COMPOUNDS; CRANK CASE AND GEAR CASE DRAINERS FOR THE DRAINING OF SUCH CASES BY SUCTION; MANUAL OR MECHANICAL APPARATUS

Ser. No. 521,734. GINSBERG MACHINE CO., INC., New York, N. Y. Filed May 2, 1947.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Ser. No. 524,666. SLEEPWEAR, INC., New York, N. Y. Filed June 23, 1947.

CASES AND FOR THE REMOVAL OF THE FLUSHING COMPOUNDS; CRANK CASE AND GEAR CASE DRAINERS FOR THE DRAINING OF SUCH CASES BY SUCTION; MANUAL OR MECHANICAL APPARATUS FOR PACKING WHEEL BEARINGS WITH LUBRICANTS; WASHING APPARATUS FOR BEARINGS; MANUALLY, MECHANICALLY, AND/OR AIR OPERATED APPARATUS FOR FORCING CLEANING FLUIDS, SUCH AS SOLVENT OR LEAD-FREE GASOLINE, OVER, AROUND, AND THROUGH BALL AND ROLLER BEARINGS; CABINETS FOR CONTAINING LUBRICANT-APPLYING TOOLS AND FITTINGS; AND PARTS FOR ALL OF THE FOREGOING.
Claims use since July 30, 1945.

Ser. No. 501,902. DEERE & COMPANY, Moline, Ill. Filed May 11, 1946.

Touchromatic

The word "Touch" is disclaimed apart from the mark. The drawing is lined to indicate the colors green and yellow.
FOR TRACTORS EQUIPPED WITH HYDRAULIC POSITION CONTROL MECHANISM FOR TRACTOR MOUNTED IMPLEMENTS.
Claims use since Sept. 1, 1945.

Ser. No. 503,332. SPARTAN TOOL COMPANY, Chicago, Ill. Filed June 5, 1946.

Spartan

FOR FLEXIBLE CABLE TYPE PORTABLE, HAND MANIPULATED TOOLS FOR USE IN CLEANING SEWERS.
Claims use since May 1, 1945.

Ser. No. 503,766. SOCIÉTÉ GENEVOISE D'INSTRUMENTS DE PHYSIQUE, Geneva, Switzerland. Filed June 12, 1946.

ROTOPTIC

FOR MACHINE-TOOLS—NAMELY, JIG BORERS, DRILLING, BORING, AND MILLING MACHINES.
Claims use since Apr. 14, 1945.

Ser. No. 515,466. SPIR-IT, INC., Malden, Mass. Filed Jan. 6, 1947.

SPREDETTE

FOR SPATULAS USED TO MIX COMESTIBLES SUCH AS MUSTARD, SAUCES, JAMS, JELLIES, OR TO MIX COSMETICS SUCH AS FACE POWDER AND FOR SIMILAR HOUSEHOLD USES.
Claims use since Aug. 19, 1946.

Ser. No. 521,734. GENEVOISE MACHINE CO., INC., New York, N. Y. Filed May 2, 1947.

SAMSON

FOR CUTTING BOARD PINS USED FOR MAINTAINING IN ALIGNMENT THE DESIGNS OF SUPERIMPOSED LAYERS OF CLOTH OR OTHER FLEXIBLE MATERIAL MOUNTED ON A CUTTING BOARD PREPARATORY TO AND DURING THE CUTTING OF THE LAYERS TO DESIRED DIMENSIONS.
Claims use since Mar. 13, 1947.

Ser. No. 522,391. H. BOKER & CO., INC., New York, N. Y. Filed May 14, 1947.

TREE

FOR POCKET KNIVES MADE OF BASE METAL.
Claims use since Jan. 1, 1867.

Ser. No. 525,022. ORREFRACTION INCORPORATED, Pittsburgh, Pa. Filed June 27, 1947.

FOR CERAMIC GRINDING BODIES, AND CERAMIC ABRASIVE BODIES.
Claims use since May 14, 1940.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Ser. No. 513,918. THE VITRON CORPORATION, Wilmington, Del. Filed Dec. 7, 1946.

Vitron

FOR TUBING MADE OF GLASS FIBERS AND IMPREGNATED WITH VARNISH TO BE USED FOR CONDUITS AND HOSE.
Claims use since Oct. 30, 1946.

CLASS 36

MUSICAL INSTRUMENTS AND SUPPLIES

Ser. No. 512,795. WILLIAM E. QUINN, Houston, Tex. Filed Nov. 18, 1946.

Gold Star

FOR GROOVED MUSICAL RECORDINGS.
Claims use since July 1, 1946.

CLASS 39

CLOTHING

Ser. No. 521,382. SUSE BRECHER DANNENBERG, doing business as "Suse," Los Angeles, Calif. Filed Apr. 26, 1947.

Suse

FOR SWEATERS.
Claims use since June 1, 1942.

Ser. No. 524,666. SLEEPWEAR, INC., New York, N. Y. Filed June 23, 1947.

The specific representation of pajamas appearing on the grotesque figures in the drawing are specifically disclaimed apart from the mark.
FOR PAJAMAS.
Claims use since Apr. 9, 1947.

Ser. No. 525,943. PHILLIPS-JONES CORPORATION, New York, N. Y. Filed July 3, 1947.

SEVEN WONDERS OF THE WORLD

FOR SPORT SHIRTS, PAJAMAS, AND NECKTIES.
Claims use since Mar. 26, 1947.

Ser. No. 525,945. PHILLIPS-JONES CORPORATION, New York, N. Y. Filed July 3, 1947.

VAN GAB

FOR MEN'S COLLARS, SPORT SHIRTS, SPORT JACKETS, OUTER SHIRTS, NECKTIES, AND PAJAMAS.
Claims use since Apr. 24, 1947.

CLASS 42

KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR

Ser. No. 522,727. CHARMETTE FABRICS COMPANY, INC., New York, N. Y. Filed May 20, 1947.

TRICO-CHARM

The word "Trico" is disclaimed apart from the mark.
FOR TRICOT KNIT JERSIES IN THE PIECE.
Claims use since May 9, 1947.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 502,446. JAMES MARSHALL (DEVON) LIMITED, [illegible]

Ser. No. 523,432. SMYRNA IMPORTS CO. INC., New York, N. Y. Filed June 2, 1947.

FOR CERAMIC GRINDING BODIES, AND CERAMIC ABRASIVE BODIES.
Claims use since May 14, 1940.

ACT OF 1946

The following trade-marks are published in compliance with section 13(a) of the Trade-Mark Act of 1946. Notice of [illegible] section 13 may be filed within thirty days of this publication. See Rules 20.1 to 20.5.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 502,446. JAMES MARSHALL (DEVON) LIMITED, Totnes, England, assignor to James Storey Marshall, Totnes, England. Filed May 20, 1946.

WIDDECOMBE FAIR

No claim is made to the exclusive use of the word "Widdecombe."
FOR CANDY.
Claims use since Jan. 19, 1933.

Ser. No. 516,541. FARMERS EXCHANGE, INC., Onley, Va. Filed Jan. 29, 1947.

FARMEX

The picture of the man appearing on the drawing is fanciful.
FOR FRESH VEGETABLES.
Claims use since Jan. 1, 1946.

Ser. No. 521,293. STAHL-MEYER, INC., New York, N. Y. Filed Apr. 24, 1947.

OUR TRADE MARK HAM

FOR SMOKED MEATS—VIZ., HAM.
Claims use since Apr. 1, 1876.

Ser. No. 523,432. SMYRNA IMPORTS CO. INC., New York, N. Y. Filed June 2, 1947.

Applicant owns Reg. Nos. 229,522 and 229,523. No claim is made to the word "Products."
FOR DATES.
Claims use since June 1, 1926.

Ser. No. 525,283. NATIONAL CANINE PRODUCTS, INC., New York city and Brooklyn, N. Y. Filed June 30, 1947.

LIFESPAN

FOR FOODS FOR ANIMALS OF THE DOG FAMILY.
Claims use since October 1936.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Ser. No. 515,761. SANCHEZ ROMATE HERMANOS, S. A., Jeres de la Frontera, Spain. Filed Jan. 15, 1947.

ABOLENGO

FOR WHISKEY, GIN, RUM, BRANDY, COGNAC, LIQUEUR, AND ALCOHOLIC CORDIALS.
Claims use since Feb. 11, 1946.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Ser. No. 522,730. BELL INDUSTRIES, INC., Chicago, Ill. Filed May 20, 1947.

ICE-GLO

The word "Glo" is disclaimed apart from the mark.
FOR ORNAMENTAL BALLS FOR USE ON CHRISTMAS TREES AND FOR OTHER ORNAMENTAL PURPOSES.
Claims use since Mar. 3, 1947.

ACT OF 1946

As provided by section 31 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 503,543. AMERICAN EXTRUDED PRODUCTS CO., Hollywood, Calif. Filed Oct. 17, 1947; originally filed, act of 1905, June 10, 1946.

Amepco

FOR PLASTIC MEMBERS FORMED BY EXTRUSION IN THE FORM OF RIGID OR SEMI-RIGID SHEETS, RODS, BARS, STRIPS, PROFILES, RIBBON, COILS, AND SPECIAL SHAPES, ALL FOR FABRICATION INTO VARIOUS MANUFACTURED ARTICLES.
Claims use since Aug. 31, 1941.

Ser. No. 547,991. GULF & WEST INDIES CO., INC., New York, N. Y. Filed Jan. 26, 1948.

ZAGNEB

FOR SPONGES.
Claims use since Nov. 1, 1946.

Ser. No. 548,201. UNITED STATES RUBBER COMPANY, New York, N. Y. Filed Jan. 28, 1948.

KOYLON

FOR FLATSTOCK OF FOAM RUBBER FOR FILLERS FOR FURNITURE CUSHIONS.
Claims use since Dec. 2, 1946.

Ser. No. 548,614. SPHAR & COMPANY, Winchester, Ky. Filed Feb. 2, 1948.

PURITAN

FOR FIELD SEEDS.
Claims use since 1940.

Ser. No. 548,660. LEAS & MCVITTY, INC., Philadelphia, Pa. Filed Feb. 3, 1948.

LEAMAC

Applicant claims ownership of registration No. 357,972.
FOR LEATHER.
Claims use since Jan. 19, 1938.

Ser. No. 549,114. BLACK HILLS BENTONITE, INC., Moorcroft, Wyo. Filed Feb. 9, 1948.

TOWER

FOR BENTONITE SOLD TO THE TRADE IN COMMINUTED FORM IN BAGS.
Claims use since July 12, 1947.

Ser. No. 549,115. BLACK HILLS BENTONITE, INC., Moorcroft, Wyo. Filed Feb. 9, 1948.

The mark is a fanciful representation of a tower rising above surrounding trees.
FOR BENTONITE SOLD TO THE TRADE IN COMMINUTED FORM IN BAGS.
Claims use since July 12, 1947.

Ser. No. 563,989. THE PHILADELPHIA AND READING COAL AND IRON COMPANY, Philadelphia, Pa. Filed Apr. 2, 1948. Under section 2f of the act of 1946.

READING

Applicant claims ownership of registrations Nos. 229,012, 192,216, 242,049, and 242,348.
FOR COAL.
Claims use since September 1912.

CLASS 2

RECEPTACLES

Ser. No. 526,845. BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed July 5, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of registrations Nos. 192,216, 242,049, and 242,348.
FOR BAGS.
Claims use since 1940.

Ser. No. 526,889. BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed July 5, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of registrations Nos. 192,216, 242,049, and 242,348.
FOR BAGS.
Claims use since 1940.

Ser. No. 537,015. COOPERS INTERNATIONAL UNION OF NORTH AMERICA, Boston, Mass. Filed Oct. 7, 1947.
CERTIFICATION MARK.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 514,964. ALEXANDER R. PATTERSON, doing business as PATTERSON-KELLEY CO., East Stroudsburg, Pa. Filed Mar. 31, 1947.

Applicant claims ownership of registration No. 357,972.
FOR ABRASIVE CLEANSING POWDER.
Claims use since Jan. 19, 1938.

CLASS 2

RECEPTACLES

Ser. No. 526,845. BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed July 5, 1947.

FLEXI-CARTON

The word "Carton" is disclaimed apart from the mark
Applicant claims ownership of registrations Nos. 245,747 and 340,780.
FOR PAPER BAGS.
Claims use since Oct. 7, 1927.

Ser. No. 526,857. BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed July 5, 1947.

Applicant claims ownership of registrations Nos. 120,242, 169,435, 219,995, 266,776, and 266,777.
FOR BAGS AND SACKS MADE OF TEXTILE MATERIALS, PAPER, LAMINATED TEXTILE MATERIAL AND/OR PAPER AND MOISTURE RESISTANT MATERIAL.
Claims use since Jan. 1, 1881.

Ser. No. 526,860. BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed July 5, 1947.

TRY-SAX

The word "Sax" is disclaimed apart from the mark.
Applicant claims ownership of registration No. 425,551.
FOR FABRIC BAGS AND SACKS.
Claims use since January 1941.

Ser. No. 526,874. BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed July 5, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of registrations Nos. 120,242, 169,435, 219,995, 266,776, 266,777, 372,807, 416,343, 416,879, 421,218, 423,429, 423,767, 424,933, 426,940, 427,085, 427,086, 428,425, 430,580, and 504,279.
FOR FABRIC AND PAPER BAGS AND SACKS FOR CONTAINING PULVERIZED OR GRANULAR MATERIAL AND THE LIKE.
Claims use since July 1, 1929.

Ser. No. 526,889. BEMIS BRO. BAG COMPANY, St. Louis, Mo. Filed July 5, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of registrations Nos. 120,242, 169,435, 219,995, 266,776, 266,777, 372,807, 416,343, 416,879, 421,218, 423,429, 423,767, 424,933, 426,940, 427,085, 427,086, 428,425, 430,580, and 504,299.
FOR FABRIC AND PAPER BAGS AND SACKS FOR CONTAINING PULVERIZED OR GRANULAR MATERIAL AND THE LIKE.
Claims use since July 1, 1925.

Ser. No. 533,561. THE GREIF BROS. COOPERAGE CORPORATION, Cleveland, Ohio. Filed Sept. 5, 1947. Under section 2f of the act of 1946.

The representation of a barrel is disclaimed apart from the mark.
FOR BARRELS AND DRUMS OF STEEL AND FIBER OR BOTH.
Claims use since July 11, 1935.

Ser. No. 535,632. S. & F. COMPANY, Hartford, Conn. Filed Sept. 24, 1947.

Toy-Tainers

The word "Toy" is disclaimed.
FOR BAGS MADE OF CLOTH AND WIRE.
Claims use since Oct. 15, 1945.

Ser. No. 537,015. COOPERS INTERNATIONAL UNION OF NORTH AMERICA, Boston, Mass. Filed Oct. 7, 1947. CERTIFICATION MARK.

The words "Union Made" and "Locals" are disclaimed apart from the mark.
FOR USE ON WOODEN BARRELS.
Claims use since 1892.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 535,760. SWANK, INC., Attleboro, Mass. Filed Sept. 25, 1947.

Senator

FOR WALLETS OR BILLFOLDS.
Claims use since December 1945.

Ser. No. 543,375. ABEL & BACH, INC., Milwaukee, Wis. Filed Dec. 5, 1947.

Applicant disclaims the right to the exclusive use of the outline of the representation of the label apart from the mark.
FOR SUITCASES.
Claims use since Feb. 15, 1946.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 514,964. ALEXANDER R. PATTERSON, doing business as Lyman-Ross Co., Seattle, Wash. Filed Mar. 1, 1948; originally filed, act of 1905, Dec. 28, 1946.

CHEE

FOR WASHING POWDER.
Claims use since July 20, 1946.

Ser. No. 530,563. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed Aug. 5, 1947.

RADIANT

Applicant claims ownership of registration No. 98,803.
FOR SUDSING DETERGENT IN PASTE FORM.
Claims use since Jan. 24, 1947.

Ser. No. 533,097. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Sept. 2, 1947.

PAYDET

FOR DETERGENT COMPOUND FOR USE IN INDUSTRIAL AND DOMESTIC CLEANING.
Claims use since Nov. 6, 1946.

Ser. No. 533,098. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Sept. 2, 1947.

C. C. S. ALKALI

"Alkali" is disclaimed apart from the mark.
FOR ALKALINE DETERGENT COMPOUND FOR INDUSTRIAL CLEANING AND WASHING PURPOSES, ESPECIALLY FOR BOTTLE WASHING IN THE FOOD AND BEVERAGE INDUSTRIES.
Claims use since June 1938.

Ser. No. 533,099. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Sept. 2, 1947.

B. C. X.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 516,083. MAGNOLIA CHEMICAL CO., INC., Jackson, Miss. Filed Sept. 15, 1948; originally filed, act of 1920,

MONOCHLORACETIC, ACID NITRIC, ACID NITROHYDROCHLORIC, ACID OLEIC, ACID OXALIC, ACID PARAHYDROXYPHENYLARSONIC, ACID PERCHLORIC, ACID PEROSMIC, ACID PHENYLACETIC, ACID PHOSPHOMOLYBDIC, ACID PHOSPHORIC, ACID METAPHOSPHORIC, ACID PHOSPHOTUNGSTIC, ACID PHTHALIC ANHYDRIDE, ACID PICRIC, ACID PYRO-

MUTH TANNATE, BISMUTH AND AMMONIUM CITRATE, BISMUTH AND POTASSIUM TARTRATE, BLAUD'S MIXTURE, BLUE VITRIOL, BORAX, BROMINE, BROMOFORM, BROWN PATCH FUNGICIDE, BRUCINE ALKALOID, BRUCINE SULFATE, CADMIUM METAL FOR USE AS A REAGENT, CADMIUM ACETATE, CADMIUM BROMIDE, CADMIUM CARBONATE, CADMIUM CHLORIDE, CADMIUM IODIDE,

Ser. No. 533,099. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Sept. 2, 1947.

B. C. X. SPECIAL

"Special" is disclaimed apart from the mark.
FOR ALKALINE DETERGENT COMPOUND FOR INDUSTRIAL LAUNDERING.
Claims use since November 1938.

Ser. No. 533,102. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Sept. 2, 1947.

EMLON

FOR CLEANING COMPOUND ESPECIALLY ADAPTED FOR METAL CLEANING.
Claims use since Dec. 13, 1946.

Ser. No. 557,734. THE DIVERSEY CORPORATION, Chicago, Ill. Filed May 25, 1948.

DIVOLUME

The trade-mark comprises the word "Divolume."
FOR CLEANING COMPOUND IN POWDERED FORM FOR CLEANING ALUMINUM SURFACES AND HAVING INCIDENTAL WATER SOFTENING PROPERTIES.
Claims use since Apr. 28, 1948.

Ser. No. 557,862. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed May 26, 1948.

DUOMERSE

FOR SYNTHETIC DETERGENT COMPOSITIONS FOR GENERAL CLEANING PURPOSES.
Claims use since Apr. 7, 1948.

Ser. No. 558,425. VIRGINIA-CAROLINA CHEMICAL CORPORATION, Richmond, Va. Filed June 3, 1948.

VICAR-EX

FOR GENERAL CLEANSER IN POWDER FORM.
Claims use since Apr. 17, 1948.

Ser. No. 559,408. WEST VIRGINIA PULP AND PAPER COMPANY, New York, N. Y. Filed Feb. 21, 1948.

TALLSO

Applicant claims ownership of registration No. 397,935.
FOR CRUDE TALL OIL (TALLOIL) SOAP DERIVED FROM THE FATS AND RESINS OF PINE WOOD.
Claims use since April 1942.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 516,083. MAGNOLIA CHEMICAL CO., INC., Jackson, Miss. Filed Sept. 15, 1948; originally filed, act of 1920, Jan. 21, 1947. Under section 2f of the act of 1946.

PINE-SOL

FOR PINE OIL.
Claims use since 1929.

Ser. No. 517,367. AL PERLMUTTER, doing business as Karter Chemical Company, Detroit, Mich. Filed Sept. 16, 1947; originally filed, act of 1905, Feb. 12, 1947. Under section 2f of the act of 1946.

karter's COUGH -EZE

FOR COUGH MEDICINE.
Claims use since January 1938.

Ser. No. 522,143. LANCOME S. A., Paris, France. Filed Sept. 18, 1947; originally filed, act of 1905, May 9, 1947.

ALBÂTRE

Applicant claims ownership of French registration No. 371,126 dated Oct. 10, 1946.
FOR ALL KINDS OF CREAMS AND OILS FOR BEAUTIFYING THE SKIN.
Claims use since Oct. 10, 1946.

Ser. No. 526,920. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo. Filed July 5, 1947. Under section 2f of the act of 1946.

Mallinckrodt

Applicant claims ownership of registration No. 359,706.
FOR ACETALDEHYDE, ACETAMIDE, ACETANILID, ACETIC ANHYDRIDE, ACETOACETIC ESTER, ACETONE, ACETOPHENETIDIN, ACID ACETIC, ACID ACETYLSALICYLIC, ACID AMINOACETIC, ACID ARSENIC, ACID ARSENIOUS, ACID ASCORBIC, ACID BENZOIC, ACID BORIC, ACID CAMPHORIC, ACID CAPROIC, ACID CARBOLIC, ACID CHROMIC, ACID CITRIC, ACID CRESYLIC, ACID, FORMIC, ACID GALLIC, ACID GLYCEROPHOSPHORIC, ACID HYDRIODIC, ACID CHROME ALUM, CHROMIUM ACETATE, CHROMIUM CHLORIDE, CHROMIUM NITRATE, CHROMIUM OXIDE, CHROMIUM SULFATE, CHROMIUM TRIOXIDE, CHRYSAROBIN, CINCHONIDINE, ALKALOID, CINCHONIDINE SALICYLATE, CINCHONIDINE SULFATE, CINCHONINE ALKALOID, CINCHONINE BISULFATE, CINCHONINE HYDROCHLORIDE, CINCHONINE SALICYLATE, CINCHONINE SULFATE, CINCHOPHEN, NEO-CINCHOPHEN, CINNABAR, CITRINE OINTMENT, COBALT ACETATE, COBALT CARBONATE, COBALT CHLORIDE, COBALT NITRATE, COBALT OXIDE, COBALT SULFATE, COCAINE ALKALOID, COCAINE HYDROCHLORIDE, CODEINE ALKALOID, CODEINE HYDROCHLORIDE, CODEINE PHOSPHATE, CODEINE SULFATE, COLCHICINE ALKALOID, COLCHICINE SALICYLATED, COLD TOP ENAMEL USED AS A PHOTOSENSITIVE RESIST FOR MAKING PHOTOENGRAVINGS, COLD TOP ENAMEL DEVELOPER FOR MAKING PHOTOENGRAVINGS, COLD TOP ENAMEL REMOVER FOR MAKING PHOTOENGRAVINGS, COLD TOP ENAMEL PROTECTOR USED AS A SOLVENT INSOLUBLE RESIST FOR MAKING PHOTOENGRAVINGS, COLLODION, COLLODION PHOTO COLLODION PHOTO IODIZER, STRIPPING COLLODION, COLLODION THINNER, COPPER METAL FOR USE AS A REAGENT, COPPER ACETATE, COPPER ALUMINATED, COPPER AMMONIUM CHLORIDE (CUPRIC), COPPER ARSENATE (CUPRIC), COPPER ARSENITE (CUPRIC), COPPER BROMIDE, COPPER CARBONATE (CUPRIC), COPPER CHLORIDE (CUPRIC), COPPER CHLORIDE (CUPROUS), COPPER CITRATE (CUPRIC), COPPER CYANIDE (CUPROUS), COPPER NITRATE, COPPER OXIDE BLACK (CUPRIC), COPPER OXIDE RED (CUPROUS), COPPER SULFATE (CUPRIC), COPPER SULFOCARBOLATE (CUPRIC), COPPER AND POTASSIUM CHLORIDE, COPPER AND POTASSIUM CYANIDE, CORROSIVE SUBLIMATE, COUMARIN, CREAM TARTAR (POTASSIUM BITARTRATE), CREOSOTE, CREOSOTE BEECHWOOD, CREOSOTE CARBONATE, CRESOL, CRESOL SOLUTION COMPOUND, CUPRIC ACETATE, CUPRIC BROMIDE, CUPRIC CARBONATE, CUPRIC CHLORIDE, CUPRIC NITRATE, CUPRIC OXIDE, CUPRIC SULFATE, CUPRIC SULFIDE, CUPROUS CHLORIDE,

CUPROUS SULFIDE, CYANIDE-CHLORIDE MIXTURE, CYANIDE-CHLORIDE-CARBONATE MIXTURE, CYCLOPROPANE, DEXTRIN YELLOW, DEXTRIN WHITE, DEXTROSE, DIBENZYL CARBONATE, DICETYL CARBONATE, DICYCLOHEXYL CARBONATE, DIETHYL BENZYLPHENYLMALONATE, DIETHYL CETYLMALONATE, DIETHYL DECYLMALONATE, DIETHYL OXALATE (FERRIC), IRON AND POTASSIUM TARTRATE (FERRIC), IRON AND QUININE CITRATE (FERRIC), IRON QUININE AND STRYCHNINE CITRATE, IRON AND SODIUM OXALATE (FERRIC), IRON AND STRYCHNINE CITRATE (FERRIC), IRON AND AMMONIUM SULFATE (FERRIC), IRON AND AMMONIUM SULFATE (FERROUS), KAOLIN USED AS

BLACK, NICKEL SULFATE, NICKEL AND AMMONIUM SULFATE, OPIUM, ORGANIC MERCURY COMPOUNDS, ORTHODICHLORBENZENE, OXYQUINOLINE BASE, 2-OXAZOLIDONE, OXYQUINOLINE BENZOATE, OXYQUINOLINE SULFATE, PAPAVERINE HYDROCHLORIDE, PAPER LITMUS BLUE, PAPER LITMUS RED, PAPER PHENOLPHTHALEIN, PARACHLOROPHENOL, PARAFORMALDEHYDE,

SILVER METAL FOR USE AS A REAGENT, SILVER ACETATE, SILVER BROMIDE, SILVER CARBONATE, SILVER CHLORIDE, SILVER CYANIDE, SILVER IODIDE, SILVER LACTATE, SILVER NITRATE, SILVER NITRITE, SILVER NUCLEINATE, SILVER OXIDE, SILVER PROTEINATE, SILVER SULFATE, SODA AND LIME, SODA LIME, SODIUM METAL FOR USE AS A REAGENT, SODIUM ACETATE, SODIUM ARSENATE,

CUPROUS SULFIDE, CYANIDE-CHLORIDE MIXTURE, CYANIDE-CHLORIDE-CARBONATE MIXTURE, CYCLOPROPANE, DEXTRIN YELLOW, DEXTRIN WHITE, DEXTROSE, DIBENZYL CARBONATE, DICETYL CARBONATE, DICYCLOHEXYL CARBONATE, DIETHYL BENZYLPHENYLMALONATE, DIETHYL CETYLMALONATE, DIETHYL DECYLMALONATE, DIETHYL ETHYLISOAMYLMALONATE, DIETHYL ETHYLMALONATE, DIETHYL PARA-IODOPHENYLMALONATE, DIETHYL PHENYLETHYLMALONATE, DIETHYL PHENYLMALONATE, DIGITALIN, 4,4-DI-(HYDROXYMETHYL)-2-OXAZOLIDONE, DILAURYL CARBONATE, DIMETHYL GLYOXIME, 4,4-DIMETHYL-2-OXAZOLIDONE, DIMYRISTYL CARBONATE, DI-N-AMYL CARBONATE, DI-N-BUTYL CARBONATE, DI-N-BUTYL CETYLBENZYLMALONATE, DI-N-HEXYL CARBONATE, DI-N-PROPYL CARBONATE, DI-N-PROPYL OXAZOLADINEDIONE, DIOCTADECYL CARBONATE, DOVER'S POWDER, ELATERIUM, EMETINE HYDROCHLORIDE, EPHEDRINE ALKALOID, EPHEDRINE HYDROCHLORIDE, EPHEDRINE SULFATE, ERGOTIN-BONJEAN, ESCHKA'S MIXTURE, ESERINE ALKALOID, ESERINE HYDROCHLORIDE, ESERINE SALICYLATE, ESERINE SULFATE, ETCHING POWDER, ETHER FOR ANESTHESIA, ETHER CONCENTRATED, ETHER PETROLEUM, ETHYL ACETATE, ETHYL ALPHA-CYANOSTEARATE, ETHYL ALPHA-PHENYLBUTYRATE, ETHYL BROMIDE, ETHYL-CAPROYLACETATE, ETHYL FORMATE, ETHYL IODIDE, ETHYL ISOVALERYLACETATE, ETHYL MERCAPTAN, ETHYL NITRITE, ETHYL MORPHINE HYDROCHLORIDE, ETHYL PARA-METHOXYBENZOYLACETATE, ETHYL PHENYLACETATE, ETHYL PHENYLBENZYLCYANOACETATE, ETHYL PHENYLCYANOACETATE, ETHYL PHENYLETHYLCYANOACETATE, ETHYLENE BROMIDE, EUCALYPTOL, FERRIC CHLORIDE, FERRIC NITRATE, FERRIC SULFATE, FERRIC AMMONIUM SULFATE, FERROUS CHLORIDE, FERROUS SULFATE, FERROUS AMMONIUM SULFATE, FIXING BATH, FLUOR SPAR, FORMALDEHYDE, FUSEL OIL, GLYCERIN, GLYCIN, GLYCOCOLL, GOLD CHLORIDE, GOLD AND SODIUM CHLORIDE, GOLD MONO-BROMIDE, GOLD TRI-BROMIDE, GUAIACOL, GUAIACOL CARBONATE, GUM ARABIC, HEXAMETHYLENAMINE, HOMATROPINE ALKALOID, HOMATROPINE HYDROBROMIDE, HOMATROPINE HYDROCHLORIDE, HOMATROPINE SULFATE, HYDRASTINE ALKALOID, HYDRASTINE HYDROCHLORIDE, HYDRASTINE SULFATE, HYDROGEN PEROXIDE, HYDROQUINONE, 8-HYDROXYETHYL-2-OXAZOLIDONE, 8-HYDROXYQUINOLINE, HYOSCINE HYDROBROMIDE, HYOSCINE HYDROCHLORIDE, HYOSCYAMINE ALKALOID, HYOSCYAMINE HYDROBROMIDE, HYOSCYAMINE HYDROCHLORIDE, HYOSCYAMINE SULFATE, INDICATING SODA LIME, IODIDE MIXTURE, IODINE, IODINE TINCTURE, IODOFORM, IODOPHTHALEIN SODIUM, IRON METAL FOR USE AS A REAGENT, IRON ACETATE, IRON ALBUMINATED, IRON ARSENATED, IRON ARSENITE, IRON BROMIDE, IRON CARBONATE, IRON CARBONATE SACCHARATED, IRON CHLORIDE, IRON CHLORIDE (FERROUS), IRON CITRATE, IRON CITROCHLORIDE, IRON FERROCYANIDE, IRON GLYCEROPHOSPHATE, IRON HYDROXIDE, IRON HYPOPHOSPHITE, IRON IODIDE (FERROUS), IRON IODIDE SACCHARATED (FERROUS), IRON LACTATE, IRON NITRATE, IRON OXALATE FERRIC, IRON OXALATE FERROUS, IRON OXIDE PURE ANHYDROUS, IRON OXIDE BLACK (FERRO-FERRIC), IRON OXIDE BROWN, IRON OXIDE SACCHARATED, IRON PEPTONIZED, IRON PHOSPHATE (FERROUS), IRON PHOSPHATE (SOLUBLE FERRIC), IRON PYRITES, IRON PYROPHOSPHATE (SOLUBLE FERRIC), IRON SUBSULFATE (FERRIC), IRON SUCCINATE, IRON SULFATE (FERROUS), IRON SULFIDE (FERROUS), IRON TARTRATE, IRON TERSULFATE (FERRIC SULFATE), IRON VALERATE, IRON AND AMMONIUM CITRATE, IRON AND AMMONIUM OXALATE (FERRIC), IRON AND MANGANESE CITRATE, IRON AND MANGANESE PEPTONIZED, IRON AND POTASSIUM OXALATE (FERRIC), IRON AND POTASSIUM TARTRATE (FERRIC), IRON AND QUININE CITRATE (FERRIC), IRON QUININE AND STRYCHNINE CITRATE, IRON AND SODIUM OXALATE (FERRIC), IRON AND STRYCHNINE CITRATE (FERRIC), IRON AND AMMONIUM SULFATE (FERRIC), IRON AND AMMONIUM SULFATE (FERROUS), KAOLIN USED AS AN ADSORBENT OR INERT DILUENT IN MEDICINES, LACTOSE, LANOLIN, LEAD METAL FOR USE AS A REAGENT, LEAD ACETATE, LEAD ARSENATE, LEAD BROMIDE, LEAD CARBONATE, LEAD CHLORIDE, LEAD CHROMATE, LEAD IODIDE, LEAD LACTATE, LEAD LINOLEATE, LEAD MONOXIDE, LEAD NITRATE, LEAD OXIDE RED, LEAD OXIDE YELLOW, LEAD PEROXIDE, LEAD PHOSPHATE, LEAD SUBACETATE, LEAD SULFATE, LEAD SULFIDE, LIME IODIZED DARK, LITHARGE, LITHIUM ACETATE, LITHIUM BENZOATE, LITHIUM BENZO-SALICYLATE, LITHIUM BITARTRATE, LITHIUM BROMIDE, LITHIUM CARBONATE, LITHIUM CHLORIDE, LITHIUM CITRATE, LITHIUM FLUORIDE, LITHIUM HYDROXIDE, LITHIUM IODIDE, LITHIUM NITRATE, LITHIUM PHOSPHATE, LITHIUM SALICYLATE, LITHIUM SULFATE, LITHIUM TARTRATE, LITMUS CUBES, LOBELINE SULFATE, LUNAR CAUSTIC (SILVER NITRATE FUSED), MAGNESIUM METAL FOR USE AS A REAGENT, MAGNESIUM ACETATE, MAGNESIUM BROMIDE, MAGNESIUM CARBONATE, MAGNESIUM CHLORIDE, MAGNESIUM CITRATE, MAGNESIUM GLYCEROPHOSPHATE, MAGNESIUM HYDROXIDE, MAGNESIUM HYPOPHOSPHITE, MAGNESIUM NITRATE, MAGNESIUM OXIDE, MAGNESIUM PEROXIDE, MAGNESIUM PHOSPHATE TRIBASIC, MAGNESIUM PHOSPHATE DIBASIC, MAGNESIUM SALICYLATE, MAGNESIUM SILICATE, MAGNESIUM STEARATE, MAGNESIUM SULFATE, MAGNESIUM SULFITE, MAGNESIUM TRISILICATE, MANGANESE ACETATE, MANGANESE BROMIDE, MANGANESE BUTYRATE, MANGANESE CARBONATE, MANGANESE CHLORIDE, MANGANESE CITRATE, MANGANESE DIOXIDE, MANGANESE GLYCEROPHOSPHATE, MANGANESE HYPOPHOSPHATE, MANGANESE HYPOPHOSPHITE, MANGANESE IODIDE, MANGANESE LINOLEATE, MANGANESE NITRATE, MANGANESE PEPTONIZED, MANGANESE SULFATE, MANNITE, MARBLE CHIPS USED AS A REAGENT FOR PRODUCTION OF CARBON DIOXIDE, MASKING SOLUTION FOR PROTECTING PHOTOSENSITIVE TOP ENAMELS IN PHOTOENGRAVING, MENTHOL, MERCURY FOR USE AS A REAGENT, MERCURY MASS, MERCURIC ACETATE, MERCURY AMMONIATED, MERCUROUS IODIDE, MERCURY OLEATE, MERCURIC SALICYLATE, MERCURIC SUBSULFATE (TURPETH MINERAL), MERCURY SULFIDE BLACK (ETHIOPS MINERAL), MERCURY WITH CHALK, MERCURIAL OINTMENT, MERCURIC ACETATE, MERCURY BISULFATE, MERCURIC BROMIDE, MERCURIC CHLORIDE, MERCURIC CYANIDE, MERCURIC IODIDE, MERCURIC NITRATE, MERCURIC OXIDE RED, MERCURIC OXIDE YELLOW, MERCURIC SULFATE, MERCUROUS CHLORIDE, MERCUROUS NITRATE, MERCUROUS SULFATE, METAL DEVARDA'S FOR USE AS A REAGENT, METHYL IODIDE, METHYL ORANGE INDICATOR, METHYL RED INDICATOR, 4-METHYL-5-PHENYL-2-OXAZOLIDONE, METHYL SALICYLATE, METHYLENE BLUE, MILK SUGAR, MIXTURE CORROSIVE SUBLIMATE AND CITRIC ACID, MIXTURE CORROSIVE SUBLIMATE AND AMMONIUM CHLORIDE, MONOETHANOLAMINE SULFITE, MONOMETHYL-PARAMINOPHENOL SULFATE, MORPHINE SULFATE, MORPHINE ACETATE, MORPHINE ALKALOID, MORPHINE HYDROBROMIDE, MORPHINE HYDROCHLORIDE, MORPHINE ETHYLHYDROCHLORIDE, MOTH KILLER, 1 NAPHTHALENEACETIC ACID, N-BUTYL BENZOYLACETATE, NEOCALAMINE, NEOCINCHOPHEN, NIACIN, NIACINAMIDE, NICKEL METAL FOR USE AS A REAGENT, NICKEL ACETATE, NICKEL BROMIDE, NICKEL CARBONATE, NICKEL CHLORIDE, NICKEL NITRATE, NICKEL OXIDE BLACK, NICKEL SULFATE, NICKEL AND AMMONIUM SULFATE, OPIUM, ORGANIC MERCURY COMPOUNDS, ORTHODICHLORBENZENE, OXYQUINOLINE BASE, 2-OXAZOLIDONE, OXYQUINOLINE BENZOATE, OXYQUINOLINE SULFATE, PAPAVERINE HYDROCHLORIDE, PAPER LITMUS BLUE, PAPER LITMUS RED, PAPER PHENOLPHTHALEIN, PARACHLOROPHENOL, PARA-DICHLORBENZENE, PARAFORMALDEHYDE, PARALDEHYDE, PARA-PHENYLENE-DIAMINE HYDROCHLORIDE, PARA-PHENYLENE-DIAMINE BASE, PELLETIERINE TANNATE, PHENOBARBITAL, PHENOBARBITAL SODIUM, PHENOL, PHENOLPHTHALEIN, PHENOL-TETRAIOD-PHTHALEIN SODIUM, PHENYL-AZO-ALPHA-ALPHA-DIAMINO-PYRIDINE HYDROCHLORIDE, 3-PHENYL-2-OXAZOLIDONE, PHENYL SALICYLATE, PHOSPHORIC ANHYDRIDE, PHOSPHORUS, PHOSPHORUS OXYCHLORIDE, PHOSPHORUS PENTACHLORIDE, PHOSPHORUS TRICHLORIDE, PHOTOGRAPHIC DEVELOPER, PICROTOXIN, PILOCARPINE HYDROBROMIDE, PILOCARPINE HYDROCHLORIDE, PILOCARPINE NITRATE, PIPERINE, PLATINUM CHLORIDE, POTASH SULFURATED, POTASSIUM METAL FOR USE AS A REAGENT, POTASSIUM ACETATE, POTASSIUM ACID PHTHALATE, POTASSIUM ARSENATE, POTASSIUM ARSENITE, POTASSIUM BICARBONATE, POTASSIUM BISULFATE, POTASSIUM BITARTRATE, POTASSIUM BORO-TARTRATE, POTASSIUM BROMATE, POTASSIUM BROMIDE, POTASSIUM CARBONATE, POTASSIUM CHLORATE, POTASSIUM CHLORIDE, POTASSIUM CHROMATE, POTASSIUM CITRATE, POTASSIUM CREOSOTE-SULFONATE, POTASSIUM CYANIDE, POTASSIUM DICHROMATE, POTASSIUM FERRICYANIDE, POTASSIUM FERROCYANIDE, POTASSIUM FLUORIDE, POTASSIUM GLUCONATE, POTASSIUM GLYCEROPHOSPHATE, POTASSIUM GUAIACOLSULFONATE, POTASSIUM HYDROXIDE, POTASSIUM HYPOPHOSPHITE, POTASSIUM IODATE, POTASSIUM IODIDE, POTASSIUM IODIDE WITH MAGNESIUM CARBONATE AND POTASSIUM HYDROXIDE, POTASSIUM MERCURIC IODIDE, POTASSIUM METABISULFITE, POTASSIUM NITRATE, POTASSIUM NITRITE, POTASSIUM OXALATE, POTASSIUM PERMANGANATE, POTASSIUM PERSULFATE, POTASSIUM PHOSPHATE MONOBASIC, POTASSIUM PHOSPHATE DIBASIC, POTASSIUM PHOSPHATE TRIBASIC, POTASSIUM SALICYLATE, POTASSIUM SULFATE, POTASSIUM SULFITE, POTASSIUM SULFOCARBOLATE, POTASSIUM TARTRATE, POTASSIUM THIOCYANATE, POTASSIUM SODIUM TARTRATE, PROCAINE, PROCAINE HYDROCHLORIDE, PROFLAVINE DIHYDROCHLORIDE, PROFLAVINE SULFATE, PYRIDINE, PYRIDYLMERCURIC ACETATE, PYRIDYLMERCURIC BENZOATE, PYRIDYLMERCURIC BORATE, PYRIDYLMERCURIC CHLORIDE, PYRIDYLMERCURIC CHROMATE, PYRIDYLMERCURIC PHOSPHATE, PYRIDYLMERCURIC PICRATE, PYRIDYLMERCURIC SALICYLATE, PYRIDYLMERCURIC STEARATE, PYRIDYLMERCURIC SULFATE, PYRIDYL POLYMERCURIC CHLORIDE, PYROXYLIN, QUINIDINE ALKALOID, QUINIDINE SULFATE, QUININE SULFATE, QUININE ALKALOID, QUININE ARSENATE, QUININE ARSENITE, QUININE BISULFATE, QUININE CARBONATE, QUININE DIHYDROBROMIDE, QUININE DIHYDROCHLORIDE, QUININE ETHYLCARBONATE, QUININE FORMATE, QUININE GLYCEROPHOSPHATE, QUININE HYDROBROMIDE, QUININE HYDROCHLORIDE, QUININE HYDROCHLOROSULFATE, QUININE HYPOPHOSPHITE, QUININE LACTATE, QUININE PHOSPHATE, QUININE SALICYLATE, QUININE TANNATE, QUININE VALERATE, QUININE AND UREA HYDROCHLORIDE, RESORCINOL, RIBOFLAVIN, ROACH KILLER, ROCHELLE SALT, RUBBER SOLUTION USED AS A REAGENT FOR PRODUCING PHOTOGRAPHIC FILMS BY WET PLATE METHOD, SACCHARIN, SACCHARIN SODIUM, SAL ACETOSELLA (POTASS. BINOXALATE), SALICIN, SALOL (PHENYL SALICYLATE), SANGUINARINE NITRATE, SANTONIN, SAPONIN, SILICA GEL, SILVER METAL FOR USE AS A REAGENT, SILVER ACETATE, SILVER BROMIDE, SILVER CARBONATE, SILVER CHLORIDE, SILVER CYANIDE, SILVER IODIDE, SILVER LACTATE, SILVER NITRATE, SILVER NITRITE, SILVER NUCLEINATE, SILVER OXIDE, SILVER PROTEINATE, SILVER SULFATE, SODA AND LIME, SODA LIME, SODIUM METAL FOR USE AS A REAGENT, SODIUM ACETATE, SODIUM ARSENATE, SODIUM ARSENITE, SODIUM BENZOATE, SODIUM BICARBONATE, SODIUM BIPHOSPHATE, SODIUM BISMUTHATE, SODIUM BISULFATE, SODIUM BISULFITE, SODIUM BITARTRATE, SODIUM BORATE, SODIUM BROMATE, SODIUM BROMIDE, SODIUM CACODYLATE, SODIUM CARBONATE, SODIUM CHLORIDE, SODIUM CHOLEATE, SODIUM CHROMATE, SODIUM CITRATE, SODIUM COBALT NITRITE, SODIUM CYANIDE, SODIUM DICHROMATE, SODIUM FERROCYANIDE, SODIUM FLUORIDE, SODIUM FORMATE, SODIUM GLYCEROPHOSPHATE, SODIUM GLYCOCHOLATE, SODIUM HYDROSULFITE, SODIUM HYDROXIDE, SODIUM HYPOPHOSPHITE, SODIUM HYPOSULFITE (THIOSULFATE), SODIUM IODATE, SODIUM IODIDE, SODIUM LACTATE, SODIUM MANDELATE, SODIUM META-BISULFITE (PYROSULFITE), SODIUM METABORATE, SODIUM MOLYBDATE, SODIUM NITRATE, SODIUM NITRITE, SODIUM NITRO-FERRICYANIDE, SODIUM OLEATE ACID, SODIUM ORTHO-IODOHIPPURATE, SODIUM OXALATE, SODIUM PERBORATE, SODIUM PEROXIDE, SODIUM PHOSPHATE MONOBASIC, SODIUM PHOSPHATE DIBASIC, SODIUM PHOSPHATE TRIBASIC, SODIUM PHOSPHITE, SODIUM POTASSIUM BISMUTHO-TARTRATE, SODIUM PYROPHOSPHATE, SODIUM SALICYLATE, SODIUM SANTONINATE, SODIUM SILICATE, SODIUM STEARATE, SODIUM SUCCINATE, SODIUM SULFATE, SODIUM SULFIDE, SODIUM SULFITE, SODIUM SULFOCARBOLATE (PHENOLSULFONATE), SODIUM TARTRATE, SODIUM THIOCYANATE, SODIUM THIOSULFATE, SODIUM TUNGSTATE, SODIUM AND AMMONIUM PHOSPHATE, SPARTEINE SULFATE, SPIRIT AMMONIA, SPIRIT AMMONIA AROMATIC, SPIRIT CHLOROFORM, SPIRIT ETHER COMPOUND, SPIRIT ETHYL NITRITE (SPIRIT OF NITROUS ETHER), SPIRIT PHOSPHORUS, STABILIZED POTASSIUM IODIDE, STANNIC CHLORIDE, STANNOUS CHLORIDE, STARCH FOR MEDICINAL USE OR REAGENT USE, STRONTIUM ACETATE, STRONTIUM BROMIDE, STRONTIUM CARBONATE, STRONTIUM CHLORIDE, STRONTIUM IODIDE, STRONTIUM LACTATE, STRONTIUM NITRATE, STRONTIUM OXALATE, STRONTIUM PEROXIDE, STRONTIUM SALICYLATE, STRONTIUM STEARATE, STRONTIUM SULFATE, STRONTIUM SULFIDE, STRYCHNINE ALKALOID, STRYCHNINE ARSENATE, STRYCHNINE ARSENITE, STRYCHNINE GLYCEROPHOSPHATE, STRYCHNINE HYPOPHOSPHITE, STRYCHNINE NITRATE, STRYCHNINE PHOSPHATE, STRYCHNINE SULFATE, SUCROSE, SULFANILAMIDE (PARA-AMINOBENZENE-SULFONAMIDE), SULFATHIAZOLE, SULFATHIAZOLE SODIUM, SULFONETHYL-METHANE, SULFON-METHANE, SULFUR, SYRUP IRON IODIDE, TALCUM FOR MEDICAL OR COSMETIC USE, TARTAR EMETIC, TEREBENE, TERPIN HYDRATE, THEOBROMINE ALKALOID, THEOBROMINE SALICYLATE, THEOBROMINE AND SODIUM ACETATE, THEOBROMINE SODIOSALICYLATE, THEOPHYLLINE, THEOPHYLLINE SODIUM ACETATE, THEOPHYLLINE SODIUM SALICYLATE, THIAMINE HYDROCHLORIDE, THIOCARBAMIDE, THIOSINAMINE, THYMOL, THYMOL IODIDE, TIN METAL FOR USE AS A REAGENT, TIN MURIATE (STANNOUS CHLORIDE), TIN OXIDE WHITE, TOLUOL, TOTAQUINE, TROPACOCAINE HYDROCHLORIDE, URANIUM ACETATE, URANIUM NITRATE, UREA, VANILLIN, XYLOL (XYLENE), YOHIMBINE HYDROCHLORIDE, ZINC METAL FOR USE AS A REAGENT, ZINC ACETATE, ZINC BORATE, ZINC BROMIDE, ZINC CARBONATE, ZINC CHLORIDE, ZINC CYANIDE, ZINC IODIDE, ZINC NITRATE, ZINC OXIDE, ZINC PER-

MANGANATE, ZINC PEROXIDE, ZINC PHENOLSULFONATE, ZINC PHOSPHATE, ZINC PHOSPHIDE, ZINC SALICYLATE, ZINC STEARATE, ZINC SUBBENZOATE, ZINC SULFATE, ZINC SULFITE, ZINC SULFOCARBOLATE, ZINC VALERATE.

Claims use since 1922.

Ser. No. 533,159. GEIGY COMPANY, INC., New York, N. Y. Filed Sept. 3, 1947. Under section 2f of the act of 1946.

DEACRYDINE

Ser. No. 534,419. DOUGLAS LABORATORIES, INC., Boston, Mass. Filed Sept. 13, 1947.

DER AND ROUGE WHEN SOLD IN TRADE, LIPSTICK, ROUGE, FACE POWDER, TALCUM POWDER, DUSTING POWDER, COLOGNE, SACHET POWDER, FACE AND SKIN CREAMS INCLUDING CLEANSING CREAM, VANISHING CREAM, COLD CREAM, SPECIAL FORMULA CREAM, COMPLEXION CREAM, STYPTIC CREAM; HAND CREAM, SKIN LOTIONS, BATH

MANGANATE, ZINC PEROXIDE, ZINC PHENOLSULFONATE, ZINC PHOSPHATE, ZINC PHOSPHIDE, ZINC SALICYLATE, ZINC STEARATE, ZINC SUBBENZOATE, ZINC SULFATE, ZINC SULFITE, ZINC SULFOCARBOLATE, ZINC VALERATE.
Claims use since 1892.

Ser. No. 526,984. H. M. SINCLAIR, JR., trustee for the partnership, The Sinclair Manufacturing Company, Toledo, Ohio. Filed July 5, 1947.

WHITE CROSS

Applicant claims ownership of registration No. 95,359.
FOR BLEACHING AND DISINFECTING SOLUTIONS.
Claims use since September 1941.

Ser. No. 527,004. H. M. SINCLAIR, JR., trustee for the partnership, The Sinclair Manufacturing Company, Toledo, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

SINCLAIR'S

Applicant claims ownership of registration No. 254,255.
FOR CHLORINATED LIME.
Claims use since 1911.

Ser. No. 529,697. THE RELIANCE GAUGE COLUMN COMPANY, Cleveland, Ohio. Filed July 26, 1947.

VIZZENE

Applicant claims ownership of registration No. 378,393.
FOR FILLING-LIQUIDS FOR LIQUID LEVEL GAUGE INSTRUMENTS.
Claims use since Sept. 10, 1936.

Ser. No. 532,520. THE SPECIALTY PRODUCTS COMPANY, New Orleans, La. Filed Aug. 26, 1947. Under section 2f of the act of 1946.

ANTI-HEAT

Applicant claims ownership of registration No. 191,390.
FOR ANTISEPTIC TOILET POWDER.
Claims use since Aug. 1, 1914.

Ser. No. 532,529. VERNON AND VERMONT PHARMACY, doing business as Betan Company, Los Angeles, Calif. Filed Aug. 26, 1947.

BETAN

The word "Tan" is disclaimed apart from the mark.
FOR SUNTAN OIL.
Claims use since April 1946.

Ser. No. 533,159. GEIGY COMPANY, INC., New York, N. Y. Filed Sept. 3, 1947. Under section 2f of the act of 1946.

DIAZOPHENYL

Applicant claims ownership of registration No. 148,580.
FOR DYESTUFFS.
Claims use since 1910.

Ser. No. 534,216. WINTHROP CHEMICAL COMPANY, INC., New York, N. Y., assignor to Winthrop-Stearns Inc., New York, N. Y., a corporation of Delaware. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

WINTHROP

Applicant claims ownership of registrations Nos. 393,625 and 261,030.
FOR ABSORBENT, ALTERATIVE, AND ANALGESIC PREPARATIONS, ANESTHETICS, ANODYNES, ANTACID, ANTIALLERGIC, ANTIANEMIC, AND ANTIARTHRITIC PREPARATIONS, ANTIASTHMATICS, ANTIBACTERIAL PREPARATIONS, ANTIBIOTICS, ANTICATARRHAL, ANTIDOTAL, ANTIEPILEPTIC, ANTIGONORRHEAL, ANTIHEMORRHAGIC, ANTILEPROUS, ANTILEUKORRHEAL, ANTIMALARIAL, ANTINEURALGIC, ANTINEURITIC, ANTIPARASITIC, ANTIPSORIATIC, ANTIPYRETIC, ANTIRHEUMATIC, ANTISCORBUTIC, AND ANTITUSSIVE PREPARATIONS. ANTISEPTICS, ANTISPASMODICS, ANTISYPHILITICS, ANTITETANIC PREPARATIONS, ASTRINGENTS, CARDIOTONIC PREPARATIONS, CHEMOTHERAPEUTIC AGENTS, CHEMOTHERAPEUTIC ANTIMONY COMPOUND, CHEMOTHERAPEUTIC ARSENICAL COMPOUNDS, CHOLAGOGUES, DIGESTANT, DIURETIC, ENDOCRINE, AND EXPECTORANT PREPARATIONS, HEMOSTATIC PREPARATIONS, HYPNOTICS, IODINE COMPOUNDS, LAXATIVE PREPARATIONS, LIPO-PROTEIN WITH EMETINE COMPOUND, NON-SPECIFIC IMMUNIZING AGENTS, RADIOPAQUE MEDIA FOR X-RAY EXAMINATION, CHEMICAL PREPARATION INDICATED AS A SUBSTITUTE FOR SALT IN SALT-FREE DIETS, SEDATIVES, TRYPANOCIDES, URETERAL RELAXANTS, URINARY ANTISEPTICS, VASOCONSTRICTOR, ANTIHYPNOTIC AND CENTRAL NERVOUS SYSTEM STIMULANT PREPARATIONS, VASODILATORS, VITAMINS AND VITAMIN PREPARATIONS, ANTIDYSENTERIC PREPARATIONS, AND SPIROCHETICIDES.
Claims use since November 1927.

Ser. No. 534,418. DOUGLAS LABORATORIES, INC., Boston, Mass. Filed Sept. 13, 1947.

ZORMONE

FOR AMINO ACID PREPARATION USEFUL IN THE RELIEF OF INDIGESTION AND ULCER CONDITIONS, AND FOR REGULATING ACID DISBALANCE.
Claims use since June 2, 1947.

Ser. No. 534,419. DOUGLAS LABORATORIES, INC., Boston, Mass. Filed Sept. 13, 1947.

ZORMONE

FOR AMINO ACID PREPARATION USEFUL IN THE RELIEF OF INDIGESTION AND ULCER CONDITIONS, AND FOR REGULATING ACID DISBALANCE.
Claims use since June 2, 1947.

Ser. No. 535,919. ALLIED LABORATORIES LIMITED, London, England. Filed Sept. 27, 1947.

The exclusive use of the sign of Mars (male sign) and the sign of Venus (or female sign) either separately or together is disclaimed. Applicant claims ownership of British registration No. 620,167, dated Sept. 10, 1942.
FOR MEDICATED PREPARATIONS IN TABLET FORM FOR HUMAN USE IN THE TREATMENT OF RHEUMATISM, NEURITIS, NEURALGIA, FIBROSITIS AND LUMBAGO, DISEASES OF THE RESPIRATORY ORGANS, DISEASES OF THE SKIN, DYSMENORRHEA, GASTRIC DISORDERS, BILIOUSNESS, MIGRAINE, FATIGUE, ANAEMIA, NERVOUS DEPRESSION, MENTAL AND PHYSICAL EXHAUSTION; PHARMACEUTICAL PREPARATIONS IN THE FORM OF OINTMENT FOR REMOVING EXFOLIATED SKIN AND DEAD TISSUE FROM THE FEET; VACCINES IN TABLET FORM FOR IMMUNISATION AGAINST COLDS; SPERMICIDAL PREPARATIONS IN TABLET FORM, GERMICIDES AND ANTISEPTICS.

Ser. No. 536,575. AVON PRODUCTS, INC., New York, N. Y. Filed Oct. 3, 1947. Under section 2f of the act of 1946.

AVON

Applicant claims ownership of registrations Nos. 402,664, 297,127, and 401,831.
FOR PERFUME, TOILET WATER, COMPACTS MADE OF NON-PRECIOUS MATERIALS CONTAINING POWDER AND ROUGE WHEN SOLD IN TRADE, LIPSTICK, ROUGE, FACE POWDER, TALCUM POWDER, DUSTING POWDER, COLOGNE, SACHET POWDER, FACE AND SKIN CREAMS INCLUDING CLEANSING CREAM, VANISHING CREAM, COLD CREAM, SPECIAL FORMULA CREAM, COMPLEXION CREAM, STYPTIC CREAM; HAND CREAM, SKIN LOTIONS, BATH SALTS, BATH OIL, DEODORANTS, DEPILATORY CREAM, BLACKHEAD REMOVER IN PASTE OR LIQUID FORM, WITCH HAZEL EXTRACT AND CREAM, ASTRINGENTS, SKIN FRESHENER AND TONIC, ANTISEPTIC SOLUTION, AFTER SHAVING LOTION, NON-SAPONACEOUS SHAMPOO PREPARATIONS, HAIR LOTION, HAIR OIL, BRILLIANTINE, BAY RUM, WAVE SET PREPARATION, NAIL POLISH, NAIL POLISH REMOVER, NAIL WHITE PENCIL, CUTICLE OIL AND SOFTENER, NAIL AND CUTICLE CREAM, TOOTH POWDER, TOOTHPASTE, DENTAL CREAM, MASCARA, EYEBROW PENCIL, EYELASH CREAM, EYE SHADOW, CAKE MAKE-UP, LEG MAKE-UP, STYPTIC PENCILS, LAUNDRY CRYSTALS, LAUNDRY STARCH, MOTH KILLING PREPARATIONS IN FLAKE, POWDER, AND SOLID FORM, AND FOOD COLORS.
Claims use since September 1929.

Ser. No. 538,965. SHELL OIL COMPANY, INCORPORATED, San Francisco, Calif. Filed Oct. 24, 1947.

RESITOX

FOR INSECTICIDAL FOLIAGE SPRAY OIL.
Claims use since Mar. 17, 1947.

Ser. No. 540,739. VINCENT TIZIO, doing business as Fifty-Fifty Manufacturing Co., Brooklyn, N. Y. Filed Nov. 10, 1947.

FIFTY-FIFTY
"50-50"

The drawing is lined for the colors red and blue. The portrait included in the drawing is fanciful.
FOR CLEANING, DISINFECTING, GERMICIDAL, AND DEODORIZING COMPOUND FOR LAUNDRY AND GENERAL HOUSEHOLD USE.
Claims use since Sept. 5, 1947.

Ser. No. 540,773. GODFREY L. CABOT, INC., Boston, Mass. Filed Nov. 12, 1947.

PT-600

FOR LIQUID OBTAINED FROM PINE WOOD BY DISTILLATION USED AS A SOFTENER, TACKIFIER, AND DISPERSING AGENT IN RUBBER AND AS A PRESERVATIVE AND LUBRICANT IN CORDAGE.
Claims use since 1930.

Ser. No. 541,521. DELAVELLE (G. B.) LIMITED, London, N. 1. England. Filed Nov. 18, 1947.

Ser. No. 542,321. ANTONIO LOPEZ JIMENEZ, Almeria, Spain. Filed Nov. 25, 1947.

Ser. No. 545,327. BELL CHEMICAL CO., Chicago, Ill. Filed Dec. 24, 1947. Under section 2f of the act of 1946.

DO-RATZ

Ser. No. 547,579. THE TECHNOTE COMPANY, Inglewood, Calif. Filed Jan. 20, 1948.

NET-LIFE

Ser. No. 541,521. DELAVELLE (G. B.) LIMITED, London, N. 1, England. Filed Nov. 18, 1947.

DELAVELLE

Applicant claims ownership of British registration No. 498,451.

FOR PERFUMES, TOILET WATERS, PREPARATIONS FOR THE HAIR—NAMELY, HAIR WASHES, HAIR SHAMPOOS, BRILLIANTINE, HAIR CREAM, HAIR WAVING LOTION, HAIR SETTING LOTION; PREPARATIONS FOR THE SKIN, BOTH LIQUID AND SOLID—NAMELY, NIGHT CREAMS, DAY CREAMS, FOUNDATION CREAMS; FOUNDATION LIQUIDS, NOURISHING SKIN CREAMS, COMPLEXION CREAMS, LIPSTICKS, BOTH LIQUID AND SOLID; PREPARATIONS FOR THE NAILS—NAMELY, NAIL LACQUER, NAIL LACQUER REMOVER; FACE POWDERS; TOILET AND BODY POWDERS; PREPARATIONS FOR THE BATH—NAMELY, BATH SALTS, BATH ESSENCE, BATH OILS, BATH WATER SOFTENER IN CUBE FORM; LIQUID PREPARATION WHICH RESEMBLES STOCKINGS WHEN APPLIED; AFTER SHAVE LOTIONS AND CREAMS, ASTRINGENT FACE LOTIONS AND CREAMS.

Ser. No. 541,624. THE HERB FARM SHOP, LTD., Elizabeth, N. J. Filed Nov. 17, 1947.

UNDER POWDER MIST

FOR SKIN LOTION.
Claims use since October 1938.

Ser. No. 542,135. IMPERIAL MINERALS, INC., Denver, Colo. Filed Nov. 24, 1947.

M27

FOR DIETARY MINERAL FEED SUPPLEMENT FOR LIVE STOCK AND POULTRY IN THE NATURE OF A NATURALLY OCCURRING GROUND MINERAL CONTAINING AS PRINCIPAL INGREDIENTS CALCIUM OXIDE, MAGNESIUM OXIDE, SODIUM OXIDE, AND POTASSIUM OXIDE AND HAVING A VARIETY OF OTHER CHEMICAL COMPOSITIONS AS MINOR INGREDIENTS.
Claims use since Sept. 26, 1947.

Ser. No. 542,321. ANTONIO LOPEZ JIMENEZ, Almeria, Spain. Filed Nov. 25, 1947.

CHEMIA

The drawing is lined to represent the color blue. Applicant claims ownership of Spanish registration No. 155,559.
FOR PERFUMES, COLOGNES, AND TOILET WATERS.

Ser. No. 544,231. WILLIAM R. WARNER & CO., INC., New York, N. Y. Filed Dec. 12, 1947.

KETESTROL

FOR HORMONE CONTAINING LIQUID FOR PARENTERAL USE.
Claims use since Dec. 10, 1947.

Ser. No. 544,232. WILLIAM R. WARNER & CO., INC., New York, N. Y. Filed Dec. 12, 1947.

PRONIDOL

FOR HORMONE CONTAINING LIQUID.
Claims use since Dec. 10, 1947.

Ser. No. 544,977. CONSOLIDATED ROYAL CHEMICAL CORPORATION, Chicago, Ill. Filed Dec. 20, 1947. Under section 2f of the act of 1946.

GERMANIA

Applicant claims ownership of registration No. 305,829.
FOR MEDICINES—NAMELY, AN HERB TEA FOR CAUSING THE ORGANS TO ELIMINATE.
Claims use since Jan. 1, 1926.

Ser. No. 545,168. THE REGAL DRUG COMPANY, New Haven, Conn. Filed Dec. 22, 1947.

ZEPHYR

FOR MEDICAL PREPARATION FOR IRRITATED CHAFED SURFACES, SUCH AS PRICKLY HEAT OR POISON IVY.
Claims use since Nov. 11, 1946.

Ser. No. 545,327. BELL CHEMICAL CO., Chicago, Ill. Filed Dec. 24, 1947. Under section 2f of the act of 1946.

NO-RATZ

FOR RAT PASTE.
Claims use since June 5, 1936.

Ser. No. 545,824. THE G. B. CONKEY COMPANY, Cleveland, Ohio, assignor to G. B. Conkey Co., Cleveland, Ohio, a corporation of Maine. Filed Dec. 31, 1947.

Phe-Nikala

Applicant claims ownership of registration No. 297,220.
FOR VERMIFUGE FOR POULTRY.
Claims use since June 1946.

Ser. No. 545,936. ELIZABETH ARDEN SALES CORPORATION, New York, N. Y. Filed Jan. 2, 1948. Under section 2f of the act of 1946.

JUNE GERANIUM

Applicant claims ownership of registrations Nos. 230,829 and 236,238.
FOR BATH SALTS, TOILET WATER, TALCUM POWDER, AND BATH OIL.
Claims use since January 1917.

Ser. No. 547,012. J. C. MENDENHALL MEDICINE CO., INCORPORATED, Mt. Vernon, Ind. Filed Jan. 14, 1948. Under section 2f of the act of 1946.

MENDENHALL'S NUMBER 40

FOR ALTERATIVE LAXATIVE.
Claims use since Mar. 4, 1936.

Ser. No. 547,518. DEODOR-X COMPANY OF ENGLAND LIMITED, Liverpool, England. Filed Jan. 20, 1948.

Racalan

Applicant claims ownership of British registration No. 659,214, dated May 17, 1947.
FOR PHARMACEUTICAL, VETERINARY AND SANITARY SUBSTANCES—NAMELY, MEDICATED PLASTERS, MATERIAL FOR BANDAGING (MEDICATED), DISINFECTANTS (GERMICIDAL PREPARATIONS); PREPARATIONS FOR KILLING WEEDS AND DESTROYING VERMIN; DEODORIZERS FOR REMOVING ODORS BY CHEMICAL ACTION, AND INSECTICIDES.

Ser. No. 547,579. THE TECHNOTE COMPANY, Inglewood, Calif. Filed Jan. 20, 1948.

NET-LIFE

The word "Net" is disclaimed apart from the mark.
FOR CHEMICAL COMPOUNDS FOR PRESERVATIVE TREATMENT OF FISH NETS AND FISHING LINES.
Claims use since Mar. 21, 1947.

Ser. No. 548,224. AKTIESELSKABET LAGERMAN JUNR., Glostrup, Denmark. Filed Jan. 29, 1948.

DELFOL

Applicant claims ownership of Danish registration No. 216/46.
FOR PECTORALS AND THROAT TABLETS.

Ser. No. 548,233. BENGUE & CO. LTD., Mount Pleasant, Alperton, Middlesex, England. Filed Jan. 29, 1948.

Actovite

Applicant claims ownership of British registration No. 622,633.
FOR VITAMIN ADJUVANT PREPARATION IN TABLET FORM FOR USE IN MEDICINE AND PHARMACY.

Ser. No. 548,357. E. FOUGERA & COMPANY, INC., New York, N. Y. Filed Jan. 30, 1948.

LIPIODOL

Applicant claims ownership of registration No. 196,499.
FOR LIQUID USED IN X-RAY AND ROENTGEN RAY PHOTOGRAPHY FOR DIAGNOSTIC PURPOSES.
Claims use since Dec. 11, 1901.

Ser. No. 548,674. OAKITE PRODUCTS, INC., New York, N. Y. Filed Feb. 3, 1948.

Applicant claims ownership of registrations Nos. 192,611, 249,419, and 330,255.
FOR CHEMICAL COMPOUNDS HAVING WATER-SOFTENING QUALITIES, RECOMMENDED FOR ALL CLEANSING, WASHING, AND POLISHING PURPOSES,

PARTICULARLY FOR USE IN THE KITCHEN AND IN THE HOUSEHOLD GENERALLY, AND FOR USE IN LAUNDRIES, GARAGES, DAIRIES, AND INDUSTRIAL PLANTS OF ALL KINDS; ALSO RECOMMENDED FOR LUBRICATING, HEAT ABSORBING, CUTTING, GRINDING, STAMPING, DRAWING, STRIPPING SURFACES OF PAINT, VARNISH, ENAMELS, JAPANS, LAC-

Ser. No. 549,657. THE PENNSYLVANIA SALT MANUFACTURING COMPANY, Philadelphia, Pa. Filed Feb. 13, 1948.

Penphos

Ser. No. 551,515. BUFFINGTON'S, INCORPORATED, Worcester, Mass. Filed Mar. 9, 1948.

KOLEFAN

Ser. No. 553,903. ROHM & HAAS COMPANY, Philadelphia, Pa. Filed Mar. 23, 1948.

RHOPLEX

Applicant claims ownership of registrations Nos.

PARTICULARLY FOR USE IN THE KITCHEN AND IN THE HOUSEHOLD GENERALLY, AND FOR USE IN LAUNDRIES, GARAGES, DAIRIES, AND INDUSTRIAL PLANTS OF ALL KINDS; ALSO RECOMMENDED FOR LUBRICATING, HEAT ABSORBING, CUTTING, GRINDING, STAMPING, DRAWING, STRIPPING SURFACES OF PAINT, VARNISH, ENAMELS, JAPANS, LACQUERS, AND OTHER SURFACE FINISHES; ANTI-RUSTING, NEUTRALIZING, AND DEODORISING; ALSO RECOMMENDED FOR STERILIZATION, COMMERCIAL AND HOUSEHOLD, SUCH AS STERILIZING BOTTLES AND OTHER CONTAINERS; ALSO RECOMMENDED AS A SCALE REMOVER, MILKSTONE REMOVER, ACID INHIBITOR, BACTERICIDE, FUNGICIDE, AND FOR USE IN WET FINISHING OPERATIONS OF TEXTILES.
Claims use since Nov. 20, 1947.

Ser. No. 548,915. NICK BINDILLO, Baton Rouge, La. Filed Feb. 6, 1948.

RED STICK

FOR LIQUID HAIR AND SCALP CONDITIONER.
Claims use since Nov. 29, 1947.

Ser. No. 549,008. RUDOLPH L. SCHWARTZ, doing business as Watertecter Company, Buffalo, N. Y. Filed Feb. 6, 1948.

WATERTECTER "Shows the water if it is there"

The representation of a scale, and of the slogan "Shows the water if it is there," are disclaimed. The lettering and part of the scale in the drawing are lined for the color red.
FOR COMPOSITION OF MATTER INCLUDING AN INGREDIENT WHICH CHANGES COLOR UPON CONTACT WITH WATER, AND WHICH IS USEFUL TO DETERMINE THE PRESENCE OF WATER COLLECTING IN A TANK OR OTHER CONTAINER FOR GASOLINE AND OTHER MINERAL OIL PRODUCTS.
Claims use since Nov. 17, 1938.

Ser. No. 549,428. THE FARM MINERALS COMPANY, INC., Indianapolis, Ind. Filed Jan. 26, 1948.

BLUE CROSS

Applicant claims ownership of registration No. 426,397.
FOR MINERAL AND LIKE ADDITIONS FOR FEEDS SUCH AS A SUPPLEMENT FOR FEED FOR POULTRY, LIVE STOCK, AND OTHER ANIMALS, AND WHEREIN THE SUPPLEMENT IS PREDOMINANTLY OF MINERAL OR CHEMICAL CHARACTER.
Claims use since Dec. 17, 1947.

Ser. No. 549,657. THE PENNSYLVANIA SALT MANUFACTURING COMPANY, Philadelphia, Pa. Filed Feb. 13, 1948.

Penphos

FOR INSECTICIDES.
Claims use since Nov. 7, 1947.

Ser. No. 549,839. PERFUMERIA FLORALIA, S. A., Madrid, Spain. Filed Feb. 16, 1948.

PERFUMERÍA FLORALIA

No claim is made to the exclusive use of the word "Perfumeria." Applicant claims ownership of Spanish registration No. 24,153 dated Sept. 29, 1914.
FOR COLOGNE; HAND, FACE AND SKIN LOTIONS; AFTER-SHAVING LOTION; BAY RUM; HAIR DRESSING; HAIR TINT; HAIR DYE; HAIR RINSE; PERFUME; TOILET WATER; ROUGE IN CREAM, STICK, AND POWDER FORM; RICE, TALCUM, FACE, AND BODY POWDERS; EYE SHADOW AND MASCARA; LIQUID AND POWDERED NAIL POLISH; DENTIFRICE IN PASTE, POWDER, AND LIQUID FORM; DEODORANT FOR PERSONAL USE; AND SHAMPOO IN LIQUID AND POWDERED FORM.

Ser. No. 550,563. SOCIETE ANONYME SOCIETE TECHNIQUE DE PARFUMERIE F. MILLOT, Paris, France. Filed Feb. 25, 1948.

CHERE MADAME

Applicant claims ownership of French registration No. 362,736.
FOR PERFUMES, TOILET WATERS, COLOGNES, LIPSTICKS, FACE POWDER, ROUGE, EYE SHADOW, MASCARA, BRILLIANTINE, AND TALCUM POWDER.

Ser. No. 550,768. ELIZABETH ARDEN SALES CORPORATION, New York, N. Y. Filed Feb. 28, 1948.

ARDENA COMPLEXION FILM

The words "Complexion Film" are disclaimed apart from the mark as shown. Applicant claims ownership of registration No. 371,473.
FOR LIQUID AND CREAM FOUNDATIONS FOR FACIAL USE.
Claims use since Jan. 20, 1948.

Ser. No. 551,514. BUFFINGTON'S, INCORPORATED, Worcester, Mass. Filed Mar. 9, 1948.

AMPOPHOS

FOR INJECTABLE MEDICINAL SOLUTION INDICATED AS A TONIC IN DEBILITATED CONDITIONS.
Claims use since March 1940.

Ser. No. 551,515. BUFFINGTON'S, INCORPORATED, Worcester, Mass. Filed Mar. 9, 1948.

KOLEFAN

FOR MEDICINAL PREPARATION FOR RELIEF OF GASTROINTESTINAL DISORDERS—NAMELY, DIARRHEA, INTESTINAL FERMENTATION, EXCESSIVE ACIDITY, AND FLATULENCE.
Claims use since July 1927.

Ser. No. 551,516. BUFFINGTON'S, INCORPORATED, Worcester, Mass. Filed Mar. 9, 1948.

NITRAEGUS

FOR MEDICINAL TABLET FOR THE TREATMENT OF HIGH BLOOD PRESSURE.
Claims use since September 1932.

Ser. No. 551,517. BUFFINGTON'S, INCORPORATED, Worcester, Mass. Filed Mar. 9, 1948.

PILEZOL

FOR MEDICINAL OINTMENT FOR RELIEF OF HEMORRHOIDS.
Claims use since July 1927.

Ser. No. 551,518. BUFFINGTON'S, INCORPORATED, Worcester, Mass. Filed Mar. 9, 1948.

VERDOL-B

The letter "B" is disclaimed apart from the mark.
FOR MEDICINAL TABLET CONTAINING AN IRON SALT AND VITAMIN-B-COMPLEX INDICATED IN THE TREATMENT OF SECONDARY ANEMIA.
Claims use since May 1938.

Ser. No. 552,005. THE PAUL PLESSNER COMPANY, Detroit, Mich. Filed Mar. 15, 1948.

RU-NITRAL

FOR PREPARATION FOR USE IN THE TREATMENT OF HYPERTENSION.
Claims use since Jan. 13, 1948.

Ser. No. 552,193. WILLIAM R. WARNER & CO., INC., New York, N. Y. Filed Mar. 17, 1948.

GELU-CILLIN "PR"

Applicant claims ownership of registrations Nos. 431,918, 434,058, and 422,035.
FOR PENICILLIN PREPARATION FOR USE AS ANTI-BIOTIC.
Claims use since Feb. 16, 1948.

Ser. No. 553,803. ROHM & HAAS COMPANY, Philadelphia, Pa. Filed Mar. 23, 1948.

RHOPLEX

Applicant claims ownership of registrations Nos. 337,130 and 435,557.
FOR RESIN SUSPENSIONS OR DISPERSIONS SUITABLE FOR USE IN WAX FORMULATIONS, POLISHES, AND THE LIKE, AND ALSO FOR USE AS STARCH SUBSTITUTES IN LAUNDERING OPERATIONS.
Claims use since Dec. 4, 1946.

Ser. No. 553,853. HALL & RUCKEL, INC., New York, N. Y. Filed Apr. 5, 1948.

INSECTAN

FOR SKIN LOTION.
Claims use since Mar. 30, 1948.

Ser. No. 554,819. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Apr. 16, 1948.

PROCIPITOIDS

FOR IMMUNOGENIC PREPARATIONS FOR HUMAN USE IN THE TREATMENT AND PREVENTION OF DISEASES OF BACTERIAL ORIGIN INCLUDING DIPHTHERIA, TETANUS, PERTUSSIS, AND STAPHYLOCOCCAL AND STREPTOCOCCAL INFECTIONS.
Claims use since Apr. 8, 1948.

Ser. No. 555,149. G. H. BROWN SPECIALTY CO., Des Moines, Iowa. Filed Apr. 21, 1948.

"SWEETHEARTS"

FOR ASPIRIN TABLETS.
Claims use since Apr. 6, 1948.

Ser. No. 556,100. INTERCHEMICAL CORPORATION, New York, N. Y. Filed May 3, 1948.

ELAMINE

FOR PROTEIN HYDROLYSATES MADE UP CHIEFLY OF AMINO ACIDS.
Claims use since Apr. 7, 1948.

Ser. No. 556,467. PARFUMS CHARBERT, INC., New York, N. Y. Filed May 7, 1948.

LET'S MAKE UP

The words "Make Up" are disclaimed apart from the mark.
FOR PERFUMES, TOILET WATERS, EAU DE COLOGNES, SACHET POWDER, TALCUM POWDER, FACE POWDER, BATH POWDER, COMPACT POWDER, LIPSTICK, ROUGE, COLD CREAM, FACE CREAM, VANISHING CREAM, FOUNDATION CREAM, SKIN FOOD CREAM, AND EYE MAKE-UP.
Claims use since Apr. 22, 1948.

Ser. No. 556,752. THE AIR KONDITIONING COMPANY, Clermont, Fla., now by change of name Airko Manufacturing Co., a corporation of Florida. Filed May 11, 1948.

AIRKO

Ser. No. 558,135. THE GLIDDEN COMPANY, Cleveland, Ohio. Filed May 29, 1948.

PINEY

Ser. No. 562,005. AMERICAN AIR FILTER COMPANY, INC., Louisville, Ky. Filed July 23, 1948.

Ser. No. 533,231. MACWHYTE COMPANY, Kenosha, Wis. Filed Sept. 4, 1947.

Ser. No. 556,752. THE AIR KONDITIONING COMPANY, Clermont, Fla., now by change of name Airko Manufacturing Co., a corporation of Florida. Filed May 11, 1948.

AIRKO

FOR COMPOSITION CONTAINING DIATOMACEOUS EARTH USED FOR DEHUMIDIFYING THE ATMOSPHERE OF CLOSED CONTAINERS AND CLOSED ROOMS.
Claims use since June 1946.

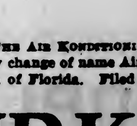
Ser. No. 556,990. SCHNEPEL BROS. CORPORATION, Newark, N. J. Filed May 13, 1948.

naylon by La Cross SLIM STICK

The term "Slim Stick" is disclaimed apart from the mark. Applicant claims ownership of registrations Nos. 287,475 and 398,516.
FOR COSMETIC ITEMS—NAMELY, FINGERNAIL POLISH, FINGERNAIL ENAMEL, LIP ROUGE, AND PREPARATION FOR REMOVING THE CUTICLE.
Claims use since Mar. 15, 1948.

Ser. No. 557,197. MARY MARIQUES, New York, N. Y. Filed May 17, 1948.

Hamandis



The word "Hamandis" is a coined word.
FOR FACE CREAM AND HAIR LOTION TO AID IN RESTORING THE COLOR OF WHITE HAIR.
Claims use since 1927.

Ser. No. 557,356. HERCULES POWDER COMPANY, Wilmington, Del. Filed May 19, 1948.

ABITOL

FOR HYDROABIETYL ALCOHOL FOR USE IN RESINS AS A PLASTICIZER FOR SYNTHETIC RESINS, AND FOR THE MANUFACTURE OF DETERGENTS.
Claims use since Apr. 28, 1948.

Ser. No. 558,135. THE GLIDDEN COMPANY, Cleveland, Ohio. Filed May 29, 1948.

PINEY WOODS

Applicant claims ownership of registration No. 217,392.
FOR FLOTATION OILS, PINE OILS, AND PINE TAR OIL.
Claims use since Jan. 15, 1923.

Ser. No. 559,245. PRAIRIE STATES OIL & GREASE COMPANY, Danville, Ill. Filed June 15, 1948.

Blue Star

FOR ANTI-FREEZE COOLANT FOR INTERNAL COMBUSTION ENGINES.
Claims use since Apr. 1, 1948.

Ser. No. 559,325. ROHM & HAAS COMPANY, Philadelphia, Pa. Filed June 16, 1948.

KATHON

FOR SYNTHETIC ORGANIC CHEMICALS IN SOLID FORM AND/OR IN SOLUTIONS AND/OR SUSPENSIONS FOR USE IN CONTROLLING THE GROWTH OF AND/OR ERADICATING PLANTS.
Claims use since May 18, 1948.

Ser. No. 560,448. CIBA PHARMACEUTICAL PRODUCTS, INC., Summit, N. J. Filed June 30, 1948.

ETICYLOL

FOR ESTROGENIC COMPOUND FOR USE IN SEX HORMONE THERAPY.
Claims use since May 25, 1948.

Ser. No. 561,350. SUN CHEMICAL CORPORATION, New York, N. Y. Filed July 14, 1948.

WARCONYL

Applicant claims ownership of registration No. 377,641.
FOR CHEMICAL COMPOUNDS FOR RENDERING TEXTILES FIRE RETARDANT.
Claims use since Apr. 30, 1948.

Ser. No. 562,005. AMERICAN AIR FILTER COMPANY, INC., Louisville, Ky. Filed July 23, 1948.

AAF

Applicant claims ownership of registration No. 385,349.
FOR NON-OILY VISCOUS LIQUIDS USED ON DUST COLLECTING SURFACES FOR DUST RETENTION PURPOSES.
Claims use since Oct. 23, 1935.

Ser. No. 563,245. THE DOW CHEMICAL COMPANY, Midland, Mich. Filed Aug. 12, 1948.

DOWEX

FOR ION EXCHANGE RESINS.
Claims use since Feb. 15, 1946.

CLASS 7
CORDAGE

Ser. No. 527,617. JOHN FLOCKER AND COMPANY, Pittsburgh, Pa. Filed July 5, 1947.

Applicant disclaims the right to the exclusive use of the word "Rope" apart from the mark.
FOR FIBER ROPE AND TWINE.
Claims use since 1862.

Ser. No. 533,331. MACWHYTE COMPANY, Kenosha, Wis. Filed Sept. 4, 1947.

FOR WIRE ROPE.
Claims use since June 3, 1903.

CLASS 11
INKS AND INKING MATERIALS

Ser. No. 527,344. THE PARKER PEN COMPANY, Janesville, Wis. Filed July 5, 1947. Under section 2f of the act of 1946.

PARKER

Applicant claims ownership of registrations Nos. 165,783, 255,741, and 184,396.
FOR WRITING INK.
Claims use since 1898.

Ser. No. 534,630. J. M. HUBER CORPORATION, Locust, N. J., and New York, N. Y. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

HUBER

FOR PRINTING INKS.
Claims use since 1929.

Ser. No. 534,784. INTERCHEMICAL CORPORATION, New York, N. Y. Filed Sept. 17, 1947. Under section 2f of the act of 1946.

SET FAST

Applicant claims ownership of registration No. 202,826.
FOR PRINTING INKS AND OFFSET COMPOUNDS, I. E., COMPOUNDS FOR USE WITH PRINTING INKS TO PREVENT OFFSETTING ON PRINTED SHEETS.
Claims use since January 1923.

CLASS 12
CONSTRUCTION MATERIALS

Ser. No. 513,285. ANDERSEN CORPORATION, Chicago, Ill. Filed Feb. 28, 1948; originally filed, act of 1905, Nov. 27, 1946.

Ser. No. 551,467. SMITH & KANZLER COMPANY, Lindau, N. J. Filed Mar. 8, 1948.

Ser. No. 536,763. W. A. CASS AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Oct. 4, 1947. Under section 2f of the act of 1946.

BENNING

Ser. No. 539,347. PREMIER OIL REFINING COMPANY OF TEXAS, Longview, Tex. Filed Oct. 28, 1947.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 513,285. ANDERSEN CORPORATION, Chicago, Ill. Filed Feb. 28, 1948; originally filed, act of 1905, Nov. 27, 1946.

BLACRETE

FOR MIXTURE OF AGGREGATE BONDED WITH ASPHALT USED FOR FLOORS, SURFACING, AND ROAD PAVING.
Claims use since Oct. 3, 1944.

Ser. No. 536,968. TRIANCO LIMITED, East Molesey, England. Filed Oct. 6, 1947.

TRIANCO

Applicant claims ownership of British registration No. 431,758.
FOR SLABS, BLOCKS, AND TILES OF CONCRETE FOR BUILDING PURPOSES.

Ser. No. 541,840. C. T. HOGAN & COMPANY, INC., New York, N. Y. Filed Nov. 20, 1947.

ALUMISEAL

FOR FABRICATED INSULATING BARRIERS AND MATERIALS FOR SUCH BARRIERS, INCLUDING SHEET ALUMINUM INSULATION AND VAPOR BARRIERS, COMPRISING SELF-SUSTAINING, NON-POROUS, HEAT-REFLECTIVE SHEETS OF ALUMINUM AND METAL-FACED, PRESSURE-SENSITIVE TAPE FOR SEALING JOINTS AND CORNERS, AND USED FOR INSULATING BARRIERS FOR REFRIGERATED STRUCTURES, INSULATING BARRIERS FOR STRUCTURES EXPOSED TO HIGH TEMPERATURES, AND INSULATING BARRIERS FOR EQUIPMENT AND PIPES OPERATED AT REFRIGERATING OR HIGH TEMPERATURES.
Claims use since Nov. 13, 1947.

Ser. No. 546,091. DEARBORN GLASS COMPANY, Chicago, Ill. Filed Jan. 3, 1948.

Crys GLAS

The word "Glas" is disclaimed.
FOR GLASS WALL TILE.
Claims use since Oct. 14, 1947.

Ser. No. 551,467. SMITH & KANZLER COMPANY, Linden, N. J. Filed Mar. 8, 1948.

INSULROCK

FOR WALLBOARD.
Claims use since Dec. 20, 1947.

Ser. No. 551,976. INSUL-WOOL INSULATION CORP., Wichita, Kans. Filed Mar. 15, 1948.

INSULBAT

FOR THERMAL INSULATING MATERIAL IN SHEET FORM MADE FROM PAPER.
Claims use since Feb. 21, 1948.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 531,487. KNICKERBOCKER RUBBER COMPANY, Chicago, Ill. Filed Aug. 15, 1947.

Knickerbocker

Applicant claims ownership of registration No. 140,618.
FOR SHAMPOO SPRAYS, BATH SPRAYS, AND FAUCET STRAINERS.
Claims use since 1903.

Ser. No. 531,625. SPERZEL COMPANY, Minneapolis, Minn. Filed Aug. 16, 1947. Under section 2f of the act of 1946.

SPERZEL

FOR TOILET SEATS.
Claims use since Jan. 1, 1937.

Ser. No. 531,747. THE YOST SUPERIOR CO., Springfield, Ohio. Filed Aug. 18, 1947.

YS

FOR TENSION, TORSION, AND EXPANSION SPRINGS, AND WIRE FORMS GENERALLY IN THE FORM OF SPRINGS MADE TO ORDER.
Claims use since Apr. 1, 1924.

Ser. No. 536,769. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Oct. 4, 1947. Under section 2f of the act of 1946.

BENNING

FOR PLUMBING FIXTURES—NAMELY, VITREOUS CHINA WATER CLOSETS AND WATER CLOSET TANKS.
Claims use since May 1943.

CLASS 15

OILS AND GREASES

Ser. No. 527,420. JENKIN-GUNBIN INC., St. Louis, Mo. Filed July 5, 1947.

ANCHOR BRAND

In this application, applicant makes no claim to the word "Brand." Applicant claims ownership of registration No. 269,882.
FOR LUBRICATING OILS AND GREASES.
Claims use since July 1, 1919.

Ser. No. 535,606. PATE OIL COMPANY, Milwaukee, Wis. Filed Sept. 24, 1947.

AIR GLIDE

FOR GASOLINE.
Claims use since Aug. 20, 1945.

Ser. No. 536,498. CARDINAL CHEMICAL CORPORATION, Newark, N. J. Filed Oct. 2, 1947.

RAY-SPRAY

The word "Spray" is disclaimed apart from the mark.
FOR LUBRICATING OILS.
Claims use since Sept. 23, 1947.

Ser. No. 539,347. PREMIER OIL REFINING COMPANY OF TEXAS, Longview, Tex. Filed Oct. 28, 1947.

Sky Ranger

FOR LUBRICATING OILS FOR AIRPLANES.
Claims use since May 7, 1947.

Ser. No. 539,459. TOPP OIL & CHEMICAL CO., Milwaukee, Wis. Filed Oct. 29, 1947.

RED TOP

The drawing is lined to indicate the color red.
FOR LUBRICATING OILS AND GREASES.
Claims use since April 1929.

CLASS 20

LINOLEUM AND OILED CLOTH

Ser. No. 542,148. MASTIC TILE CORPORATION OF AMERICA, Newburgh, N. Y. Filed Nov. 24, 1947.

MA-TI-CO

FOR ASPHALT FLOOR TILES.
Claims use since Aug. 1, 1946.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 527,209. DYNAMATIC CORPORATION, Kenosha, Wis. Filed July 5, 1947.

DYNAMATIC

Ser. No. 539,035. DIAMOND POWER SPECIALTY CORPORATION, Detroit, Mich. Filed Oct. 25, 1947.

DIAMOND

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 498,569. MAXIMILIAN C. MEYER, doing business as P M Game Company, New York, N. Y. Filed Feb. 10, 1948; originally filed, act of 1905, Mar. 19, 1946.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 515,226. INDUSTRIAL MOLDED PRODUCTS CO., INC., Chicago, Ill. Filed Sept. 10, 1947; originally filed, act of 1905, Jan. 3, 1947.

The trade-mark comprises the letters "Ind."
FOR MOLDED PLASTIC ARTICLES—NAMELY, RELAY BASES, BOBBINS FOR ELECTRICAL RELAYS AND SOLENOIDS, TERMINAL HEADS FOR ELECTRICAL CONNECTORS, SWITCH LEVERS FOR AUTOMATIC ELECTRICAL SWITCHES, BRUSH HOLDER CAPS FOR ELECTRICAL MOTORS, DUST PLATES FOR ELECTRICALLY DRIVEN SANDING MACHINES, TERMINAL BLOCKS FOR ELECTRICAL CONNECTIONS, SHELLS FOR ELECTRIC SOCKETS, SWITCH END FOR ELECTRIC SOCKETS, ELECTRIC PEN HANDLES, LUG STRIPS FOR ELECTRICAL CONNECTORS, SWITCH BUTTONS, PLUNGER ASSEMBLIES FOR ELECTRONIC EQUIPMENT, AND SOCKET ASSEMBLIES FOR RADIO TUBES.
Claims use since Mar. 10, 1938.

Ser. No. 527,019. THE EDWIN F. GUTH COMPANY, St. Louis, Mo. Filed July 5, 1947.

MAGIC-LITE

In this application, applicant makes no claim to the word "Lite." Applicant claims ownership of registration No. 158,548.
FOR ELECTRIC-LIGHTING FIXTURES.
Claims use since Mar. 4, 1922.

Ser. No. 527,024. THE EDWIN F. GUTH COMPANY, St. Louis, Mo. Filed July 5, 1947.

FLU-O-INDIRECT

In this application, applicant makes no claim to the word "Indirect."
FOR ELECTRIC LIGHTING FIXTURES.
Claims use since Apr. 1, 1941.

Ser. No. 527,209. DYNAMATIC CORPORATION, Kenosha, Wis. Filed July 5, 1947.

DYNAMATIC

Applicant claims ownership of registrations Nos. 316,735, 419,310, 425,108, and 419,309.
FOR ELECTRO-MAGNETIC CLUTCHES OR COUPLINGS FOR USE AS ELECTRIC VARIABLE-SPEED POWER-TRANSMISSIONS ON POWER BOATS AND IN INDUSTRIAL MACHINERY—NAMELY, COMPRESSORS, REFRIGERATORS, AND FANS; ELECTRIC CLUTCHES; ELECTRIC BRAKES; VOLTAGE CONTROLS; AND ELECTRIC VALVES—TO WIT, OVERRUNNING POWER-TRANSMISSION CLUTCHES.
Claims use since Mar. 5, 1934.

Ser. No. 529,616. EUREKA WILLIAMS CORPORATION, Bloomington, Ill. Filed July 26, 1947.

DISPOS-O-MATIC

The prefix "Dispos" is disclaimed apart from the mark.
FOR WASTE FOOD DISPOSERS—NAMELY, ELECTRIC GARBAGE GRINDERS FOR ATTACHMENT TO KITCHEN SINKS.
Claims use since May 27, 1947.

Ser. No. 530,116. THE OKONITE-CALLENDER CABLE COMPANY, INCORPORATED, Paterson, N. J. Filed July 31, 1947.

VERTICOL

FOR IMPREGNATING OR FILLING COMPOUNDS FOR PAPER OR VARNISHED CAMBRIC INSULATED ELECTRIC POWER CABLES, THE COMPOUND CONSISTING OF A MIXTURE OF A NAPHTHENIC BASE CYLINDER TYPE PETROLEUM OIL AND A SATURATED SYNTHETIC HYDROCARBON POLYMER.
Claims use since May 16, 1947.

Ser. No. 536,510. ELECTRIC SPECIALTY COMPANY, INCORPORATED, Stamford, Conn. Filed Oct. 2, 1947.

ESCO

Applicant claims ownership of registration No. 162,243.
FOR DIRECT AND ALTERNATING CURRENT MOTORS, GENERATORS, MOTOR-GENERATORS, DYNAMOTORS, AND ROTARY CONVERTERS.
Claims use since 1922.

Ser. No. 536,035. DIAMOND POWER SPECIALTY CORPORATION, Detroit, Mich. Filed Oct. 25, 1947.

UTILISCOPE

FOR TELEVISION TRANSMITTING AND RECEIVING APPARATUS.
Claims use since June 22, 1946.

Ser. No. 547,126. INDUSTRIAL TELEVISION, INC., Clifton, N. J. Filed Jan. 15, 1948.

Teleceiver

FOR TELEVISION RECEIVERS.
Claims use since Apr. 1, 1947.

Ser. No. 547,594. URBANA MANUFACTURING COMPANY, Urbana, Ohio. Filed Jan. 20, 1948.

WASP

FOR ELECTRIC MOTORS.
Claims use since Mar. 1, 1946.

Ser. No. 547,707. THE CRESCENT COMPANY, INC., Pawtucket, R. I. Filed Jan. 22, 1948.

CRESCENT

FOR BATTERY CABLES.
Claims use since Jan. 1, 1924.

Ser. No. 547,708. THE CRESCENT COMPANY, INC., Pawtucket, R. I. Filed Jan. 22, 1948.

CRESCENT *Wiry Joe*

FOR BATTERY CABLES.
Claims use since June 1, 1932.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 493,569. MAXIMILIAN C. MEYER, doing business as P M Game Company, New York, N. Y. Filed Feb. 10, 1948; originally filed, act of 1905, Mar. 19, 1946.

PRO BASEBALL

The word "Baseball" is disclaimed apart from the mark.
FOR BASEBALL GAME.
Claims use since December 1945.

Ser. No. 521,015. KELMAR CORPORATION, Milwaukee, Wis. Filed Feb. 21, 1948; originally filed, act of 1905, Apr. 19, 1947.

POW'R POP

The word "Pop" is disclaimed.
FOR TOY PISTOLS.
Claims use since July 1946.

Ser. No. 529,103. WINIFRED B. SHERMAN, Detroit, Mich. Filed July 21, 1947.

Little People

FOR DOLLS AND DOLL CLOTHES.
Claims use since Nov. 5, 1946.

Ser. No. 544,215. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Dec. 12, 1947.

KRO-FLITE

Applicant claims ownership of registrations Nos. 265,420, 285,865, and 375,087.
FOR GOLF BALLS, TENNIS RACKETS, GOLF CLUBS, BADMINTON RACKETS, SQUASH RACKETS, AND TABLE TENNIS BATS.
Claims use since 1919.

Ser. No. 551,094. DUNLOP TIRE AND RUBBER CORPORATION, Buffalo, N. Y. Filed Mar. 3, 1948.

MAXPLY

Applicant claims ownership of registration No. 298,103.
FOR TENNIS AND BADMINTON RACKETS.
Claims use since Sept. 11, 1936.

Ser. No. 551,132. THE OHIO BOWLING & BILLIARD SUPPLY CO., Cleveland, Ohio. Filed Mar. 3, 1948.

CLASSIC

Ser. No. 506,222. THE AMERICAN FORK AND HOE COMPANY, Cleveland, Ohio. Filed July 5, 1947; originally filed, act of 1905, July 25, 1946.

Ser. No. 526,532. DIAMOND CHAIN COMPANY, INC., Indianapolis, Ind. Filed July 6, 1947.

DIAMOND

Ser. No. 528,686. THE BASTIAN-BLESSING COMPANY, Chicago, Ill. Filed July 16, 1947.

REGO

Ser. No. 551,132. THE OHIO BOWLING & BILLIARD SUPPLY CO., Cleveland, Ohio. Filed Mar. 3, 1948.

CLASSIC

FOR BOWLING PINS.
Claims use since Feb. 8, 1946.

Ser. No. 551,133. THE OHIO BOWLING & BILLIARD SUPPLY CO., Cleveland, Ohio. Filed Mar. 3, 1948.

MAJOR

FOR BOWLING PINS.
Claims use since Feb. 8, 1946.

Ser. No. 551,595. J. & E. STEVENS COMPANY, Cromwell, Conn. Filed Mar. 9, 1948.

THE SHERIFF

FOR TOY PISTOLS.
Claims use since Dec. 15, 1947.

Ser. No. 560,181. BROWN & BIGELOW, St. Paul, Minn. Filed June 25, 1948.

B&B

FOR PLAYING CARDS.
Claims use since Mar. 5, 1926.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 487,308. CHAIN BELT COMPANY, Milwaukee, Wis. Filed Sept. 29, 1947; originally filed, act of 1905, Aug. 20, 1945.

REX

Applicant claims ownership of registrations Nos. 126,139, 126,140, 132,109, 278,177, 292,083, 350,360, and 406,266.
FOR FOOD PROCESSING MACHINES AND EQUIPMENT—VIZ., APPARATUS FOR THE CONTINUOUS PASTEURIZATION AND DEAERATION OF LIQUID AND SEMI-LIQUID FOODS, COMPRISING A SALTING UNIT, A HOLDING UNIT, A STERILIZING UNIT, A DEAERATING UNIT, AND A UNIT FOR HEATING AND/OR COOLING THE PACKAGED PRODUCT, ALL SOLD UNDER THE MARK AS A UNITARY APPARATUS; AND PARTS THEREOF.
Claims use since July 10, 1944.

Ser. No. 506,222. THE AMERICAN FORK AND HOE COMPANY, Cleveland, Ohio. Filed July 5, 1947; originally filed, act of 1905, July 25, 1946.

PARROT
TRUE TEMPER

Applicant disclaims the use of the words "True Temper" apart from the mark. Applicant claims ownership of registrations Nos. 62,551, 239,511, 258,244, 258,575, 260,024, 283,564, and 146,672.
FOR AXES, HAMMERS, HATCHETS, SPADES, SHOVELS, HOES, AND RAKES.
Claims use since June 1941.

Ser. No. 507,674. EASTMAN OIL WELL SURVEY COMPANY, Denver, Colo. Filed Aug. 22, 1947; originally filed, act of 1905, Aug. 20, 1946. Under section 2f of the act of 1946.

Eastman

FOR OIL WELL TOOLS—NAMELY, WHIPSTOCKS AND KNUCKLE JOINTS FOR WELL DRILLING AND SELF-ORIENTING DEFLECTING TOOLS FOR WELL DRILLING.
Claims use since Jan. 1, 1935.

Ser. No. 509,471. RITE TOOL, INC., Fall River, Mass. Filed Sept. 30, 1947; originally filed, act of 1905, Sept. 20, 1946. Under section 2f of the act of 1946.

RITE TOOL

The word "Tool" is disclaimed.
FOR HAND ACTUATED TOOLS FOR TRUING AND UNDERCUTTING COMMUTATORS.
Claims use since July 1940.

Ser. No. 519,846. THE WAYNE PUMP COMPANY, Fort Wayne, Ind. Filed Jan. 10, 1948; originally filed, act of 1905, Mar. 29, 1947.

Collaps-A-Hose

The word "Hose" and the representation of the hose is disclaimed apart from the mark.
FOR PORTABLE AND STATIONARY AIRCRAFT REFUELING SYSTEMS SOLD AS A UNIT CONSISTING OF ONE OR MORE PUMPS, AN ELECTRONICALLY CONTROLLED VARIABLE VALVE UNIT, A METER AND REGISTER, A STRAINER AND DISCHARGE VALVE, A REEL AND HOSE UNIT, A NOZZLE CONTROL SWITCH, A HOSE REWIND MECHANISM, AND A DEFUELING HOSE.
Claims use since May 20, 1946.

Ser. No. 526,532. DIAMOND CHAIN COMPANY, INC., Indianapolis, Ind. Filed July 5, 1947.

DIAMOND

Applicant claims ownership of registrations Nos. 211,419 and 241,217.
FOR POWER TRANSMISSION CHAINS AND PARTS THEREOF, INCLUDING BUT NOT LIMITED TO BICYCLE CHAINS AND MOTORCYCLE CHAINS, SPROCKETS AND SPROCKET WHEELS FOR USE WITH POWER TRANSMISSION CHAINS, CONVEYOR CHAINS AND PARTS THEREOF, AND CHAIN TYPE FLEXIBLE SHAFT-COUPLINGS AND PARTS THEREOF.
Claims use since Apr. 15, 1896.

Ser. No. 526,840. STANDARD UTILITIES, INC., Pasadena, Calif. Filed July 5, 1947.

HI-KLONIC

FOR FLUSHING APPARATUS COMPOSED OF A PUMP, A FILTER, A HOSE, VALVES, AND A TANK CONTAINING A HEATING ELEMENT, FOR INTERNAL COMBUSTION ENGINES.
Claims use since Dec. 31, 1933.

Ser. No. 527,657. WYEMBERK & STAFF, INC., Chicago, Ill. Filed July 5, 1947.

WYCO

FOR FLEXIBLE SHAFTS OF METAL FOR DRIVING ROTARY TOOLS, FLEXIBLE SHAFT CUTTING, POLISHING AND ABRADING TOOLS, ROTARY HOLE CUTTERS, OSCILLATING SPEED SAWS, ROTARY MOTOR DISKS, SANDING DRUMS, FLEXIBLE SHAFT ROTARY GRINDERS AND POLISHERS, AND PARTS OF THE ABOVE.
Claims use since July 2, 1919.

Ser. No. 528,359. MINNEAPOLIS-MOLINE POWER IMPLEMENT COMPANY, Minneapolis, Minn. Filed July 11, 1947.

MONITOR

The lining in the drawing indicates the colors red and yellow.
FOR AGRICULTURAL IMPLEMENTS — NAMELY, GRAIN DRILLS AND SEEDING MACHINES.
Claims use since June 1, 1874.

Ser. No. 528,686. THE BASTIAN-BLESSING COMPANY, Chicago, Ill. Filed July 16, 1947.

REGO

Applicant claims ownership of registrations Nos. 115,833, 212,613, 280,239, 130,151, and 213,622.
FOR SELF-CONTAINED FIRE EXTINGUISHER VALVES, VALVE RESEATING TOOLS, RETHREADING DIES, SPECIAL REAMERS, REFACING TOOLS, VALVE WRENCHES, AND END WRENCHES.
Claims use since Nov. 2, 1925.

Ser. No. 528,817. QUIK-SEAL, INC., Kansas City, Mo. Filed July 17, 1947. Under section 2f of the act of 1946.

QUIK-SEAL

The word "Seal" is disclaimed apart from the mark. Applicant claims ownership of registration No. 365,520.
FOR SEALING MACHINES FOR WRAPPED PACKAGES.
Claims use since July 1, 1934.

Ser. No. 530,066. WILBERT W. HAASE, doing business as Winnebago Steel Products Company, Fond du Lac, Wis. Filed July 31, 1947.

E-Z

FOR CONCRETE BURIAL VAULT HOIST APPARATUS.
Claims use since May 6, 1947.

Ser. No. 530,518. KOEHRING COMPANY, Milwaukee, Wis. Filed Aug. 5, 1947. Under section 2f of the act of 1946.

twinbatch

KESSCO PRODUCTS

The word "Products" is disclaimed apart from the mark as shown.

FOR ACETONE, METHYL-ETHYL KETONE, METHYL ETHYL KETONE ANHYDROUS ALCOHOL SOLVENT, ETHYL ACETATE, BUTYL ACETATE, BUTYL ACETATE SUBSTITUTES, BUTYL ALCOHOL, AMYL ACETATE, AMYL ALCOHOL, FUSEL OIL, BUTYL PROPIONATE, BUTYL STEARATE, DIMETHYL PHTHALATE, DIETHYL PHTHALATE, DIBUTYL PHTHALATE, ACETINE, TRIACETINE, DIBUTYL TARTRATE, AND DIACETINE.

Claims use since 1924.

Reg. No. 349,186. Registered Aug. 24, 1937. MULFORD COLLOID LABORATORIES, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Ferrocol

FOR SOLUTION AND A SCALE SALT CONTAINING IRON AND COPPER IN COLLOIDAL FORM, APPLIED EITHER ORALLY OR BY INTRAMUSCULAR OR INTRAVENOUS INJECTION IN CASES OF EXTREME CHLOROSIS, ANEMIA AND WHEREVER IRON THERAPY IS INDICATED.

Claims use since on or before Sept. 1, 1921.

Reg. No. 350,309. Registered Sept. 28, 1937. DOHO CHEMICAL CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

OTOSMOSAN

FOR EAR DROPS.

Claims use since Jan. 5, 1936.

Reg. No. 357,121. Registered May 24, 1938. THE DENVER CHEMICAL MANUFACTURING COMPANY, New York, N. Y., a corporation of Colorado. Republished by registrant.

Galatest

FOR DRY REAGENT FOR TESTING SOLUTIONS FOR SUGAR.

Claims use since June 4, 1937.

Reg. No. 357,151. Registered May 24, 1938. DOHO CHEMICAL CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

(+) AURALYT

FOR OSMOTHERAPEUTIC TREATMENT OF EAR DISEASES.

Claims use since Oct. 15, 1936.

Reg. No. 357,735. Registered June 14, 1938. NATIONAL CO-OPERATIVES, INC., Indianapolis, Ind. Republished by National Cooperatives, Incorporated, Chicago, Ill., a corporation of the District of Columbia.

NATIONAL CO-OP COOPERATIVES

FOR FLY SPRAY.

Claims use since 1929.

Reg. No. 362,350. Registered Nov. 15, 1938. CLIFFORD E. JONES, Peru, Ind. Republished by registrant.

"ANT SHOTS"

FOR INSECTICIDE CONTAINED IN CAP-LIKE RECEPTACLES.

Claims use since May 1, 1938.

Reg. No. 379,235. Registered July 9, 1940. NATIONAL CO-OPERATIVES, INC., Chicago, Ill., and Indianapolis, Ind. Republished by National Cooperatives, Incorporated, Chicago, Ill., a corporation of the District of Columbia.

NATIONAL CO-OP COOPERATIVES

FOR BORIC ACID POWDER, CALOMEL, SPIRITS OF CAMPHOR, CAMPHOR ICE, CARBOLIC ACID, CASTOR OIL, CHLOROFORM, CITRATE OF MAGNESIA, COD LIVER OIL, HALIVER OIL, EPSOM SALTS, SULPHUR, GLYCIUM; LINIMENT FOR THE TREATMENT OF MUSCULAR ACHES AND PAINS, RHEUMATISM, LUMBAGO, NEURALGIA AND LIKE AILMENTS; LITHIA TABLETS, QUININE, STEARATE OF ZINC, PEROXIDE OF HYDROGEN, IODINE, POTASH, PETROLEUM JELLY, CHLORIDE OF LIME, MURIATE OF POTASH, SWEET OIL, WOOD ALCOHOL, BEESWAX, COUGH DROPS, BREATH PURIFYING TABLETS, TOOTHACHE WAX, TOOTHACHE LIQUID, TOOTH PASTE, TOOTH POWDER, STOMACH BITTERS, MOUTH WASH, MUSTARD PLASTERS, FOOTPOWDER, SMELLING SALTS, EYE WASH, YEAST TABLETS, VITAMIN CAPSULES, MILK OF MAGNESIA, LAXATIVE TABLETS, CARBOLIC SALVE, WITCH HAZEL, PREPARATIONS FOR THE TREATMENT OF DISEASES IN POULTRY AND LIVESTOCK, INCENSE, EMBALMING FLUID, LIQUID INK ERADICATOR, FLY SPRAY, INSECT POWDER, SHEEP DIP, PARIS GREEN, MOSQUITO REPELLANT, BLUING, LAUNDRY STARCH, LYE, CLOTHING DYE, RADIATOR CLEANER, DRAIN CLEANER, AMMONIA; AUTOMOBILE KNEE ACTION, BRAKE AND SHOCK ABSORBER FLUID; PHOTOGRAPHIC CHEMICAL, RADIATOR ANTI-FREEZE SOLUTION, WELDING COMPOUND, SOLDERING ACID, FACE POWDER, LIP STICK, ROUGE, DEPILATORIES, SKIN LOTION, SKIN CREAM, MUD PACK, HAIR DRESSING, HAIR TONIC, LIQUID SHAMPOO, PERFUME, NAIL POLISH, NAIL POLISH REMOVER, EYE SHADOW, MASCARA, COLD CREAM, VANISHING CREAM, DEODORANT, POWDER BASE, WAVE SET, AND CHEMICAL RUST REMOVER.

Claims use since December 1929.

Reg. No. 383,369. Registered Dec. 3, 1940. G. & W. H. CORSON, Plymouth Meeting, Pa., a corporation of Delaware. Republished by registrant.

ACTOMAG

The symbol "Mg" is disclaimed apart from the mark as shown.

FOR SELECTIVELY CANCINED DOLOMITE CONSISTING OF MAGNESIUM OXIDE AND CALCIUM CARBONATE.

Claims use since June 24, 1940.

Reg. No. 397,405. Registered Sept. 8, 1942. WM. P. POTTHRESS & CO. INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

Reg. No. 410,605. Registered Dec. 5, 1944. C. J. MARTIN & SONS, Austin, Tex. Republished by C. J. Martin and Sons, Inc., Austin, Tex., a corporation of Texas.

RUBIKA

Reg. No. 435,692. Registered Jan. 6, 1948. AMES COMPANY, INC., Elkhart, Ind., a corporation of Indiana. Republished by registrant.

EGG COOKERS, SADIRONS, HOT PLATES FOR COOKING PURPOSES, SUCTION CLEANERS, WAFFLE IRONS, FOOD MIXERS, FOOD CHOPPERS, VENTILATING FANS, CIGAR LIGHTERS, CURLING IRONS, COFFEE PERCOLATORS, TOASTERS, DOOR BELLS,

Reg. No. 397,405. Registered Sept. 8, 1942. WM. P. POTTHRESS & CO. INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

BENSULFOID

FOR PREPARATION IN TABLET OR POWDER FORM FOR INTERNAL OR EXTERNAL USE IN ANY HUMAN AILMENT, SKIN DISEASE, OR SKIN INFECTION IN WHICH THE EXTERNAL OR INTERNAL USE OF SULPHUR MAY BE CONSIDERED THERAPEUTICALLY OR PALLIATIVELY DESIRABLE.
Claims use since Oct. 25, 1940.

Reg. No. 397,576. Registered Sept. 8, 1942. JANTZEN KNITTING MILLS, Portland, Oreg. Republished by Jantsen Knitting Mills Inc., Portland, Oreg., a corporation of Nevada.

JAN

FOR SUNTAN LIQUID CREAM ALSO USED FOR PROTECTING THE SKIN FROM THE SUN'S RAYS AND THE WEATHER.
Claims use since Mar. 30, 1942.

Reg. No. 399,562. Registered Jan. 19, 1943. AR-JAY LABORATORIES, INCORPORATED, Ontario, Calif., a corporation of California. Republished by registrant.

AR-JAY
LEM-O-LENE

FOR HAIR RINSE.
Claims use since Apr. 1, 1940.

Reg. No. 404,462. Registered Nov. 23, 1943. THE DENVER CHEMICAL MANUFACTURING COMPANY, New York, N. Y., a corporation of Colorado. Republished by registrant.

Antiphlogistine

The drawing is lined to indicate the color orange.
FOR MEDICINAL PREPARATION POSSESSING HEALING PROPERTIES AND BEING A HEALING PREPARATION FOR INJURIES AND ACUTE AND CHRONIC INFLAMMATORY AFFECTIONS.
Claims use since Nov. 1, 1942.

Reg. No. 405,820. Registered Feb. 22, 1944. THE DENVER CHEMICAL MANUFACTURING COMPANY, New York, N. Y., a corporation of Colorado. Republished by registrant.

DENCO

FOR CHEMICAL COMPOUNDS TO BE USED FOR THE IDENTIFICATION OF CERTAIN NORMAL AND ABNORMAL SUBSTANCES FOUND IN THE BODY FLUIDS.
Claims use since Sept. 20, 1943.

Reg. No. 410,606. Registered Dec. 5, 1944. C. J. MARTIN & SONS, Austin, Tex. Republished by C. J. Martin and Sons, Inc., Austin, Tex., a corporation of Texas.

PHENIKA

FOR PREPARATION IN DRIED, LIQUID, OR SOLID FORM, FOR THE TREATMENT OF WORMS IN POULTRY AND ANIMALS.
Claims use since Aug. 11, 1943.

Reg. No. 422,335. Registered July 16, 1946. CHANEL, INC., New York, N. Y., a corporation of New York. Republished by registrant.

No 5

FOR PERFUME, TOILET WATER, EAU DE COLOGNE, FACE POWDER, TALCUM POWDER, AND BATH POWDER.
Claims use since Jan. 1, 1921.

Reg. No. 428,653. Registered Apr. 1, 1947. EBERSOLE-GAETS-RHODES CO., Clarence Center, N. Y., a firm. Republished by registrant.

COCCI-BAN

The word "Cocci" is disclaimed apart from the mark as shown.
FOR PREPARATION FOR THE TREATMENT OF COCCIDIOSIS.
Claims use since May 10, 1945.

Reg. No. 431,975. Registered Aug. 12, 1947. RIGO MANUFACTURING COMPANY, Nashville, Tenn., a corporation of Tennessee. Republished by registrant.

KLiSTA

FOR MOUTH WASH.
Claims use since Sept. 16, 1946.

Reg. No. 432,621. Registered Sept. 9, 1947. HAAS-MILLER CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

IMMUNOL

FOR CHEMICAL COMPOUNDS FOR WET GRINDING OF METAL.
Claims use since Apr. 10, 1946.

Reg. No. 434,073. Registered Nov. 4, 1947. CHAS. PFIZER & CO., INC., New York, N. Y., a corporation of New Jersey. Republished by registrant.

A★C★M

FOR MIXTURE OF ASCORBIC ACID AND CITRIC ACID FOR TREATING FRESH AND PRESERVED FRUITS AND VEGETABLES.
Claims use since Apr. 1, 1947.

Reg. No. 435,902. Registered Jan. 6, 1948. AMES COMPANY, INC., Elkhart, Ind., a corporation of Indiana. Republished by registrant.

Amecholin

FOR CHOLAGOGUES AND CHOLERETICS FOR THE TREATMENT OF ALL DISEASES OF THE LIVER AND BILE DUCTS SUCH AS CHOLANGITIS (JAUNDICE) AND CHOLELITHIASIS, DIURETICS IN NON-COMPENSATED HEART DEFECTS AND ASCITES WITH CIRRHOTIC DISEASES OF THE LIVER, PREPARATIONS DIMINISHING THE UNTOWARD EFFECTS IN THE INTERNAL TREATMENT OF DIABETES, PREPARATION FOR USE IN THE TREATMENT OF DRUG AND ALCOHOL POISONING AND IN THE TREATMENT OF CERTAIN CONDITIONS OF POISONING, ESPECIALLY METALLIC POISONINGS, IN WHICH DETOXIFICATION OF THE LIVER PROVES BENEFICIAL; MENTAL AFFECTIONS DUE TO LIVER DISEASES, IMPROVING THE TECHNIQUE OF CHOLECYSTOGRAPHY, TREATMENT OF PNEUMOCOCCIC INFECTIONS, TREATMENT OF CONSTIPATION, TREATMENT OF ALLERGIC DISEASES.
Claims use since Dec. 13, 1946.

Reg. No. 435,985. Registered Jan. 20, 1948. HOWARD W. NAYLOR, Morris, N. Y. Republished by registrant.

LINITE

FOR A VETERINARY PREPARATION FOR USE IN THE TREATMENT OF HOOF ROT, CONTRACTED HOOFS, BARN ITCH, CUTANEOUS ERUPTIONS, THRUSH-CANKER, AND CALK WOUNDS.
Claims use since on or about June 1, 1933.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 386,642. Registered Apr. 22, 1941. NATIONAL CO-OPERATIVES, INC., Chicago, Ill., and Indianapolis, Ind. Republished by National Cooperatives, Incorporated, Chicago, Ill., a corporation of the District of Columbia.

NATIONAL CO-OP COOPERATIVES

FOR ELECTRICALLY OPERATED APPARATUS AND PARTS THEREOF—NAMELY, LIGHTING FIXTURES, FARM LIGHTING PLANTS AND PARTS THEREOF, INCANDESCENT LAMPS, WIRES, EXTENSION CORD, CONDUITS, SWITCHES, SWITCH PLATES, PLUGS, SOCKETS, FLASHLIGHTS, TRANSFORMERS, ARC LAMPS, FUSES, PORCELAIN INSULATORS, LIGHTNING RODS AND ARRESTORS, MAGNETS, PLOWS, RHEOSTATS, WALL PLATES, WALL AND CEILING LIGHTS, MOTORS, GENERATORS, STORAGE BATTERIES, DRY CELL BATTERIES, INSULATING TAPE, RADIO RECEIVING SETS AND PARTS THEREOF,

CLASS 10

FERTILIZERS

Reg. No. 377,942. Registered May 21, 1940. NATIONAL CO-OPERATIVES, INC., Chicago, Ill., and Indianapolis, Ind. Republished by National Cooperatives, Incorporated, Chicago, Ill., a corporation of the District of Columbia.

NATIONAL CO-OP COOPERATIVES

FOR COAL, COKE, KINDLING WOOD, WIPING RAGS, WASTE, HIDES, LEATHER, FUR SKINS, SPONGES, CHAMOIS, PLANTS, TREES, SHRUBS, BULBS, FLOWER SEEDS, GRASS SEED, GARDEN SEED, HAY, STRAW, ALFALFA; AGRICULTURAL LIMESTONE, FIRE CLAY, SAND, GRAVEL, CHICKEN GRIT, GRANITE GRIT, CRUSHED STONE, SAND, AND GRAVEL, AND GROUND OYSTER SHELL.
Claims use since December 1929.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 380,280. Registered Aug. 20, 1940. NATIONAL CO-OPERATIVES, INC., Chicago, Ill., and Indianapolis, Ind. Republished by National Cooperatives, Incorporated, Chicago, Ill., a corporation of the District of Columbia.

NATIONAL CO-OP COOPERATIVES

FOR BUILDING HARDWARE—NAMELY, NAILS, STAPLES, SCREWS, TACKS, BRADS, SPIKES, METAL

STAKES, WINDOW SASH CHAINS, WINDOW PULLEYS, SWIVELS, CURTAIN FIXTURES, HINGES, DOOR CHECKS, DOOR HANGERS AND TRACKS, DOOR

Reg. No. 375,069. Registered Feb. 6, 1940. CHRISTIAN PEPER TOBACCO COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

STAKES, WINDOW SASH CHAINS, WINDOW PULLEYS, SWIVELS, CURTAIN FIXTURES, HINGES, DOOR CHECKS, DOOR HANGERS AND TRACKS, DOOR KNOBS, DOOR SPRINGS, HASPS, METAL STALL GUTTERS, WIRE SCREENING, FIREPLACE SCREENS AND ANDIRONS, HARDWARE CLOTH, STAIR PLATES, METAL LETTERS AND NUMBERS, TRANSOM LIFTERS, WALL HOOKS AND HANGERS, DOOR CHAINS, CURTAIN RODS, DRAPE BRACKETS, TOWEL RACKS, NUTS, BOLTS, METAL WASHERS; COCK, FAUCET, AND VALVE WASHERS; RIVETS, CASTERS, HOSE SPRINKLERS, NOZZLES AND CLAMPS; COPPER, BRASS, AND BLOCKED TIN TUBING; SKID CHAINS, HARNESS CHAINS, STEEL STANCHIONS; LOGGING CHAINS, BARBED WIRE, WOVEN FENCE WIRE, METAL POSTS AND FENCE GATES, BALE TIES, BASE METAL TABLE AND COOKING HOLLOW WARE, BASE METAL DRINKING CUPS; WALL SOAP TRAYS, GLASS HOLDERS, TOOTH BRUSH HOLDERS AND BROOM HOLDERS; CHAFING DISHES, METAL CUSPIDORS, POULTRY AND LIVESTOCK DRINKING PANS CONNECTED TO PLUMBING; PRESSURE COOKERS, SEPTIC TOILET BOWLS, CLOSET TANKS; IRON, CAST IRON, AND LEAD PIPE AND PIPE FITTINGS; WATER SOFTENING TANK UNITS, STEEL ROLLER CHAINS, STEEL SPROCKET CHAINS, COTTER PINS, METAL BELT LACING, DOOR HANDLES, TIRE VALVE STEMS, SINKS, BATHTUBS, CLOSET BOWLS, URINALS, WASH BOWLS, WASH BASINS, STATIONARY LAUNDRY TUBS, FOOT BATHS, SHOWER FIXTURES, METAL SHOWER BATHS, FAUCETS, WATER CLOSET SEATS, WASTE COCKS, FLUSH TANKS AND PARTS THEREOF, SEPTIC TANKS, METAL SYPHONS; AND PLUMBING, GAS-FITTING, AND STEAM-FITTING VALVES.

Claims use since December 1929.

Reg. No. 378,447. Registered June 11, 1940. NATIONAL CO-OPERATIVES, INC., Chicago, Ill., and Indianapolis, Ind. Republished by National Cooperatives, Incorporated, Chicago, Ill., a corporation of the District of Columbia.

FOR INDEX CARDS, LETTER AND CARD INDEXES, CRAYONS, CHALK, TRACING CLOTH AND PAPER, DIARIES, ENVELOPES, RUBBER BANDS, PAPER CLIPS, FILE POCKETS, FILE TRANSFER CASES, INK WELLS, LEDGERS, CASH BOOKS, MEMORANDUM BOOKS, JOURNALS, ORDER BOOKS, SCRATCH PADS, PENCIL SHARPENERS, DESK PADS, DESK CALENDAR PADS, THUMBTACKS, RUBBER DATING STAMPS, LEAD AND MECHANICAL PENCILS, PENS, WRITING TABLETS, ERASERS, DESK AND HAND BLOTTERS, WRITING AND PRINTING PAPER, TISSUE PAPER, PAPER TOWELS, NAPKINS AND TABLECLOTHS, WALLPAPER, TOILET TISSUE, WRAPPING PAPER, WAX PAPER, SHELF PAPER, ADDING MACHINE ROLLS, STENCIL PAPER, BLANK ADHESIVE LABELS, ADHESIVE TAPE PAPER, ALBUMS, STENCILS, PAPER FILES, LOOSELEAF BINDERS, STRAWBOARD, SCRAPBOOKS, CARDBOARD, FILTER PAPER, AND PAPER CUTTERS.

Claims use since December 1929.

Reg. No. 407,799. Registered June 27, 1944. PHILADELPHIA STEEL AND WIRE CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

PHIL-ALLOY POWER PLUS SPRING WASHERS

The words "Alloy Spring Washers" are disclaimed apart from the mark as shown.

FOR SPRING WASHERS.

Claims use since 1937.

Reg. No. 407,800. Registered June 27, 1944. PHILADELPHIA STEEL AND WIRE CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

PHIL-ALLOY SPRING WASHERS

The words "Alloy Spring Washers" are disclaimed apart from the mark as shown.

FOR SPRING WASHERS.

Claims use since 1937.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 153,058. Registered Mar. 7, 1922. JOSEPH WHITCOMB & CO., Springfield, Mass. Republished by E. Waegemans & Son, Inc., Bridgeport, Conn., a corporation of Connecticut.

TEL AND TEL

FOR CIGARS.

Claims use since June 1914.

Reg. No. 226,846. Registered Apr. 19, 1927. H. FENDRICH, INC., Evansville, Ind., a corporation of Indiana. Republished by registrant.

FOR CIGARS.

Claims use since July 19, 1913.

Reg. No. 226,847. Registered Apr. 19, 1927. H. FENDRICH, INC., Evansville, Ind., a corporation of Indiana. Republished by registrant.

FOR CIGARS.

Claims use since Aug. 5, 1909.

Reg. No. 337,879. Registered Aug. 25, 1936. CHRISTIAN PEPER TOBACCO COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

Crosby Square

FOR SMOKING TOBACCO.

Claims use since Mar. 8, 1935.

Reg. No. 360,151. Registered Sept. 6, 1938. H. FENDRICH, INC., Evansville, Ind., a corporation of Indiana. Republished by registrant.

LA CUBAVANA

FOR CIGARS.

Claims use since June 1, 1890.

Reg. No. 362,780. Registered Nov. 29, 1938. H. FENDRICH, INC., Evansville, Ind., a corporation of Indiana. Republished by registrant.

BLACK HAWK

FOR CIGARS.

Claims use since January 1889.

Reg. No. 362,781. Registered Nov. 29, 1938. H. FENDRICH, INC., Evansville, Ind., a corporation of Indiana. Republished by registrant.

Charles Denby

FOR CIGARS.

Claims use since July 25, 1893.

Reg. No. 404,151. Registered Nov. 2, 1943. IOWA CANNING COMPANY, Vinton, Iowa. Republished by Tendersweet Sales Corporation, Cedar Rapids, Iowa, a corporation of Iowa.

Reg. No. 380,560. Registered Aug. 12, 1941. NATIONAL CO-OPERATIVES, INC., Chicago, Ill., and Indianapolis, Ind. Republished by National Cooperatives, Incorporated, Chicago, Ill., a corporation of the District of Columbia.

FOR TURKEY POULTS, CHICKS, HATCHING EGGS, LIVE POULTRY, DRESSED POULTRY, MILK, BUTTER, EGGS, POULTRY FEED, LAYING MASH, STOCK FEED, MINERAL HOG FEED, CANNED DOG FOOD, DOG BISCUITS, AND BIRD SEED.
Claims use since December 1929.

Reg. No. 392,135. Registered Dec. 9, 1941. RICHGROVE-JASMINE CITRUS ASSOCIATION, Richgrove, Calif., a corporation of California. Republished by registrant, present address Delano, Calif.

CONVOY

FOR FRESH CITRUS FRUITS.
Claims use since July 15, 1941.

Reg. No. 393,497. Registered Feb. 17, 1942. JAMES T. HIROTO, Coachella, Calif. Republished by registrant.

DESERT EAGLE

FOR FRESH VEGETABLES.
Claims use since April 1937.

Reg. No. 394,224. Registered Mar. 24, 1942. ORANGE BELT FRUIT DISTRIBUTORS, Pomona, Calif. Republished by Orange Belt Fruit Distributors (1942), Pomona, Calif., a firm.

FIRST MATE

FOR FRESH CITRUS FRUIT.
Claims use since Feb. 3, 1940.

Reg. No. 395,462. Registered May 26, 1942. CALIFORNIA MILLING CORPORATION, Los Angeles, Calif., a corporation of Delaware. Republished by registrant.

"FORTIFIED FOR HOME DEFENSE"

The word "Fortified" is disclaimed apart from the mark as shown.
FOR WHEAT FLOUR.
Claims use since Sept. 12, 1941.

Reg. No. 399,825. Registered Feb. 2, 1943. PLEE-ZING, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

PLEE-ZING

FOR DRIED APRICOTS, CANNED GREEN BEANS, CANNED CORN ON THE COB, CANNED GRAPEFRUIT AND PINEAPPLE JUICE, CANNED GRAPEFRUIT AND ORANGE JUICE, CANNED PINEAPPLE, CANNED POTATOES, CANNED CARROTS, CANNED PRUNE JUICE, CANNED TOMATO PASTE, PACKAGED SALT CODFISH, CANNED CHOP SUEY-MEATLESS, CANNED MIXED CHOP SUEY VEGETABLES, CANNED BEAD MOLASSES, CANNED CHOW MEIN NOODLES, CANNED COCKTAIL SAUCE, CANNED CRANBERRY JUICE COCKTAIL, PURE FLAVORING EXTRACTS FOR FOOD FLAVORING PURPOSES, IMITATION FOOD FLAVORING EXTRACTS, GELATIN DESSERTS; CANNED MEATS—NAMELY, BREAKFAST SAUSAGE, BEEF STEW WITH BROWN GRAVY, VEAL LOAF, SPICED LUNCHEON MEATS, PIGS' FEET CUTLETS IN VINEGAR, BONELESS PIGS' FEET IN VINEGAR, CANNED OKRA, TOBASCO PEPPERS, CANNED POTATO SALAD, DRIED PRUNES, CANNED SALAD SPROUTS, CORN SYRUP, VEGETABLE NOODLE SOUP MIX, VEGETABLE SOUP MIX WITH CHICKEN FAT, CANNED SPICES, CRUSHED FRUIT TOPPINGS, JAMS, POWDERED FRUIT PECTIN, CANNED LIQUID APPLE PECTIN, SUNDAE TOPPINGS, BAKING CHOCOLATE, BITTERSWEET CHOCOLATE, MILK CHOCOLATE, INSTANT CHOCOLATE, CANE AND MAPLE SYRUP, WHEAT FLOUR, MACARONI IN CHEESE AND CREAM, POPPED WHEAT, POPPED RICE, CANNED SPAGHETTI SAUCE, SPANISH STYLE TOMATO SAUCE, PEPPER SAUCE, CANNED PREPARED SPAGHETTI, CANNED SPAGHETTI WITH MEAT BALLS, CANNED OKRA AND TOMATOES, DATE AND NUT BREAD, CANNED FRUIT COCKTAIL, GINGER-BREAD MIX, ICE-CREAM MIX, JULIENNE POTATOES, CANNED FRENCH FRIED JULIENNE POTATOES, CANNED JULIENNE STYLE CHEESE COATED POTATOES, CANNED SPICED WATERMELON RIND, CANNED SPICED CANTALOUPE, CANNED SPICED CRABAPPLES, CANNED SQUASH, CANNED PEAS AND CARROTS, SALAD VEGETABLES, STEWED PRUNES, SANDWICH SPREAD, CANNED LAYER-PACK VEGETABLES, CANNED SLICED APRICOTS, CANNED SLICED PEARS, CANNED SLICED PEACHES; CANNED BABY FOODS—NAMELY, APPLES, CANNED STRAINED PRUNES, STRAINED BEETS, CANNED STRAINED CARROTS, APRICOTS, CELERY, GREEN BEANS, PEAS, SPINACH, TOMATOES, AND COMBINATIONS THEREOF; VEGETABLE SOUP WITH CEREAL, CANNED CHICKEN WITH EGG NOODLES, CANNED CHICKEN WITH GRAVY, CHICKEN INVALID BROTH, CHOCOLATE PUDDING, PACKAGED ROASTED OATS, PACKAGED DRIED CURRENTS, HONEY SYRUP, HOT SAUCE, MACARONI SAUCE, CANNED MACARONI SALAD WITH CHEESE, ALPHABET NOODLES, EGG BOW NOODLES, SLICED BEEF, CHOCOLATE MILK, CANNED PRUNES, CANNED SHOESTRING VEGETABLES, DRY SOUP MIXTURES.
Claims use since December 1922.

Reg. No. 400,656. Registered Mar. 23, 1943. L. A. NUT HOUSE, Los Angeles, Calif. Republished by Los Angeles Nut House (1945), Los Angeles, Calif., a firm.

The word "Nut" and the notation "Nut House" are disclaimed apart from the mark as shown.
FOR POTATO CHIPS, PEANUT BUTTER, CANDY, DRIED FRUITS, SHELLED NUTS, AND NUTS IN THEIR NATURAL STATE.
Claims use since June 29, 1932.

Reg. No. 402,024. Registered June 22, 1943. MASON, AU & MAGENHEIMER CONF. MFG. CO., Brooklyn, N. Y. Republished by Mason, Au & Magenheimer Conf. Mfg. Co., Brooklyn, N. Y., a corporation of New York.

RUMOR

FOR CANDIES AND CHOCOLATES.
Claims use since Dec. 16, 1934.

Reg. No. 402,245. Registered July 13, 1943. J. E. STANSFIELD, Arvin, Calif. Republished by Kern Valley Farms, Arvin, Calif., a corporation of California.

CAL-PRIDE

The representation of the outline of a label is disclaimed apart from the mark as shown.
FOR FRESH GRAPES.
Claims use since July 14, 1939.

Reg. No. 402,519. Registered July 27, 1943. ROBERT ASPINALL, San Francisco, Calif. Republished by registrant.

REMEMBER

FOR JELLIES, FRUIT PRESERVES, CANNED FRUITS, AND CANNED VEGETABLES.
Claims use since Feb. 10, 1943.

Reg. No. 403,034. Registered Aug. 31, 1943. DALE BUMSTEAD, Phoenix, Ariz. Republished by registrant, present address Peoria, Ariz.

TAL-WI-WI

FOR FRESH CITRUS FRUITS.
Claims use since Nov. 14, 1942.

Reg. No. 404,151. Registered Nov. 2, 1943. IOWA CANNING COMPANY, Vinton, Iowa. Republished by Tendersweet Sales Corporation, Cedar Rapids, Iowa, a corporation of Iowa.

"Chubbies"

FOR CANNED VEGETABLES—NAMELY, PEAS.
Claims use since May 1, 1942.

Reg. No. 405,284. Registered Jan. 18, 1944. J. E. STANSFIELD, Arvin, Calif. Republished by Kern Valley Farms, Arvin, Calif., a corporation of California.

CAL-PRIDE

The word "Cal" is disclaimed apart from the mark as shown.
FOR GRAPES, FRESH CITRUS FRUIT, AND FRESH VEGETABLES—NAMELY, POTATOES.
Claims use since July 14, 1939.

Reg. No. 407,342. Registered May 30, 1944. ALFRED W. MCCONN, Moorhead, Minn. Republished by registrant.

AL'S PAL

"Dawgone Good"

The words "Dawgone Good" are disclaimed apart from the mark as shown.
FOR POTATOES IN THEIR NATURAL STATE.
Claims use since August 1943.

Reg. No. 409,265. Registered Sept. 26, 1944. FINE PRODUCTS CORPORATION, doing business as Nunnally's, Augusta, Ga., a corporation of Georgia. Republished by registrant.

Camellia

FOR CANDY.
Claims use since September 1938.

Reg. No. 411,307. Registered Jan. 9, 1945. JORGENSEN FARMS, Fresno, Calif., a firm. Republished by registrant.

Reg. No. 417,239. Registered Oct. 16, 1945. PORTER & WENTS, INC., Brownsville, Tex., a corporation of Texas. Republished by registrant.

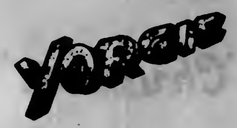
Reg. No. 423,520. Registered Sept. 3, 1946. HALE-HALSELL CO., McAlester, Okla., a corporation organized under the laws of the Indian Territory. Republished by registrant.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 380,280. Registered Aug. 20, 1940. NATIONAL CO-OPERATIVES, INC., Chicago, Ill., and Indianapolis,

Reg. No. 411,307. Registered Jan. 9, 1945. JORGENSEN FARMS, Fresno, Calif., a firm. Republished by registrant.



FOR FRESH VEGETABLES AND MELONS.
Claims use since July 21, 1944.

Reg. No. 413,444. Registered Apr. 24, 1945. PORTER & WENTS, INC., Brownsville, Tex., a corporation of Texas. Republished by registrant.

SOUTHMOST

FOR FRESH TOMATOES.
Claims use since May 1944.

Reg. No. 417,237. Registered Oct. 16, 1945. PORTER & WENTS, INC., Brownsville, Tex., a corporation of Texas. Republished by registrant.

The map of Texas is disclaimed apart from the mark as shown.
FOR POTATOES.
Claims use since Apr. 13, 1945.

Reg. No. 417,238. Registered Oct. 16, 1945. PORTER & WENTS, INC., Brownsville, Tex., a corporation of Texas. Republished by registrant.

The map of Texas is disclaimed apart from the mark as shown.
FOR FRESH TOMATOES.
Claims use since Apr. 25, 1945.

Reg. No. 417,239. Registered Oct. 16, 1945. PORTER & WENTS, INC., Brownsville, Tex., a corporation of Texas. Republished by registrant.

The map of Texas is disclaimed apart from the mark as shown.
FOR POTATOES.
Claims use since Mar. 31, 1945.

Reg. No. 420,004. Registered Mar. 19, 1946. JAMES P. SMITH & COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Antonini
CERTIFIED
VIRGIN
ITALIAN
OLIVE
OIL

The words "Certified Virgin Italian Olive Oil" are disclaimed apart from the mark as shown.
FOR CERTIFIED VIRGIN ITALIAN OLIVE OIL.
Claims use since about the year 1887.

Reg. No. 420,075. Registered Mar. 26, 1946. FROZEN DRUMSTICK SALES COMPANY, Fort Worth, Tex., a firm. Republished by registrant.

Frozette

FOR EDIBLE POWDER USED IN THE MANUFACTURE OF FROZEN DESSERTS, SOLD IN BULK.
Claims use since May 20, 1943.

Reg. No. 421,586. Registered June 4, 1946. REID & REID, St. Petersburg, Fla., a firm. Republished by registrant.

Chest of Gold

FOR FRESH CITRUS FRUITS—NAMELY, ORANGES, GRAPEFRUIT, AND TANGERINES.
Claims use since Aug. 28, 1945.

Reg. No. 423,520. Registered Sept. 3, 1946. HALE-HALSELL CO., McAlester, Okla., a corporation organized under the laws of the Indian Territory. Republished by registrant.

Lumps-O' Silver

FOR CANNED WHITE CORN.
Claims use since Sept. 21, 1945.

Reg. No. 424,486. Registered Oct. 8, 1946. ALABAMA FEED MILLS, Tuscaloosa, Ala., a co-partnership. Republished by registrant.

SAW MILL SPECIAL

The word "Mill" per se and the word "Special" per se are disclaimed apart from the mark as shown.
FOR HORSE AND MULE FEED.
Claims use since Jan. 3, 1925.

CLASS 47

WINES

Reg. No. 371,764. Registered Oct. 3, 1939. SCHENLEY IMPORT CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

CORONATION

FOR WINES.
Claims use since Jan. 26, 1934.

Reg. No. 378,600. Registered June 11, 1940. SCHENLEY IMPORT CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

MARQUITA

FOR WINES.
Claims use since Aug. 20, 1937.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 87,489. Registered July 16, 1912. JOS. SCHLITZ BREWING COMPANY, Milwaukee, Wis. Republished by Jos. Schlitz Brewing Company (1933), Milwaukee, Wis., a corporation of Wisconsin.

FOR LAGER BEER.
Claims use since May 15, 1894.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 380,280. Registered Aug. 20, 1940. NATIONAL CO-OPERATIVES, INC., Chicago, Ill., and Indianapolis, Ind. Republished by National Cooperatives, Incorporated, Chicago, Ill., a corporation of the District of Columbia.

FOR BUILDING HARDWARE—NAMELY, NAILS, STAPLES, SCREWS, TACKS, BRADS, SPIKES, METAL STAKES, WINDOW SASH CHAINS, WINDOW PULLEYS, SWIVELS, CURTAIN FIXTURES, HINGES, DOOR CHECKS, DOOR HANGERS AND TRACKS, DOOR KNOBS, DOOR SPRINGS, HASPS, METAL STALL GUTTERS, WIRE SCREENING, FIREPLACE SCREENS AND ANDIRONS, HARDWARE CLOTH, STAIR PLATES, METAL LETTERS AND NUMBERS, TRANSOM LIFTERS, WALL HOOKS AND HANGERS, DOOR CHAINS, CURTAIN RODS, DRAPE BRACKETS, TOWEL RACKS, NUTS, BOLTS, METAL WASHERS; COCK, FAUCET, AND VALVE WASHERS; RIVETS, CASTERS, HOSE SPRINKLERS, NOZZLES AND CLAMPS; COPPER, BRASS, AND BLOCKED TIN TUBING; SKID CHAINS, HARNESS CHAINS, STEEL STANCHIONS, LOGGING CHAINS, BARBED WIRE, WOVEN FENCE WIRE, METAL POSTS AND FENCE GATES, BALE TIES, BASE METAL TABLE AND COOKING HOLLOW WARE, BASE METAL DRINKING CUPS; WALL SOAP TRAYS, GLASS HOLDERS, TOOTH BRUSH HOLDERS AND BROOM HOLDERS; CHAFING DISHES, METAL CUSPIDORS, POULTRY AND LIVESTOCK DRINKING PANS CONNECTED TO PLUMBING; PRESSURE COOKERS, SEPTIC TOILET BOWLS, CLOSET TANKS; IRON, CAST IRON, AND LEAD PIPE AND PIPE FITTINGS; WATER SOFTENING TANK UNITS, STEEL ROLLER CHAINS, STEEL SPROCKET CHAINS, COTTER PINS, METAL BELT LACING, DOOR HANDLES, TIRE VALVE STEMS, SINKS, BATHTUBS, CLOSET BOWLS, URINALS, WASH BOWLS, WASH BASINS, STATIONARY LAUNDRY TUBS, FOOT BATHS, SHOWER FIXTURES, METAL SHOWER BATHS, FAUCETS, WATER CLOSET SEATS, WASTE COCKS, FLUSH TANKS AND PARTS THEREOF, SEPTIC TANKS, METAL SYPHONS; AND PLUMBING, GAS-FITTING, AND STEAM-FITTING VALVES.
Claims use since December 1929.

Reg. No. 435,835. Registered Jan. 13, 1948. THE SPONGE RUBBER PRODUCTS COMPANY, Shelton, Conn., a corporation of Connecticut. Republished by registrant.

Texlite

FOR SHOCK CUSHIONING RESILIENT COMPRESSIBLE MATS, PADS, NESTS, WRAPPINGS, AND RUG UNDERLAYS, MADE OF ENTANGLED MUTUALLY ATTACHED FLEXIBLE FILAMENTS FORMING A SPRINGY, SPONGY MASS THICKER THAN CLOTH AND HONEYCOMBED WITH VOIDS.
Claims use since Oct. 6, 1945.

REISSUES

FEBRUARY 22, 1949

REISSUES

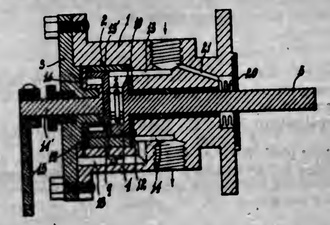
FEBRUARY 22, 1949

23,085
PREVENTION OF FOAMING IN STEAM GENERATION
Lewis O. Gunderson, Park Ridge, Ill., assignor to Dearborn Chemical Company, Chicago, Ill., a corporation of Illinois
No Drawing. Original No. 2,328,551, dated September 7, 1943, Serial No. 330,993, April 22, 1940. Application for reissue August 18, 1944, Serial No. 550,072
9 Claims. (Cl. 252—321)

1. The method of generating steam from a boiler water having a tendency to foam on boiling which comprises dispersing into said water a surface-active predominantly hydrophobic organic compound, each of the molecules of which includes interconnected hydrophilic radicals selected from the group consisting of ester and amide radicals, the hydrophilic radicals in said molecules each being spaced from one another by not more than five carbon atoms, each of said selected radicals having attached thereto an unsubstituted hydrocarbon chain containing at least twelve carbon atoms, and heating the resulting aqueous dispersion to the boiling point, said compound being dispersed into said water in an amount sufficient substantially to inhibit the tendency of said water to foam on boiling.

23,086
VARIABLE DELIVERY ROTARY PUMP
James W. F. Holl, Los Angeles, Calif.
Original No. 2,359,558, dated October 3, 1944, Serial No. 361,063, October 14, 1940. Application for reissue October 1, 1945, Serial No. 619,535
11 Claims. (Cl. 103—120)

5. In a rotary pump, the combination of: a housing provided with a chamber therein and having inlet and outlet ports therein which communicate with the interior of said chamber; a sleeve in said chamber having an internal periphery which is eccentric with respect to the longitudinal axis of said chamber, one end of said sleeve being adapted to engage one end wall of said chamber and the other end of said sleeve being spaced from the other end wall of said chamber; a rotor in said sleeve engaging said one end wall of said chamber, said rotor being rotatable about said longitudinal axis of said chamber; a plurality of blades carried by said rotor, said blades engaging said eccentric internal periphery of said sleeve and said one end wall of said



chamber and being movable radially with respect to said longitudinal axis of said chamber; a wall member spaced from said other end wall of said chamber and sealably engaging said sleeve, said rotor, and said blades; means connected to said rotor for effecting rotation thereof so as to deliver fluid under pressure through said outlet port; and passage means for conducting a portion of the fluid under pressure delivered by the pump into said space between said other end of said sleeve and said other end wall of said chamber whereby the fluid acts on said other end of said sleeve to retain said one end thereof in engagement with said one end wall of said chamber.

PLANT PATENTS

GRANTED FEBRUARY 22, 1949

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

825
CHRYSANTHEMUM PLANT
Gustav C. Sparre, Clarkson, Ontario, Canada, assignor to John J. Grullemans, Mentor, Ohio
Application June 19, 1947, Serial No. 755,681
1 Claim. (Cl. 47—60)

The new variety of chrysanthemum plant herein shown and described characterized in that its flowers are fully double, are shaped like the flowers of a cactus dahlia, are large yet very graceful in appearance and of an exceptional whiteness and are produced in open clusters, and the plant is exceedingly vigorous, has the ability to withstand severe winters, whether protected or unprotected, is exceptionally resistant to disease, and has good resistance to drought.

826
CHRYSANTHEMUM PLANT
Gustav C. Sparre, Clarkson, Ontario, Canada, assignor to John J. Grullemans, Mentor, Ohio
Application June 19, 1947, Serial No. 755,682
1 Claim. (Cl. 47—60)

The new variety of chrysanthemum plant herein shown and described characterized in that its flowers are produced in open clusters, are fully double, are shaped like a cactus dahlia and are large yet very graceful in appearance and have an exceptional color, beginning with a deep yellow ochre at the start of the blooming season and changing during the blooming season to an apricot buff and then to a soft corn yellow, and the plant is exceedingly vigorous, of exceptional resistance to disease and of good resistance to

drought, and its roots have the ability to withstand severe winters, both protected and unprotected.

827
CHRYSANTHEMUM PLANT

of the buds and flowers, size and petalage of said flowers, penetrating and pleasing fragrance of the flowers, high degree of resistance to rust of the foliage, vigorous, bushy and upright growth of the plant, moderately long, strong and straight stems with many large and small thorns, and the unusual color of the stems on the side exposed

PATENTS

METHOD OF PRODUCING HEXAETHYL

drought, and its roots have the ability to withstand severe winters, both protected and unprotected.

827
CHRYSANTHEMUM PLANT
Gustav C. Sparre, Clarkson, Ontario, Canada, assignor to John J. Grullemans, Menter, Ohio
Application June 19, 1947, Serial No. 755,683
1 Claim. (Cl. 47—60)

The new variety of chrysanthemum plant herein shown and described, characterized in that its flowers are produced in open clusters, are fully double, are shaped like a cactus dahlia and are large yet very graceful in appearance and have an exceptional rose lilac color, and the plant is exceedingly vigorous, of exceptional resistance to disease and of good resistance to drought, and its roots have the ability to withstand severe winters, both protected and unprotected.

828
ROSE PLANT
Herbert C. Swim, Ontario, Calif., assignor to Armstrong Nurseries, Inc., Ontario, Calif., a corporation of California
Application June 17, 1947, Serial No. 755,152
1 Claim. (Cl. 47—61)

A new and distinct variety of rose plant, characterized as to novelty by the color combination of the buds and flowers, size and petalage of said flowers, penetrating and pleasing fragrance of the flowers, high degree of resistance to rust of the foliage, vigorous, bushy and upright growth of the plant, moderately long, strong and straight stems with many large and small thorns, and the unusual color of the stems on the side exposed to the sun, substantially as shown and described.

829
ROSE PLANT
Herbert C. Swim, Ontario, Calif., assignor to Armstrong Nurseries, Inc., Ontario, Calif., a corporation of California
Application June 24, 1947, Serial No. 756,589
1 Claim. (Cl. 47—61)

A new and distinct variety of rose plant characterized as to novelty by the vigorous, upright, free-branching habits of growth of the plant, abundantly furnished with large leaves highly resistant to mildew; by the color of its flowers and the size thereof characteristically varying from very large in early spring to medium-small in mid-summer to medium in the fall, and with the number varying more or less in proportion to the size of the flower—extremely double in the early spring, merely double in the summer, and very double in the fall, with not so many petals in the fall bloom as in the spring, substantially as shown and described.

PATENTS

GRANTED FEBRUARY 22, 1949

2,462,052
PLASTIC COMPOSITION
Andrew C. Buechele, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
No Drawing. Application January 5, 1946, Serial No. 639,422
5 Claims. (Cl. 106—218)

1. A plastic composition comprising a major proportion of a polyamide of a polyfunctional amine and a polyfunctional acid derivable from the polymerization of higher fatty acids and their esters, and about 2 to 20% of a polymerized rosin.

2,462,054
FURFURYL ALCOHOL-RESORCINOL RESIN COMPOSITION
John Delmonte, Glendale, Calif., assignor, by direct and mesne assignments, of seventy-two per cent to Ralph Hemphill, Los Angeles, Calif.
No Drawing. Application June 30, 1944, Serial No. 543,944
5 Claims. (Cl. 260—42)

1. A liquid polymer resin comprising the product resulting from heating a mixture of resorcinol and furfuryl alcohol in proportions ranging from 1 mole resorcinol for each two moles of furfuryl alcohol, to three moles resorcinol for each one male of furfuryl alcohol, in the presence of an alkali catalyst in an amount to give a pH of at least 8.0.

2,462,055
BRUSH
Robert S. Herwig, North Arlington, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
No Drawing. Application January 24, 1944, Serial No. 519,531
10 Claims. (Cl. 171—325)

9. In a method for forming a moisture adsorbent current conducting brush; the steps consisting of adding to a carbon-copper mixture a minor proportion of an inorganic material, said inorganic material being a member of a group consisting of barium nitrate and calcium sulfate dihydrate, then compressing said mixture into the form of a block, baking said block at a temperature sufficient to release a gaseous medium from the inorganic material and change said inorganic material into a hygroscopic form, and passing said gaseous medium through said block so as to form said block into a porous structure, whereby the same is conditioned for the adsorption of atmospheric moisture vapor through capillary action.

2,462,056
HARD ALLOYS
Roy B. McCauley, Chicago Heights, Ill.
No Drawing. Application April 19, 1945, Serial No. 589,270
3 Claims. (Cl. 75—122)

1. A stable, inherently hard abrasive-resistant tough alloy comprising copper about 4.85%; nickel about 5.15%; phosphorus about 6.20% and iron containing less than 1.00% of chromium, silicon and other non-essential ingredients of commercial grades of scrap iron.

2,462,057
METHOD OF PRODUCING HEXAETHYL TETRAPHOSPHATE
Howard Adler, Flossmoor, Ill., assignor to Victor Chemical Works, a corporation of Illinois
No Drawing. Application February 3, 1947, Serial No. 726,219
4 Claims. (Cl. 260—461)

1. The method of producing hexaethyl tetraphosphate which comprises reacting not less than three moles of diethyl ether per two moles of phosphoric anhydride at from about 50° to 90° C. for a sufficient period to effect an intermediate exothermic reaction, cooling to maintain the temperature within said range, and then at the end of the exothermic reaction period heating at from about 90° to 110° C. under superatmospheric pressure for a period of time sufficient to form a substantial proportion of the tetraphosphate.

2,462,058
SYSTEM FOR COMPARISON OF PHASE SHIFT OF ELECTRIC QUANTITIES
Jean Ahier and Jacques Seis, Lyons, France, assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 27, 1947, Serial No. 737,660
In France April 27, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires April 27, 1964
4 Claims. (Cl. 172—245)

1. A phase comparison system for comparing the phase of a locally generated wave with the phase of an applied signal, comprising a high frequency generator, a generator having a rotary field coil and two orthogonal stator coils, a coupling circuit for coupling said high frequency generator to said field coil, means for applying said signal to said field coil, a pair of electron discharge tubes coupled respectively to said stator coils to derive therefrom output waves having a ninety degree phase relation and amplitude patterns dependent upon the phase of said applied signal and the envelope wave locally generated in said generator, and means for supplying energy from said high frequency generator to said electron discharge tubes to provide substantially sinusoidal variations to said output waves.

2,462,059
ELECTRONIC DISCHARGE DEVICE FOR ELECTRONIC MULTIPLICATION
Maurice Arditi, Boulogne-Billancourt, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 1, 1943, Serial No. 481,509
In France July 25, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires July 25, 1961
7 Claims. (Cl. 250—175)

1. An electronic discharge device for secondary emissions comprising a primary emitting elec-

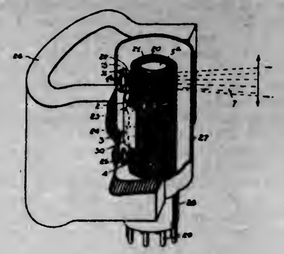
trode, a secondary emitting electrode, and a collecting electrode, all said electrodes being mounted in succession and substantially aligned, electrode means mounted in front of said aligned electrodes for producing a zero potential gradient region beginning a short distance

2,462,06:
HIGH-FREQUENCY ELECTRICAL COMMUNICATION SYSTEM UTILIZING DAMPED OSCILLATIONS
William Arnold Beatty, London W. C. 2, England, assignor to International Standard Electric

tion against passage of gases on premature approach of said detonator when said bolt is in the safe position, a cavity in said bolt at its forward side, a sphere loose in said cavity, and a receiving groove for said sphere in said body portion to lock the bolt against return slid-

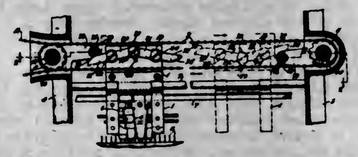
outer shell in the form of a polyhedron of carbon steel, diagonal insulating supports extending inwardly from the edges of said polyhedron to the intersections of spherical segments equal in number to the faces of the polyhedron and

trode, a secondary emitting electrode, and a collecting electrode, all said electrodes being mounted in succession and substantially aligned, electrode means mounted in front of said aligned electrodes for producing a zero potential gradient region beginning a short distance from said aligned electrodes and extending along the path of the electron beams emitted by said aligned electrodes, said electrode means having apertures for the passage therethrough



of the electron beams, means adjacent said aligned electrodes and in the short space between said aligned electrodes and said region of zero potential gradient for controlling the speed of the electrons in said beams, and means adjacent said region of zero potential gradient for applying therein a transverse magnetic field for the deflection of the electron beams entering said region.

2,462,060
TRANSMISSION MECHANISM
Paul Barteit, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application September 10, 1945, Serial No. 615,429
11 Claims. (Cl. 74—37)



1. A transmission mechanism comprising in combination, an endless chain suitably supported and driven in a continuous direction, a carriage to be impelled thereby supported for movement parallel to the chain and clutch means on the carriage consisting of oppositely pivoted clutch arms inwardly extending from their pivots, a toggle connection between the arm inner ends, said clutch arms each being formed with a detent for coupling engagement with the chain, said detents being oppositely extending for engagement alternately with reversely moving tangents of the chain at least one of said clutch arms being formed with spaced recesses, a spring pressed retaining ball supported by the carriage to engage within the recesses and yieldingly retain the arms in the respective shifted positions, and means operative to shift the clutch arms to effect coupling engagement for reversing the motion at the end of each travel motion of the carriage and to act as a safety lock.

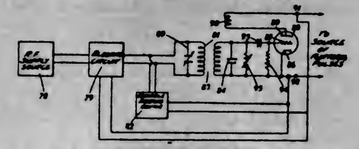
HIGH-FREQUENCY ELECTRICAL COMMUNICATION SYSTEM UTILIZING DAMPED OSCILLATIONS
William Arnold Beatty, London W. C. 2, England, assignor to International Standard Electric Corporation, New York, N. Y.
Application January 24, 1941, Serial No. 375,814
In Great Britain November 10, 1939
Section 1, Public Law 690, August 8, 1946
Patent expires November 10, 1959
10 Claims. (Cl. 179—15)



10. A multiplex system for the transmission of intelligence, comprising means for producing a succession of damped oscillations, control means for controlling the amplitude of successive ones of said oscillations in accordance with the amplitudes at successive instances of a number of intelligence signal waves, means for applying a time modulated pulse train to control said means for producing a succession of damped oscillations, and means for variably controlling the pulse duration in accordance with the signal wave amplitudes and over a range which is comparable with the period of said damped oscillations, said last mentioned means comprising means for deflecting an electron beam in a circular trace by high frequency alternating currents in quadrature, a plurality of target structures arranged in the path of said beam to be cyclically scanned by the beam, said target structures being designed to present different traversal areas at different radial displacements, means for controlling the amplitude of the deflection of said beam in accordance with each of said number of signal waves over successive periods determined by the incidence of the beam on successive target structures, and means for collecting from the target structures the determined current pulses of varying duration determined by the momentary radius of the trace.

FUSE
Donald R. Beeman, Wharton, N. J., assignor to the United States of America as represented by the Secretary of War
Application June 23, 1942, Serial No. 448,162
1 Claim. (Cl. 102—79)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A fuse comprising a body portion having a fire communicating passage, a bolt receiving bore across said passage and at an oblique angle thereto, a bolt slideably moveable in said bore between extreme armed and unarmed positions, a second fire-communicating passage in said bolt alignable with the first fire communicating passage in the armed position but rearwardly slideable down said bore in the unarmed position, a detonator in said body in communication with the first fire communicating passage, a portion of the material of said body extending between said detonator and said bolt immediately adjacent to said bolt, said portion being constructed to yield to the pressures produced by the explosion of the detonator when fired while the bolt is in said safe position, whereby to seal the opening between said bolt and said body portion against passage of gases on premature approach of said detonator when said bolt is in the safe position, a cavity in said bolt at its forward side, a sphere loose in said cavity, and a receiving groove for said sphere in said body portion to lock the bolt against return sliding, said groove being of a depth substantially

less than the diameter of the sphere, said cavity being spaced from said groove when the bolt is in said safe position a distance equal to the distance between said safe position and said armed position of the bolt, whereby under the combined action of creep and centrifugal force said sphere is urged toward said groove when said bolt is in the armed position.

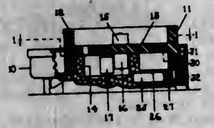
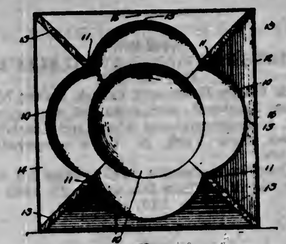
GUIDE MEANS FOR ROTARY OSCILLATING PISTONS OF EXPANSIBLE CHAMBER METERS
Charles P. Bergman, Brooklyn, N. Y., assignor to Rockwell Manufacturing Company, a corporation of Pennsylvania
Application July 26, 1944, Serial No. 546,606
13 Claims. (Cl. 121—68)



11. In a fluid meter having a measuring chamber and a fluid pressure operated piston member of the oscillating type therein; means controlling the oscillatory motion of said piston comprising a guide member mounted on the chamber wall with its axis substantially normal to the axis of oscillation of the meter piston, and connecting means between said piston and guide members operative to impart reciprocating motion to the guide member during the oscillating motion of the meter piston.

2,462,064
PRESSURE VESSEL FOR STORAGE OF LIQUIDS AT ABNORMALLY HIGH OR LOW TEMPERATURES
Harry C. Boardman, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a corporation of Illinois
Application October 9, 1944, Serial No. 557,842
8 Claims. (Cl. 220—15)

1. A pressure vessel for storing liquids at extremely high or low temperatures comprising an outer shell in the form of a polyhedron of carbon steel, diagonal insulating supports extending inwardly from the edges of said polyhedron to the intersections of spherical segments equal in number to the faces of the polyhedron and



arranged symmetrically with respect to the sides thereof, the spherical segments being composed of a metal capable of retaining a substantial part of its strength at extreme temperatures, and forming a fluid-tight shell.

SHOE POLISH COMPACT
William J. Bowen and William R. White, Berkeley, Calif.
Application October 22, 1945, Serial No. 623,804
1 Claim. (Cl. 15—135)
